The great American Republic has been in the throes of financial depressions and labour agitations and strikes for a year past that would have torn asunder the government of any nation not deeply rooted in principles that are eternal. The greatest strike ever known in any country is now in full blast from the Atlantic to the Pacific coasts. Indeed, so great is the labour movement and the boycott declared, that it borders on a revolution, and has been so called by the leading papers in the land. At this time of writing, United States troops are marshalled in Denver, Chicago, and many other cities and towns, and have ready their artillery with orders from Washington to shoot. Railroads are tied-up, and scarcely any freight traffic is being carried on in the great west, and a famine of meat and vegetables seems inevitable on account of the tie-up of freight trains. As I write, a message comes that the U.S. Army has been called out in this city, and within ten blocks of where I write soldiers are mustering. It looks like war—and predictions are heard on every hand that it is a revolution. Boys are now crying, "Extra papers—all about the riot in Chicago." Our wires are ringing with messages telling of riots and troops.

I have been writing up these strikes for two months and am familiar with them. I have been among both the capitalists and working men. The coal strike was serious enough, and caused untold hardship to multiplied thousands, but it was absolutely nothing to the great railroad strike that is now on.

The country never has never seen such a strike. Most of the men who have quit work have no grievance of their own, but have come out in sympathy for Pullman Palace Car employees. The wages of the employees of the Pullman Palace Car Co., at Pullman, Ill., were reduced several months ago on account of the financial panic. The employees asked that their wages be restored, but Mr. Pullman declined to submit the difficulty to arbitration, and in consequence about 5,000 hands in the employ of the company suddenly laid down their tools and walked out of the shops in a body. These employees were members of the American Railway Union, which organization espoused their cause, and began to agitate and organize all Pullman employees in other parts of the country. Pullman has three other large car shops at Wilmington, Del., St. Louis, Mo., and Ludlow, Ky., and soon all employees in these three places were organized and ready to act. Demands were made upon the Pullman Company, but with no effect, and in consequence President Debs of the American Railway Union ordered all employees in these three cities to quit work, which order they promptly obeyed. But Pullman made no concession, and his magnificent Buffer Sleepers were carried after every passenger train as if nothing had happened. The railroad authorities were asked to desist from running these Pullman cars, which they refused to do, saying that they had contracts with that company which they could not break. To stop all Pullman Cars, every member of the American Railway Union was ordered to leave his post. This order brought about the present national calamity. The first men to quit were the switchmen, whose business it is to make up trains at the depots, shunting, etc. I was at the Union depot in this city last week when the first shift of switchmen walked out. Their example was followed, until in 24 hours not a freight train could be moved in or out of this city.

Soon firemen and engineers followed suit, and a general lock-up of travel and traffic was the immediate consequence. Not all the engineers and firemen left, however, but just enough to tie-up

several roads. Imagine the feelings of hundreds of passengers who were on their way to distant cities being suddenly informed in Central Illinois that both firemen and engineer had left the engine and no others could be found to take their places. Passengers spent days in this plight and were only moved away by a "Green" engineer, guarded by United States troops.

There are now fully 100,000 men out on strike, with a probability of thousands of others to follow within a few days. To-day's reports are to the effect that Grand Master Workman of the Knights of Labour of America, Sovereign, has signified his intention of calling out all members of that order in sympathy with the strike movement. If that is done it will be the finishing stroke of a deadly paralysis of business in this country.

This momentous strike can not be over estimated—the picture, terrible as it is, can hardly be overdrawn—not even to speak of the suffering of hundreds of thousands of families of labouring men who are out of work and money.

Every other matter of public interest, great and small, has been lost sight of in the midst of the great strike. Last week another branch of Coxey's Industrial Army passed through this city on their way to Washington. They came from the Pacific Coast, a distance of 3,000 miles. Washington is full of Industrials, and if the revolutionary symptoms of the strike keep up they might prove a serious factor.

Since writing the above, more serious developments have taken place in the great strike situation. President Cleveland has ordered out Federal troops, and issued two proclamations to the citizens of Illinois and the United States in which he warns all people to remain away from public gatherings, etc. It is now said that he will declare martial law in Chicago, which will take the local government out of the hands of the City of Chicago and State of Illinois and put it in the hands of the Federal Government. All public enterprises, including the telegraph, etc., are to be seized by U.S. Marshalls and war methods adopted in general.

President Debs and Vice-Pres. Howard of the American Railway, were indicted by the grand jury and arrested. They gave bonds in the sum of \$10,000 and were released. Other indictments have been made.

The Grand Master Workman of the Knights of Labour yesterday ordered all knights to strike and an army of 100,000 more workmen are in consequence going out on strike. President Gompers, of the American Federation of Labour, will hold a conference to-morrow in Chicago with secretaries and Presidents of the various orders of the Federation and it is believed that they will declare a strike also.

Traffic is almost at a stand-still in this country and provisions, etc., are advanced in price, and to sum up the whole situation:—We are in perilous times and Geo. Pullman, the Palace Car-king, still refuses to arbitrate the matter with his men. He is the prime cause of all the trouble.

Despite drawbacks, American industries still prosper. No people on earth, I suppose, has greater powers and natural tendencies toward scientific advancement. The latest invention that has achieved success is the type-setting machine. This invention has been worked at for some time, but only recently has it proved sufficiently successful to give it a place in the leading newspaper composing rooms of the country. It works exactly like a type-writer and one man can do the work of half-a-dozen. It has been introduced generally, and in consequence thousands of compositors have been thrown out of work.

Only this week I saw in the fashionable portion of this city an electric *kuruma*. Two men sat comfortably in a seat, while the four-wheeled concern sped along by electric force. It is only a question of time when waggons, buggies, and carriages will be propelled by electricity, and horseflesh done away with. Japan will probably never have need for horses, as electricity will be used for that purpose by the time the nation is ready to do away with the *jinrikisha*.

The House of Commons, which is supposed only to sit for forty-two hours in the week—a supposition more honoured in the breach than the observance in these days—has decided, by a majority of 87, that miners should only work eight hours a day. With the principle of the decision few people will be disposed to disagree, but it is remarkable that one of the strongest speeches against the Bill was made by Mr. William Mather, who runs his engineering works on the eight hours' system. He believes in voluntary reform as against the legislative enforcement of a hard and fast rule, that may some day be found destructive of a great industry.

EVANGELISTIC METHODS IN TOWN AND COUNTRY.

By Rev. A. D. HAIL, D.D.

A PAPER READ AT THE MISSIONARY ASSOCIATION OF CENTRAL JAPAN, OSAKA, AND REQUESTED TO BE PUBLISHED IN THE "JAPAN MAIL."

Church politics, Mission peculiarities, and personal individualities are so diverse as to demand a treatment of methods of Evangelistic work from a dynamical point of view.

What this paper proposes, therefore, is simply some suggestions toward securing an enlarging and ever increasing efficiency of Evangelistic methods. As Evangelization is a work that may be hindered and hampered by hobbies, its underlying theory should be a right one. Consciously or unconsciously the work of each one is being conducted upon some constructive principle. Without stopping to mention various views, nor to defend the statement, yet in the practical usages of the Mission it has come to mean the immediate, direct effort to reach the people with the Gospel, and to convert them by it. This makes a very good working theory. Such a definition differentiates it from every other branch of mission work. The formative idea of the pastorate is the training of the church for aggressive work. The conversion of great numbers is not so much its immediate as its ultimate aim. The medical work is the hand of Jesus laid upon the leper and the loathsome that men may see what divine love is. It is Christ raising the noblest type of scientists directly for the sake of bodily relief and restoration, indirectly for soul redemption. The educational work is conservative of the results of evangelization. It trains the trainers of the ingathered and makes the enlargement of the direct evangelizing work possible. Evangelism is consequently both the seed and the fruit, the "root and the offspring" of all the other forms of work and furnishes them with both their materials and motives. It is buttressed on and broadened by them.

It is quite needful, then, that the retroactive relation of this work to every other be borne in mind, and that it be given a shaping influence upon the indirect work. The battle between the *Merrimac* and *Monitor* modified the instruction given in Naval Schools and methods of Naval Architecture throughout all civilized nations. Just as actual warfare has such a moulding influence over the working of institutions which supply it with men and means, so has evangelistic work a right to expect a similar influence over all branches of the work with a view to wiser methods.

It is necessary to enlargement and efficiency that methods should be flexible, and based upon the facts as found in the field. At first thought it seems a very simple thing to suggest some flaws of work for winning success. But more mature reflection will relieve one of any such idea. For instance, methods appropriate to country districts, when the days are short and the evenings long would be unworkable in the days of seed-sowing and harvest. In fishing villages there are seasons when the whole community do duty day and night in catching, and saving, and marketing the catch of fish. The same is true of the lumbering districts, orange farming, and tea planting communities.

It is impossible even to announce a rule invariably applicable to means and instruments. What can we do with the magic lantern? Good, undoubtedly. It has been and can be used with success. But even this demands a word of caution from the standpoint of the varieties of Japanese circles. This makes it necessary sometimes to beware of the Angels—on the lantern slides. For some audiences in Japan, Celeste with pinions of pearl modestly overshadowing a form of grace, makes a better impression as an angel than does Bridget with wings developing from angular shoulder-blades. Even tract distribution may be conducted in a way that may be more repellant than useful. Indiscriminate tract distribution may be injurious. In a new place, at the first, they may be given to each one, especially if there is, also, the advertisement of preaching places, or other needful points as to sources of information, printed upon an additional place or page. But ordinarily the character of the person, his social and intellectual standing must be taken into consideration. A Japanese classical scholar would be certainly repelled by a tract in the colloquial, while on the other hand a book like Martineau's Evidence of Christianity in high Chinese has been the means of doing much good. The character of a community ought, also, to be known, and suitable tracts as well, before a general giving is undertaken. Tracts, of which in general it may be said, "that it is more blessed to give than to receive" must be wholly abjured. Originality in the tracts he gives away and

the people to whom he gives them, this branch of the work may be very serviceable. They may be used oftentimes in introducing conversation on Christian topics with fellow passengers in coasting steamers, or fellow guests in hotels. Every missionary ought to be supplied with a good variety of them, but nothing can be so efficiently helpful in the use of them as a thorough knowledge of the people.

Even the matter of preaching cannot be conducted in fixed ways, always after our western models. It could not be so done even in Christ's day. He pursued one method with the thousands gathered upon Galilee's Sea and an entirely different one with the Samaritan Woman at the well of Jacob. A missionary may start out with a whole stock of set sermons, and yet if he knows the various audiences he meets, may not find a place for any of them.

A missionary then, for efficient work on evangelistic lines needs a knowledge gained by a patient inductive investigation of the country, as well as a knowledge of its language.

Growing efficiency of methods requires, then, a far more thorough study of this department of work. It must be studied from the standpoint of facts as they exist here in this field.

There are two things the missionary must study, the language and the people. Both are equally important and alike indispensable. In the study of the work in Japan we can obtain but comparatively little help from other fields. The situation in this country is thoroughly unique. Outside of Christian lands it is about the only country that has a predominating patriotism. Shintoism has introduced elements into the problem that require to be well understood. It has modified Confucianism and Buddhism and in some directions has been a power for good. Several sects of Buddhism are only other names with which it has clothed itself. It is another instance in which the hand is hand "Esaú, but the voice is that of Jacob." But Buddhism is not destitute of influence and cannot be ignored. Confucianism brings in still another element, yet is readily dovetailed into Shintoism. In other non-Christian nations educational institutions of value are developed either by the western governments which control them, or else by Christian missions, or by both. The same is true, also, of medical work. In Japan all this is reversed. The Government itself leads in these enterprises. Racial and social peculiarities have also to be considered. This is the soil in which the seed is to be sown. This is the patient whose symptoms must be understood before the remedies can be properly applied.

Another feature which requires special study that suitable methods may be devised, is the matter of reaching the overwhelming majority of the nation with the Gospel. There are in Japan, 123 towns with a population of from 10,000 to more than 1,000,000. These contain a population of 6,105,816. Or in round numbers, allowing for increase since the last census, 7,000,000. Besides these there are about 4,512 towns with populations of from 1,000 to 10,000. In addition to these there are other thousands of villages along the highways, and by-ways, on mountain tops and hill-sides, and along the streams in the valleys. Deducting 7,000,000 from these, leaves about 33,000,000 of Japan's 40,000,000, souls in the smaller places. The mission force is distributed through about 40 of the 123 larger towns, leaving 83 of them without occupancy. Add to this that in various places occupied in Central Japan, at least the number of missionaries given wholly to this work is disproportionately small. There a number who engage in the work incidentally. Certainly then the question is worthy of profounder study.

The field must be studied with the future in view as well as the present. Although this Empire has made marvellous progress in the past forty years, yet all that has been achieved is simply initial. Changes of centres of population will take place as great interests shall demand. There are back districts where missionaries now seldom go, with mountains rich in coal and iron and other minerals, which will as assuredly attract populations, as that man naturally lives and seeks prosperity. In these places it is not too soon even now to begin the foundation work of evangelization. The mineralogical, agricultural, and commercial possibilities of these future places are to be borne in mind, even though present results in such out of the way points might be meagre. This was the wisdom of the methods of the Jesuits in the early history of America. The names of such American cities as St. Louis, San Francisco, Santa Fé, Trinidad, and others, which to-day are great centres of Roman Catholic populations and influence, are monuments to the far reaching plans of the French and Catholic fathers who located their work in these places when as yet there was nothing of them but a

future. Here is where Christianity ought to have a great advantage over other religions in Japan. They already have their centres largely in places that in the great, and probably near future, will have become only of Archaeological importance. Evangelizing work ought, therefore, to precede the railroad and telegraph and lay the foundations in those places to which they must certainly go. Villages at the foot of great "Mountains which hold in their purple bosoms treasures for the endowment of coming generations," are salient points to be discerned and worked.

It is quite evident then that our plans of evangelization must take on a constantly widening scope and our methods be correspondingly enlarged. In a land where the seashore is largely the interior and the town is often the country, it is difficult to draw the line of distinction. We may safely take it as an euphemism for the entire Empire. Not the larger cities alone, but the smaller towns as well demand increasing consideration. None will question the wisdom of putting strength upon the cities. The danger to the work does not lie in overestimating the present great centres, but of underestimating the country. In looking over the work it will be found that the country has shown what may be expected should it receive greater attention. Some of our most prominent pastors and successful workers are from the villages. Of the famous Kumamoto band only the fewest number were from the town. The country work has been the means, also, of gaining an entrance to large places. Tokyo, Sendai, Wakayama, and other points have been opened up to several missions by means of work started in the smaller towns. There are some places so difficult of entrance that it might be safely laid down as a method to approach them through work in adjacent country places. It is generally the most enterprising people in the country who take hold of Christianity. Medical and law students, Doctors, Mr. Fukuzawa's scholars, pushing merchants, policemen, school teachers, have hitherto been the first to investigate and to be converted by the Gospel. Such men almost invariably move to larger places to better their condition. These men converted and followed up, or used as a means for gaining an acquaintance with their friends in other towns often become a very successful way of obtaining a foothold in neighbouring and even distant places. No nook nor corner should be neglected in our study. Joseph Nee-shima of Anaka is one of God's suggestions upon this subject.

The itinerating missionary, with varying methods of itineracy, is essential to an enlarging efficiency of the work. Each Mission ought to have a corps of men and women devoted exclusively to itineracy. They should have no other responsibilities whatever. Smaller Missions might find it profitable to have every member devoted to this work, leaving the literary culture of their pastors and helpers to Christian institutions already established, or even to the Government Schools. Indeed, it is perhaps not too much to say that in view of all the present circumstances the strength of every Mission in numbers at least ought to be devoted to this end.

Singleness of devotion to this work is of the utmost importance, whether from the point of view of health, or of personal efficiency. Conducted as it ought to be, it is trying to the nervous system, both on account of the isolation it demands and the constant brain effort necessary to keep track of its requirements through the medium of a hard language. The exposures incident to working in houses without fire, and where compliance with Japanese ideas requires the removal of comfortable foot-gear, also have their dangers to health. For success, however, the labourer must be able to say, "this one thing I do."

When the well-equipped itinerating missionary comes to his work, the prime requisite for the development of correct dynamical methods is the spirit of the man himself. His own personality and character will permeate everything. A man must have and cultivate a Christian love for the Japanese. There ought to be no class of men more prompt to see the good points in the people and more patient toward their failings. To live with them and for them so long as Providence shall preserve health and life, must be the ideal of the itinerator. Such a spirit will enable one to conform quite readily to many peculiar social requirements and little amenities, the observance of which are requisite to the greatest success. A Gracind spirit with coolies, niggardly dealings with hotel keepers, indifference to the efforts made by the Yadoya folks to accommodate the foreigner, and all kindred things growing out of differences in modes of life, are sure to be "dead-flies in the ointment." In no country is "The fragrance of a gentle life," so greatly influential as in Japan.

The itinerator must have his own special field of labour, embracing as large a territory as pos-

sible. He must become thoroughly identified with the field, so much so that he can be able to enter into something of the spirit of the people of that section. He should seek to know its history, wars, *daimios*, and great families, industries, sects of Buddhism and forms of Shintoism. Its schools, towns, rivers, roads, and valleys must be found out. It is well that he should know what families have children in his own place of residence, and what ones have sons in western lands. All this requires that the field should be the Evangelists' speciality, his "hobby" if necessary. It is important, too, that this territory should include large towns as sub-centres of work. The personal equation and the itinerator's field are the two things which condition all methods. Moody, of America, and Gen. Booth of the Salvation Army, pursue methods widely different and yet each alike are successful.

Another essential to the success of methods in the itinerator's district is the occupancy of the sub-centres of the field, by one or more resident missionary ladies. If they cannot go out in the service of a Japanese Church or Native Board of Missions, it would be better to be employed for some form of Christian charity work. As it is a work of such great importance, and as mistakes make almost insuperable difficulties it is a matter of great consequence that they should have a large stock of prudence, patience, courage and tact. Their native assistants should be not less than thirty years of age and of the very best kind to be had. If a nurse for the sick, who should be devoted especially to the care of the sick poor, could be of the household it would be an inexpressible gain to the cause. The number of native Christian women nurses ought to be greatly increased, and trained for this special line of labour. There ought also to be included in the home one or more native women in training, either spending their vacations from the Bible Woman's Training School, or else permanently in that way under education. The School for Nurses, and the Bible Woman's School are factors of such importance that they cannot be overestimated. If there were increasing numbers to take the courses in both schools we could have nearly more ideal evangelistic work. The advantages of missionary ladies thus living and working are various. (1)—Knowing the estimate which Christians place upon womanhood, it shows the Japanese people and government that we have sufficient confidence in them to entrust our Christian women to their protection. It is an object lesson of faith in the people which has seldom failed to elicit a favourable response. (2)—Such an arrangement helps to gather up the fruits and enlarge the scope of the evangelistic work. Among those who attend the preaching services will generally be found some who desire to make further inquiries as to "this way." The home of the lady missionary would always furnish the means, or classes for such cases. It would form a basis, also, from which to extend the work into the contiguous villages. The extent to which this could be done, would of course depend upon the members who constituted the home. (3)—Lady missionaries of this kind have many ways of discovering new opportunities for good, and of opening the hearts of the people. At first many homes will not be prompt to respond, but in time residence will in some way or other open more homes than they will have either the strength, or time to enter. (4)—They are invaluable in the matter of keeping their fingers upon the pulse of the spiritual life of the people. They can tell the itinerating missionary when he comes upon his rounds of visitation, what the people have been asking and talking about: the questions that have been asked, the trials and perplexities to be solved. They know the homes to which sorrow has come, and the hearts that bleed for comfort. (5).—In every such place there are Japanese women who need just the companionship which such an arrangement affords. They are women who have come into touch with the spirit of modern Japan. They are desirous of making their own homes attractive to their husbands and children, and if properly encouraged they will not be averse to seeking supplementary knowledge even from their Western Sisters, in regard to ways and ideas that can be accommodated to Japanese surroundings and be helpful to their own home-life. While they may not and ought not to be ambitious to westernize their homes, yet they have a home-hunger that will predispose them to friendship with their sisters from the Occident. This often forms a strong bond of attachment which may be profitably used in Christ's work. Jean Paul Richter said, "I love God and flowers and little children." The love of flowers and children, forms such a common basis for Christian women and Japanese, that the former can move readily than any one else, stand thereon and raise the latter up to Him who is the source of all beauty and all inno-

cence. (6).—They form a most valuable adjunct to the native pastor, or evangelist, one which if they are judicious, will greatly increase their influence.

Although it may be a method that is wearisome to the flesh, yet the itinerator must work his way with increasing thoroughness.

This requires that the rounds of the field be made as frequently as time will allow. To employ an evangelist and leave him alone in the interior, especially in the initial period of the work, co-operating with him mainly at a distance, going only now and then simply to baptize a convert, is not, properly speaking, itinerating work. It is not wholly evangelistic work, nor is it very satisfactory.

There ought to be an occasional attempt at universal visitation, so that the intervening villages of the centres and sub-centres may not be unduly neglected. Providence has occasionally hinted this by the movements of men which take place from city to country. Students, merchants and others who are temporarily resident in the towns, become converted and at the end of a term of years go back to their own places, or elsewhere, to practice their avocation. Some are lost to the Church in this way for the lack of being followed up. This would suggest the propriety of hospitals, girls' schools, and other like institutions, as well as the city churches, of each having a Bible woman and the boys' schools, a chaplain, one branch of whose duties should be the matter of keeping track of those who go out from these institutions, and notify those working the districts to which they have returned. It is really necessary to save much of the results of the work already obtained to more minutely work our fields. This would greatly enlarge the possibilities of the work, for as an evangelist goes from place to place he will often receive invitations from adjacent points to pay them a visit. This feature of the matter has been too greatly neglected. It is customary for a missionary to ride in a jinrikisha half-a-day or even a whole day passing through village after village in which no sermon has ever been preached, and which have never even been exploited for missionary purposes. Between Tsu in Ise and Yamada a distance of about 25 miles, there are along the main road alone some 10 villages with more than 500 inhabitants in each and here in we may say comparatively, if not absolutely, no Christian work whatever has been done. The same thing holds true of every centre in which missionaries are now located. In all the Empire there are now, including church houses, only 928 regular preaching places. Of these some 35 are in the city of Osaka, and probably 115 in the city of Tokyo. Running in about that proportion throughout the country it is readily seen that outside of towns of 10,000 inhabitants or even more the number must be disproportionately meagre. Besides visits to the centre, an annual, or semi-annual visit to the smaller places would be very profitable. The missionary, for example, who has the Kishi-no-wada field could start out on foot from Osaka and spend at least a day or night in a village, or the centre of little villages. He would require perhaps two weeks time. The daily walks would be short and allow a good portion of the day to be given to each place. The disparity in the number of missionaries devoted to this exclusive line of Christianization makes the work to be undertaken assume rather large proportions. By what methods can it be accomplished?

It is important that the itinerator should turn to account everything in his field that he can. For example, the hotels in the country may furnish a good means of gaining a knowledge exceedingly helpful for extending the work and deepening it. Here, if one tarries several days he will be very apt to meet guests from various parts of his territory. The ubiquitous pack-peddler and boot agent will bethere. They generally know all the villages, the leading families, and all the items of information that are important for the missionary's purpose. From them may be learned what families have sons in the west. A very important item that can be fruitful of good results if rightly used. Solomon says "He that would have friends must show himself friendly." Little courtesies and cards can be exchanged with guests. Coffee and crackers may open the way for catechisms, and tea for tracts. A blank book should be kept into which the names and description of the persons and their families may be entered for future use. They can be remembered with a New Year's postal card or an occasional tract. Arrangements can be made for a visit to their villages. When visiting such villages, however, they should not be promptly called upon until a messenger has been sent with a card. There are communities in which men who are secretly friendly to Christianity might not care to have the assiduous attentions of a missionary paid them publicly.

The nationalistic feeling should not be lost sight of as a means which may be turned to good account. The attitude toward it ought to be a sympathetic one. It is far better that it should have its dangers than that it should not exist. It ought not to be antagonized for it is a virtue, which on a right basis has God's sanction. In all our work as preachers we should remember that preaching publicly is allowed only as a matter of grace upon the part of the Government. Indeed, it is not altogether certain that missionaries for their work have any right of residence upon the foreign concessions in Tokyo and Osaka. In the country, where the foreign missionary takes part in them, public meetings ought to be always held under the auspices of the Japanese, the missionary preaching only upon invitation. In places where he is not well known he should first send in his card to the police head-quarters. Both preaching and conduct must be such as to convince the Japanese, that Christianity is the religion of all others that can alone put patriotism upon a right, and therefore an unchangeably enduring, foundation. This feeling may be used, also, for preventing the impression so fatal to the highest usefulness of Japanese Christians that it is a very appropriate accompaniment to Christian conversion to change the cut of their clothing, their customs, and manners. The Bible is not a fashion magazine nor a tailor's manual. But more especially ought this spirit to be made to consume the self-reliance and responsibility of the church in this land for the conversion of their country-men? This as well as other reasons ought to make us avoid prematurely renting permanent preaching places in the country. It should be the last thing thought of, if it has to be done with mission funds. After people begin to get interested they will spontaneously begin to cast about for such a place. For the average meetings of those beginning to take an interest in Christianity a room in a private dwelling house would be sufficient. As those interested increase in numbers, if they are not informed that they are not expected to do so, they will naturally set about looking up such a place. When a Kogisho is procured in this way, though it may take more time, yet the people will take a more patriotically Christian interest in it.

In order to achieve the progressive accomplishment of this work, it is necessary for the itinerant missionary to multiply himself through the agency of the brethren. In the last resort, under God, the conversion of Japan rests upon the Japanese Church. The Japanese Christians must be made to feel this fact and missionaries must have more faith in it. The native agency must be multiplied. First of all there must be a great increase in the number of unpaid agents. A great deal of this work, especially that which lies contiguous to Churches, may be engaged in by the voluntary efforts of Christian men and women who "abide in their calling," as the apostle puts it. To do this, however, it is not necessary for them to neglect their families and their business. Busy men and women are the kind needed. The pastors, or missionaries ought to form special classes of such persons and train them scripturally and practically for their work. Trained Bible women should train unpaid women workers. Officers of the church could use the Methodist class system to advantage, a system that has, with some modifications, been so successful in Spurgeon's work, as well as everywhere else that it has been tried. "Each man, woman, and child should be a learner from some one more advanced and a teacher of some one less advanced." There is a growing need of more Bible women, and of men who will fill about the same place in the work amongst men that Bible women do amongst their sex. They should be men of some age and experience amongst their own people, so providentially situated that they can be either wholly or at least partially employed in it. They should be grounded in Biblical knowledge and the fundamentals of theology. Their work should be wholly itinerating. Their selection and employment might include some such principles as these. (1).—They should not be employed until after they have been in Church connections for at least three years. (2).—They must have shown a willingness to do voluntary unpaid work. (3).—They should not be employed to do occasional work in their own Churches. (4).—They should not be employed without consultation with their pastors, or the more experienced Church members or officers, and never against their advice.

They should move on to other places just so soon as well qualified men can come into the pastoral oversight of the converts gathered.

The itinerating missionary, according to the demands and extent of his territory, ought to have one or more good men as his more immediate special collaborators. They could thus be in training in the work, by the work, for the work. He could despatch them here and there to different

parts of the field as occasion might demand. They could often accompany him upon his tours, and when with him, at home or in touring, could constantly be receiving his instructions. This was the method of the Master and of Paul.

For the training of this class of workers, while some might be so situated that they could take the two years course provided in some of the Theological Schools, yet the wants of the case may be, in most instances, met by station classes modelled after the Bible Women's Schools, short sessions for teaching the essentials and practical work, and the rest of the time in the field. In the larger towns the classes could occasionally combine for a week or ten days' course of lectures from professors in our various theological schools, something on the University extension method. It would be simply theological university extension.

For the multiplication of his missionary power there is one more matter of supreme moment, and that is the impression of the missionary himself upon his immediate co-labourers. This requires that the missionary Evangelist must be and do what he would have his native brethren do and become. This principle must extend to everything, even to his travelling pack, which should be as small as is consistent with health. He should be willing to climb and cross the steepest and roughest mountain to reach the obscurest village in the land if the cause would gain by it. He must not take a jinrikisha where he would have his co-worker walk, and the excruciating luxury of a kago ought seldom to be thought of. The missionary must learn to make himself as little trouble as possible to the hotel people. The younger and more modern his helper is the more should he be careful not to sin against this canon of conduct.

As the Japanese co-workers are those through whom the missionary is to work by impressing his own spirit upon them, it is absolutely necessary that there should be growing harmony between them. These workers from different nationalities made one by the blood of Christ must maintain that oneness in all sincerity. Where there is danger of friction, the duty devolves upon the missionary, as coming to this country to exemplify the gospel in his own life to yield, where no moral principal is involved. Now here it is a mere question of methods or policy, the missionary even should be confident that his own judgment is correct, ought nevertheless, after faithful instruction as to results, give way rather than have contention. The Evangelist must constantly remember that he has a missionary character to build up before the brethren with whom he comes in contact. The attainment of this is not a thing of a day, nor of a year, neither is it imparted "by the laying on of the hands of presbytery." It comes through the cultivation of the passive virtues of long suffering, patience, gentleness, and brotherly kindness. Such a character will ultimately win confidence and conquer respect. Our ideal of ruling must be our Lord's royal principle of ruling by service. "Ye know that the rulers of the Gentiles lord it over them, and their great ones exercise authority over them. Not so shall it be amongst you; but whosoever would be great amongst you shall be your minister; and whosoever would be first amongst you shall be your servant. Even as the Son of Man came not to be ministered unto, but to minister and to give his life a ransom for many." To undertake to make use of money allowances as a crank with which to turn the native machine will certainly confirm to the average missionary the great wisdom of our Lord's Command. One of the most touchingly beautiful things in our Lord's career was his relation to and training of the twelve in their evangelizing work and his relation to John the Baptist. The first year of his ministry was given up to the extension of the preparatory work which John had begun. Christ kept in the background his higher nature, and became simply the Baptist's co-labourer. He even retired from Judea to Galilee that his own work might not overshadow that of John the Baptist and subject it to criticism. Christ, always sustained to the twelve the relation of a *Paraclete*, one always at their side ready to respond to their call for help. "The most important part of their training was one which was perhaps at that time but little noticed, though it was producing splendid results, the silent and constant influence of His character on theirs." "It was this which made them the men they became," and sent them ultimately everywhere with a holy zeal. Christian character is the missionary's only power of control over and usefulness through his fellow labourers of the Japanese Church. Let this missionary character be the one object of attainment, and it will have a cumulative force in multiplying personal usefulness. It will be efficient in life, and it will be a planted tree that will "be growing" when one sleeps.

For the stimulation of the country Christians it would be exceedingly profitable to hold an occasional fellowship meeting with them. Pastors and workers from abroad should be called in for conference and exhortation on practical topics of Christian life and work. Where Christians are isolated, young in the life and work, such meetings could be made a great power for good in stirring them up to duty in their immediate vicinities, besides making them feel their oneness with the great body of the Church.

In order to induce the enlargement and secure the efficiency of the work it is needful that much attention be given to methods for evangelizing those classes in Japanese society whose employments and surroundings and aims tend to make them a unit. For example the fisherman form quite a distinct class. They have a common folk lore, many secular dialectical terms and idioms, common superstitions and objects of worship. They are hardy, brave, and generous. Their conduct toward shipwrecked sailors from different nations challenges the admiration of the world, and has received substantial recognition from the crowned heads of Europe and the Government of the United States. They can be gathered sometimes upon the sea shore amongst their boats and nets to hear the Gospel. They take very kindly to illustrative preaching, especially, when the illustrations are drawn from sea scenes and sea life. Boatmen are, also, an increasing class. Coasting steamers, river boats, and sail boats are constantly multiplying. The life of the majority of these men is an exceedingly hard one and its temptations many and great. Here is room for a few gospel-boats fitted up with reading rooms and other attractions. An occasional use of the magic lantern, and a baby organ with a few good singers would be very helpful. The tea drinking apparatus will be a general requisite. Preaching places ought to be located amongst them modelled somewhat after the Bethels and Seaman's Missions of other countries.

There is a wide field awaiting some judicious middle-aged woman or women. Visiting a Government Lazar-house several years ago with Dr. Osgood of China and a Japanese medical missionary, we were ushered into a large room where several hundred women, the diseased victims of licensed vice were assembled. They were engaged in knitting, sewing, and similar employments, while whiling away the tedium of the time until they could be returned to their old haunts and hells of social horror. Cannot industrial schools and homes for this class be undertaken, and efforts be thus made to gain them to our Lord? A sufficient number of such women have been converted to justify hopes of success. They will need to be taught useful arts and employments in order that they may be helped in their fight against the social pressure and temptations growing out of their first condition. There are also the Eta villages, coolies, factory hands, the prisons, that all need to be considered and reached in some way.

In each theological school the chair of practical theology ought to be reinforced by an additional teacher, who shall thoroughly study this whole evangelistic problem. He should take the students of the advance classes into practical training in actual evangelistic work and instill into their minds methods which shall take in all classes. The instructor should be entirely devoted to the work in his own city and its surrounding places. It should be the "Chiries" of the theological school.

As greatly assisting the evangelistic work in the town, there is need of and room for the gradual development of the Institutional Church, adapted to Japanese conditions. A pastor of one of these Churches defines it as "one which, with a suitable corps of workers, and a varied equipment, aims to educate and confirm people in the love of all that is pure and lovely and of good report. Its object is to save the whole man: and it believes that there is in salvation everything that makes a man more nearly what he is designed to be. It should begin with people just where they are: meet the needs which they are conscious of, and so generally lead them to be conscious of needs higher and nobler. Some general lines will be friendliness and sociability, charitable aid, aid to self-help; the ministry of music and art; the simple and urgent preaching of the deepest and most aspiring truth we can possibly attain to.

There are three things which our Lord emphasized as important in seeking to win men to Him. The unity of His followers, the indwelling of His spirit, and good works. The Institutional Church is an exemplification of the Christ Spirit coming under the latter head. The maintenance of reading rooms, ragged and industrial schools, kindergartens, homes and rescue work in outcast districts, orphanages, nurseries for the sick, nurseries

where the babies of working woman can be kept while the mothers are out for day labour and other forms of Christian charity. Such Churches would be in accord with the genius of the Japanese people and in harmony with the word of God.

The principles and results that these churches have in common, as summarized by a student of them in America, are these. (1).—They aim to provide for the social needs as far as financial power permits. None of them regard their equipment as adequate to the work growing up around them. They feel an absolute call to give facilities in up-building to the scores they are winning to the Master. (2).—They keep the doors open all the week. No man finds these Churches locked at any reasonable hour. They are the home of the rescued, the refuge of the tempted, the centre of opportunity for Christian workers, the meeting place of Philip and Nathaniel, those who have seen the Saviour and those who have not. (3).—They accompany the regular preaching by evangelistic efforts, choosing themes calculated to lead to conversion, presenting them in direct, forceful, simple fashion and following an evening sermon by an after meeting. They employ evangelists. All of the pastors themselves are possessed of a rich evangelistic spirit.

In Japan the nearest approach to such an institution is the Central Tabernacle of Tokyo, under the auspices of the Canda Wesleyan Mission, Dr. C. S. Eby in charge. Its success is an indication of possibilities in such a work. In some places, as the Osaka Church, Rev. Mr. Miyagawa pastor, the boys and girls schools have brought many under Christianizing influences and many most useful converts have been gathered in. The Spiritual life, and the range of the Evangelistic work of some Churches has been greatly helped and extended by means of orphanages and ragged schools. Such Churches may be in danger of secularization, but this cannot be if it is made a means of Evangelism and the Evangelistic spirit is made to be the sub-base that is heard all through it. Actual experience thus far proves that the most powerful effect of all is the exaltation of the preaching of the Gospel pure and simple to the masses they gather in, and the adoption by the Church of direct and regular evangelistic Methods.

While the situation in Japan is unique, yet we can ever have our minds open to methods that are successful elsewhere, and especially in Christian lands. Such as renting a column in the most popular dailies to be placed under the editorial management of some live sensible Japanese brother for propagating Christian truths; simultaneous meetings at suitable seasons, throughout the city with direct efforts at conversion, and the development of Christian Endeavour Societies modified to suit Japanese surroundings.

CHINA'S DECLARATION OF WAR.

A Chinese correspondent of the *North-China Daily News*, writing from Peking, 1st August, 5 p.m., says:—

The following Edict was issued to-day by the Throne:—

Korea has been our tributary for the past two hundred odd years. She has given us tribute all this time, which is a matter known to the world. For the past dozen or so years Korea has been troubled by repeated insurrections, and we in sympathy with our small tributary have as repeatedly sent succour to her aid, eventually placing a Resident in her capital to protect Korea's interests. In the 4th moon (May) of this year another rebellion was begun in Korea and the King repeatedly asked again for aid from us to put down the rebellion. We then ordered Li Hung-chang to send troops to Korea, and they having barely reached Yashan the rebels immediately scattered. But the *Wojen* (an ancient name for Japanese, expressive of contempt), without any cause whatever, suddenly sent their troops to Korea, and entered Söul, the capital of Korea, reinforcing them constantly until they have exceeded ten thousand men. In the meantime the Japanese forced the Korean King to change his system of government showing a disposition every way of bullying the Koreans. It was found a difficult matter to reason with the *Wojen*. Although we have been in the habit of assisting our tributaries we have never interfered with their internal government, Japan's treaty with Korea was as one country with another; there is no law for sending large armies to bully a country in this way, and compel it to change its system of government. The various Powers are united in condemning the conduct of the Japanese, and can give no reasonable name to the army she now has in Korea. Nor has Japan been amenable to reason, nor would she listen to the exhortation to withdraw her troops

and confer amicably upon what should be done in Korea. On the contrary, Japan has shown herself bellicose without regard to appearances, and has been increasing her forces there. Her conduct alarmed the people of Korea as well as our merchants there and so we sent more troops over to protect them. Judge of our surprise then, when, half-way to Korea, a number of the *Wojen* ships suddenly appeared and taking advantage of our unpreparedness opened fire upon our transports at a spot on the sea coast near Yashan, and damaged them, thus causing us to suffer from their treacherous conduct which could not be foretold by us. As Japan has violated the treaties and not observed international laws, and is now running rampant with her false and treacherous actions, commencing hostilities herself, and laying herself open to condemnation by the various Powers at large, we therefore desire to make it known to the world that we have always followed the paths of philanthropy, and perfect justice throughout the whole complications, while the *Wojen* on the other hand have broken all the laws of nations and treaties which it passes our patience to bear with. Hence we command Li Hung-chang to give strict orders to our various armies to hasten with all speed to root the *Wojen* out of their lairs. He is to send successive armies of valiant men to Korea in order to save the Koreans from the dust of bondage. We also command the Manchu Generals, Viceroy, and Governors of the Maritime Provinces, as well as the Commanders-in-Chief of the various armies to prepare for war and to make every effort to fire on the *Wojen* ships if they come into our ports, and utterly destroy them. We exhort our Generals to refrain from the least laxity in obeying our commands in order to avoid severe punishment at our hands. Let all know this Edict as if addressed to themselves individually. Respect this!

IN A CHINESE THEATRE.

If you want to be amused, and have a large stock of patience and nothing better to do, go to see a play acted in a Chinese theatre, such as may now be found in every large town on the Pacific Coast of America. You will find it most entertaining, and are moreover, certain to gain, if nothing else, an enlarged view of the possibilities of the drama. You must, however, be willing to play your part as one of the audience thoroughly, if you wish to learn anything. It would be worse than useless to go merely to gaze blankly and blandly for a few moments, like a supernumerary, and then to disappear for ever and for ever. A short stay could only result in wrong impressions—you would come away amused and vain—you would "feel good" about it: your race-pride would be flattered, and you would say to yourself, "What queer nonsense! What dull folk to enjoy it!"

Exactly so! Once I was in the company of some Japanese sailors watching "Hamlet" played at the chief theatre in San Francisco. They were astonished—men and women actually fondled each other on the stage! Such immodesty distressed them: they were not used to it, in public. And then the play was such a ridiculous jumble! No one could make any sense of it, nor tell what it was all about; so they soon grew tired and came away.

In this case of course we know that the fault was not in the play, but in the spectators; and is it not just possible that you yourself have been at fault sometimes with regard not to plays only, but to various other matters as well? Have you never given judgment where you lacked sympathy? Do not be surprised, then, if, when you come to watch the Chinese actors, much of what they do should seem meaningless and foolish. Remember that their art was not framed for your particular amusement, but has grown up without one thought of you. And indeed what possible right have you to come with your ready-made tastes and condemn it because it is not what you are used to? Hosts of people are used to it, and their preference may well outweigh your condemnation, "beir of all the ages" though you be. Besides, if you could only view it aright, for all what you call the buffoonery of the actors, the play itself may be a veritable Chinese "Hamlet" for wisdom and beauty. At any rate act on that supposition, and sit till you can prove its truth or untruth.

But I said you would need patience, and you will! To see the whole play you will have to come at four in the afternoon and stay till midnight. You must not stir: there are no intervals, and you might "mar all by this starting." You must watch intently the exits and entrances, note the disguises and transformations. An actor who has gone out scantily clad may reappear in flowing robes fourteen feet in circumference with a gorgeous golden crown four feet high, but you must be

able to recognise him; you must look beyond the streaming beard and moustache that hang so oddly in front of his face like a veil. You must not be deceived by appearances: "there are cozeners abroad." That hero is not necessarily dead because his head has apparently been cut off—it may be he has only suffered enchantment; nor this man be alive because he is stalking round the stage with the others,—there are such things as spirits and dreams, and this man may perchance be a dream or a spirit.

If you need an interpreter, find out a friendly Chinaman in the audience who can speak a little English—a washerman or a domestic servant—and sit near him. Then, when a new character appears, you can make your inquiries. You may learn "him allee same good, him all light," and feel confidence in him accordingly; or it may be that your neighbour's opinion is unfavourable, and he thinks "him heap bad, him all same debil," when you will expect to find the new comer doing wickedly, even though he have no black and white paint on his face. Thus you will be able to separate the sheep from the goats.

But if you are very sensitive or quick-tempered it will be best to keep away from these theatres. You may find, as I did once in Victoria, Vancouver's Island, that suddenly the rows of glistening heads around you are all turned so that their owners might cast their oblique looks upon you, full of enjoyment and satisfaction because of some joke that the chattering comedian upon the stage has broken over your unconscious head; and this might destroy your self-possession and lead to consequences. When one's skin is white one does not take such insolence well from heathen people.

In watching the play be careful to disregard the mannerisms of the actors: every stage is stagey. Do not allow yourself to be annoyed by the set, stalking gait, the short, quick stride, and the ridiculously sudden wheeling about of the men, nor by the distressingly affected and mincing airs of the ladies. Heed not that constantly recurring, rapid, curving fling of the leg, which seems to twist that member almost into a knot: the movement may not be meaningless to the initiated, though it seems so to you. Learn to find pleasure in the lithe neatnesses of the actors, and in the quick, delicate movements of the wrist and hands with which they follow the music,—for there is music, and much of it, and a very important and characteristic part it plays. It is a mass of sound, forced from gongs and cymbals—several of each, perhaps, manned vigorously—from tomtoms, from curious loud fiddles, from mouth-instruments that emit a blare louder than a trumpet, and from twanging instruments with strings. Loud noises come from all: the sound varies, but never ceases: it is incessant and stunning. Also it is Wagnerian and expresses sentiments: there is a love-motif on the cymbals, sorrow on the gong, joy on all the instruments together. Warriors enter to the clarinet and gong: marriages are celebrated on the gong: conversations, combats, deaths,—all require the gong. The gong is always with you. It drowns the voice of the singers, though this will not cause you any additional sorrow, since the high screeching *falsetto*, which all the actors use except the low comedians, is not melodious to English ears. At first this noise will cause you pain, uneasiness, confusion; but be patient, and gradually you will become accustomed to it. It will form an undertone to everything, like the sea, and you will come to regard it as a necessary constant, and feel a void when it stops. Its influence over you will be greater than you imagine: you will find little fragments of airs afterwards passing through your mind that you do not remember to have noticed in the din.

Certainly you must have patience—great patience. You must be prepared to witness endless repetitions: *da capo* stands over everything, even over mortal combats, deaths, and executions. No need for you to applaud, or shout *encore*! Sit still, and you will see every action repeated over and over and over again, so that you can never forget it.

There is no scenery, but you will find something to admire in the richness, the variety, and picturesque quality of the costumes and in the grotesque masks that are sometimes used. The terrible painted faces of the bad men and comedians will amuse you; and you will notice no doubt that the ladies' faces are tinted with the colours you are familiar with, but that the pinkness covers the temple instead of the cheeks.

Then, as you are a mere ignorant spectator, unlearned in the language of the Chinese, and in their myths, legends, and histories, you will soon have a most engaging series of problems to solve, as you labour to follow the plot.

Two heroes have been fighting—why and with what result? Is either dead? And if so, which of them? The man in magnificent raiment, with

the earnest face, why does he warble so often and so painfully above his loose moustache? Are they mere ballads he sings to please the audience, or does his theme carry forward the plot? The grave old gentleman with wings in his helmet—is he a terrestrial or a celestial? And the superior personage who makes such fitful entrances—is he from above or below? What relationship exists between the two ladies? Is the elder a sister, or a mother, or a mother-in-law? Do Chinese doctors always prise open the jaws of their reluctant patients with a short stick, before they administer doses? Whence this sudden accession of strength to the persecuted man, which enable him to become all at once the persecutor? Has the doctors' medicine, or his own long prayers, caused the grateful change?

Many things like these will trouble you and you will form many false theories that will fall to the ground as the play goes on; but if you hold fast to the leading characters, giving them names of your own for reference, and closely follow their movements, you will emerge victorious at the end; and, unless your experience differs from mine, you will come away with the outline of a remarkable and often quite pleasing story in your mind. To you it is as though the play were in dumb show and you must exercise your judgment in interpreting what you see. Amid a jumble of acrobatic performances and much pantomimic buffoonery, you will come here and there upon scenes full of dramatic force, scenes that, with very little alteration, would be considered powerful even on a European stage. Glimpses of pathos and humour, of dignity and force, will sparkle out occasionally, and remain pleasantly in your memory after the rest is forgotten.

Let me give some instances from my own experience. I will begin with a pathetic piece that I saw once in Victoria, Vancouver's Island, which shall be called "Two Broken Hearts." A maiden sits weeping on the stage. Her father, once a powerful mandarin, has had to fly with her from bitter enemies who still pursue them. She had fallen blind through the witchcraft and wicked spells of their persecutors, and, in their long flight, has been guided by grasping the shaft of her father's spear. Now they have come, without friend or follower, to a desert place, and she has sunk down exhausted. Her father leaves her to rest for a few moments, while he goes out to reconnoitre; and she sits chanting a mournful song, meanwhile moving her hands aimlessly over the ground. Her fingers touch something: it is the handle of her father's sword, and, as she clutches it, her song suddenly stops. She shivers as she raises it and tries its keen edge; and then once more her song commences, more mournfully even than before. But it is soon stopped for ever, for she suddenly drops her neck over the edge of the sword, and quietly dies. Her father, who is close at hand, rushes frantically forward to prevent her, but too late. In his wild grief he snatches up the sword, stained with his darling's blood, and turns back desperately to meet his pursuers. Soon he returns with an arrow buried deeply in his shoulder, which he painfully draws, and dies, and so the scene ends.

As to humour, I have heard it said that the Chinese have no sense of humour, but I do not believe it. What else is it that I have sometimes caught gleaming in the bright eyes of bland, grave house-servants? What else has caused the deep, low chuckle, coming from somewhere lower than the throat, that I have heard run through a group of Chinamen as they listened to the jocose narrative of a friend's doings? Perhaps the form their humour takes upon the stage will hardly satisfy the western standard. Here is a sample which I saw in the "Big Grand Theatre" at San Francisco. It shall be called "The Ghost who hated Boreas." The hero, a sea-captain, comes in and seats himself at a table to write; but he is heavy with sleep, his head soon droops, and he falls into a peaceful slumber. But scarcely has his nap begun when he is disturbed by the hasty entrance of a breathless fellow who begins, with an air of great consequence, to pour out a long tale of not the slightest importance. The captain listens for a time with wide open eyes, but when he finds that the story has settled down into an uninterrupted singsong which shows no prospect of reaching an early conclusion, he tries to break the thread of the narrative. All in vain, for the tedious fellow represses his interruptions with a deprecatory wave of the hand, and goes on his monotonous way with head thrown back and eyes half closed in an ecstasy of delight at having secured a listener. After a time the captain submitting to the inevitable, adopts the wisest course in the circumstances, and dozes off to sleep again. The bore is so satisfied with himself, and so engrossed in his tale, that he never notices this, and still goes on, see-saw, sing-song, with never a stop till the audience (or at least one of them) grew as

weary as the captain. But a mysterious avenger is at hand. A limping ghost of horrible appearance, who remembers his own suffering on earth, hops in unseen to befriend the captain. He squats silently behind the chair of the story-teller, holding the club he carries in readiness to strike, while that worthy is still quite unconsciously jabbering his interminable nonsense. Once the club is raised threateningly over him, and twice, and yet he goes on: then a thundering stroke descends on his shoulders which stop his voice so suddenly that it leaves him with open mouth in the middle of a word. In comical terror he gazes about in vain attempts to find out whence the blow came, then, in amazement seizes the sleeper and rouses him to tell of this terrible new affair. But the captain listens with hazy inattention, evidently thinking it some more of the same tale, and dozes off again immediately. The bore, abandoned now to the tender mercies of the spectre, runs hither and thither in horror, adopting first one plan and then another to discover or avoid his invisible assailant; but the ghost crawls after him wherever he goes, now clubbing, now clutching him, until at last the poor wretch makes his escape half dead with fright, and the captain is left to sleep in peace, while the ghost curls up by his side like a faithful dog whose labours are done.

What an example for European ghosts! And what a sphere of usefulness for ancestral spectres is here indicated! Surely it would pay to import a Chinese ghoul of this kind to instruct our gibbering idiotic phantoms in their duties. Indeed this ghost was in every way a model ghost, and that man might count himself rich who could boast the friendship of such a one. For the faithful thing laboured in the interests of its friend all through the play. The captain had much heavy fighting to do; and whenever a combat took place the brave phantom was always at hand to hover on the outskirts of the fight, like Mephistopheles, and put in blows with his terrible club upon the enemy whenever an opportunity occurred.

I have seen occasional touches of Rabelaisian coarseness in their humour, as when, in Victoria, the comedian professed to play the prank of Gargantua in Paris upon the orchestra; but in spite of this in the scenes between the sexes the acting is really refined and delicate.

Nor must you think that there is no dignity in these plays. I have watched many graceful and impressive tableaux, and I was always pleased with the rather frequent altar-scenes, when prayers and oblations were offered by the characters of the drama. In one case I heard the audience join, with a low hum, in chanting a prayer which was evidently familiar to them. And the following scene that I saw in the chief theatre at San Francisco, was incomparably more impressive than the angels at the Lyceum. There entered in solemn state a procession of superior persons—deities, perhaps, or kings, or ancestral spirits—in magnificent raiment, with wings to their towering helmets and shoulders. With grave majesty they ranged themselves silently around their leader, who uttered a few impressive words to which they replied in curt ringing sentence, or by simply nodding the head in silent acquiescence; then solemnly and mysteriously the procession filed out again and was seen no more. I felt that in those brief sentences, the doom of men and of nations had been pronounced; and I did not wonder at the awesome effect that the scene produced on the audience.

Thus, all through, amid much that is pantomimic and tedious you will find little fragments of better things that will encourage you, and make you wish to know more. And when you have watched the whole play, and, by translating the dumb show and piecing together your notes and recollections, have come to have an idea of what the plot may be, you will find a perfectly logical and connected story, at least as good as those that form the bases of many a modern melodrama; and you will possibly conclude that the drama itself has a merit greater than that of the actors therein, whose whimsical doings, along with the enthusiastic energy displayed by the gong-player and orchestra generally, will send you out into the open air at midnight with a peculiarly confused feeling in the head as though a large number of fantastic dreams had been holding high holiday there. —G. W. LAMPLUGH, in *Macmillan's Magazine*.

A letter from Algeria in the *Débats* states that missions of English girls are being pushed forward in Kabylia, and that these fair missionaries teach the native to write, and set up in their copy-books such pernicious maxims as these, "I should like to have myself naturalised as an Englishman." For the present the *Débats* is willing to regard this as a joke; but it warns the Englishman that he must not go too far.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The following is the fifty-eighth report of the Court of Directors to the ordinary half-yearly general meeting of shareholders to be held at the City Hall, Hongkong, on Saturday, the 18th August, at noon:—

GENTLEMEN,—The directors have now to submit to you a general statement of the affairs of the Bank, and balance-sheet for the half-year ending 30th June, 1894.

The net profits for that period, including \$115,290.83, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to \$1,256,856.08.

The directors recommend the transfer of \$300,000 from the profit and loss account to credit of the reserve fund which fund will then stand at \$4,500,000.

In connection with the Praya Reclamation Scheme, the portion in front of the Bank's premises here is now complete. The cost, \$60,000, has been debited to profit and loss account. This land, now standing in our books clear, will no doubt ultimately prove a valuable asset; in the meantime it is not the Bank's intention to either sell or build upon the site.

After making these transfers and deducting remuneration to directors, there remains for appropriation \$886,856.08, out of which the directors recommend a dividend of one pound per share, which will absorb \$355,555.55.

The difference in exchange between 4/6, the rate at which the dividend is declared, and 2/1½ the rate of the day, amounts to \$404,840.49.

The balance \$126,460.04 to be carried to new profit and loss account.

AUDITORS.

The accounts have been audited by Mr. F. Henderson, Mr. A. G. Wood, and Mr. S. G. Bird.

C. J. HOLLIDAY, Chairman.

Hongkong, 2nd August, 1894.

LATEST TELEGRAMS.

REUTER "SPECIAL" TO "JAPAN MAIL."

London, August 6.

Sir Edward Grey has stated that the Japanese Government has promised that no warlike operations shall be undertaken by its forces against Shanghai or the approaches to that port; and China has also agreed that the approaches to Shanghai shall not be obstructed. Combatants will have no right to interfere with neutral vessels unless an effective blockade has been duly notified. It will be impossible to define contraband of war, but it will not be for combatants to decide what is to be held as contraband of war regardless of the rights of neutrals.

London, August 9.

The *Vigilant* has been twice defeated by the *Britannia* at Cowes.

Jabez Balfour has been extradited by the Argentine Government.

"SPECIAL" TELEGRAMS TO "JAPAN MAIL."

Nagasaki, August 4.

Her Majesty's ship *Severn* left this port on Tuesday last for Tushima to meet the British Squadron, which was bound to Chemulpho, and reported the loss of the steamer *Kowshing* to Admiral Fremantle. On receiving the report the Admiral ordered the *Alacrity* to proceed to Sasebo and demand the release of Galsworthy, Tamplin, and another Englishman recently belonging to the *Kowshing*. The *Alacrity* arrived here yesterday, and was on the point of leaving for Sasebo, when it became known that the Japanese Authorities had already ordered the prisoners to be taken to Nagasaki. They are hourly expected here, and the *Alacrity* is awaiting their arrival.

Nagasaki, August 5, 5.35 p.m.

Captain Galsworthy has arrived here, and his report of the *Kowshing* affair is entirely in favour of the Japanese. He says the *Kowshing* was not connected with the Chinese war-ships, and he has no knowledge of the naval fight, but, being helpless, he offered to surrender his vessel. To this the Chinese Generals objected, and threatened his (Galsworthy's) life. The *Naniwa*, after due warning, fired a torpedo, but this missed the object, whereupon broadside and machine guns were brought to bear upon the *Kowshing* until she sank. All the Europeans and many of the Chinese jumped overboard, and these were fired upon by the Chinese who remained on board. The quartermaster is still under treatment at Sasebo, for a wound in the neck, and Muhlenstedt is still a prisoner at Sasebo. The captain and mate are all right.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS."]

London, July 28.

The French Chamber of Deputies has passed a bill for the punishment of incitement to anarchy and for the suppression of anarchist propaganda in the press.

July 31.

Mr. Sydney Charles Buxton, Parliamentary Secretary to the Colonial Office, in reply to a question in the House of Commons, in regard to the military contribution of the Straits Settlements, stated that the matter was receiving the special consideration of the Treasury, and that there was every reason to hope for a speedy conclusion of the matter.

The *Novoe Vremya* states that Russia will never permit the occupation by Great Britain of Port Hamilton, whereby that Power would be enabled to create a new Gibraltar, dangerous to the Russian Navy and menacing to Russian possessions in the East.

(FROM THE "N.C. DAILY NEWS.")

London July 31.

Sir Edward Grey (Under Secretary of State for Foreign Affairs) in reply to a question in the House of Commons, said that British interests in Siam consisted in upholding the independence of the country and securing the "most

favoured nation" treatment. The British Government relied on the assurance given by France that the occupation of Chantaboon would not be indefinitely prolonged.

The *Times* correspondent at Peking wires that Li Hung-chang, being interviewed, said that if war was once declared the Chinese would fight to the bitter end.

Great Britain has notified neutrality. Lord Spencer, First Lord of the Admiralty, has issued a warning to British ships to carry no troops or munitions of war, and instructed Admiral Sir E. R. Fremantle on the China Station, to concentrate his ships at Chinese and Japanese ports in order to watch British interests.

London, August 3rd.

It is reported that two thousand Japanese were killed in the fighting which took place on the 27th and 28th ult., at A-San. The *Times* states that twenty thousand Chinese have entered Korea from Manchuria.

Russia and England are desirous to act in complete accord in regard to their diplomatic action for settling the conflict between China and Japan. It is stated semi-officially at St. Petersburg that, if their efforts fail, Russia is determined never to allow any Power to take even a partial possession of Korea.

(FROM TONGKING PAPERS.)

Paris, July 24.

The Chamber has voted articles two and three of the Anti-Anarchist Bill. The Socialists raised a tumult, alleging that Casimir-Périer influenced the Cabinet.

The trial of Cesario Santo has been adjourned until the 2nd August.

Paris, July 25.

The Chamber has voted articles four and five, after a stormy debate, the moderate Radicals exchanging insults.—*Daily Press*.

(FROM JAPANESE PAPERS.)

Kumamoto, August 9.

A strong earthquake was felt here at 19 minutes past 11 o'clock last night, and 29 after shocks occurred up till noon. No damage was done in the town. Nothing is known as to the results of the shock in the rural divisions.

Yamaguchi, August 9.

A violent shock of earthquake was felt here last night.

Miyazaki, August 9.

A severe earthquake occurred here at 12 o'clock last night.

Nagasaki, August 9.

A rumour is current that the Captain of the *Kowshing* has asked the British Consul at this port to open a Marine Court of Inquiry to examine into the circumstances of the loss of the transport.

Shanghai, August 9th.

It is said that another Imperial order has been sent to General Lien Ming-Chang calling him up to Peking. It is not known whether he will answer the call or not.

Kyoto, August 10.

A serious dispute in connection with the water privileges occurred on the 8th inst. between one hundred and fifty residents of Ayabecho, Tango Province, and one hundred and seventy farmers living in the neighbourhood of the above town. The men were scattered by the police before they could attack each other.

Kumamoto, August 10.

The violent earthquake of the 8th was strongly felt in every rural division around here, but no loss of life has been reported. In Kikuchi District a stone bridge was partly destroyed, and cracks were made in the walls of godowns. Some residents, who attempted to leave their dwellings, sustained slight injuries.

Nagasaki, August 10.

The captain of the *Kowshing* and others left here for Hongkong on the 8th.

Utsunomiya, August 10.

Severe gales and heavy rains have been experienced since the day before yesterday, and various rivers are expected to overflow shortly.

Shimonoseki, August 10.

The remains of Major Koshi and Ensign Matsuzaki arrived here from Korea yesterday, and were at once sent up to Hiroshima.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 133.

- WHITE. BLACK.
- 1—R to Q B 7 1—P x Kt
2—R to R 7 ch. 2—K to B 3
3—Kt x P, mate if 2—K to Q 5
3—Q to Kt 4, mate 1—K to Q 5
2—R to B 4 ch. 2—K x R
3—Q to Kt 4, mate if 2—K to K 4
3—Q to K 4, mate 1—P to K R 3
2—K x Kt P 2—K x Kt (K 6)
3—Q to K 4, mate if 2—K x Kt (Q 5)
3—Q to K B 5, mate.

Correct answers received from Digamma, W.H.S., J.D., and Shogi, who all remark upon the beauty of the variation resulting from Black's move 1—P to K R 3.

Problem 132.—Correct solutions have also been received from Shogi and Blanco.

PROBLEM No. 135.
By W. A. SHINKMAN.

White to play and mate in three moves.

Mr. C. H. McGEE.

The Tokyo Chess Club suffers a severe loss in the departure of its Secretary, Mr. C. H. McGee, to fill a position in one of the Canadian colleges. A sound and steady player, Mr. McGee could always be trusted to give a good account of himself, and in the first match between the Yokohama and Tokyo Clubs he came out with honours divided in playing against Mr. Balk, the Yokohama champion. The local clubs will find it no easy task to replace players of such calibre as those they have recently lost.

The Chess manuals of our youth spent much time and space in examining Philidor's defence (2—P to Q 3) in the King's Knight's opening. It was a favourite with the great Morphy, who played it successfully in many of his match games, and was always thought to give Black a safe though close game. Steinitz, however, in his Modern Chess Instructor, fights on the other side, and gives a series of moves which, he claims, must result in White having the advantage. We give a specimen, exemplifying the ex-champion's views on the point.

GAME No. 149.

PHILIDOR'S DEFENCE.

(NOTES BY W. STEINITZ.)

- WHITE. BLACK.
- Steinitz. Rainer.
- 1—P to K 4 1—P to K 4
2—K Kt to B 3 2—P to Q 3
3—P to Q 4 (best) 3—P to K B 4

This move was recommended by Philidor and favoured by Morphy.

- 4—Q P x K P 4—B P x P
5—Kt to K 5 5—P to Q 4
6—P to K 6

Q Kt to B 3 at once reduces the option of Black to 6.....
If to Q B 3 or B to Q Kt 5 and both are unfavourable for the defence.

- 7—Q Kt to B 3 7—P to B 3
8—K Kt x K P 8—P x Kt

B x P was no doubt better for Black, but in that case also White obtains the advantage.

- 9—Q to R 5 ch. 9—P to Kt 3
10—Q to K 5 10—R to Kt sq.
11—Q B to K Kt 5 11—Q to Q 3

If 11..... Kt to Kt 4, Q to B 4 wins, or if 11..... Kt 3, 12—Castles (Q R to Kt sq.)

- 12—R to Q sq. 12—Q x P
13—B to Q B 4 13—K Kt to Q 2
Of course if Q x Q White mates by R to Q 8.
14—B x Q 14—Resigns.

It is generally understood that Chess is one of the favourite pastimes of monarchs, warriors, statesmen, etc. But it does not always follow that they are experts in the mimic warfare. We clip the following from a contemporary.

Ludwig Bachmann is the author of a book recently published in the German language on the science of chess. The book contains a number of games which should interest every devotee of the game, not so much on account of the excellence of the play as on account of the notability of the players. These include such men as Roy Lopez de Signora, Jean Jacques Rousseau, Louis Francois de Bourbon, and Napoleon the Great. Two games played by Napoleon are reproduced below:

GAME No. 150.

(Played at Malmaison, March 20, 1804.)

- WHITE. BLACK.
- Napoleon I. Mme. de Remusat.
- 1—Q Kt to B 3 1—P to K 4
2—K Kt to B 3 2—P to Q 3
3—P to K 4 3—P to K B 4
4—P to K R 3 4—P x P
5—Q Kt x P 5—Q Kt to B 3
6—Kt to K 5? 6—P to Q 4
7—Q to R 5 7—P to Kt 3
8—Q to B 3 8—Kt to R 3
9—Kt to B 6 ch. 9—K to K 2
10—Kt x Q P ch. 10—K to Q 3
11—Kt to K 4 ch. 11—K x Kt
12—B to B 4 ch. 12—K x B
13—Q to Kt 3 ch. 13—K to Q 4
14—Q to Q 3 mate.

GAME No. 151.

(Played at St. Helena about 1820.)

- WHITE. BLACK.
- Napoleon I. Gen. Bertrand.
- 1—K Kt to B 3 1—P to K 4
2—P to K 4 2—Q Kt to B 3
3—P to Q 4 3—Kt x P
4—Kt x Kt 4—P x Kt
5—B to B 4 5—B to B 4
6—P to B 3 6—Q to K 2
7—Castles 7—Q to K 4
8—P to K B 4 ch. 8—P x P
9—K to R sq. 9—P x P
10—B x P ch. 10—K to Q sq.
11—P x Q 11—P x R (Q)
12—B x Kt 12—B to K 2
13—Q to Kt 3 13—P to Q R 4
14—R to B 8 ch. 14—B x R
15—B to Kt 5 ch. 15—B to K 2
16—B x B ch. 16—K x B
17—Q to B 7 ch. 17—K to Q sq.
18—Q to B 8 mate.

REPORTS.

The Japanese steamer *Miike Maru*, Captain W. Thompson, reports:—Left Otaru the 2nd August at 7.30 p.m., Shirakami the 3rd at 11.45 a.m., Shiriyasaki at 4.10 p.m.; passed Kinkasan the 4th at 9.47 a.m., Inuboye-saki the 5th at 12.50 a.m., Noshima at 9.56 a.m.; had fine weather and light variable winds to Inuboye-saki; thence to Noshima calm and foggy; thence to port light airs and fine weather. Arrived at Yokohama the 5th August at 2.15 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Nagasaki the 3rd August at 4.52 a.m. and anchored at Shimonoseki the same day at 3.45 p.m. Left at 10 p.m.; on the 4th at 10.45 a.m. passed steamer *Niigata Maru* outward bound; at 11.30 a.m. passed steamer *Hinode Maru*; anchored at Kobe at 5.3 p.m. Left Kobe the 6th at 4.10 a.m. and proceeded toward Yokohama, where we arrived the 7th August at 6.20 a.m.; had fine passage throughout with light and moderate breezes.

The British steamer *Victoria*, Captain J. Panton, R.N.R., reports:—Left Tacoma, Wash., the 24th July at 9 a.m., and *Victoria*, B.C., the 25th July at 3.30 a.m.; had light to moderate winds and much fog prevailed throughout the passage; crossed the meridian on the 31st July in lat. 51° north; passed Company's steamer *Tacoma* on the 5th August in lat. 44.09 N., long. 159.16 E.; passed P.M. Co.'s steamer *China* the 7th at 7.45 p.m. Arrived at Yokohama the 8th August at 2.30 p.m. Time on passage, 13 days, 17 hours, 28 minutes.

LATEST COMMERCIAL.

IMPORTS.

War operations have taken the life out of all markets. It is naturally to be supposed that when the country in at war trade will be disorganised; but there are some things which should be in demand, notably Blankets for the troops. Iron and steel for military purposes, etc. But no transactions of moment are done in anything and all is flat, stale, and unprofitable.

METALS.

Market unchanged. Small business indeed with no prospect of any immediate change for the better. War, tight money, high interest, hot weather, all fight against the trade at present.

	PER POUND.
Flat Bars, 4 inch	\$3.35 to 3.40
Flat Bars, 3 inch	3.45 to 3.50
Round and square up to 2 inch	3.45 to 3.50
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.70 to 4.85
Galvanized Iron sheets	9.40 to 9.60
Wire—Galvanized	6.00 to 6.25
Thin Plates, per box	5.80 to 6.00
Silicon No. 1, Illinois	1.60

KIKOSNRK.

Further vessels have come in from New York, and the stock is apparently ample. But from Tokyo a higher market is reported, and as there is some doubt as to future supplies being near at hand the market has risen: Holders are strong, and we have advanced our quotations.

Chester	1.72½ to 1.75
Comet	1.70 to 1.72½
Devote	—
Russian Anchor	1.70 to 1.72½
Russian Moon	1.67½ to 1.70

SUGAR.

Market well nigh stagnant. Quotations nominally maintained, and both sides take up a post of observation for the present. Dealers will not operate owing to the uncertain nature of present demand, and importers are not pushing sales until they know whether the naval operations will prevent supplies from coming up.

	PER PICUL.
Brown Takao	\$4.60 to 4.65
Brown Manila	5.20 to 5.30
Brown Daitong	3.40 to 3.45
Brown Canton	3.70 to 4.40
White Java and Penang	7.20 to 7.40
White Refined	7.60 to 9.90

EXPORTS.
RAW SILK.

Our last issue was of the 3rd instant, since which date settlements on this market amount to 753 piculs, divided thus:—*Hanks*, 32 piculs; *Filatures*, 597 piculs; *Re-reels*, 92 piculs; *Kakada*, 32 piculs. Direct shipments have been 172 bales, making the total settlements of the week somewhere near 900 piculs.

There has been a fair amount of enquiry and the market generally has been pretty steady. Holders, however, seem inclined to sell, and in one or two cases have taken some reduction in price. The forward settlements on the Produce Exchange also show considerable falling off, both in quantity and price, so that we predict a lower market all round. Stock increases, the war causes money to be tight and interest on native loans is advancing rapidly, to say nothing of the probability that many industrial loans will be called in and the money used for military purposes. These things combined make dealers anxious to quit their stocks and a bold operator might get silk at less than quotations.

New Crop.—Nothing further to be said. It is probable that the out-turn will, in the aggregate, be fully as much as was anticipated; and the reported shortage in *Kakada* sorts is not confirmed by the course of the market.

There have been three shipping opportunities since we last wrote. The English mail *Verona*, 5th instant, had 393 bales for Europe; the *Empress of Japan*, sailing on the same date, took 328 bales for New York, and the steamer *China*, 7th instant, carried 530 bales for the same destination. These departures make the present export figures 4,624 piculs, against 1,725 piculs last year, and 4,498 piculs at the same date in 1892.

Hanks.—There have been a few small purchases, principally in *Chichibu* sorts, at \$565. No *Shinshu* or high class *Foshu* have as yet come to hand.

Filatures.—There has been a fair trade in these, both markets operating to a good extent. For America some high prices were paid, competition between shippers giving the native holder about \$20 more than the market price. We do not raise our quotations on account of this, the general trend of the market being towards lower prices. Among the most recent purchases are *Gakosha*, \$690; *Yafima*, \$685; *Kaimetsu*, \$680; *Teisha*, \$675; *Kairosu* and *Shineisha*, \$665. In fine sizes a fair amount of business has been done; *Intayama*, \$700; *Hoshinsha*, \$690, with others in proportion.

Re-reels.—These are a little easier, and lower prices have been accepted, so that the following transactions are reported: *Katsuyama*, \$655; *Five Girl*, *Tortoise*, \$650; *Kodama*, \$630; *Shorusha*, \$625; *Tenshinsha*, \$620.

Kakada.—A small business; some old *Kakada* *Re-reels* done at \$665, with new *Horsehead* at \$630; some new *Horsehead*, third sorting, were reported at \$580.

In other sorts, no business.

WASTE SILK.

A blank week, the total settlements being 5 piculs *Kibiso*, with direct shipments of about 25 piculs.

The market seems practically to have come to a stand; stock is increased to nearly 15,000 piculs and holders' statements that home manufacturers can pay more than shippers do not seem to incite shippers to action. It is quite clear that the native dealers must lower their pretensions if they wish to do any considerable trade.

There have been two shipping opportunities since we last wrote, the English mail *Verona* on the 5th instant taking 18 bales waste for Europe and the steamer *Alderly*, 6th instant, having 120 bales for the same destination. These departures make the total export to date 1,709 piculs, against 400 piculs last year and 1,610 piculs at the same date in 1892.

Pierced Cocoons.—Fresh arrivals have increased the stock to nearly 900 piculs, but there have been no sales as yet.

Noshi.—Nothing at all has been done during the week, and shippers do not seem inclined to pay what holders ask.

Kibiso.—The only business has been a few piculs of *Filature*, best realizing \$107, with seconds at \$90.

In other sorts, nothing to remark.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1877, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

THAMES ELECTRIC & STEAM LAUNCH CO^Y

ELECTRIC LAUNCH "GLOW-WORM." 53R. by T. L. Sin.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 11 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 18TH, 1894.

BIRTH.

On the 17th instant, the wife of JOHN A. JEWETT, of a son.

DEATH.

On August 16th, at sea, of aneurism, J. C. THOMAS, Master, Nippon Yusen Kaisha steamship *Tsuruga*, aged 32 years.

SUMMARY OF NEWS.

MR. KUMAZAKI, Japanese Consul at Lyons, was released from his position on the 11th inst.

THE Chinese exodus from Yokohama still continues. Over five hundred have left during the week.

LIEUTENANT GUNJI, who has been staying in the capital for some time, left for Chishima on the 11th inst.

A SEVERE earthquake has been felt in Kiushiu, but the damage done is not so great as was at first suspected.

THE Japanese fleet paid a visit to Wei-hai-wei on the 10th, but, failing to find the Chinese fleet there, returned to Chemulpho.

THE Empress Dowager has subscribed yen 1,500 towards the fund for providing comforts for the soldiers in Korea.

THE floods have done extensive damage on many parts of Japan—breaches in embank-

ments, submerging of houses, washing away of bridges, and delay in the train service being the principal. Several lives were lost.

TWO convicts while indulging in some horseplay in Ishikawajima Prison strangled another with a loin cloth. They are now awaiting trial.

THE Chinese Minister and suite, including the Chinese Consuls at the various Treaty ports, left Japan this week per the M.M. steamship *Salaste*.

THE King of Siam has conferred decorations upon several high officials of late, among them being Mr. Mutsu and Mr. Hayashi of the Foreign Office.

SURGEON ISHIGAMI, one of the experts sent to Hongkong to investigate the causes of the pest, returned to Tokyo on Sunday. He was warmly welcomed.

THE water in Hakone Lake rose to the abnormal height of five feet above high water mark on Sunday, owing to the recent heavy rain in the adjacent district.

QUARANTINE inspection is no longer deemed necessary at Hakodate. The quarantine station at Nagaura, near Yokosuka, has been shifted to Nagahama near Tomioka.

THE Chinese have seized the *Tenkyo Maru*, a Japanese ship engaged in conveying railway sleepers to Tientsin. The officers and crew were sent back to Japan.

JAPANESE residents in China have been very roughly treated by the *canaille* of the Chinese towns and most of them have returned home, along with the Consular and Legation officials.

THE total amount of tea sold to foreigners at Yokohama and Kobe from the commencement of this season up to the end of July last was 27,840,050 *kin*, valued at yen 7,526,229.439.

THE Messageries Maritimes, the Pacific Mail, and the Occidental and Oriental Steamship Companies now make Nagasaki a port of call on their run to Shanghai and Hongkong respectively.

MAJOR FURUISHI, on being reprimanded by the Commander-in-Chief because his battalion failed to strictly observe some directions given by that officer, took the matter so much to heart that he committed *seppuku*.

THE ladies belonging to the suite of the Japanese Legation at Peking were grossly insulted by the Chinese soldiers at Tientsin. The Chinese Government has apologised and promised to duly punish the offenders.

A SAD bathing accident occurred at Kamakura on Tuesday, a young Japanese lady and a lad being drowned in the under-tow, which was said to be running very strongly at the time. The parents of both are persons of note in Tokyo.

THE British steamship *Quantock* picked up the crew of a Japanese sailing vessel soon after leaving the Formosa Channel last week. The steamer *Gwalior* also rescued some shipwrecked Japanese when nearing Kobe on her voyage up from Hongkong.

THE military telegraph wire between Fusan and Seoul has been completed, but the Koreans, displaying much mischievous opposition to the invention, have cut it twice within twenty-four hours, so that no messages have yet been able to get through.

THE weather was so boisterous on Saturday that the race for the A division boats of the Yokohama Sailing Club was postponed until a more favourable opportunity. The *Daimyo* and *Spray*

entered for a match, but the latter meeting with several accidents at the start left the *Daimyo* to sail the course alone.

A PAPER-HANGER's apprentice in Yokohama, having a grudge against another employé, waylaid him the other night and stabbed him. He is now in prison, while the injured man is progressing as favourably as can be expected.

THE Minister for Communications issued a notification on the 11th inst. to the effect that any persons desiring to send money by urgent telegraphic money order will have to pay an additional fee of 35 *sen* beside the ordinary telegraphic money order fee.

GERMANY is increasing her fleet on the China station, five war-vessels having been ordered there during the week. The *Novoe Vremya* states that Russia will never permit the occupation by Great Britain of Port Hamilton, whereby that Power would be enabled to create a new Gibraltar, dangerous to the Russian Navy and menacing to Russian possessions in the East. The British Naval Manœuvres, which have had for their object the reproduction of possibilities in warfare with France, have ended in a complete victory for the squadron representing France. The steamship *Baltimore*, from St. Petersburg, has arrived at Gravesend with five cases of Asiatic cholera on board, and one death occurred during the voyage from the same cause. Speaking in the House of Commons, Mr. Morley stated that the rejection of the Evicted Tenants Bill by the House of Lords would render it very difficult to maintain peace in Ireland. The *Vigilant* has been twice defeated by the *Britannia* at Cowes. Jabez Balfour has been extradited by the Argentine Government. The Prorogation of Parliament is expected to take place on the 22nd inst. Sicily has been visited by an earthquake, thirteen persons having been killed and twenty-nine injured. Cholera is increasing in Holland. In the United States Senate the Tariff Bill has been accepted and passed. In the House of Representatives Bills were introduced to place on the free list coal, iron, and sugar; that dealing with coal has passed. The debate in the House of Lords on the Evicted Tenants Bill has been adjourned.

THE Import trade continues much as last reported. Only small sales of Yarn have been effected, and Piece-goods are scarcely looked at. A few Fancies have been taken, but only to a retail extent. The Metal market is quiet, and new business has been on a small scale, deliveries of previous bargains having been the principle feature of the trade during the week. No change in Iron of any description, but Tin Plates being scarce are held for more money, while Wire Nails are a trifle easier. The Kerosene trade is healthy, and holders are strong; in fact anything like a good demand at present would send prices up. The Sugar trade has been fairly brisk, but most of the sales of Brown sorts are said to have been "forced" in consequence of Chinese owners settling their affairs and leaving the port. White sorts are in fair demand at full figures. The Silk trade, which languished somewhat almost since the opening of the new season, took a turn this week, and the total export amounts to fully 2,500 piculs. This has had the expected effect on prices, which are pushed up as high as possible, but, holders being anxious to unload, some reduction on present rates may be obtained. Waste Silk is almost entirely neglected, the actual business being 7 piculs. There has been more doing in Tea, the demand running on the better grades, and Common leaf being in full supply prices are somewhat lower. Exchange has been decidedly turned upward, and rates close firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The reigning question in the vernacular press continues to be the war. The general election which, were it not for Korean affairs, would at this time be the paramount problem of the moment, is dwarfed into utter insignificance: it occupies a few inches of space in unconsidered corners. The Declaration of War by the Chinese Emperor is made the subject for various expressions of national disdain and indignation against the colossal kingdom, and the "old knave," Li Hung-chang. In connection with war funds, Imperial Edict, No. 143, is discussed by several papers. They do not censure the Government for issuing it at this time, but, some of them, for instance, the *Hochi*, sorely regret that the Ito Cabinet did not take measures to assemble the New House of Representatives, earlier so that the Rescript could have been issued with the warm consent of the popular legislators. The *Hochi* does not doubt that their consent would have been easily obtained. As to a national loan, the *Kokumin* speaks in favour of it, and advises the Government to fix the rate of interest at not less than the percentage currently obtainable, so that there may be no failure in raising the necessary funds. It further advises that the denominations of the bonds be ten yen and multiples of that sum, in order that men of ordinary means, as well as the wealthy, may enjoy the honour of becoming creditors of the Government at this critical tide of affairs, and so gratify their warm sentiment of patriotism. The *Hochi* takes the opposite camp, especially against a debt extending over a long period of time. It denounces in burning terms the disgrace that must fall on the present generation should it make its successors bear the burden of the war. Other papers that have touched this question speak in favour of the loan, and as to the rate of interest they are united in recommending that it be small.

Such was the spirit before Rescript, No. 144, was issued. Since then all the papers unite in praising the Government with one voice for having acted wisely and promptly. They bid the Cabinet rest assured that the patriotism of the people, who are justly enraged at the barbarous government of China and fully convinced of the importance of the war, will fill the military chest with the required sum long before the specified time, and they predict that the money will be procured at a lower rate of interest than the maximum mentioned in the Rescript. In connection with this subject, they repeatedly assure the Government that the people are as one man against China, who, to use their words, is not merely the enemy of Japan, but the foe of humanity and civilization.

The *Fiji Shimpō*, which has hitherto been censured by the Japanese public as too backward in its expressions of opinion and sentiment, is this time ahead of all journals in the vehemence of its invectives against the "arrogance and lawlessness" of China, and in urging the Japanese forces abroad to invade China and to make a triumphant entry into her capital, risking their lives to a man. In its issue of Thursday, it asserts the advisability of marching by land into Manchuria and occupying its three Provinces before the winter comes, so as to make the giant Kingdom come to terms before the cold prevents the Japanese troops from marching onward. In case the occupation of Manchuria does not bring China to terms, it says that the troops may quarter there for the winter and march upon Peking as soon as spring sets in. Not entering into such minutæ, other papers urge the necessity of quick and active measures on the part of the Japanese army and navy, so that they may not be beaten in an unfought fight, reminding them of the proverbial crafty policy of Li, usually described by the Japanese "Delay"; a policy by which France was obliged years ago to make a little creditable treaty with the "old knave."

Korean reforms receive considerable attention. The *Niroku* and several other papers say

much about the comparative uselessness of making small changes in the organization of the government and of enacting new laws and regulations. What is really required, they say, is a fundamental change, such that once established would at once alter the whole features of Korean politics and never again permit the detrimental influence of China to be exercised. The education of Korean youths in the Spirit of the Japanese system is treated by more than one contemporary as the only means of firmly establishing a spirit of independence among the Koreans. A means of making the reforms in the peninsula thorough and deep-rooted is suggested by the *Kokumin*. It recommends that a considerable number of Japanese should emigrate to Korea and become new Koreans. It states that these settlers might hope to make their lives there happy and prosperous, notwithstanding the hilly features and barrenness of not a small part of the peninsula, for the country has at present not more than 120 inhabitants per square mile, while in Japan there are fully double that number in the same space.

Speaking of the advantages Japan may derive from making Korea a really independent State, the *Niroku* gives the following table, which shows the benefit in trade Japan may reap by having greater influence than China in the peninsula (in studying the table, it must be remembered that 1884 is the year when Japanese prestige in the peninsula suffered seriously at China's hands):—

IMPORTS TO KORRA IN YEN.		
Year.	From Japan.	From China.
1885	726,760	242,680
1886	941,550	406,856
1887	827,113	641,340
1888	1,049,489	636,092
1889	1,113,647	723,037
1890	1,259,218	1,321,614
1891	1,426,403	1,738,044
1892	1,318,707	1,712,272
1893	845,349	1,589,126

The *Kokumin* and the *Yomiuri*, which usually pretend to some literary merit, call upon Japanese bards and scholars to produce songs and essays worthy of the victories at Hôitō and Seikwan. The *Yomiuri* calls it a disgrace to the literati of Japan not to pay due tribute, in the form of *uta* or *shi*, to the victors. Our contemporary is so earnest in this matter that it has proposed to receive from the public literary gems upon these memorable victories, offering prizes, not in the form of money or watches as usual, but in the shape of the paper itself. It promises to send the paper free for two years to first-rate contributors, for one year to second-rate, and for six months to third-rate.

The *Nippon* and the *Kokumin* speak of the war at some length. The gist of their articles is that war is not an unmixed evil, often proving a blessing to both the conquered and the conqueror. They mention France and Germany after the Franco-Prussian war as examples of countries benefited by defeat and victory, the victors not reaping more good than the vanquished. Forecasting the issue of the present war, they say that China defeated will not be able to reap benefits such as France has harvested, so effeminate is she in moral and intellectual capacities, whereas Japan has ample capacity for the glorious rôle played by Germany since the Treaty of Paris. Thus they ply pens so full of sentiment and enthusiasm that their readers become almost blinded to the benefits of peace and lost in a dream of war's blessings.

The *Nippon* calls clamorously upon the nobles not to fail to fulfil their proper duty toward the Emperor and the nation at large, and reminds them that it is not wealth well hoarded, but wealth well spent, that proves a man worthy of high position. The *Asahi* gives an article by one of its eminent correspondents, which, after mentioning various things to be attended to by the nation, by the Government, and by the

wealthy, in order that Japan may become a Power not merely in the East but in the world,—among the rest, the building of a dockyard where warships of any size can be constructed and the establishment of a steel foundry equal to the requirements of the new dockyard—proceeds to call upon the whole people to aid any large projects useful to the State, and to divert the funds they now spend in giving their children special education into some channel better calculated to conduce to strengthening the country.

The Government is warmly urged by all the papers to retrench its expenditures in view of the people's voluntary contributions towards the war-fund. The *Shin Choya* goes so far as to declare that the Government should not resort to a national loan until it has so retrenched its expenditures as to convince the nation of the necessity of resorting to that means of raising money.

The advantage on Japan's part of humiliating China from the standpoint of Chinese commerce is touched on by the *Fiji* and other contemporaries. They refer to the abolition of the heavy taxes in the interior of China, which Japanese importers have to bear at present and which do much to lessen the profits obtainable from Chinese trade.

The attack upon some foreign papers published in Yokohama is continued by the *Nippon* and not a few other journals.

EDITORIAL NOTES.

THE METROPOLITAN PAPERS ON CHINA'S DECLARATION OF WAR.

As might have been expected, the metropolitan papers comment on China's Declaration of War with disdain and derision. They heap invectives on what they consider the arrogant and altogether absurd claims of China over Korea, and on the Chinese perversion of the true state of affairs. The *Nichi Nichi*, for instance, considers the declaration as altogether wanting in dignity, a sure sign that China has no faith in what it parades with so much apparent plausibility. It then proceeds to refute the Declaration sentence by sentence. It says that to base the presumption that China has a just claim over Korea on the mere conventional payment of tribute by the latter is absurd; that the request of Korea to China to send troops for the suppression of insurrections was simply due to the arbitrary action of Ming Yei-sun, who was instigated by the Chinese Resident; that the despatch of Japanese troops to Korea in the present instance was in virtue of the Treaty of 1882, that the number of troops was not increased till after the skirmishes on the 23rd ult., and that the entry of the troops to the Palace was due to the request of the King who wished to be able to carry out various reforms contemplated by him. Again, it was China herself that interfered by force, both in 1880 and in 1882, in the internal administration of Korea, while Japan's action in the present case in demanding the reform of Korean administration is justified by international law, for Japan has simply exercised the right of self-preservation that belongs to every state. Further, as is fully recognized by the various Powers, Japan has been obliged to take the present step single-handed, because China has refused to cooperate with Japan in this matter. The statements in the Declaration that the Korean people are afraid of Japanese soldiers, and that the Japanese warships have fired upon Chinese ships unexpectedly and without any justification, are regarded by the *Nichi Nichi* as mere subterfuges, and childish endeavours to make Japan responsible for China's actions. The last part of the document, which enjoins on the authorities the utter destruction of Japanese ships that may enter into Chinese harbours, it instances as an example of the narrow-minded barbarism so characteristic of China; while the exhortation that is addressed to Li Hung-chang

and others to beware of neglecting the imperial commands lest sure punishment should overtake them, is regarded by our Tokyo contemporaries as a proof that the Empire, vast as it is, has no faithful subjects, and that the Court of Peking has no confidence in their loyalty. The *Mainichi* writes in a similar strain. It says that if the mere fact that Korea has offered tribute to China may be construed in the sense that Korea was China's tributary, then Japan has precisely the same claim to make over the Peninsula, for the latter used to send tribute to the Tokugawa Regency, and therefore Japan's claim to suzerainty is as valid as that of China. But these are really all matters of ancient history, and have no bearing on the present situation. The relations between Japan and China and Korea can be said to have been firmly established on a new basis in the period when, with the inauguration of the new era in Korea, the last named independently contracted a treaty with the various Powers, and when China explicitly acknowledged Korean autonomy in domestic and foreign affairs. And yet China, with absurd inconsequence and vain ostentation, endeavours to obscure the real state of the case, and persists in false statements to the effect that the Powers hold Japan blameworthy for the despatch of troops to Korea. This proceeding of China is, says the *Mainichi*, really in keeping with her cunning artifices, first to corrupt sordid, unprincipled newspaper editors who are induced to manufacture false telegrams and mutilate reports for her interests, and secondly to pray secretly for the intermediation of foreign Powers while ostensibly showing a bold front toward Japan. The *Mainichi* sneers at the cowardice of China who, notwithstanding all her pomp and arrogance, evidently intends to confine herself to a purely defensive policy.

A STRANGE RUMOUR ABOUT THE MITSUI RUSSIAN KAISHA.

THE *Hochi* transcribes the following from the Kumamoto *Nichi Nichi Shimbun*. In the harbour of Tsunokuchi, Nagasaki Prefecture, there have been for some days one German and two British sailing vessels with eleven Chinese on board. On the 29th ult. two more British steamers came in. All these ships have come for the purpose of buying coal. The purchasers are all Chinese, and when the purchase is completed the ships are to sail for Shanghai. One of the two steamers got about 1,800 tons coal and instantly started for Shanghai on the afternoon of the 29th. Besides the captain, there were two more English in the crew, but the remaining 41 were all Chinese. Up to the 30th nine foreign vessels had entered the harbour whence they carried away on an average 2,500 tons of coal each. All of them must be Chinese vessels in spite of the flags, for they bore on the side Chinese characters. In Tsunokuchi there are ten coal depôts, and the total quantity stored there on the 30th was estimated at about sixty thousand tons. The price is more than double that which prevailed during the previous month. Prior to the arrival of those Chinese ships pulverized coal alone was disposed of, but to them blocks were sold, which amounted to more than two-thirds of the whole sale. The stock of blocks running short, the two small steamers that are usually found in the harbour led in tow from Miike junks loaded with coal, which was then directly transferred to the foreign ships. All the coal thus sold of course came from Miike, which is owned by the Bussan Kaisha. The branch office of the Company at Tsunokuchi used to give announcement whenever a foreign vessel arrived, but this notice is now entirely dispersed with. The harbour of Tsunokuchi, says the *Hochi*, is specially adapted for the secret export of coal, and should the Bussan Kaisha really supply coal to Chinese taking advantage of this condition, then its action should be denounced in the severest terms. The *Hochi* is, however, inclined to think that the firm must be incapable of selling coal to the enemy.

THE CHINESE RESIDENTS IN YOKOHAMA.

THE issue of the Imperial Ordinance providing security to Chinese subjects desirous of remain-

ing to reside in Japan, has had quite the opposite result to what was expected. It has alarmed rather than pacified the Chinese. For various absurd conjectures have begun to arise among them, as that the registration would have the effect of naturalizing them as Japanese subject; that in any civil disputes that may arise between Chinese and Japanese, the judges would show partiality to their own countrymen; or that the Chinese would be taxed just in the same way as the Japanese. The Chinese are really puzzled at the Ordinance, and they have frequently held conferences on this point at their Central Club. It is said (we take these statements from the *Yifu*), that the majority of them cling obstinately to their suspicions, and that they have decided to give up their first idea of remaining in Japan. Those Chinese are all men of more or less means, but they are said to be demanding their due share of the funds they have contributed to the Club, declaring, under one pretext or another, that they are even in want of the passage money. The managers of the Club are said to be at a loss what to do, the funds having already been exhausted in providing tickets to their nationals who wanted go home.

Various other considerations have conduced to persuade the Chinese, once resolved to stay, to give up that resolution, writes the *Shogyo Shimpō*. In the first place, they are urged by their wives and relatives who, at the first alarm, fled to China, and who, now that war has actually begun, are anxious that their husbands should join them. And then the Chinese Minister and Consul are said to have urged their nationals to return. Even if they were inclined to stay they would experience great inconvenience in the transaction of business, for the Chinese who were employed as book-keepers, accountants, and in other subordinate positions have nearly all gone away. It is said that the Kanagawa Kencho will not tax those staying behind, there being no provision in the Ordinance requiring it to do so. The Chinese are required to apply for registration before the 24th inst., but those who have applied are few in number thus far.

VANDAL PROJECTS IN KYOTO.

KYOTO, says the *Nichi Nichi*, is noted far and wide for the excellence of its scenery. That is mainly due to the charming mountain range of Higashiyama, which may therefore be considered the park not only of Kyoto but of all Japan. Nothing should be farther from the thoughts of the citizens than to take any step calculated to detract from the beauty of these hills for mere pecuniary reasons. None the less a scheme of that nature appears to be contemplated by a portion of the Kyoto folks. They talk of building a railway along the part of Higashiyama known as Shogunzaka, the object being to attract visitors to Kyoto next year during the Fourth Domestic Exhibition, and to show them the fine views of the city at a fixed charge. The capital required is estimated at thirty thousand yen. The projectors have applied for permission both to the City Office and to the Osaka Dendrological Bureau, for the forest at Shogunzaka, being public property, is under the control of the Osaka Office. These applications have been rejected, but the projectors are so zealous about what they apparently consider a profitable enterprise that they have submitted their proposals to the City Council, and are employing every possible means to secure the attainment of their programme. Governor Nakai is expected to adhere to his original resolution: He will reject the application when it is again brought before him in his capacity of President of the City Council. One of his predecessors, Baron Makimura, received the title of "the Plebeian Governor," because he sanctioned the cutting down of a number of trees in Higashiyama and Arashiyama, thereby greatly marring the beauty of the two famous hills. Young trees have since been planted in the places denuded by the woodmen, and the ancient appearance will be gradually restored. The repetition of any such action—and the contemplated construction of a railway in the Shogunzaka

precisely analogous—must be sternly repressed. In fact, even the establishment of ordinary industrial factories should be regarded with disfavour in Kyoto, for their tall chimneys interfere seriously with the restfulness of the scenery. Nature certainly never intended Kyoto to be a city of machines and smoke, but alas! Nature's designs are little respected where filthy lucre is in question.

THE SILVER QUESTION.

THE Eastern Bimetallic League, recently established in Shanghai, has just issued a pamphlet entitled a "A Protest," dealing with the silver question. "The protest is against the attitude assumed by the opponents of bimetallicism with respect to this, the most important question of the century." The causes of the appreciation of gold are thus summarised in the pamphlet: 1.—A reduced production, which, though slightly increasing during the past few years, has not sufficed, with this increase, to make a material addition to the already existing stock, that previously, together with all the silver in circulation, was not too much for the world's monetary requirements. 2.—An enormous increase in the demand, caused by the demonetization of silver, which virtually threw upon gold the chief burden of the currencies, thereby giving rise to a general scramble among the gold-using countries for that metal.

As proofs that the appreciation of gold was the natural outcome of the demonetization of silver, the following points are urged: 1.—That such an appreciation was inevitable in accordance with the law of supply and demand. 2.—That the general fall in prices and shrinkage of values noted since the demonetization of silver, are what must necessarily have happened from an appreciation of the standard, being, in fact, another form of expressing the same idea. 3.—That while such a fall of prices with attendant disturbances in all the gold standard countries leads to the conclusion that the cause is the same in all those countries (though it suits the purposes of the partisans of monometallism to assign different reasons therefore), the fact that, in the silver standard countries, there has been no such decline in or disturbance of values, proves that the trouble arises from some cause which is common to all the gold countries, but does not exist in those where silver is the standard; and, among all the pretexts assigned by the opponents of bimetallicism, there is not one which makes the slightest approach towards meeting the requirements of these conditions, nor is there any reason that can do so, except the appreciation of gold.

According to the writers, some of the effects of the domination of gold have thus far been: 1.—It has reduced the gold value of the world's property by one half. 2.—It has destroyed the financial stability of the greatest British possession, India; and thrown upon the British taxpayer, himself being gradually ruined by the same cause, liability to make good the debts which India is now unable to pay. 3.—It has closed up thousands of flourishing industries in Europe and America. 4.—It is diverting manufacture from gold to silver currency countries. 5.—It has thrown millions of men out of employment, compelling employers to reduce work and wages for those who remain. 6.—It has deprived the agriculturist of the profit of his toil, and the owner of the land of his rentals. 7.—It is curtailing the operations of merchants throughout the world. 8.—It is causing such diminution in transport that the shipping and railroad industries are seriously threatened. 9.—The prevailing distrust among capitalists, the natural consequence of the foregoing causes, has led to the hoarding of gold in banks and treasuries, further intensifying the evil. 10.—Finally, it has caused such general discontent that sedition and anarchy are rife.

The writers then go on to point out why both gold monometallism and silver monometallism

are impossible, and they conclude that international bimetalism is the only remedy for the present financial chaos. The paper ends with an examination of the three principal objections put forward by the opponents of bimetalism: first, that there is no certainty that bimetalism, though before successful in accomplishing its objects, would be so if again introduced; secondly, that by reverting to bimetalism we should upset the new order of things which has come into existence since the outlawry of silver, and cause the sacrifice of such interests as have been established on the faith in its permanency; thirdly, that a restoration of silver means a dangerous inflation of the currency. The fallacies underlying these objections are briefly exposed.

The paper is clear and effective, but we must say a word or two in criticism. To exaggerate the evils that have ensued on the demonetization of silver, as, for instance, to attribute the anarchist movement to this cause, will not hasten the general acceptance of bimetalism. Again, to speak of bimetalism as if it were a kind of universal panacea, after the administration of which we may expect to see something very like the millennium, is to strengthen the hands of the enemy. Lastly, the adherents of such a cause as bimetalism can never improve their own position by implying that their opponents are necessarily either knaves or fools.

"TRILEY."

MR. WHISTLER, like everybody else, has been reading Mr. Du Maurier's "Triby," now appearing in *Harper's Magazine*. Having tried on the cap of Joe Sibley, one of the minor characters in the novel, and finding it fit very well, Mr. Whistler has written a characteristic letter on the subject to the *Pall Mall Gazette*:

To the Editor—SIR:—It would seem, notwithstanding my boastful declaration, that, after all, I had not, before leaving England, completely rid myself of that abomination, the "friend!"

One solitary unheeded one—Mr. George du Maurier—still remained—hidden in Hampstead.

On that healthy heath he has been harbouring for nearly half a life every villainy of good fellowship that could be perfected by the careless frequentation of our early intimacy and unsuspecting camaraderie. Of this pent-up envy, malice, and furtive intent he never at any moment during all that time allowed me, while affectionately grasping his honest Anglo-French fist, to detect the faintest indication.

Now that my back is turned the old marmite of our pot-au-feu he fills with the picnic acid of thirty years' spite, and, in an American magazine, fires off his bomb of mendacious recollection and poisoned rancour.

The lie with which it is loaded, a mean invention, he proposes for my possible "future biography"—but I fancy it explodes, as is usual, in his own waistcoat, and he furnishes, in his present unseemly state, an excellent example of all those others, who, like himself, have thought a foul friend a finer fellow than an open enemy.

J. MCNEIL WHISTLER.

Reflection:—The companion of the petard we guillotine. Guineaes are given to the popular companion who prepares his infernal machine for the distinguished associates in whose friendship he has successfully speculated.

No one surely, except Mr. Whistler himself, could feel thus injured by the shafts of Mr. Du Maurier's genial humour.

VOLUNTEERING IN HONGKONG.

A NEW impetus has been given to the Volunteering movement in Hongkong, says the *China Mail*, by a scheme for the formation of what may be termed "suburban sections," the first of which is now being organised at Hungham. There are at the Kowloon Docks, at East Point, at Quarry Bay, and at Aberdeen, a considerable number of men eligible and willing to become Volunteers, but unable to get into Victoria as frequently and regularly as is necessary to qualify; and so, as the mountain will not come to Mahomed, Mahomed has at last made up his mind to go to the mountain. The leading spirits among the Volunteers sounded some of the Dock-men, and found promise of sufficient support to warrant the experiment; the Secretary of the Company gave all the encouragement he could without leaving room for any suspicion of compulsion, and the military authorities willingly co-operated. The other evening, Colonel Jerrard and Lieutenant Lambarde (Adjutant) went over with Captain McCallum and Surgeon-Captain Cantlie to "swear in" recruits in the Reading Room at the Hongkong

Docks. Fourteen men presented themselves as soon as they had come off duty, and all passed the medical inspection and were sworn in. Arrangements were then made for the formation of two gun-detachments, and a couple of field-guns are to be sent over in a few days, to be housed by permission in Dock premises, so that the new section may practice on the spot; the Kowloon shooting range is handy for them to put in their carbine exercise. It is hoped that a similar spirit will be displayed in other outlying regions, and that equal success may be obtained; though the peculiar nature of Sugar-works duties may prevent men from getting the time required for drill. The Hongkong Volunteer Artillery thus receives a very promising addition to its force, which deserves the best wishes of the whole community.

CAPTAIN INGLES, R.N.

WE take the following from the *Army and Navy Gazette*:—"The announcement of the selection of Captain John Ingles, R.N., who is now in command of the *Mersey*, to succeed the late Captain Younghusband, R.N., as Superintendent of the Royal Gun Factories at Woolwich, has been received with much satisfaction by the Naval Service. While the feeling afloat is entirely that this post should invariably be filled by a naval officer, it was considered in the circumstances inexpedient to enforce this claim by newspaper agitation, but instead, to trust to the authorities and their advisers choosing the right man. That they have done so will we are certain, be generally admitted, and indeed universally acknowledged by those who know Captain Ingles and his career. It was generally understood that as soon as he had put in his sea-time for flag rank he was to be employed in some way in connection with the Admiralty, but we assume that he has given up all idea of further active service in taking this post. Captain Ingles, who was fifty-two in January last, may retire at once, in which case there should be an additional promotion this batch."

THE JAPANESE FLEET.

A PLUCKY attempt made by the Japanese fleet on the 10th instant has ended in failure. The Chinese Navy having hidden itself away, and its commanders being apparently determined to preserve it for the Middle Kingdom by not exposing it to any risks, nothing remains for the Japanese except to go in search of the skulking iron-clads. Accordingly, a strong squadron set out for Wei-hai-wei, where the Chinese vessels were supposed to be lying. But on arriving there, the Chinese fleet was *non inventus*, and after bombarding the forts for a short time, the Japanese ships steamed back to their anchorage off Chemulpho. Apparently the whereabouts of the Chinese fleet is unknown. Probably it is lying in Port Arthur, but the Japanese officers seem to have been too uncertain about the matter to essay an immediate attack on the latter place. We may take it for granted, however, that they are determined to get at the Chinese fleet sooner or later.

CHINESE ITEMS.

THE Chinese Navy, says the *Kokumin*, formerly employed many foreigners in its ships, but the Government was obliged some years ago to dismiss them with the exception of engineers, in consequence of the opposition of some thirty young Chinese officers who threatened the Government that they would resign should the foreigners continue to be employed. The Chinese war-vessels are therefore now poorly manned, the places left vacant by the dismissed foreigners having been taken by Chinese who are but slenderly acquainted with the art of managing ships. A second difficulty is now reported to have overtaken the Chinese war-vessels, for the foreign engineers, who have hitherto been employed, are said to have resigned their posts since war has been formally declared between China and Japan. There are but few Chinese who are qualified to act as naval engineers, and the consternation of the Chinese navy may well be imagined at this wholesale withdrawal of foreigners from its service. This is believed to

be the reason why the Chinese fleet is shut up in Wei-hai-wei.

With regard to the Japanese sailing vessel *Tenkyo Maru*, said to have been seized at Tientsin, the *Nichi Nichi* says that the sleepers which the vessel carried were supplied under contract to the Chinese Government, and so it is likely that the cargo may have been duly received, not confiscated as at first reported. That the Chinese action in the matter was peaceful is considered to be the more likely as the crew are reported to have been suffered to set sail unmolested.

The *Kokumin* has an important item of news to the effect that the Chinese Government has sent a communication to Tokyo suggesting that the commercial transactions between the two countries should be continued, notwithstanding the war, and that merchant vessels that are not connected with warfare should be suffered to pass without interference. The *Kokumin* has nothing to say with regard to the source of this information which, therefore, needs confirmation.

With regard to the charges reported to have been made by the Japanese officers who took part in the recent naval engagement, viz., that they are ignorant of international usage and devoid of the sentiment of humanity, the *Nichi Nichi* remarks that Mr. von Hanneken is in Chinese service, and cannot be regarded as an impartial witness.

THE STANDARD LIFE ASSURANCE COMPANY.

THE Standard Life Assurance Company in its last yearly report says:—"The total funds have increased during the year by £171,721, 4s. 5d.; the average rate of interest earned £4, 2s. 1d. per cent., being nearly the same as in 1892. The amount paid for claims is less by upwards of £90,000 than the corresponding figures for the previous year, and the expense ratio again shows a small decrease. The mortality experience of the Company, both at home and abroad, continues to keep well within the tables of expectation on which the calculations are based. The funds now amount to eight millions sterling and are invested with the greatest care. Year by year, as is well known to every one who has to do with the investing of money, the placing of funds on safe securities and at remunerative rates becomes more difficult, and the Directors of the Standard consider that the average rate of £4 2s. 1d. per cent., now being realised overhead on the Company's investments is as good a return as they have any right to expect under the circumstances which prevail."

A PEEP AT THE KOREAN CAPITAL.

THE *Hochi* gives an account of the present state of Seoul, based on the narration of a Japanese gentleman who has lately returned to Tokyo from that city. Since the sudden change in the state of affairs in Korea, and since the Government became dependent on Japan and asked the Japanese troops to drive out the Chinese in A-San, the Japanese residents in Seoul are publicly licensed to wear swords. It is as if the old order of things that prevailed in Japan prior to the Restoration had been resuscitated. The Japanese, armed with swords, walk the streets in small parties with a highly satisfied air. They are, however, orderly and civil in their behaviour, and the fact has made a good impression on the natives, whose attitude towards the Japanese has become more and more respectful as the news of the victory of Japanese forces both at sea and on land has arrived. Since then the Japanese are regarded by common folks as something superhuman, and whenever a Korean meets with a Japanese on the road he salutes him reverentially several times. The respect paid to the Japanese is not confined to the common people, for the same feeling is exhibited by the Court. So, whenever a Japanese resident of importance who takes interest in the improvement of the country, goes out either on palanquin or on horseback to call upon the Korean officers of distinction, he is

invariably escorted by a body of native soldiers armed with spears and drawn swords. In short the Korean capital is exactly in the state which prevailed in Kyoto at the time of Restoration. The *Hochi* jocosely remarks that any body who had no opportunity of seeing the disturbed aspect that Japan wore during the period of the Restoration, or who is desirous to swagger about with two swords girded on, should proceed to Seoul. He must behave himself in an orderly manner, but he may with impunity assume a warlike appearance.

NATIONAL LOANS.

A STATEMENT, says the *Nichi Nichi*, given in several Japanese papers that the Government has decided to raise national loans to supply the military chest, is unfounded. The Treasury has a surplus amounting to above 20 million *yen*, and if to this the contributions which the people have begun to pour in towards the military chest be added, the sum is not less than 30 million *yen*. The expenses thus far disbursed for the prosecution of the war would not exceed 5 million *yen*; consequently so long as the war is confined to Korean soil and is not carried on, for a protracted time, or on a very large scale, and so long as no necessity arises for the Navy to augment its equipment, there would be no need to raise loans. Such a topic therefore has never been discussed in the ministry. Yet this absurd rumour is carried even to the length that the Treasury contemplates the issue of inconvertible notes after the loans have been raised. Nothing is more chimerical. The issue of inconvertible notes is a last resource to be taken when all means available for the raising of national and foreign loans have been exhausted. The credit of the Japanese Empire has not fallen to such an extent as the spread of that rumour would imply. On the contrary, now that the Japanese army has proved signally victorious in Korea, the credit of the Government is as high as ever. If there were any necessity for the Government to raise national loans, the demand would be eagerly met. Some may compare the condition of the Government at the time of the Satsuma rebellion with the present condition, but this is quite fallacious; the financial conditions of the two periods are utterly distinct. Six per cent. capitalized pension bonds, of 100 *yen* face value, had, to give an instance, fallen even below the level of 70 *yen* in 1873, but the Redemption Loan bond of 5 per cent. interest still preserves the face value.

SOME CURIOSITIES OF ETYMOLOGY.

ONE of the most interesting classes of words in our language is that of the doublets, two words differing in form and in meaning, but originally derived from the same source. If we were to read "The milk-maid was milking the cow in the bower, while the lady was lying down in the byre," we should be somewhat surprised; yet the two words were originally the same, being derivatives of the Anglo-Saxon *bur*, a chamber. The word *ancient*, now obsolete, but familiar to everyone in connexion with Ancient Pistol, was merely an Anglicised form of *ensign*, a standard, or a standard-bearer. Another curious pair is *beldam* and *belladonna*. The former name was given ironically to an ugly old woman, while the latter was applied to the deadly nightshade on account of its use by fine ladies to expand the pupils of their eyes. *Spook*, *bug*, *puck*, and *pug*, appear to be all variants of an original unknown form, from which are derived the Welsh *bug* a hobgoblin, the Middle English *pouke*, an elf, the Irish *puka*, a sprite, and the German *spuk*. *Spook* retains its original meaning, and this meaning is shown also in the compound *bug-bear*, and in the proper name *Puck*. The insect *bug* was so called because, like a hobgoblin, it is an object exciting terror or disgust. By the Americans the word is applied indifferently to any insect and the existence of the compound *bed-bug* suggests that in English also the word was formerly of wider application. We have, indeed, heard bacilli spoken of as *bugs*, but this was by a Scotchman. The name *pug* was originally applied to monkeys from

their impish ways—there is an eighteenth century poem in which a monkey is throughout called pug, but we cannot at the moment recall the name of the poem or that of the author. It was owing to the monkey-like face of a revolting kind of little dog that this animal was called a pug.

Speaking of doublets reminds us of words existing both in English and in German, derived from a common stem, in which one of the pair has an exalted, the other a degraded meaning. Take for example the word *knight*, which has for centuries in England been an appellation of honour, and compare it with the German *knecht* (now, however, obsolete or provincial) meaning a menial servant, a "fellow." Both are derived from a Teutonic form, *enicht*, meaning a youth, a servant, or a man-at-arms. On the other hand, the word *knave* has in English come to be used in a bad sense, while the corresponding German *knabe* retains its primitive meaning of boy.

The study of slang opens up an interesting but imperfect chapter of etymology. The difficulty in tracing the origin of so many slang words depends on the absence of written records, and on the unusual rapidity with which such words are apt to undergo change. Among the simplest are those that originated in "thieves' Latin," such as *fake* from *facere*, to make; *cop*, with its derivative *copper*, a policeman, from *capere* to take, or seize. A notable feature of slang is the extraordinary number of equivalents it contains for the verb *to die*, most of them figures of speech. We give a few of these: *To croak*, *to go off the hooks*, *to kick the bucket*, *to peg out*, *to slip one's cable*. The source of the phrase *kicking the bucket* is obscure. It is said by some to be of East Anglian origin. In hanging up a slaughtered pig a piece of wood is thrust beneath the tendons of the hind legs, and by this the pig is suspended. This piece of wood is locally termed a *bucket*, and hence, by a coarse metaphor, *to kick the bucket* came to signify to die. Another idea is that the expression is derived, from a well known method of committing suicide. A man stands on a bucket, puts a noose round his neck and attaches the rope to something above, and then kicks the bucket away so that he dangles in the air.

Each profession has its own slang. Thus medical students used at one time to speak of butter as *ointment*; "Pass the ointment, please," one would say to another; but this expression is now obsolete. In journalistic slang the *top-dressing* is the large type introduction to a report which is usually written by the editor himself, or by some other person on the staff of the paper in a higher position than the reporter. But here we are beginning to divulge to the public some of the important secrets of our profession.

ACCIDENTS AT KAMAKURA.

A VERY sad story comes from Kamakura. Two lives were lost there on the morning of the 14th instant. The children of Dr. Nagao, President of the Sanitary Board, were bathing on the beach near the *Kashin-in*, among them being a girl of sixteen. They were attended by a servant who is a strong swimmer. This man, observing that the young lady seemed to be in difficulties, went to her aid, but without success. Indeed, he nearly lost his own life, and was with difficulty rescued, in an unconscious condition. It is surmised that owing to some special state of the wind and tide, a strong under-tow had set in and the poor girl becoming involved in it, was carried out to sea. At another place some few hundred yards distant, the son of Mr. Asao, a well known official formerly in the Naval Department, was bathing at the same time. He too met with a similar fate. At the time of our latest advice the bodies had not been recovered.

THE KARASAKI PINE.

MANY of our readers are doubtless familiar with the celebrated Karasaki Pine, which constitutes one of the Eight Scenic Gems of Lake Biwa.

It is a noble tree, magnificent as to proportions and exquisite as to symmetry, and it has an island all to itself. But it seems that the Pine, having outgrown the island, must perish for lack of nourishment unless its area of dry land be extended. A society has consequently been formed to collect subscriptions for the purpose of saving the life of the celebrated tree. We have been asked to publish the prospectus, and we gladly do so, remarking, at the same time, that we have had the privilege of seeing one of the pictures by Mr. Hashimoto Gaho, referred to in the prospectus, and that we hold it to be a drawing of no small skill, beauty, and fidelity. The prospectus runs as follows:—

THE GREAT PINE TREE OF KARASAKI.

The Giant Pine of Karasaki, one of the wonders not only of Japan, but of the world, is too well-known both to foreign residents and to tourists to stand in need of particular description. Murray's Japan Guide-Book gives its dimensions as follows:

Height, over..... 90 ft.
Circumference of trunk, over..... 37 ft.
Length of branches from East to West...240 ft.
Length of branches from North to South...288 ft.
Number of branches, over.....380

It occupies an entire island, and has been considered sacred from immemorial antiquity, the local goddess being credited with power to heal all the ills to which flesh is heir. Most curious is the aspect of this venerable monarch of the forest, whose branches spread out like a sun in every direction and are supported by a whole scaffolding of wooden legs and stone cushions, making a *tout ensemble* visible for miles around from every quarter of beautiful Lake Biwa. The great tree is now in danger of destruction through a peculiar cause, namely, the absence of sufficient space for the accommodation of its ever-increasing branches. The island on which it stands has grown too small to hold it, and an artificial extension of the same has become necessary. With this object of preserving to future ages a natural monument alike so ancient, so beautiful, and so curious, the inhabitants of the neighbourhood and others interested in the preservation of the national antiquities have determined to appeal for subscriptions,—an object which it is hoped will approve itself to the minds of benevolent and artistically disposed Europeans and Americans. The celebrated artist, Mr. Hashimoto Gaho, has executed three masterpieces representing the Giant Pine, one of which is carved in wood, while the other has been collotyped by Mr. Ogawa, the well-known photographer. These prints will be given to subscribers, single or in many copies, according to the amounts subscribed at the following addresses:

Messrs. Kelly and Walsh, No. 61, Yokohama;
Mr. Ogawa's Studio, No. 13, Hiyoshi-cho, Kyobashi-ku, Tokyo;

who will receive subscriptions for the above-named object. All the money thus collected will be applied to the above-named purpose of enlarging the island in Lake Biwa on which the tree stands, and generally of tending and caring for it, so as to ward off the decay with which it is imminently threatened, and to preserve intact one of the loveliest of Japan's many lovely scenes.

DR. KITAZATO'S LECTURE.

ON the 10th instant, at the Rokumeikan, Dr. Kitazato delivered a lecture on the plague. It was attended by more than 300 hearers, among whom we may mention the Minister and Vice-Minister of the Imperial Household, Mr. Makino, Vice-Minister of Education; Mr. Nagayo, President of the Sanitary Association; Mr. Hamao, President of the Imperial University, and others. At the right hand side of the lecture room, various specimens of the bacillus brought from Hongkong were arranged for microscopical examination under a magnifying power of 600 diameters. The Doctor was led to the platform by Mr. Nagayo and spoke for about two hours. The vernacular press gives only a short epitome of the lecture, in which we see no important point that has not been already considered in his report. But we may quote the following:—There were four plague hospitals in Hongkong, and it was in the new hospital under the control of the Colony that the investigators chiefly carried on their inquiries. In this hospital there were Chinese to be treated by medical practitioners of the Western school, Indians, Portuguese, half-bred and Japanese. Now, as every body

knows, the Chinese abhor the idea of post mortem examinations, and it was most important that this business should be carried on in profound secrecy. Consequently, whenever Dr. Aoyama was to make an autopsy, he repaired to a narrow shed situated behind the Police Office. This shed had only one room of about 4 yards square, and was provided with but one window. Even this one window had to be closed in spite of the heat of the season, lest a Chinese might spy out what was going on in the interior. Dr. Kitazato believed that his colleague must be the only medical man in the world who had conducted post mortem examinations under such difficulties. When Doctor Kitazato first succeeded in discovering a species of bacilli in the blood of a plague patient, he thought it highly resembled the bacillus discovered by Dr. Frökel in cases of acute pneumonia and chicken cholera. But he was soon convinced that the new bacillus was totally distinct from the other two, for it could neither be inoculated to a bird, nor when subjected to culture experiments did it lose vitality even after several transplantations. When within a week after the arrival of the party at Hongkong, Dr. Kitazato transmitted a message to Tokyo that the cause of the plague had been discovered, a certain American doctor sent an article to a foreign paper of Yokohama and criticized his discovery as an untrustworthy and absurd report. Now, specially dispatched as he had been by the Government of Japan, he thought himself entrusted with a grave responsibility, and he was quite incapable of publishing a premature discovery, merely to attract public attention. He was sure that before he sent that telegram he had fulfilled all the conditions necessary to establish his discovery and he felt fully justified in publishing it at the time he did. The disease that has lately ravaged Hongkong originated in Yunnan, whence it first spread to Canton in the spring of the year, and then passed over to Hongkong, which is but six hours' voyage from the latter place. There are many kinds of disease popularly known as Black Death, and it is not yet clear which of them should be regarded as the genuine one. The epidemic which prevailed in Hongkong is called Black Death, simply from the occasional appearance of black spots on the skin of the patients that succumbed, or from the blackness of the patients' tongues caused by fever. Dr. Kitazato could not consent to give the designation "Pest" simply on these accounts, but he was more inclined to believe that the Pest that prevailed in Hongkong should rather be called lymphatic pest than to be merely termed "Black Death." The crisis of the disease is in the third day after the onset, and if the patient survives this he has a fair chance of recovery.

We can assure Dr. Kitazato that he is entirely mistaken in attributing our article to an American doctor. Should we be rude if we suggested that the learned specialist seems a little hasty in jumping at conclusions?

THE MITSUI BUSSAN KAISHA AND ITS COAL.

THE *Nichi Nichi* and the *Shogyo Shimpō* write on the above topic, trying to clear the Company from the charge made against it by several Tokyo papers of having secretly exported of coal to China. They say that the coal now exported by the Company at Tsunokuchi is supplied according to contracts concluded last autumn and also in the beginning of the year, the amount contracted for having reached as much as 350,000 tons this year. The buyers are chiefly steamship companies, gas and electric light works, and various factories conducted by British or German capitalists. The coal to be handed over to Chinese at Shanghai is confined to 2,000 tons to the China Merchant's Steam Navigation Company and another 2,000 to a certain Chinese retail merchant. The article is sometimes sold even in cases not previously secured by contract, but in so doing the Company has taken due precaution since the latter part of June, and has instructed its branch offices not to sell coal to the Chinese. In two cases only has the Company supplied coal

to the Chinese since then. Moreover, even in cases in which the Company has contracted to supply coal, it may withdraw from the contract, for a condition of the contract is that the Company may be unable to fulfil its engagement, on account of hostilities between Japan and any other country, or when the export of coal is forbidden. Thus, whenever the export of coal is forbidden in the present instance, the Company may refuse to fulfil the contract, but until then the Company has no option but to adhere to the contract, for to refuse to do so would be followed by a great loss to the Company. Still the Company is endeavouring as far as it can to suspend the delivery and has already taken steps to that end. Some seem to think that because the vessels carrying away coal from Kuchinotsu bear Chinese characters on their sides, therefore the Company must be selling coal secretly to China. That is simply a gross mistake, for every foreign vessel engaged in the coasting trade of China is marked in that way for the sake of convenience.

THE LATEST CENSUS OF THE CITIES OF JAPAN.

THE *Official Gazette* has issued the following census of the cities, towns, and villages on the 31st of December of 1893. We subjoin that obtained five years earlier showing the relative development of the cities:—

Name.	1893.	1888.
Tokyo	1,278,151	1,313,209
Kyoto	316,292	275,780
Osaka	485,331	442,658
Sakaye	46,199	45,005
Yokohama	152,395	118,947
Kobe	153,280	115,954
Himeji	26,268	25,466
Nagasaki	64,452	43,669
Niigata	49,933	44,761
Mayebashi	32,139	21,636
Mito	28,484	21,807
Tsu	29,253	16,031
Nagoya	188,861	154,981
Shizuoka	36,525	40,555
Kofu	33,492	24,468
Gifu	31,851	26,002
Sendai	67,372	77,515
Morioka	34,222	32,924
Hirotsuki	30,891	30,436
Yamagata	29,889	28,880
Yonezawa	28,913	28,714
Akita	27,750	29,454
Fukui	42,458	39,853
Kanazawa	90,551	96,752
Toyama	57,830	55,300
Takaoka	30,485	19,736
Tottori	26,922	26,022
Matsuyama	55,176	33,324
Okayama	50,800	43,885
Hiroshima	86,246	84,873
Shimonoseki	33,036	32,384
Wakayama	55,152	55,097
Tokushima	60,118	60,080
Takamatsu	34,324	38,294
Matsuyama	33,211	34,410
Kochi	33,691	31,209
Fukuoka	55,233	48,850
Kurume	26,336	20,732
Saga	28,768	25,584
Kumamoto	56,934	52,189
Kagoshima	50,321	47,512

JAPANESE IN THE UNITED STATES.

RECENT events, says the *Chicago Daily News*, render the interpretation of the naturalization laws by Judge Colt, of Boston, unusually interesting. The case was the application of Mr. Saito, a Japanese, for citizenship. The court held that the Japanese do not come within the description "white persons" prescribed in the statutes. Thus the most ignorant and dangerous Europeans—creatures little above animals in the scale of creation—may become citizens, while the cultured and intelligent natives of Japan are debarred from the privilege. There is certainly an opportunity for remedial legislation in this matter.

CAPTURE OF A JAPANESE SHIP.

THE rumour recently circulated as to the seizure of the Japanese merchant vessel *Tenkyo Maru* by the Chinese Authorities at Taku, is confirmed. We find a note on the subject in the *Fiji Shimpō*. It appears that the vessel was employed by the Mitsui Bussan Kaisha in connection with their branch store in Tientsin, and that

she was lying at the mouth of the Peiho when seized by the Chinese. A telegram despatched from the firm in Tokyo elicited, on the 14th instant, the reply that she had actually been seized, but that her officers and crew had been allowed to leave by a French mail steamer. She is a sailing vessel of over 1,000 tons register, and was insured for twenty thousand yen, the risk being divided among three offices. Since, however, the policy contains no provision relating to capture by a belligerent in time of war, the insurance is, of course, unrecoverable.

MR. CLEMENT SCOTT.

THE *Chicago Daily News* makes the following reference to the great critic:—Mr. Clement Scott absent-mindedly asserts that the problem play has existed in France for more than half a century, and in support of his announcement he enlists "La Femme de Claude." It happens that "La Femme de Claude" was written about twenty-one years ago, and a rash critic sagely inquires how the quoted play proves the existence of problem dramas when written twenty-nine years after Mr. Scott's alleged date. Upon receiving this unkind boomerang Mr. Scott recoiled like a wounded fawn and in a scathing arraignment of the critic he makes statements succinctly explaining with some arrogance that by half a century he means "of course twenty-five years." It is soothing to learn that Clement occasionally means what he says, as some of his effulgent idiocies may be half way met with forgiveness. Mr. Scott spent several damp, sodden days within our open gates and broke into printed imbecilities instantly he moved away. Altogether Clement was a cold cipher while he stayed. The bulging brains of the city made a pleasant effort toward entertaining the eminent critic, but he accepted their attentions in a stupor bordering on trance, and devoted himself to string-halt descriptions of people and things he did not see. Among other memories pardonable since his twenty-five-year-half-century departure are several choice reviews of his own rather mealy translation of "Diplomacy," which happened to be running at a local theatre. Mr. Scott truculently spun off a few columns and honoured a *Chicago* newspaper with the surprise of a right to publish it for a large sum of money. The manuscript was returned to the sanguine censor of the drama with some American business economy plainly suggested in a stereotyped note stating "please inclose postage stamp with any other manuscript." Clement had a fit and demanded attention and apology and several inexpensive courtesies, but the stamps are still charged up against him with other polite delinquencies.

THE "NICHU NICHU" ON THE TREATMENT OF THE CHINESE RESIDENTS.

THE Imperial Ordinance provides for the protection of Chinese subjects who choose to remain in Japanese territories. The Ordinance was dictated by humane consideration on the part of Japan, and, in pursuance of that motive, the Japanese Government will not tax those Chinese, though freely entitled to do so, as the treaty between the two countries has lost its efficacy with the declaration of war. The Chinese are thus exempted from a fate that they regard with the greatest horror, for that which makes them hesitate to remain here is not any honourable or honest fear, but consists in the single doubt whether, should they stay behind, they may not be taxed in the same way as Japanese subjects. The Japanese Government have relieved them of this apprehension, for if the words of the American Consul-General at Yokohama, who stands at present as protector of Chinese residents, be trustworthy, and there is very reason to believe him, the Japanese Government are said to have resolved not to tax the Chinese subjects living in Japanese territories. If we turn to what the Chinese Government are doing toward the Japanese subjects living in China, the contrast is striking. Look at the outrages inflicted upon them at Shanghai, at Tientsin, and at Muko. The most unpardonable of all is the outrage that occurred at Tientsin, for the offenders were China's regular soldiers, and the victims helpless Japanese

ladies. Our humanity, continues the *Nichi Nichi*, will not be altered by the wickedness of China, but if, despite our liberality and benevolence, the Chinese persist in their culpable conduct, then, to give them some lesson for their future benefit, it would be well to act with decision and promptness. If, at this juncture, there be any person who either through private interest or sentiment, intends to extend protection to the Chinese, then no matter of what nationality that person is, a similar decisive step should be taken with him. Lately, there have been some local English papers which are prone now and then to calumniate the humane Japan and support the barbarous China. Some of them are so stupid and ignorant as to protest on behalf of the Chinese, and to indulge in an absurd discussion, as if registration converts the Chinese into Japanese subjects, and as if the Chinese are entitled in virtue of international law to enjoy such hospitable treatment from the Japanese Government. Those who write in such a strain are idle scamps not suffered to mix in society in their homes, and are simply Chinese with the face of Europeans. As such we need not trouble ourselves to refute what they say. But if even their perverted arguments be considered one of the causes that induce the Chinese to indulge in wickedness, then, in virtue of the national rights of the Empire, those fellows should be driven out at once, a step that we believe to be perfectly proper.

FOREIGN RICE.

SINCE the declaration of neutrality issued by Her Britannic Majesty's Representative, as well as by the Representatives of other Foreign Powers, it becomes illegal for foreign merchants to import rice into Japan. Of course Chinese merchants had already ceased to import on their own account, but an idea seems to have prevailed at first that the services of foreign firms might be utilized for the purpose. That, however, is now seen to be out of the question, and unless the war soon terminates, Japan will have to depend entirely upon her own supply of the cereal. If, under such circumstances, the threatened shortage of the rice crop had proved a reality, very serious consequences must have ensued. But fortunately that fear has not been realized. The crop is expected to be above the average, so although high prices must be anticipated, no grave hardships will result.

TWO KOREANS.

THE *Kokkai* writes in a tone of some suspicion as to the whereabouts of Messrs. Tei Rankyo and Li Kei-kwan, confidential followers of Mr. Boku Yeiko, who, it may be remembered, are now out on bail, the Public Procurator having appealed against their discharge in connection with the Li Ishoku affair. Under the circumstances, these two Koreans ought to remain in Japan, but the *Kokkai* believes that they started for Korea with Mr. Boku when the latter was summoned by the new Korean Government to take part in the reformed administration of the country. The *Kokkai* has made inquiries at the lodgings where the two gentlemen used to live, and has ascertained beyond any doubt that they have accompanied their leader and have started for home. Being on bail they are obliged to send in a report to the nearest police station whenever they intend to go beyond Tokyo, and they faithfully observed this rule in every case when they travelled beyond the limits of the capital. But in the present instance they have neglected to do anything of the kind.

In a subsequent issue the *Kokkai* returns to this subject and gives an explanation of the two men's movements. It appears that though the fact of their leaving Japan is unquestionable, they had the special permission of the Japanese Government for doing so. They are now persons of great importance to Korea, and being men of honour, it is fully expected that if the Court of Appeal reverses their acquittal by the subordinate tribunal, they will return to Japan and undergo any sentence that may be pronounced against them. Even should they fail to do so of their own accord, it will be easy for the

Japanese Government to demand their surrender by the Korean Government. These considerations, together with the pledge of Mr. Boku, are said to have induced the Authorities to take an exceptional course with the two Korean gentlemen.

HER BRITANNIC MAJESTY'S MINISTER.

THE following is the Address to be presented to the Hon. P. Le Poer French on his arrival:—
Yokohama, August 15th, 1894.

To the Honourable P. LE POER FRENCH,
H.M. Envoy Extraordinary, Minister Plenipotentiary, and Consul-General, Tokyo.

SIR,—The news of your appointment to the post of British Minister in Japan, in succession to the late Mr. Hugh Fraser, was received by your countrymen here with feelings of great satisfaction.

When you left Japan five years ago, after a lengthened period of service in the British Legation in Tokyo, they took occasion to present you with an address expressing their esteem, and their regret at your departure.

They then entertained the hope that the experience you had acquired in this country might at some future time be utilized by you in a still more responsible position than you had previously filled, and it is therefore now a source of gratification to them to be able to welcome you on your return, and to congratulate you on your appointment to the highest position which an Englishman can hold in this country.

We remain, with sincere esteem and respect, your faithful servants,

[Signatures.]

SILK CULTIVATION IN AMERICA.

"ON the 14th inst.," says the *Silk Journal* of June, "the United States Senate passed a bill to encourage silk culture in the United States. It provides for the establishment of five silk experimental stations in different sections of the country, to be annexed of State agricultural experimental stations, but to be managed under rules prescribed by the Secretary of Agriculture. The bill appropriates \$5,000 for each station and \$2,000 to pay for a general superintendent. Silk culture is one of the industries dependent upon cheap hand labour, and, as frequently pointed out in this journal, it can never be successfully and profitably prosecuted in this country so long as labour can be more remuneratively employed in other industries. It is far better for us to go to Japan for raw silk than to try to compete with Japan in its production." We (*Japan Mail*) have pointed out many times—extending over a dozen years—that these efforts to grow silk in the United States would fail. They have been all failures so far.

ARTIFICIAL SILK.

AGAIN the announcement is made that artificial silk is a demonstrated success. The *Textile Mercury*, of Manchester, says:—"A company has recently been formed in Bradford under the title of 'The Lehner Artificial Silk Company,' for the purpose of manufacturing artificial silk according to the methods of Dr. F. Lehner. The capital of the company is £170,000. The bankers are the Bradford Old Bank. The vendors are Dr. Lehner, Mr. George Frederick Priestly, and Mr. Thomas Ferneley Wiley. A machine for producing artificial silk has been at work, privately, for some time in Bradford, and already a quantity of goods have been manufactured. For many years attempts have been made in France and Switzerland to produce artificial silk. Some of these experiments have more or less succeeded, but the great difficulty has been to reduce the elaborate laboratory experiments to a practical and commercial success. Dr. Lehner claims to have done this. He has produced a beautiful yarn, which has been woven by practical manufacturers into handkerchiefs, dress goods, braids, and so forth."

NAVAL NOTIFICATION.

COUNT SAIGO, Minister of the Navy, issued today a notification to the effect that torpedoed have been sunk at the entrances of Tokyo Bay and Nagasaki harbour, and any vessel wishing to pass will not be allowed to proceed without the assistance of an official pilot vessel. The notification

further states that every vessel is forbidden to enter or leave the above ports before sunrise and after sun-set. This notification will be enforced on and after the noon of the 22nd inst. An official notification by the U.S. Minister upon the above subject, will be found in our advertising columns.

MEDICAL SCHOOLS IN THE UNITED STATES.

THERE has been quite a little storm in St. Louis over some statements made by Dr. W. S. Chaplin, the Chancellor of Washington University, in reference to the condition of medical schools in that great city. The city might support three or four, but the actual number is ten or eleven, many of them but poorly equipped and doing slight enough work. In an impromptu address delivered before the Harvard Medical Alumni Association at the close of June, Dr. Chaplin remarked that in the West, to which St. Louis still belonged, people (thereby evidently meaning the ordinary world) do not understand what science, culture, and education mean. Consequently schools crop up like mushrooms, with an organisation and teaching faculty quite unworthy of high-class institutions. The medical schools in St. Louis mostly owed their origin to the desire of some specialist to advertise his work, and it paid him in the end to spend time and money on a teaching institute. All lovers of really good and sound education must desire to see the number of these schools decrease. As Washington University includes in its organisation the St. Louis Medical College the strongest of these Medical Colleges, these remarks created quite a storm, and the newspapers have been receiving indignant letters from medical men. One calls upon the Chancellor to resign his position as head of the St. Louis Medical College! Now it is evident on the face of the matter that the Chancellor desires this and perhaps one or two other schools strengthened and developed, instead of being dragged down, weakened, and hampered by a host of petty rivals offering a complete course in medicine in two winters. The *St. Louis Globe-Democrat* outdoes its usual blatant vulgarity in discussing the matter. Before receiving an explanation or qualification from Dr. Chaplin, who is now in Europe, it seeks to scorch him in the following notes:—"Dr. Pangloss Chaplin, LL.D. and ASS., of Washington University, has gone abroad to tell people of the difficult task before him as an educator of the wholly uncultured West. What a pity that the people of the West are compelled to pick their college professors from the offal of Yale and Harvard." Such is considered smart writing by the editor of the leading newspaper in the great city of St. Louis! Dr. Chaplin came to St. Louis from Harvard, where he was Dean of the Lawrence School of Science; hence the point of the remark.

MR. FUKUZAWA'S CONTRIBUTION TO THE WAR FUND.

MR. FUKUZAWA has contributed ten thousand yen toward the war expenses. He has set forth the motives of this contribution in the columns of his paper, the *Fiji Shimpō*. The article is permeated with sincerity and patriotism, and everybody who reads it must be touched strongly. He sets out by describing at the outset the vast influence which the English people exercise throughout the world, ascribing it to the greatness of their country. Whenever he travelled abroad he was deeply convinced of this point, and he could not but think that Japan, if she aspired to emerge from insignificance to the notice of the world, must work strenuously to deliver herself from her old ways of Oriental conservatism, and must adopt the Occidental principles of civilization and progress. His fervent prayer has been satisfied, and Japan, with unparalleled exertions has achieved wonderful success. She has, however, not only to advance on the path of the Western civilization herself, but also to inspire the same spirit into her neighbour, Korea. In fact she has resolved to take the lead in the grave task of civilizing the Orient. But now China has stepped in and endeavours to obstruct that aim. The present war

is therefore one of vital importance. It is a war between light and darkness, and is vitally connected with the fate of the Orient. Japan must by all means push this war to the extremity, and must struggle to crush her unwieldy and bigoted antagonist so long as there is a man left in the Empire. When a man learns that in this most important war the attainment of success may be furthered by financial help, how can he sit idle? Mr. Fukuzawa therefore decided, after consultation with his family, to offer 10,000 yen toward the war expenses. He is a hater, he says, of that too fashionable project, the raising of subscription funds—he has not only refused to give aid to many such projects but has even advised his friends to refrain from contributing. But the present case is entirely different, and everybody who recognizes the deep meaning that this war imports should be ready to forward it, even at the risk of creating more or less disturbance in the routine of the domestic finance. It might be thought too personal and might thus offend the good taste of the public did the writer enter into the private condition of his family; but he asks his readers to bear with him a little, for it may be of some use to those who are similarly situated as he is. He is an old scholar who has never engaged in trade, has never received any salary, but has obtained a competence solely by the use of his pen. He has provided what he thinks proper for his many children, and has set apart a portion with which he intended to enjoy his declining years with his wife. Moreover, he has reached the age of sixty-one this year, and it was his intention to celebrate his sixty-first birthday in accordance with the old Japanese custom, besides carrying out several other programmes. All these projects have, however, been given up, and by adding together the funds which he had appropriated for these various domestic undertakings and that obtained by reducing his household, he has obtained a sum of 10,000 yen. The pleasures which he had arranged for his old age may seem to be thus lost, but he replies that in place of them he will be enabled to enjoy that boundless pleasure of seeing his country respected throughout the world and he a member of it.

TEA-PLANTING IN SOUTH CAROLINA.

It is well known that the floor of the lower Mississippi valley corresponds closely to that of Japan. The climatic conditions are similar, both climates having a sultry summer, with plenty of moisture. Already cotton is a crop largely reared in both countries; and now the Westerners are endeavouring to produce tea also. An enterprising South Carolina agriculturist, living near Charleston, has received the aid of the Agricultural Department in his endeavour to naturalize tea. Seed of the best quality was obtained from China and sown in the year 1889. Dr. Sheyard, of Pinehurst, the gentleman engaged in the enterprise, obtained last year 37 lbs. of excellent tea from an acre so cultivated. This is of course a slim enough return, considered absolutely, but it must be remembered that the plants are young. By the close of the decade he hopes to increase the yield to 640 lbs. per acre. A Detroit firm, to whom the tea was handed for inspection, no particulars being furnished of its origin, reported that it might be graded with the best they had in stock. The consumption of coffee in America, especially in Southern cities, is immense, for it is served with every meal. It remains to be seen whether tea will able in any measure to supplant it, if the industry becomes a local one. The demand for tea, in such a city as St. Louis, is comparatively small, Assam and Ceylon teas find absolutely no market, and the quality supplied is altogether inferior. Tea has to be recommended to the people by a system of prizes and presents, that proclaims it to be still a fancy article.

MR. TAGUCHI ON THE OPERATION OF THE WAR. MR. TAGUCHI, editor of the *Economist*, evidently attaches great importance to an article which appeared in the last issue of his journal, for he takes the unusual course of signing the article with his name. The article discusses

the plan of campaign. Now that the Chinese troops in Korea have been dispersed, the next thing to be done is to invade China itself. In this the Navy should be made to play the chief part, and the programme for it is, according to his opinion, (1) to attack Chefoo; (2) to attack Taku; (3) to cut off the supply of provisions from the Chinese army stationed at Wi-ju at the mouth of Tai-dong-yang river; and (4) to blockade Shanghai. The objects aimed at in taking these steps are to destroy the Chinese Navy and to injure Chinese commerce. The first essential of the present war is to destroy the Chinese Navy and to obtain the unopposed command of the sea. For this purpose Chefoo and Taku should be attacked and the Tai-dong-yang closed. When its Navy has been destroyed China cannot despatch its troops to the Peninsula. Together with the destruction of the Navy the blockade of Shanghai should be carried out promptly. This is to prevent the subjects of neutral Powers from selling contraband of war to China. Several Powers have declared neutrality, and though the subjects of those countries are morally bound to observe it, nobody can foretell what they are likely to do. Hence the Japanese Navy should blockade Shanghai at first and, beside destroying or capturing the enemy's war-vessels or merchant vessels, should subject the trading vessels of neutral Powers to inspection. This will no doubt be extremely vexatious to those vessels, but they are morally bound to submit to the right of search. The shrewd economist's object in thus subjecting foreign vessels to vexatious treatment, is really to make Japanese commerce far more prosperous. Should Shanghai be blockaded and its commerce be interfered with, says he, the prosperity of the Japanese harbours would be increased, just as in former times the constant wars on the Continent of Europe threw the commerce of the world almost entirely into the hands of the English. As neutral vessels would regard it highly inconvenient to be subjected to inspection in that way, a too rigid limit must not be established in regard to contraband of war, nor must the manner of inspection be too strict, for Japan desires to keep on good terms with the neutral Powers. But everything that can safely be done to promote Japanese commerce at the expense of Chinese should be done. In conclusion, Mr. Taguchi disapproves of the opinion prevailing in some quarters that the Japanese land forces should march on Peking. He thinks this disadvantageous in many respects, and maintains therefore that the Chinese Navy must be destroyed first. After that has been accomplished the army should be made to proceed toward Peking, should China persist in her hostility even then.

THE POLICE AND RETIRED SOLDIERS.

THE Metropolitan Police are engaged in a worthy scheme in connexion with the Korean affair. There are among the 3,000 constables in the metropolis quite a considerable number of soldiers placed on the retired list. Many of them who belong to the 1st Reserve have been summoned to their respective corps, and others will shortly follow. When their service is thus required in the Army they, as policemen, are placed on the retired list. That is quite a serious thing to their families, for it means that the breadwinners are deprived of their monthly pay. The Metropolitan Police have therefore suspended their original project of forwarding donations for the comfort of soldiers and seamen, and are now deliberating on the device of giving support to families whose breadwinners have been summoned to military service. This is considered by the *Nichi Nichi* a very commendable project, for the war with China may, unlike that between civilized countries, be prolonged through a considerable period of time. Retired soldiers who are serving as police are not confined to Tokyo alone; the same must be the case all over the country. The undertaking is therefore a large one.

A RETRACTION.

THE *Asahi Shimbun* finds that its charge against Mr. Asano is baseless, and accordingly with-

draws it. It declared, as our readers doubtless remember, that Mr. Asano or his manager had been engaged clandestinely selling coal to the Chinese, and that the fact came to light owing to the wreck of a ship of his laden with coal. But it now turns out that the *Banroku Maru*—so that vessel was called—did not belong to Mr. Asano at all. It was chartered by the Government. So the *Asahi* is responsible for another mare's nest.

THE NAME OF THE WAR.

WHAT to call the present war is a difficulty that must have presented itself to all writers. "The China-Japan War" is clumsy; the Sino-Japanese War is pedantic; "the Japonico-Chinese War" is impossible. Were it permissible to construct a compound out of the dignified language used by his August Majesty the Emperor of China and the slang of the Tokyo streets, we might say "the war of the Pigmies and the Pigtales," which would at least be alliterative.

THE TELEGRAPH IN KOREA.

It was expected that the line of military telegraph in Korea, from Fusan to Seoul, would have been opened for the transmission of messages from the 8th inst. Some delay occurred, however, and necessitated the postponing of the opening for two or three days. The 11th was spoken of as a probable day, but the Koreans through whose district the line passes seem to be prejudiced against anything so new-fangled. They cut the wires in two places, and the expectation on the 13th inst. was that the line could not be in working order before the 16th or 17th.

LETTERS FROM JAPAN.

RECENTLY, in answer to a question in the House of Commons, Mr. A. Morley said:—It is the fact that letters from Shanghai superscribed for transmission *via* Vancouver and New York are sometimes received several days earlier than similarly superscribed letters from Japan. Representations were made some time ago to the Japanese Post Office on the subject, but that administration was not willing to undertake to separate the superscribed letters from the correspondence sent by the ordinary route, *via* Vancouver and Montreal.

FLOODS IN TOCHIGI PREFECTURE.

THE recent heavy rains have caused disastrous floods in Tochigi Prefecture. The line of railway to the north of Kuribashi is under water, to a depth of some 3 feet, and passengers have to walk along a wooden causeway for a distance of about 500 yards. We read in the vernacular press that 5,000 houses were submerged; 18 bridges destroyed, one life lost, 1,192 houses partially flooded, and 2,977 *cho* (7,442 acres) of arable land devastated.

THE KAMAKURA CATASTROPHE.

THE bodies of the unfortunate young people who lost their lives at Kamakura on Tuesday have been recovered. The case of Mr. Asao is rendered still more melancholy by the fact that he had but recently returned from completing his education in England, and his future was regarded as full of promise. The greatest sympathy is felt in Tokyo with the bereaved parents.

MILITARY LOANS.

THURSDAY'S *Official Gazette* contains the Rules for Military Loans. According to the new regulations the amount of the loans must not exceed yen 50,000,000, for which interest is to be paid at a rate under 6 per cent. per annum, and the loans are to be repaid in fifty years, commencing five years after the year of issue.

MORE SHIPS FOR JAPAN.

THE Japanese Government has purchased six steamships which belonged to the English line running between Liverpool and China. The steamers are being equipped for service in the event of war.

THE "KOWSHING."

THE Naval Court of Inquiry into the loss of the *Kowshing* is expected to be held in Shanghai. Capt. Galsworthy and Mr. Tamplin have reached that port, as well as a scaman and a quartermaster.

KOREAN AFFAIRS.

It is stated in the *Asahi* and several other papers that the Japanese Government have decided to return the arms seized from the Koreans when the latter opened fire against the Japanese troops on the 23rd ult., as they were proceeding toward the Palace escorting Mr. Otori. It is believed that this course will be taken by the Government owing to the fact that the Korean soldiers who fired against the Japanese must have been instigated by the Ming faction, and also because these soldiers have been friendly rather than otherwise toward the Japanese since that incident and because the Korean Government has expressed regret for the occurrence.

The Hydrographical Bureau of the Navy has given notification as follows:—Torpedoes have been laid in the following sections of Tokyo Bay: Within the line that starts from the extremity of Hashirimizu to the Honmoku buoy established in front of the extremity of Honmoku, in other words the western side of the Bay situated to the south of the line that extends from Koshibasaki to Hitomiyama, Kisarazu. Ships that pass in or out Tokyo Bay through the interspaces that lie between Kannonasaki and Futsusaki should hereafter sail that portion of the sea between the buoy stationed midway between the two capes and Futsusaki, taking the eastern route from the place where the torpedoes are laid, at a suitable distance from it. The limit of the torpedoed spaces shall be indicated by establishing two buoys along the line that stretches from the extremity of Hashirimizu to the Honmoku buoy, and also by constructing a red light beacon at the extremity of Hashirimizu. Further notice shall be given when the buoys and the beacon are in place.

The *Nichi Nichi* says that a military telegraph constructed between the watch tower at Noda-saki, Hizen, and the Nagasaki Post and Telegraph Office and between the watch-tower at Shijiki-saki, Hizen, and the Hirado Post and Telegraph Office were opened on the 3rd instant, another between the watch-tower at Oki and the Sonoura Office of the same island province was opened on the 4th, while those between the watch-tower at Fura, Awa, and Tateyama Office, and between the Nagatsuro watch-tower in Izu, and the Shimada Office were opened on the 7th instant.

The *Asahi* says that the flags, arms, and so forth of the captured vessel *Tsao-kiang* have been conveyed to Tokyo and are now in the Naval Office, having been inspected by H.I.H. Prince Arisugawa, at the Central Staff Office. They will be transferred in a day or two to the military museum at the Shokon-sha, to be shown to the public at large.

In a recent issue we suggested it as probable that the vanguards of the Japanese and Chinese armies that were presumed to be proceeding toward Phŏng-yang, Phŏng-an-do, would come into collision. This has not happened, however, for the latest telegram from Korea says that the Japanese vanguard has anticipated the Chinese in the occupation of that position. It seems that the Chinese vanguard is still somewhere near Sŏn-chhŏn, the main body being stationed at Wi-ju and its vicinity.

The *Kokumin* states that five British men-of-war are lying at anchor at Otaru, watching the movements of the Russian fleet on the other side of the sea. Some other British ships have gone to the China Sea to keep watch on the movements of the French Squadron in the neighbourhood of the strait, and any ambitious attempt which France may conceive against Siam. A rumour, therefore, that the 17 vessels of the British Squadron in China and Japan had assembled at Chemulpho must have been erroneous.

The *Hochi* has learnt from a trustworthy quarter that the United States of America has resolved to despatch the *Monterey*, the *Olympia*, the *Philadelphia*, and the *Boston* to the East, to protect her interests during the Japan-China war. They are said to have already started for their destination.

The fate of the sailing vessel *Tenkyo Maru* appears to be still uncertain. The arrival of the

Captain and five of the crew at Shanghai on the 8th instant is beyond any doubt, but it is not clear what has become of the ship and her cargo, whether they are still detained or are set free. According to a telegram said to have reached the Foreign Office on the evening of the 8th instant from Mr. Okoshi, Japanese Consul-General at Shanghai, the Captain and five of the crew of the sailing vessel after having been set free are said to have arrived in Shanghai in company with the suite of the acting Minister, Mr. Komura. From this information it appears likely that the Chinese Government has seized the vessel with the cargo, and has set the crew at liberty.

The *Nichi Nichi's* Fusan correspondent writes that the rise of the market in Fusan is extraordinary. The best hulled rice is sold with reluctance even at 12.50 yen per *hoku*, and vegetables, fish, and almost every other article of daily use are sold at double the usual rate. The exchange rate of Korean coin is even more striking in its rise. On the 4th instant it was 190 per cent., while on the next day it even went up to 220 per cent. Seeing this, the acting Japanese Consul gave warning to the Japanese exchange brokers, to confine the price to the level of 220 per cent. The brokers were displeased at the intervention of the Consul, for they held that as the price rose as much as 430 per cent. during the trouble of 1884, it would not be fair to limit the appreciation to 220 only. However, in consequence of the remonstrances of the Consul, they finally agreed not to raise the price above 330.

General Oshima has reported, says the News Agency, that the guns taken from the Chinese at the battle of Sŏng-hwan were eight instead of four as previously supposed. He has also reported that of those who were wounded in that battle five have died.

The *Nichi Nichi's* Fusan correspondent wired the following news to Tokyo, under date of 8.40 p.m. of the 10th instant. Fifteen hundred Chinese troops are said to have really reached Kai-phŏng from Phŏng-yang, and from one thousand five hundred to five thousand more are to follow. Kai-phŏng is a town in Phŏng-an-do, and is distant only about 17 *ri* north of Sŏul. The *Nichi Nichi* presumes that a decisive battle may have already taken place on the banks of the Im-jin-gang. This news is contradictory to that given above that the Chinese troops have not been seen at Phŏng-yang and that the Japanese have occupied the place. We are, however, inclined to place credence in this latter report, for the same piece of intelligence is given in yesterday's issue of the *Yiji*, though the *Yiji's* correspondent, also telegraphing from Fusan, puts the vanguard at 1,000, and the main body to follow them at 4,000 men.

The following telegram from Shanghai, under date of 8.10 p.m. of the 10th instant, is published by the *Nichi Nichi*. When Mr. Arakawa of the Japanese Consulate, Tientsin, was about to leave Taku for Shanghai on board a British steamer with the officials of the Consulate and about twenty Japanese women, Chinese soldiers, taking advantage of the temporary absence of the Japanese gentlemen, rushed into the place where the women were, and led them away by force, together with the baggage of the party. Several of the ladies received wounds. That night they were confined in the Chinese barracks and only set free on the next day; the baggage and other valuables were not returned. A rumour is current that the Japanese Government has made a strong representation on the subject to the Chinese Government through the medium of the American Minister. Even in the vicinity of this city (Shanghai) outrages on the part of the Chinese against the Japanese are not infrequent. On receipt of the foregoing telegram, the *Nichi Nichi* sent a member of the staff to the Foreign Office to inquire into the authenticity of the news. This gentleman was informed that similar intelligence had been received by the Authorities, who at once transmitted a message to the American Minister asking him to make an urgent representation to Li Hung-chang. The Minister acted promptly in the matter, for the Foreign Office is said to have received a message from

the Minister that the Viceroy has signified his great regret for what the Chinese soldiers had done, has offered repeated apologies, and has, moreover, promised him to restore the seized articles to the owners and to inflict severe punishment on the soldiers who were guilty of such misconduct. The *Nichi Nichi* observes that the Japanese must be prepared to encounter such outrageous treatment from the hands of barbarian Chinese, but that they should be patient with them, should endeavour, with magnanimously enlightened hearts, to lead them out of the darkness of ignorance and bigotry.

The following is taken from a letter sent from the Branch office at Shanghai of Mr. Kishida Ginko, under the date of the 4th instant. In Shanghai four or five Japanese are daily assaulted by the Chinese, and those who have been wounded in these attacks are not few. The other day a boy employed by a certain Japanese firm was captured with four others of the Branch Office of the Japan-Chinese Bank. They were violently handled by several hundred Chinese and fainted more than once. China appears to have adopted her accustomed tactics in carrying on war with a foreign Power, that is, to weary her antagonists by protracting war. The export of sheep, eggs, rice, and other edibles from Shanghai has been forbidden, as well as hemp and cotton; and it is believed that the import of commodities from Japan will also be forbidden. The hostile aspect of the Chinese at large in connection with the present affair is unexpectedly strong, the general excitement is far greater than which prevailed here during the war with France.

The ships of the China Merchants' Steam Navigation Company have ceased to carry on the coasting trade and have shut themselves up in various harbours. The consequence is disastrous to the commerce of Shanghai, where the market is in a deplorable state. The price of rice has risen by leaps and bounds, and the common people are suffering dreadfully. The want of steamers is sorely felt by the Japanese residents in Shanghai who are desirous to return home. The chartered ship which the Yusen Kaisha has put on the service between Shanghai and Nagasaki is an old ship, so slow that it takes four whole days to sail between the two places, while the fares charged by the foreign steamers are too high for most of the Japanese. Moreover, the latter sail directly to Kobe or Yokohama and the residents, the majority of whom have come from Nagasaki, are in great perplexity. About one hundred Japanese have already returned, and some three or four hundred still wish to leave. The military telegraph constructed between Sŏul and Fusan will be completed, it is confidently expected, on the 12th instant.

The *Kokumin* says it received yesterday a telegram announcing that a second naval engagement has taken place. Our contemporary believes that the fight occurred in the neighbourhood of Wei-hai-wai, either on the 11th or 12th inst.

Led by the statement in Monday's issue of the *Kokumin* nearly all the Metropolitan papers echo the news that a second naval engagement took place on the 10th instant near Wei-hai-wei, resulting in another signal victory for the Japanese navy. The *Nichi Nichi* even gives news, though merely as a rumour, that in that battle seven Chinese vessels were sunk. The *Chu-o* is more confident, for it says that it has received an important express from Shanghai under date 9.20 p.m. of the 12th instant. It is highly incensed therefore to find itself prevented from inserting the news, the press censors having forbidden its publication on the ground that no official report of the alleged affair has yet been received by the Authorities. After writing the above, the *Chu-o* issued an extra, from which we take the following:—

The subjoined express has been received by the authorities at 8.50 a.m. of the 14th inst from Saseho, under date 3.50 a.m. of the same day.

The Japanese fleet and a number of torpedo boats reached the neighbourhood of Wei-hai-wei at midnight on the 9th instant, and instantly the torpedo boats prepared for the attack.

Next morning shots were exchanged between the fleet and the forts. In the bay a few war-vessels of no large size were seen, the more formidable ones having left. Under the circumstances it was thought unadvisable to keep up the attack on the forts. The fleet safely arrived at Chemulpho at 8 a.m. on the 11th instant.

The express received by the *Chu-o* from Shanghai was to the effect that seven Chinese war-vessels had been sunk. This appears to be a gross exaggeration of the above incident.

The news that the Chinese troops have advanced as far as Kai-pyŏng is now regarded with suspicion by the native papers. The *Nichi Nichi* took the trouble to ask the Authorities as to the truth of the report, and was informed that the latter had received intelligence to the same effect. Judging, however, from the fact that no news has since been received of an encounter between the two armies, which must have taken place had the Chinese really proceeded so far (since Kai-pyŏng is separated from Sŏul by less than 20 *ri*), it is supposed by the *Nichi Nichi* that the previous telegram may have been erroneous.

The passing of the Chinese fugitives, from the battle of Sŏng-hwan, toward the Phŏng-yang district, through Chhŏng-ju and Chhŏn-ju, may have been mistaken for the arrival of fresh Chinese troops from Wi-ju.

The casualties on the Japanese side at the battle of Sŏng-hwan are said to be as follows:—Major Matsumoto, rifle wound in the leg; Capt. Matsuzaki, killed on the field; Lieutenant Tokiyama, drowned during the attack; Lieutenant Yamaguchi, rifle wound in the leg; Lieutenant Morita, slight rifle wound in the head; Ensign Yamada, rifle wound in the leg; 32 non-commissioned officers and soldiers, killed by gunshot or drowned during the battle; 50 others wounded. Of the wounded 5 have since died in hospital. Major Furushi is also dead, but his death occurred a day or two before the battle, and in a strange manner, according to the Sŏul correspondent of the *Chu-o*. His battalion failing to observe strictly some directions of the Commander-in-Chief, he was reprimanded by the latter. Deeming this a great disgrace, he committed *seppuku*.

The war correspondents of the metropolitan papers join in ridiculing the Chinese troops for their ignorance in the use of repeating rifles. It is said that when the company led by the late lamented Captain Matsuzaki crossed the An-sŏng river during the battle of Sŏng-hwan, and were advancing toward the enemy's entrenchments, an ambuscade suddenly rose at a short distance off and began to fire at them with repeating-rifles. The troops were then made to lie down. The Chinese thoughtlessly emptied their magazines, and when the firing had slackened the Japanese stood up, charged, and put them to flight.

According to the latest Sŏul correspondence of the *Yiji Shimpō*, the Koreans in Phŏng-yang district appear to be unfriendly to the Japanese. The other day a mob of some 300 Koreans made an onslaught on Japanese there, wounding two men named Saiki and Imai, and Lieutenant Machiguchi (of the scouting party) had his pistol and other things taken by force. The Japanese were obliged to retreat some 4 *ri* nearer to Sŏul. The *Yiji's* Shimonoseki correspondent telegraphs that in consequence of some danger being apprehended in the Korean sea between Chemulpho and Fusan, the Japanese steamers suspended navigation two or three days ago. In general, quietness prevails both on land and sea.

An account of the triumphal return to Sŏul on the morning of the 5th inst. of the Japanese army that fought at the battle of Sŏng-hwan, has been received by the *Nichi Nichi* from its Sŏul correspondent. A triumphal arch of evergreens was erected by the Japanese Legation on the high way that leads to Sŏul, at a place distant from it about one Japanese mile. There a small river runs and the arch was constructed on the bank of the river nearest to Sŏul. Early in the morning, Mr. Otori, followed by the Legation officials, proceeded in a palanquin and

took his stand on the western side of the road, just beyond the arch. Shortly afterwards, Mr. Li Inyo (Japanese pronunciation), special deputy of the Korean King, and Mr. Tei Keigen, as representative of the Ministers of State, arrived at the place, and awaited the return of the triumphant army. At about six o'clock a loud din of trumpets and drums was heard, and a few minutes later Korean coolies striking Chinese martial instruments captured in the battle advanced, bearing several white flags on which ideographs signifying, "Prizes obtained at the battle of Sŏng-hwan" were written. Then followed another band of coolies bearing the captured red and white Chinese standards. There were twenty-seven standards in all, great and small. On two of them was inscribed the name of the Commander-in-chief, and on three others that of the Vice-Commander. Eight pieces of cannon followed, each drawn by two oxen. Battalion after battalion next arrived in regular array and halted on the other side of the river. General Oshima, Commander-in-Chief of the Army, with his staff, crossed the bridge and dismounted in front of the arch. Mr. Otori received him and his suite and congratulated them in a short dignified speech on the successes attained by them. The General returned thanks, and then the King's Deputy and the Representative of the Korean Ministers of State addressed him in suitable words, to which the General replied. Cheers for the Emperor of Japan and for the King of Korea were lustily given, and the ceremony ended. The army then began to move forward and reached Sŏul at 9 o'clock a.m.

Mr. Takahira, lately *Chargé d'Affaire* in Belgium and promoted a few days ago to be Minister Plenipotentiary and Envoy Extraordinary at Rome, has sent a telegram to the Foreign Office stating that Denmark has declared neutrality in connexion with the Japan-China war.

The latest news about the Queen of Korea is given in the *Nichi Nichi*. It says that when the first meeting of the King and the Tai Wŏn-kun at the Palace was over, and the latter retired to a room specially assigned to him, the Queen came in and with tears in her eyes piteously apologised to him for her past conduct, and swore to him that she would never interfere in the future in the administration of the country. The Tai Wŏn-kun was moved, and simply confined himself to a mild reproach, and gave cordial advice as to the course to be observed by her hereafter. Thus the Queen is saved from the degradation, which according to Korean precedent, seemed likely to be her lot.

Among the subjects discussed by the seventeen Commissioners of Reform we find, besides those already given, appointment to official position according to ability regardless of rank, the abolition of the criminal system of extending punishment to others in the family beside the real offender, the permission given to widows to remarry, the restriction of marriage at an early age, and so forth. It is said that some of them have already been fully discussed and have obtained the sanction of the king. The *Kokumin's* Sŏul correspondent writes under the date of the 1st instant, that the Korean Government has decided to despatch an ambassador to Japan to return thanks for the cordial friendship manifested to Korea by Japan.

To-day's *Official Gazette* says that the Italian Minister in Tokyo has communicated to the Japanese Government that Italy had announced its intention of maintaining neutrality during the war between Japan and China. A similar communication has been made by the Minister Resident of Sweden and Norway in the capital to the Japanese Government.

The *Nichi Nichi* has received the following telegram from Fusan under date of the afternoon of the 13th instant:—"The military telegraph between Sŏul and Fusan was completed and about to be opened for the transmission of messages, when, on the afternoon of the 12th instant, the wires, throughout a distance of about 2 *ri* between Tai-ku and Saug-ju, were cut by the Koreans. It is believed that the

transmission of messages will be delayed one or two days on that account.

The *Fomiori* says, though on what authority we are not told, that Ming Yan Shun, chief of the Ming cabal, who was lately sentenced to banishment to a distant island, has secretly fled to Port Hamilton and intends to make his escape thence to some other place.

The *Mainichi* gives a rumour that a skirmish has taken place between the Chinese and Japanese troops at Kai-pyŏng and the *Hochi* thinks that in two or three days another piece of happy news, namely, the intelligence of a second victory in the neighbourhood of Phŏng-yang, will arrive.

It is stated by the *Hochi* that service by the overland telegraph is interrupted in consequence of the Chinese experts employed in the various offices having fled.

The vernacular papers observe that the object of the Japanese fleet in boldly proceeding to Wei-hai-wei was to decoy out the Chinese war-vessels that were supposed to be lying there and to cripple or destroy them. It was therefore quite a proper movement on the part of the Japanese fleet to leave the place when they saw no vessel of importance and when none of those in the harbour ventured to encounter them.

From a mutilated paragraph given in the *Hochi*, the Japanese fleet appears to be lying in the bay at the extremity of Hwan-hai-do, which it is separate from Wei-hai-wei by a distance of only 10 hours' steaming. About the place, where the Chinese fleet is sheltered two opinions prevail in the vernacular press: one, that it is in Lŏ-shun Kén; another that it is in Shanhai-kwan, a port lying at the western entrance of the Gulf of Lian-tung.

The bombardment of Wei-hai-wei is expected by the vernacular press to be followed by serious results to Northern China, whose commerce will be greatly crippled and the food supply threatened with suspension.

The *Hochi* says that the Ambassador to come here from Korea, to return thanks for the friendship shown by Japan, will be the grandson of the Tai Wŏn-kun. The Vice-Ambassador will either be Mr. Kin-ka-chin, who lately represented Korea in Tokyo, or Mr. Yu-kichi-yei.

The *Yiji Shimpō* has the following express from Osaka, under date of noon on the 14th instant:—

The injunction contained in the Chinese Declaration of War that "Wo-jen" ships coming into Chinese ports should be utterly destroyed, seems to have been literally carried out, in direct contradiction of the predictions of the *Kokumin* that China had intimated to Japan her intention of allowing the merchant marine of the two empires to carry on trade unmolested. The seizure of the Japanese ship *Tenkyo Maru* at Taku settles the question.

The *Yiji's* Shimonoseki correspondent has sent the following, under date of 7.59 p.m. on the 14th instant:—Yesterday the Authorities requisitioned 3,500 tons of first rate coal from the two collieries of Tagawa and Kanada, and the Karatsu colliery was similarly ordered to supply 1,500 tons of the same material. Some say that the quantity to be supplied by the latter is 10,000 tons. There are at present in Moji about 30,000 tons of coal, in lump and dust.

The Department of Communications yesterday instructed its officials at the Japanese Post Office in Shanghai to return home, and the Office will be closed till further notice.

The *Nichi Nichi* has received the following telegram from its Fusan Correspondent:—Fusan, 10.35 a.m. 15th instant; the telegraph between Sŏul and Fusan has been opened for transmission of messages.

The meaning of the above telegram is that the repair of the military telegraph had been completed, but that the line was again rendered useless by fresh damage done by the Koreans, as another telegram despatched from Fusan on the afternoon of the same day shows. The latter message runs thus:—"The military telegraph that was opened for the transmission of messages this morning has been damaged once more by the Koreans in the portion of the line passing between Nak-dong and Yu-gok.

The military telegraph constructed at great

pains by the Japanese Government being of no service in consequence of the mischievous acts of the Koreans, the Authorities, says the *Nichi Nichi*, are contemplating some decisive measures for its preservation.

The Metropolitan papers say that the Government has decided to lay an additional telegraphic line between Tokyo and Nagasaki, and Tokyo and Shimonoseki, and that the work of construction has already been started. The Nagasaki and Sasebo line will also be supplemented in the same way.

The *Shogyo Shimpō's* Shanghai correspondent has transmitted the following message, under date 8.24 a.m. of the 15th instant:—"The Kai-ping Colliery Office has chartered two Norwegian steamers, tonnages 691 and 885, and one Belgian steamer of 822 tons, on condition of monthly renewing the charter."

A telegram sent from Tientsin to a certain quarter in Tokyo, says the vernacular press, on the evening of the 14th instant, is to the effect that the four Chinese war-vessels and torpedo boats hitherto lying in Taku have started toward Shan-hai-kwan.

The *Hochi* says that China appears to be principally employed in the defence of the Gulf of Lian-tung, leaving the defence of the mouth of the Gulf of Pechili comparatively neglected. It is not because the mouth of the Gulf of Pechili is thought sufficiently strong that China thus neglects its defence, but because she thinks a naval engagement in the open sea risky, and also because she regards the connection between her territory and Korea as of paramount importance. It is therefore supposed by the *Hochi* that the troops which China appeared to send to Korea before the battle of Sōng-kwan were fought and before A-San was taken, were really dispatched for the strengthening of Lian-tung, and were distributed to Newchang, Port Arthur, Fāng-hwang-ch'ang, and Chiu-ben-ch'ang. The troops stationed at Wi-ju are therefore believed not to exceed 7,000. Whether those troops have advanced to Phyoŋ-yang or not is yet uncertain, some papers stating that they hesitated to advance on learning the news of the disaster at A-San, while others say that a part has advanced. In this context the *Fiji's* Fusan correspondent has sent a message, under date 2.45 p.m. of the 15th instant:—"The Chinese troops are said to be in scattered groups in the neighbourhood of Phyoŋ-yang, though their number is not known; they are moreover said to be preserving connection with the ships in Tai-dong-gang."

Some days ago we were told by the vernacular papers that the Japanese advance guard had occupied Phyoŋ-yang. Hence, if the Chinese troops have advanced so far, the collision between the two may take place at any time.

The latest news about the Chinese troops routed at Sōng-liwan is that received from Fusan, under date of the 13th instant. It says that the troops fled along a bye-way near Kim-sōng in Sang-wōn-do about the 10th instant.

It is said that the total number of Japanese soldiers sent back from Korea up to the 15th instant on account of illness, is 282, of whom only 143 are now in Hiroshima Military Hospital, the rest having been either restored to health or sent home. The *Shogyo* and other journals state that of the total number of Chinese formerly living in Yokohama, about 1,800 have gone home, and about 1,700 still remain. At a meeting held by them a day or two ago, in their Central Club, they are said to have resolved to stay behind and to apply for registration. The registration office of the Kanagawa Kencho, which had very little work to do previously, has therefore become suddenly busy.

The majority of the Chinese that have left for home are said to be young men of no means. The cause of their departure is ascribed by the vernacular papers to their having received news that the Peking Government is desirous of utilizing their services as volunteers at a higher salary than is usually given. The knowledge they are supposed to have of Japan is believed to be the motive of this high wage.

DEATH OF HIS IMPERIAL HIGHNESS PRINCE TERUHIITO.

We regret to have to announce the death of His Imperial Highness Prince Teruhito. The little Prince began to be indisposed about the 20th of June, and on the 26th of that month he was sent to Miyanosita for change of air. After a time he seemed to improve, and strong hopes of his speedy recovery were entertained, but after the storm on the 10th instant his malady grew rapidly graver, and the physicians' reports became so disquieting that the Emperor issued orders for the Prince's immediate return to the capital. Setting out from Miyanosita at 9 p.m. on the 16th instant, His Imperial Highness reached the Azabu Palace at 12.25 a.m. on the 17th, and expired the same morning at 3 o'clock. The Prince was born on November 30th last year. He was the Emperor's fifth son. Of his four brothers only one survives, Prince Yoshihito, the Heir Apparent.

KOREAN REFORMS.

Telegraphic intelligence from Sōul says that the Reforms Committee have elaborated the following principal points of improvement as calling for immediate introduction:—

- 1.—The substitution of modern for ancient style (almanack) in documents, public or private.
- 2.—The despatch of Ministers Plenipotentiary to the various Treaty States after Korea's treaty with China has been revised.
- 3.—Abandonment of the system of making lineage a prime qualification for office, and substitution of a system under which men of merit shall be selected without reference to their birth.
- 4.—Introduction of a system of etiquette based on official rank and not on the distinctions of military and civil.
- 5.—Confining of criminal punishment to the actual perpetrators of a crime, and not implicating relatives.
- 6.—Limiting the right of adopting an heir to cases where there is no child by either wife or concubine. N.B.—This reform is not to have retrospective effect.
- 7.—Abolition of early marriages, and enactment of a law making the minimum marriageable age for a man twenty, and that for a female sixteen.
- 8.—All marriages whether of maids or widows, to be left to the free volition of the parties concerned.
- 9.—Abolition of service for a fixed period, whether in a public or private capacity, and abolition of all sales of human beings.
- 10.—Permission to address the Reform Committee on all subjects of national interest, whatever be the rank of the person tendering the advice.
- 11.—Appointment or reduction of all officials to be made dependent on the real needs of the State.
- 12.—Adoption of a fashion of official and non-official dress for persons in Civil Service.
- 13.—Regulation of the question of resuming duty after a period of mourning.
- 14.—Abolition of the law forbidding the entry of priests and nuns into the capital.
- 15.—Definite determination of the numbers and salaries of all officials.
- 16.—Registration in official ledgers of all public expenditures, as well as of all lands officially held, and of all taxes.
- 17.—The Japanese Government having taken exceptional steps to secure our country's (Korea's) independence, an ambassador shall be at once sent to Japan with instructions to express Korea's thanks.
- 18.—The Japanese troops being stationed at various places to protect the country against the Chinese troops, their presence must be considered to have no other object whatever. Korean subjects are exhorted to understand this, and feel perfectly re-assured.

There are other provisions of a minor character, but we need not add them to the list. The Japanese newspapers appear to think that the work of reform is likely to be even more thorough than was indicated by the programme that the Japanese Government submitted.

Of course it will be understood that the Committee have not finished their labours. Other matters remain to be considered by it.

THE CAPTURE OF THE "TENKYO MARU."

It appears that the Japanese sailing ship *Tenkyo Maru*, which has been seized at Taku by order of the Chinese Government, sailed from Hokkaido on the 21st of June with a cargo for Tientsin. Hence her departure took place long before any prospect of war between China and Japan had made itself apparent; even before the Togaku rebellion had begun to attract serious attention. It also goes without saying that she was not engaged in any operation of a belligerent character, directly or indirectly. Under these circumstances international usage forbids her capture by the Chinese. The *Fiji Shimpō* writes very strongly on the subject. It quotes an Order in Council issued by the British Government during the Crimean war, in which the privilege of entering British ports, discharging their cargoes and clearing without molestation, was guaranteed to all Russian-owned vessels that commenced their voyage prior to the declaration of war, as well as the privilege of safely completing the outward and homeward trips. It notes that France also adopted a similar course at the same time with regard to Russian ships, and that during the Franco-German and the Turco-Russian wars, corresponding immunity was granted to the trading vessels of the belligerents under corresponding circumstances. Hence China is unquestionably violating the usages of civilized nations when she seizes and confiscates the *Tenkyo Maru*. But then, says the *Fiji*, China has never shown much respect for international law. No more she has, and we cannot expect her to turn over a new leaf on the present occasion. If the *Tenkyo Maru* represents the sum total of the Middle Kingdom's *spolia opima* in the sequel of the present trouble, Japan may congratulate herself.

THE WHITE FLAG.

"All went well," says Captain Galsworthy in his report, until the morning of the 25th, when off Shupael Island we passed a man-of-war flying the Japanese naval ensign with a white flag above it. This vessel proved to be the Chinese war-ship *Chi-yuen*. Mr. von Hanneken, in his deposition, tells the same story about the flags, though he, not unnaturally, mistook the ship that was flying them for a Japanese man-of-war. Now the Emperor of Japan, in his Declaration of War, says that hostilities were opened by the Chinese ships firing upon the ships of Japan; and the Emperor of China, in his Declaration, alleges that the Japanese began the fighting. For the purpose of determining between these statements, the testimony noted above with reference to the flags is of value. What was the *Chi-yuen* doing with the Japanese ensign flying under a white flag? The Japanese story is that the Chinese ships flew these flags treacherously, and that when the Japanese vessels, suspecting no ruse, drew to within a distance of 300 metres, the Chinese suddenly opened fire with torpedoes and big guns. If that tale be untrue, how are we to account for the Japanese ensign and the white flag seen by European witnesses to be still flying from the mast-head of the *Chi-yuen* as she effected her escape? There cannot, we presume, be the slightest doubt that the *Chi-yuen* was actually flying such colours. Why was she doing so? It is inconceivable that she should have hoisted them during the fight, except as a token of surrender, and there is no hint that she surrendered. Apparently we are justified in concluding that the Japanese account is correct; that the Chinese vessels did resort to a treacherous ruse for the purpose of inveigling the Japanese to such close quarters that a discharge of torpedoes and broad-side guns would be at once fatal; and that, therefore, the responsibility of having actually commenced hostilities rests with the Chinese.

H.R.H. Prince Komatsu had an audience with the Prince of Wales on 30th June, and is on the point of leaving this country on his return to Japan. He has become an hon. member of the Japan Society.

MR. VON HANNEKEN.

Mr. von Hanneken, a German subject, who was on board the *Kowshing* at the time of her sinking by the *Naniwa Kan*, has sworn a deposition before the British Vice-Consul in Chemulpho, and the document appears in the *North China Daily News*. There is not much to be said about Mr. von Hanneken's statements. They make it evident that he was with the Chinese troops in some official capacity, and they also show that to the last he tried to contrive the ship's escape. Indeed, he explains how it had been suggested that the *Kowshing* might pretend to obey the *Naniwa's* orders, and then run into the island. That, of course, would have entailed the transport's destruction. However, the most interesting point about the deposition is that he makes two distinct statements in consecutive sentences. We quote the paragraph:

"During this the firing continued, which was bravely answered with rifles by the poor wretches, who knew they had no chance in trying to swim. I saw a Japanese boat lowered, heavily armed with men. I thought they were coming to the rescue of the remaining men, but I was sadly mistaken—they fired into the men on board the sinking ship. I do not know what their purpose was in doing so. The fact is that the swimming men were fired at from the Japanese man-of-war and from the sinking ship, the men on board the latter one probably having the savage idea that if they had to die their brothers should not live either.

The italics here are our own. We employ them to emphasize the statements in question. Mr. von Hanneken swam first in the direction of the *Naniwa Kan* and afterwards headed for land. We know that he was swimming thus, because Capt. Galsworthy and the Chief Officer agree in alleging that they saw him in the water a good way ahead of them. Now the Captain and the Chief Officer declare that, from the position of the *Naniwa*, she could not have fired at them, and if that be true in their case, it must have been even more emphatically true in the case of Mr. Von Hanneken. Whom are we to believe? Mr. Von Hanneken says, in one breath, that the men in the sinking ship were fired at by the *Naniwa's* boat, and, in the next, that the men in the water were fired at by the *Naniwa* herself. He speaks as though the only object of the *Naniwa's* boat was to do this apparently cruel deed, but we know, as a matter of fact, that the boat went to the rescue of the Europeans. Mr. Von Hanneken never discovered that. He swam right away to the island. How much of his testimony is worthy of credence? Of course we do not suggest that he spoke in bad faith. But we doubt whether his observation of the events occurring around him was quite accurate. One thing is plain: if the rescuing boat observed that the soldiers in the *Kowshing* were firing at the Europeans in the water—as all witnesses, Mr. von Hanneken himself included agree that they were firing—the boat's crew were of course bound to try and silence that fire. Unless they could silence it, they risked their own lives in the attempt to save the swimming Europeans, and they left the latter exposed to deadly peril. It is therefore palpably unjust to find fault with the *Naniwa's* boat for firing at the men in the sinking ship who were firing at the men that the boat was sent to save. Had Mr. von Hanneken known that the boat was engaged on an errand of rescue, he could not have preferred this accusation against her. But he did not know, and it seems that his ignorance was not limited to that one particular.

All things considered, we are strongly of the opinion that the Japanese Admiralty should order a naval court of inquiry to investigate the conduct of the Captain of the *Naniwa*. Nothing less will satisfy the mind of the public. There is a pretty general feeling that the sinking of the *Kowshing* was a needless act, and there is a unanimous feeling that if the *Naniwa* deemed it necessary to resort to such an extreme measure, she ought to have taken every possible means of saving the survivors when the ship went down. Had an American, French, German, Italian, or British ship acted as the *Naniwa* acted, her commanding officer would

certainly be tried by Court-martial, unless his report fully satisfied his superiors that no blame could attach to his conduct. If the report of the Captain of the *Naniwa* fully exonerates him, the sooner it is published the better. If it does not fully exonerate him, then a Court of Inquiry should be convened as speedily as possible. Japan's reputation is destined to suffer terribly on account of this incident if she identifies herself with the proceedings of the *Naniwa Kan* in the absence of a strict investigation or a thoroughly satisfactory official report. We can not too strongly urge this matter on the attention of the Government.

POLITICAL UNION.

The *Fiji Shimpoo* has a strong article urging the importance of complete national union at the present crisis of the empire's history. In point of fact the people are thoroughly united in supporting the Government's war policy. All classes are agreed that the Korean question called for immediate solution, and that Japan was bound to approach the task with such vigour and resolution as would ensure a measure of success. In the presence of war with a Power of China's magnitude, the political differences that agitated the nation have been temporarily thrust out of the arena, and the whole country is swayed by one purpose. But the *Fiji* does not think this sufficient. It wants something more. It wants to have the leaders of the Opposition brought into the councils of the State, so that there shall be no manner of doubt as to the unanimity of the nation. Count Okuma, Count Itagaki, Count Matsukata, Viscount Shinagawa, and so forth, are directly mentioned by our contemporary in this context. It urges that they ought all to be included in the Cabinet. As to the evident objection that there are no portfolios vacant, the *Fiji* pooh-poohs it. Let nominal offices be created, it says. Technicalities of that sort should possess no weight where there is question of showing a united national front, and of assuring the people that the destinies of the State, at a supreme moment of its history, are directed, not by any one political party, but by all the talent available. The *Fiji's* article is long, but its gist may be sufficiently understood from what we have written. Evidently the problem is one that does not properly invite any emphatic comment from without. We can see many arguments against the Tokyo journal's suggestion. But we can also see many arguments in its favour. One thing is tolerably certain, namely, that if any statesmen in Japan are capable of appreciating the needs of the situation, Count Ito and his present colleagues are the men. Another thing is very doubtful, namely, the possibility of inducing Count Okuma, Count Itagaki, and so forth, to enter the Cabinet temporarily by an opportunist back-door specially constructed for their ingress. Still, the moral effect of their consent, could it be secured, would be most excellent.

CHINESE NEWS.

The foreign press in China is virtually dependent upon Japan for information about the progress of the war. In Peking the stories circulated by the Chinese are uniformly favourable to themselves. They claim to have beaten the Japanese at Yashan (A-San), and on the 3rd instant asserted that their troops, under General Yeh, were marching upon Seoul. The Peking correspondent of the *North-China Daily News* makes this comment:—

We are now fairly launched on a war the end of which and the results of which no one can foresee. Japan, as representing Western civilization, will have the sympathy, perhaps, might we not say doubtless, of most foreigners, in the Far East at any rate. Her action in Korea, however difficult perhaps to justify on some grounds, is pretty much on all fours, from their standpoint, with the British occupation of Egypt. As Great Britain wanted to safeguard the Suez Canal as her shortest route to India and also wished to institute reforms in Egypt and reconstruct that country which her suzerain and

herself are neither willing nor able to accomplish, so Japan considering the state of Korea as a continual menace to her is desirous of introducing reforms so as to make her strong and independent. She has resolved to undertake the task.

The Japanese Minister and his suit seem to have withdrawn from the Chinese capital in the quietest manner possible. "There was no ceremony with regard to the hoisting and lowering of the flag, as was the case when the French left Peking ten years ago." The principal officials travelled to Tungchow in chairs; the remainder on donkeys. Among the suite were Peking's barber, washerman, and photographer.

The Tientsin correspondent of our Shanghai contemporary has the following significant item:—

More than 12,000 troops have been sent from this immediate section to the seat of war—or near it—by steamers. It is noticeable that those vessels flying the British flag—chartered before the declaration of war had been made so far as is known here, and before any openly hostile acts had occurred—were sent under sealed orders to the most dangerous point for debarkation, i.e. to Korean soil and in closest proximity to the Japanese forces, thus showing that the Chinese apprehended that the sending of these forces would in itself, in view of existing conditions, be considered as an act of war and might involve danger, into which they would not send their own vessels. This apprehension proved true.

It will be seen from this what kind of work the British flag was required to cover. It will also be seen that the troops whom the Japanese have been fighting and routing with such ease in Korea, are the much vaunted forces of the Viceroy Li's army.

The Emperor of China in his declaration of war alleges that the Japanese ships commenced hostilities on the 25th ultimo by firing on his Majesty's vessels. The story told by the Chinese in Tientsin, as recounted by the *North China Herald's* correspondent, is this:—

The Chinese report that by strategy, the Japanese vessel was drawn on till very near the Chinese boat, one of French model and built in Foochow, when they fired with such effect as to leave her in a sinking condition and although she turned and steamed away, they think she must have sunk before getting far away or receiving any relief. They acknowledge that their principal gun was disabled by the first shot of the Japanese boat, and the impression prevails that they were quite as willing to withdraw as were their foes. It is said among the Chinese that the Captain of the gunboat was of no use, a perfect coward, and that all the fighting was done, or the commanding rather, by two of the young men who were students in the States, who stood to their guns till they were killed, and that the men under their leadership did well too.

"The truth will out."

With regard to the outrages committed by the Chinese in Tientsin against the Japanese, we read the following:—

This afternoon about a hundred coolies made an attack on a Japanese store in the French concession, broke a number of windows and did some other damage. The police explain it as a case of revenge on the part of the coolies of the carrying guild, because the Japanese employ their own men to carry goods from the steamer. If so, the time has some significance.

The attack on the Japanese shop mentioned as occurring on the 31st of July appears to have had its origin in the anti-Japanese feeling which is manifestly on the increase. It was apparently directed against all the Japanese, and but for the timely intervention of foreigners in assisting the Japanese to secure house boats, and get away to T'ongku for the steamer, matters might have become serious, and blood might have been shed.

A number of soldiers camped on an open plot beside the Japanese Consulate last night. In the late evening, they went into the Consulate and began wandering about the premises, the Consular staff being still there, and behaving in a most offensive manner. It came near being a riot within the limits of the British settlement, and probably would have been, but for the interference of the police and others. Such incidents as these indicate the need of protection against the soldiers about as much as against the roughs, of whom there are a large number about Tientsin. We have been informed that all the soldiers having been sent from the Taku forts to the seat of war, those forts are to be re-manned with soldiers from Hubei and other provinces of

Central China. These southern troops have won for themselves an unenviable reputation throughout the North, and their advent will not be welcomed by the northern Chinese.

The *North-China Daily News* persistently clings to its belief that the sole cause of the present war is to be found in Japanese domestic politics. "If the Government," it writes, "had obtained a majority at the last session of the Diet, the war would have been postponed: they were again in a minority, however, and they had either to resign and allow party government to be inaugurated, to go to war with China, or to face a revolution in Japan." The *North-China Daily News* is very grossly misled in this matter. But of course its *ipse dixit* can not be refuted, being a mere expression of opinion.

As to the troops that the Japanese may expect to encounter in the north of Korea, we find the following in the *North-China Daily News*—

The telegram received by us and published in these columns the other day stating that the Chinese army had crossed the Yalu and entered Korean territory, on the 30th of July last, apparently refers to the Kirin army under the Tatar-General Wên, who received special instructions from the Throne to lead his army of horse, foot, and artillery, (consisting of very nearly 30,000 men drawn from the Manchurian province) into Korean territory at once, without any reference to the Viceroy Li at Tientsin. It seems that the Throne has been seriously displeased at the procrastination of the Peiyang authorities, which explains the sending of the Manchurian Army Corps into Korea without informing the Viceroy Li of the order, and without waiting for a junction with the Peiyang land forces which have been pouring into Yichow on the Korean borders transported thither by the China Merchants' steamers for the past three weeks. The latter body of troops who number not less than 20,000 will thus form the reserve and at the moment of writing are very likely some 150 miles already inside Korean territory and about a day's march behind the Kirin forces. The latter passed Yichow on the 26th of July last. It is evident, if this intelligence be correct, that the Japanese army in Korea has a very powerful force before it—some fifty thousand men—and that it will probably have to fight more than one stubborn battle.

With regard to the outrage committed by Chinese soldiers at Taku, we find the following:

The *Chungking* arrived here (Shanghai) yesterday morning (August 7th) from Taku, having on board the Japanese Consul at Tientsin, his wife and family, members of the Japanese Legation (not the Minister), and other Japanese, to the number of sixty. It was arranged that they were to leave by the *Chungking*, and on Wednesday at 8 p.m. some fifteen people, including six men, the rest being women and children, went on board. The steamer was lying alongside the Tongku coal wharf and no trouble was anticipated, but at 1 a.m., on Thursday, while the Captain and some of the officers were asleep, they were suddenly awakened by demoniacal yells from a number of soldiers who rushed on board. The night was pitch dark and the soldiers had lanterns. They were armed with swords and fixed bayonets and rushed along the deck like madmen. They found one Japanese whom they pulled about, dragged along the deck and then threw on the pontoon, a distance of some four or five feet below the ship's deck. Another Japanese offered resistance and he was tied hand and foot, his hands behind him, and thrown on the pontoon. The soldiers went through the saloon and into the ladies' cabins, and in one of them they found the Consul's wife, children, and maids. They did not touch her, but took one child and the maids. The child was not hurt, and one of the soldiers took it away on his shoulders, but brought it back in about ten minutes. The poor maids' wrists and ankles were tied tightly and she was, after being thrown on the pontoon, placed with the others in a heap. Although they did not touch the Consul's wife, they stole her jewellery. The soldiers went into a room occupied by some mandarins and examined their cards. They were in uniform and intimidated the foreigners on board, brandishing their weapons in front of them. They made them open their cabins which they searched, in one case looking into the mosquito curtain which was tied up over the bunk. They told the Chinese crew that they had been ordered by the Viceroy to seize the Japanese in revenge for the Japanese having killed 2,000 Chinese in Japan. The tied-up people on the pontoon endured great agony, their wrists and ankles being so tightly bound

that their shrieks were heartrending and some of the women fainted. Between 2 and 3 a.m. the soldiers left, but before they did so six of them went to the side of the steamer and fired a volley in the air, apparently as a signal to the men in the fort that they had finished their work. Some of the soldiers went into the saloon where the officers were and demanded something to drink. They were given water which one of them spat out on the deck. They then asked for lemonade and cigars, their spokesman being a villainous-looking individual who knew a few words of English. Among other things they stole a revolver and two of the ship's lamps.

After leaving the ship, the soldiers marched away with their captives in the direction of the forts, but they stopped at a godown in which they locked their prisoners.

At 5 a.m. the prisoners were all taken back to the ship, the women were badly bruised about the face and body and they suffered terribly from the pain in their wrists and ankles caused by the tightness of their bonds. A Chinese officer came with them and made an apology to the Captain for what the soldiers had done. He ordered the ship to leave the wharf, a measure he said was necessary for the protection of the people on board. The *Chungking* left the wharf at 7 a.m. and dropped down the river, and went outside Taku in the afternoon. On Friday morning the Japanese Consul, Consular staff, and other Japanese went on board and the steamer left for Shanghai.

The *Chowchowfu*, a Chinese ship flying the German flag (by what right we do not know), has been twice stopped by a Japanese man-of-war near Chemulpho. The Captain of the *Illis* went and demanded an explanation—so says the Chemulpho correspondent of our Shanghai contemporary—but the Captain of the Japanese ship did not speak English.

A number of survivors of the *Kowshing* having arrived in Tientsin, an official inquiry was held there at the Imperial Chinese Admiralty, Messrs. Detring and Loh Fêng-luh sitting as agents of the Viceroy Li, and a number of foreign Consuls being present. Four Chinese soldiers gave evidence, and all of them were curiously unanimous in stating that the *Naniwa* had fired at the people struggling in the water. But they said not a word about the Chinese soldiers themselves having done so. A Manila-man also was among the witnesses, but he frankly confessed that he had been too frightened to observe what was going on.

The *North-China Daily News* is giving space in its columns to an essay entitled "The Japanese in Korea." Every line of it is inspired by hatred of Japan. The writer seeks by every means at his command to discredit her and bring her into ridicule. But his ignorance is so palpable and his malice so conspicuous that the essay will not deceive anybody. If the editor of the leading Shanghai journal thinks such matter worthy of his columns, the status of his paper must have greatly fallen.

Mr. Tamplin, the Chief Officer of the *Kowshing*, has sent a very full account of her sinking to the *North-China Daily News*. But his statement adds little, if anything, to our previous knowledge. He says that he saw the Chinese soldiers shooting at him from the deck and gangway ports as he swam for his life. He also says:—"No attempt was made to rescue the drowning Chinamen. Two volleys were fired from our boat with the object of sinking two of the life-boats which, having got clear of the ship, were filled with Chinese."

Here are a few words about the fight of the 25th ultimo. We take them from the Tientsin correspondence of our Shanghai contemporary. They show that the Japanese gunners handle their weapons well:—

In the engagement between the *Tsi-yuan* and the Japanese man-of-war, the first shot disabled the conning tower and broke all the engine-room and other telegraphs, besides killing three men in it. The next shot disabled the turning machinery of her forward barbettes gun, without injuring the gun itself, while the next shot went right through the ship, struck a gun standard on the opposite side, glanced off, went aft and after going through the deck, lodged in a hammock. Eighteen men were killed in the engagement and thirty odd wounded, the latter by splinters. The lieutenant who worked the after gun was badly wounded, but he refused to leave his gun and continued to

use his sextant to get the angle for firing. This officer was apparently one of the American students. As an instance of the callousness of the Chinese, four days after the engagement, the vessel had not been cleaned of the blood, etc., about the deck.

The anomalous character of the inquiry held in Tientsin, under the presidency of Messrs. Detring and Loh, for the purpose of questioning the survivors of the *Kowshing*, is strongly commented on by the *China Gazette*, which journal seems to be exceptionally well supplied with accurate war news. We find in its issue of the 9th inst. an account of an interview with Mr. Komura, the Japanese Chargé d'Affaires in Peking, who was then in Shanghai en route for home. The following deserves to be quoted:—

With reference to the affair on the *Chungking*. Mr. Komura said:—"I must state positively, in justice to Li Hung-chang, that he did not authorise the outrage. Rather I should say he exerted himself to procure the liberation of those who were seized by his soldiers, and I heard from a reliable authority that he will severely punish all who were concerned in that incident,—probably behead those directly implicated." Li sent a guard of 40 picked soldiers to protect Mr. Komura all the time he was in Tientsin and did everything in his power to facilitate his departure. Mr. Komura left Tientsin with his suite on the 4th in the *Tungchow* and arrived here yesterday afternoon.

In the same interview Mr. Komura made this interesting statement:—

Mr. Komura said that up to the time of the sinking of the *Kowshing* there was a very strong party for peace in Peking, the leaders of which, men of the highest rank and greatest influence, were all enemies of Li Hung-chang. They were the President of the Board of Revenue, the President of the Board of Rites, and other officials of equally exalted station. The naval engagement of course put an end to all hopes of affairs being amicably arranged, and the aims of the peace faction in this respect were frustrated; but they were successful in their efforts against Li Hung-chang, (between whom and the Peking Government generally there is a good deal of friction) so far as to cause the Government to appoint a Commission to examine into Li's conduct in connection with the whole Korean difficulty. The report of the Commissioners is not likely to be at all favourable to Li, seeing that they are, without exception, professed enemies to the great northern satrap. The President of the Board of Revenue is an old antagonist, who first tried conclusions with Li over the introduction of railways in the North; he is not likely to leave a stone unturned now to secure the overthrow of his great rival. The report is anxiously awaited and there is much speculation as to the nature of the decree which will be issued as soon as the Commissioners come to a decision. At all events it is generally admitted by all parties in the capital that Li Hung-chang is in a very difficult position. His only chance now is to push the war on as rapidly as possible, but this does not quite suit the views of the Central Government, whose cue is to move slowly, procrastinate and prevent any decisive battles being fought, in order to cripple Japan's finances.

Commenting on Major von Hanneken's deposition, the *China Gazette* says:—

Now what does all this mean? It looks very horrible, but while we have no idea to make it worse or better for either the Chinese or Japanese—we have no interest beyond arriving at the truth and we believe we have not nearly got it yet—we are forced to the conclusion that the Chinese soldiers were simply a horde of wild animals, ravening to shed blood of friends and foe alike, shooting their drowning comrades and murdering the foreign officers and engineers in the water. The Japanese boat obviously put off to rescue life, but were forced to shoot down the savage wretches whom they had come to succour, in sheer self defence, and to put an end to the atrocities enacted upon the *Kowshing's* deck. If the *Naniwa's* people were merely actuated by the desire to slaughter they could very easily have carried it out to the end from her deck without sending a single boat off within reach of the *Kowshing's* small arms. To talk about such dastardly proceedings as bravery on the part of the Chinese soldiers is simply abusing common sense. To our minds the story told by von Hanneken amounts to this: that the *Kowshing* was in the hands of 1,200 odd pirates from the moment the soldiers, led by the Chinese General, took charge of the ship, and rendered the Captain and his officers powerless to give orders or to navigate the vessel.

The account of the *Chungking* outrage, as given in the ship's log, is this:—

The steamer *Chungking* whilst lying alongside Tongku coal wharf in the river Peiho, having got her cargo and passengers, both European and Chinese on board, was boarded between 12.30 a.m. and 1 a.m. on the 2nd August by some 50 Chinese soldiers, armed with rifles, spears, and drawn swords. Amongst the passengers were the wife of the Japanese Consul from Tientsin, and about 25 other Japanese, all, with one exception, being females. The Chinese soldiers took complete charge of the ship, and with much shouting, commenced pulling all the Japanese passengers ashore by the hair of their heads, striking them with the butt-ends of their rifles in the most brutal manner. The Japanese were tied hand and foot and left lying on the wharf, whilst the soldiers, who were commanded by a man with a glass button, who however, did not appear to have much control over them, continued their search. The Europeans, both passengers and crew, had their berths pulled about and ransacked, and it took some trouble to convince the soldiers that two young foreign children were not Japanese. The child of the Japanese Consul's wife was taken out of its berth, but was afterwards sent back with the amah. The Consul's wife was not touched, only robbed; but a student from the Consulate was very roughly used, being stabbed in the back with a sword, thrown violently down and bound hand and foot; and whilst in that state cast bodily from the gangway on to the wooden wharf, a distance of about 10 feet. The "braves" then fired a volley in the air, evidently as a signal to somebody. They informed the Europeans that they would not molest them, but at the same time they pointed swords in their faces, whilst searching the rooms, and took the ship's lamps to assist them in overhauling the vessel. Then the so-called commander wished the officers to see and certify that nothing was lost out of the ship. There were several of the searchers dressed like ordinary coolies; some of them were stripped to the waist and armed with rusty swords. These were the men who used the Japanese women so brutally. The men in uniform acted more as sentries and did not appear to take so much interest in the proceedings. The roughest portion of the raiding party came into the saloon and ordered liquors and cigars in the most insolent manner. They stated that what they were doing was by the orders of the Viceroy. About 2 a.m. another official appeared on the scene, who had the women unbound and moved further along the wharf, and about 2.30, he marched them all into a godown. This official came on board and remained some time, taking a note of all the Japanese luggage, which he ordered to be put down into the ship's hold. Two Turks, deck passengers, were also taken ashore. The official said through an interpreter, the captain's boy, that he ought to have asked the captain's permission before searching the ship and intended to have done so; but the proceedings were more like a raid for spoil than a proper search. A very strange circumstance was that the roughs who did most of the work could speak "pidgin" English, whilst the officers and soldiers proper, could not. There were two Chinese saloon passengers who were so frightened that they left the ship about 5 a.m. the same morning. The Japanese Consul's wife had between \$200 and \$250 stolen, and the other women had their rings, keys, and money taken off their persons; their luggage was not touched. From the ship a revolver and two lamps were stolen. The captain of the ship was warned to take the vessel away from Tongku village by the commander of the soldiers.

Here is a point of interest—we take it from the *China Gazette*:—

The Model Settlement having secured the inestimable boon of freedom from attack by the Japanese during the war, we ask the responsible authorities if it is right or proper that the Foreign Settlements should be made the scene of the most important military operations in which China, at the present moment, seems engaged, i.e., the enlistment of Foreign mercenaries to aid her in the war and inspire some confidence in the breasts of her own gallant defenders. Recruiting for the Chinese army is openly prosecuted here, and "beach combers" of the most varied nationalities, British, German, and American chiefly, are being engaged by foreign agents of the Chinese Government in Shanghai, for service in the war ships and with the troops of China. Tempting rates of remuneration are offered to induce adventurous foreigners to incur desperate risks and we suppose that it is useless in this mercenary age to ask men, whose ordinary lot is hard work and scarcely any pay, to resist the tempter who offers him big pay for what seems very little

work. But we think it is due to ourselves that this place, considering its peculiar status and very delicate position between the two belligerents, should be made a recruiting ground for neither one or the other. Steps should be taken to stop it at once, for it is pretty clear that the British Consular notification, respecting the penalties that British subjects incur by taking military or naval service with either China or Japan, will not exercise the wholesomely deterrent effect on here that it would were the provisions of the Foreign Enlistment Act more clearly understood.

HONGKONG NEWS.

The *Daily Press* records with regret the death from plague of Sister Anna Pereira, of the Italian Convent, which occurred at the Government Civil Hospital. The unfortunate sister had until recently been one of the noble band of voluntary workers at the Alice Memorial Branch hospital at Kennedytown and doubtless contracted disease there.

Dr. Yersin, the French pathologist has returned to Saigon. His investigations have been most thorough and the results will doubtless shortly be made known. The Professor before leaving expressed his desire to correct a misstatement. He only discovered the bacillus of plague at a depth of two inches below the surface in the infected district and not at a depth of a foot or eighteen as reported.

The death is announced of Fleet Paymaster W. Wykeham Perry, who served on this station some ten years ago as secretary to Admiral Wiles. *The Times* given the following obituary notice:—Fleet Paymaster William Wykeham Perry, R.N., who died on the 14th June, at Bonclia, Caterham Valley, Surrey, at the early age of 48, deserves remembrance on account of the gallantry which he displayed when, 19 years ago, Commodore James Graham Goodenough, of the *Pearl*, was fatally wounded in the Pacific. Mr. Perry, although he was suffering from a sore mouth, and although the arrow which had struck the Commodore was believed to have been poisoned, devotedly sucked the wound, unhappily, without avail. For this he received promotion to the rank of paymaster. From 1885 until quite recently he acted as secretary to the Admiral Superintendent of Naval Reserves. Mr. Perry became staff-paymaster in 1886 and fleet-paymaster in 1887. He was a qualified interpreter in Italian and Arabic, and, owing to his service as secretary, was entitled to the special rate of half-pay.

News has been received by telegram at Singapore that Lady Bonser, wife of the Chief Justice of Ceylon, late Attorney-General of the Straits Settlements, has died in Ceylon of typhoid fever.

According to the *Macao Independente* two lads, Antonio Maria Azedo and Filomeno Gracias, lost their lives while bathing at the favourite bathing beach at Area Preta early on the morning of the 31st ult. It appears that one of them went too far out and finding himself in danger called for assistance; his companion swam out to him, but unfortunately instead of saving him they both were drowned.

News has been received, says the *Siam Observer*, that M. Pavie had a rather exciting time during his trip down the Meikong. At one place he was occupying a native house which took fire and was totally destroyed. The neighbour hurried up to try to extinguish the flames, but M. Pavie stopped them, being afraid that his stock of explosives would be ignited and burst.

A telegram was received in Hongkong on the 7th inst. by Messrs. Wieler and Co. conveying the news that the German steamer *Protos* (Capt. Johannsen) had been in collision with another steamer off Cape St. James at the mouth of the Saigon River and had been beached. The *Protos* left Hongkong on July 27th for Saigon, and was at the quarantine anchorage at Cape St. James at the time of the mishap.

In the libel case of Tilleke v. Ward, which was tried in the British Consular Court at Bangkok on the 26th July, the plaintiff was

awarded 500 ticals damages. The parties were joint proprietors of the *Siam Observer*, but the interest of Mr. Tilleke, who provided the capital, was undisclosed, Mr. Ward appearing as the sole proprietor. The parties quarrelled and notice of dissolution was given. Mr. Tilleke is a lawyer and while engaged in Court in the case of M. M. Pulley & Co. v. Mr. Murray-Campbell, on June 28th, as solicitor for the latter, defendant, who was present as a reporter for the *Siam Observer*, sent to Mr. Bennett, a representative of Mr. Murray-Campbell, a letter containing these words:—"Insist on your lawyer asking Pully who the Co. is. It might be a lawyer on your side, in which case—well, you don't stand much chance." This was the libel complained of.

Commodore Boys announces the receipt of a telegram from H.B.M. Consul at Takao warning shipmasters that the Pescadores and South Cape Lighthouses have been ordered to cease exhibiting lights.

Mr. Tilleke, the Bangkok lawyer, has had to tender an apology to M. Pelinski for having stated at the British Consular Court that it was impossible to obtain justice in the French Consulate.

ENGLISH NEWS.

The English newspapers that arrived by the belated *Hongay* occupy themselves chiefly with the birth of an heir to the English throne, and the assassination of the President of the French Republic. But these events have already been fully dealt with in our extracts from American papers. The following sonnet by Swinburne appears on the first page of the *Nineteenth Century* for July:—

CARNOT.

Death, winged with fire of hate from deathless hell
Wherein the souls of anarchists hiss and die,
With stroke as dire has cloven a heart as high
As twice beyond the wide sea's westward swell
The living lust of death had power to quell
Through ministry of murderous hands whereby
Dark fate bade Lincoln's head and Garfield's lie
Low, even as his who bids his France farewell.

France, now no heart that would not weep with thee
Loved ever faith or freedom. From thy hand
The staff of state is broken: hope, unmanned
With anguish, doubts if freedom's self be free.
The snake-souled anarchy's fang strikes all the land
Cold, and all hearts unsundered by the sea.

The settlement arrived at between England and Germany in connexion with the Congo agreement will be embodied in a formal instrument cancelling Article III. of the said agreement. That is to say, the lease granted to England of a strip of territory along the German frontier will be declared void, and the *status quo ante* will be fully and unreservedly affirmed. There is no doubt whatever that this article was an infringement of the recognized rights of Germany, and in the negotiations that have recently taken place Germany appears to have acted with great friendliness and moderation, thus rendering a settlement much more easy than would have been the case had she acted as if she were glad to find an opportunity of twisting the lion's tail.

An explosion occurred on the 23rd June in the Albion Colliery, near Pontypridd, South Wales, causing the loss of more than two hundred lives.

Two interesting points have been raised in connexion with the succession of the Hon. Bernard Coleridge to the title of Lord Coleridge. The first relates to the right of peers to sit in the House of Commons. It is doubtful whether the eldest son of a peer becomes a peer *ipso facto* by the death of his father. He has, it seems, to make a definite application for a writ. Now the question arises whether, if a man does not apply for this writ, he is not at liberty to retain his seat in the House of Commons. This question has been raised by Mr. Chamberlain as a matter of privilege; and with it is also to be discussed the subject of the reelection of those Members of Parliament that accept office under the Crown. The second point relates to the right of a peer to practise as

a barrister. The new Lord Coleridge has consulted the Attorney-General, Sir John Rigby, with respect to his right to practise at the Bar, having regard to the fact that he has succeeded to a seat in the House of Lords by the death of the late Lord Chief Justice, and the learned law officer has given it as his emphatic opinion that there is no legal bar to his practising, and further, that he can see no objection to such a course. As coming from the highest authority on professional etiquette in matters appertaining to the Bar, Lord Coleridge has accepted this decision, and has decided to continue his practice at the Bar both in town and on the Western Circuit.

There is yet another bullet-proof cuirass. According to the *Münchener Neueste Nachrichten*, trials have recently taken place at the Bavaria Circus in Munich of a new bullet-proof cuirass invented by a Hamburg armourer, Wilhelm Weber. The trials took place before Prince Leopold and Prince Ruprecht of Bavaria, and appear to have been eminently successful. The cuirass, which is covered with blue military cloth, was on the first occasion fired at with a service rifle at a distance of ten paces, and the bullets, it is stated, were shattered into small fragments, which lost themselves in the material, whatever it may be, of which the cuirass is made. On the second occasion Herr Reimers, who conducted the trials on behalf of the inventor, put on the cuirass, and three shots were fired at him without producing the slightest effect or causing even any apparent concussion. A few splinters of the steel coating of the bullets and a lead fragment about the size of a pea were subsequently extracted with the help of pincers from the point of impact of the bullets. The cuirass weighs 11 lb., but the inventor states that it can be safely reduced to 8 lb. Prince Leopold declared himself highly satisfied with the results, and expressed his opinion that the invention, if sustained by further experiments, might be of great value to the army. It is important to notice that steel-coated bullets were used on this occasion. If we remember rightly the claim made for Herr Dowe's cuirass was that it would resist leaden bullets, but not steel.

At a meeting of the British Economic Association, Mr. Balfour made the following interesting remarks on the attitude of the general public towards economic science discussions. Political economy, if it is anything in the world, is a science. If it is not a science, we exist—this society exists—in vain, for our object, that for which we exist, for which we have come together, is to promote directly scientific investigations. Now, the public have never yet mixed themselves up in scientific investigations without spoiling the investigations and doing themselves a good deal of harm. The public have left the scientific man alone. They have but vaguely understood the character of his labours; they have been content to profit by them without apprehending them. In political economy it has been and is now more and more different every day. It always has been different, and the difference has emphasized itself day by day, and the result is that you do not leave the economist to work out his results in scientific independence as you permit the chemist or the physicist; but the public insist on coming in at any moment and pronouncing on the results of labours, from which, therefore, they do not draw the full profit which they might draw. I do not pretend to be able to see any solution of this difficulty. The idea that a democracy—or without using the word democracy, which appears to suggest controversies which are far from our minds on the present occasion—the idea that any large body of public opinion can express views worth having on difficult economic subjects appears to me to be absurd. You have only to ask the first man in the street what his views are upon some very simple economic problem, not at all more difficult to understand than the fifth proposition of Euclid, and he will tell you those are abstract metaphysical discussions far above his ability, but that common-sense tells him this or the other with regard to the practical issue. The man you meet in the street is the man

who rules our destinies, and whether our destinies are going to be better ruled under his scientific guidance than they would be if we were really permitted to profit by the unselfish scientific investigations of economists I do not pretend to say. At all events, of this I despair. I do not believe that we shall ever get newspapers, which are run on commercial principles, to insist upon their readers understanding scientific political economy. I do not believe you will ever get the public to take the trouble to master the real elements of the problem, on which it may be in some cases that its own economical prosperity depends. Therefore, unless they will consent to follow the teaching of those who are prepared to devote their minds to these subjects, or unless, which is possible, the untutored instincts of the community—which is, I say, possible, though I think unlikely—are to be a better guide of public policy than are the carefully thought-out deductions of men of science—unless one of these two contingencies occurs, I confess I think it is more than probable that the community will commit many economic blunders, from which both the generation which commits them and those who come after for many generations will suffer.

THE "KOWSHING" AFFAIR. CAPTAIN GALSWORTHY'S REPORT.

The British steamer *Kowshing*, owned by the Indo-China S. N. Co., left Shanghai on July 17th, bound to Taku, under charter to carry Chinese troops from that port to A-San, on the coast of Korea. Arriving at Taku on the 20th, arrangements were made to ship the troops, and on the 23rd 1,100 came on board, including two Generals, a number of other officers of various ranks, and a German ex-army officer named Henniken, who came as an ordinary passenger. At 9.50 p.m. on the 23rd the ship proceeded on her voyage to A-San. All went well until the morning of the 25th, when off Shipeul Island, we passed a man-of-war flying the Japanese naval ensign, with a white flag above it. This vessel proved to be the Chinese war-ship *Tai-yuen*. Shortly afterwards we sighted three Japanese men-of-war, the *Naniwa*, *Yoshino*, and another (probably the *Akitsu-shiu*). The *Naniwa* at once steamed towards us, flying a signal ordering us to stop. She also fired two blank charges, and signalled us to anchor, which we at once did. The *Naniwa* then steamed away, apparently to communicate with the other ships. I at once enquired by signal if I might proceed, to which the *Naniwa* replied: "Heave-to or take the consequences." A boat then came from the *Naniwa*, and an officer came on board. He was received at the gangway, and he asked to see the ship's papers. They were shown to him, and his attention particularly called to the fact that she was a British ship. Numerous other questions were asked and answered, the most important one being: "Would the *Kowshing* follow the *Naniwa*?" Being utterly helpless against a man-of-war, I replied that there would be no alternative but to do so, under protest, if ordered. The officer then left the ship, and proceeded to the *Naniwa*. Shortly after, being still at anchor, I was ordered by signal to cut, slip, or weigh immediately. The Chinese generals learning the meaning of the signals, and finding preparations were being made to follow the *Naniwa*, objected most emphatically. They were told how useless it would be to resist, as one shot would sink them in a short time. The Generals then said they would rather die than obey Japanese orders, and as they had 1,100 men against about 400 on the *Naniwa*, they would fight sooner than surrender. They were told that if they decided to fight, the foreign officers would leave the ship. The Generals then gave orders to the troops on deck to kill us if we obeyed the orders of the Japanese or attempted to leave the ship. With gestures they threatened to cut off our heads, to stab, or shoot us; and a lot of men were selected to watch us

and carry out the order. A signal was then made requesting the *Naniwa* to send a boat, in order to communicate the state of affairs. A boat was at once sent, but a crowd of armed Chinese took possession of the gangway, until I prevailed on the General to send them away. Eventually the officers came alongside, and a message for the commander of the *Naniwa* was sent, stating that the Chinese refused to allow the *Kowshing* to be taken a prisoner, and insisted upon returning to Taku. It was again pointed out that she was a British ship, and that she had left port before war had been declared. The boat then returned to the *Naniwa*, and on her arrival a signal was hoisted, ordering the Europeans to leave the ship at once. A reply was given that they were not allowed to leave, and asking for a boat to be sent. Notice was sent to the engineers to be handy on deck in case the Japanese fired. The *Naniwa* shortly afterwards replied that a boat could not be sent. The *Naniwa* then hoisted a red flag at the fore, which was apparently a signal for discharging a torpedo, as one was fired at the *Kowshing*, but missed her. A broadside of five guns was then fired. At the time, I was on the bridge, my officers having left it, and seeing that the soldiers set to watch me had left their station at the foot of the ladder, I rushed to the wheel-house, and, after obtaining a life-belt (the last one remaining), I jumped over the ship's side. In doing so I heard a terrific explosion, and upon returning to the surface of the sea I found the atmosphere was thick with smoke and fine coal-powder. I at once struck out for the shore, distant about 1½ mile. There were many Chinese in the water, but I only saw one European, Mr. Von Hanniken. As the air cleared, a bullet struck the water close to my ear, and was followed by a shower of bullets. Knowing that shot from the *Naniwa* could not strike near me, owing to being sheltered by the hull of the *Kowshing*, I turned on my back, and saw Chinese soldiers firing at me from the deck and the 'tween deck ports. As far as possible I protected the back of my head with the life-belt, and swam as low in the water as I could. Firing from the *Naniwa's* broadside and machine guns was continued until shortly before the *Kowshing* went down, stern first. After being in the water some time, I was picked up by the *Naniwa's* cutter, in a very exhausted condition. The same boat had already rescued one of the quartermasters, who had been wounded in the neck with a rifle-bullet. On arriving at the *Naniwa* we found that the chief officer was the only other person saved by the Japanese, leaving five Europeans connected with the ship, and the passenger, missing. I requested another boat to be sent, but am afraid no further attempts were made to find them. We anchored off Shipeul about 9 a.m. The firing commenced about 1 p.m., and we were taken aboard the *Naniwa* about 2.30 p.m. During the evening the *Naniwa* steamed away, arriving the next a.m. at the rendezvous of the Japanese fleet in Korea. We were then transferred to the *Yayeyama*, together with a Danish electrician, named Mühlenstedt, and about sixty Chinese, who were taken prisoners from the Chinese steamer *Tso-kiang*, the same day. The *Yayeyama* then proceeded to Saseho, arriving on the a.m. of the 28th. From Saseho, myself and Mr. Tamplin, the chief officer, came here in a small tender at noon on Saturday last, having in the meantime been interviewed by Mr. Suyematsu Kencho, President of the Imperial Board of Legislature, who came down from Tokyo for that purpose. The quartermaster remained behind owing to his wound not having properly healed up; whilst Mr. Mühlenstedt is being further detained. During our detention we received every care and attention necessary for our comfort. After arriving here we proceeded to H.M.'s Consulate, and made an affidavit of the entire circumstances. The *Naniwa*, I may mention, had been damaged on the port quarter from a shot fired from the *Tai-yuen* in the morning. I can positively say I did not see the Japanese fire on the Chinese in the water. The Chinese killed many of their own people.—*Nagasaki Express*.

THE MEETING OF THE NINTH INSTANT.

NOTHING could have been better or more sensible than the tone of the public meeting held on the 9th instant to consider the case of Chinese subjects in foreign employ. It appears, as we were inclined to anticipate, that the Chinese have not been thoroughly reassured by the Imperial Ordinance of the 5th instant. They still doubt whether the Japanese Government is really willing and able to protect them, should they continue to reside and carry on business here, and they are disposed to fear that, by registering themselves as the Ordinance directs, they may forfeit their nationality and become Japanese subjects, thus losing the right to return to China at any moment. We cannot be greatly surprised at this. The Chinese, applying the standard of Chinese officialdom to the motives and acts of the Japanese Authorities, are naturally unprepared for any display of generosity or magnanimity in time of war. Perhaps, too, they have been taught by the extravagant diatribes of the local foreign press to regard Japanese jurisdiction with aversion and apprehension. Indeed, within the last few days, a local English paper has been so silly as to hint that the Chinese are quite right to fear and fly from the contingencies involved in submission to Japanese jurisdiction. The Chinese, forsooth! The meeting of the 9th, however, showed how little endorsement such sentiments find among the better classes of the community. The universal disposition of those present was to approve and give full credit to the motives of the Japanese Government and to declare their conviction that the Authorities of this Empire are not only sincerely desirous of observing the most enlightened principles of international law, but have also competence to enforce them. It is refreshing to turn from the intemperance of journalistic agitators to the quiet business-like and liberal-minded proceedings of such a meeting as that of the 9th instant. We desire to call the attention of the Japanese to the fact that the men who attended and controlled the meeting are the real leaders of the foreign community and that all ultimate appeal in matters where that community is concerned must be to their verdict. If the opinions of these men were polled at the present crisis, a sentiment would be found very different from that condemned by us in a recent article. It is a pity that Yokohama has not more frequent occasion to give public expression to the views of its true representatives.

As for the Chinese, it is scarcely necessary to repeat what was stated in a previous issue of this journal, namely, that the Japanese Government is undoubtedly in earnest in its promises of protection; that Chinese residents will forfeit no national right whatever for availing themselves of

that protection, and that, should it ever become necessary—an improbable contingency—to order their departure from Japan, ample notice will be given and all possible means will be adopted to palliate the hardships of an enforced exodus. The Japanese Government cannot do more than it has done, and it would be very regrettable if groundless distrust prevented the Chinese from profiting by the permission offered to them.

VERSIONS.

THE versions circulated in China of recent naval and military operations in Korea and off her coast, differ very greatly from the intelligence received here. In the case of the naval fight, the Chinese have been careful to conceal the fact that one of their ships was taken and another so badly shattered as to necessitate her beaching and abandonment. They speak only of the ship that escaped to Wei-hai-wei after sustaining serious injury, and with respect to her they allege that she had beaten and almost captured her Japanese adversary when an overwhelming force of Japanese ships appeared upon the scene. So too, of the fight at A-San. Rumours published in China represent the Japanese as having been twice repulsed with very heavy loss, and as having retired to Söul *re infecta*. Experience has amply shown that China's invariable habit is to convert her defeats into victories for the public ear. She did so persistently in her contests with European Powers in former years, and truly we can not blame her. It is generally believed that the present dynasty is very loosely seated on the throne of the Middle Kingdom, and might easily be shaken off were its prestige damaged by military disasters abroad. To avert such disasters, or to conceal them if they occur, consequently becomes a matter of life and death to the rulers of China, and they may fairly be granted all the license dictated by the situation. The Japanese, too, are not without reasons for imparting a bright complexion to their operations, and rumours from Japanese sources must naturally be received with caution. Assuming, however, that we were required to judge between the two stories on the intrinsic evidence they present, and thus arrive at an estimate of their relative titles to credence, we should have little difficulty in the present case. As to the naval engagement, it is a matter of certainty that of the three Chinese ships engaged, one was captured, another was so battered that she had to be beached and abandoned, and the third suffered so terribly that her plight is quoted by competent observers as an illustration of the terrible effects of modern guns. It is further a certainty that of the three Japanese ships engaged, not one received any injury sufficient to incapacitate her even temporarily. We

believe that an unexploded shell in the *Naniwa's* engine-room constituted the sum total of their sufferings, but without insisting upon that it may at least be accepted that whereas two of the Chinese vessels were lost to the Chinese Navy and the third seriously injured, not one of the Japanese had to desist from cruising. Turning now to the accounts of the land fight, we find that the Chinese story depicts the Japanese as attacking A-San on the 27th of July, when they suffered a partial reverse, which was turned into a complete defeat on the 28th, the loss of the vanquished being 1,500 men. Now it has to be noted that the Japanese troops did not leave Söul to march against A-San until the forenoon of the 25th of July. That fact is established by independent testimony. Hence it is almost a physical impossibility that they could have delivered an assault against the Chinese position on the afternoon of the 27th. Their own account of the affair is that they set out from Söul at 10 a.m. on the 25th; encamped that night at Kwasen, about 8 miles from Söul; marched the next day to Suigen, a distance of 10 miles; set out the next morning, at 4 o'clock, and reached Shin-i, a distance of 15 miles, by noon. Then the troops were allowed a few hours' rest, as was natural on the eve of a fight. The next morning (28th), at 4 a.m., the onward movement was resumed, and after a march of 8 miles, the Chinese advanced position at Söng-hwan was sighted, but owing to the terrible heat, the troops were again allowed to rest until mid-night, when they resumed their advance and at 7.30 a.m. Söng-hwan was in Japanese possession. The retreating Chinese were pursued to within 5 miles of A-San—it now appears that the distance from Söng-hwan to A-San is 17 miles, not 6 or 7 as originally stated: evidently the figures first published were Japanese *ri* not English miles—and on the 30th at 4 a.m. the advance upon A-San took place. But the stronghold had been evacuated. There cannot, we think, be the smallest hesitation as between these stories. The Japanese account comes from a large number of newspaper correspondents who accompanied the army, and is consistent in every detail. The Chinese account asks us to believe that a Japanese force moved out of Söul on the 25th of July, and on the afternoon of the 27th delivered an attack upon a place 61 miles distant. Unquestionably A-San has been taken. The only thing that causes us some surprise when we examine the Japanese account is that the Chinese force does not seem to have been pursued beyond A-San. We suspect that the Japanese are now beginning to feel the want of a sufficient cavalry force. It might be worth while to organize a few troops in Korea. Splendid ponies are to be had there, and it is wonderful how much training can be given to men in two

or three weeks of earnest work. But that is another question.

One point seems to call for observation. It is this—does not the Japanese Government intend to publish the despatches received from its military and naval commanders after an engagement? The press having been placed under strict consorship, every endeavour ought to be made to supply the public with official news. Silence will assuredly be misconstrued. We venture to think that not a moment should be lost in publishing in the *Official Gazette* whatever details are officially received from the seat of war.

CHINA'S DECLARATION OF WAR.

THE Chinese Government's Declaration of War is not worthy of a great Power. Even though its reasoning were cogent—which it is not, by any means—the opprobrious epithet employed to designate the Japanese would deprive the document of all claim to dignity. "*Wo-jên*," or the pigmies, is a term long used by Chinese in an insulting sense, and its insertion in an Imperial Edict declaring war is consistent with China's general attitude toward Japan during the past 25 years, and especially throughout the present complication. The Middle Kingdom despises its neighbour, primarily because she is so little, but above all because she has broken away from the venerable traditions of the Celestial Empire and has embraced a civilization that China abhors. That has always been the key-note of China's tone toward Japan. What matters it that Japan has with Korea a treaty explicitly declaring the latter's independence as well as the absolute equality of the high contracting parties? That kind of thing does not signify a row of pins in China's estimation. Korea is the Middle Kingdom's tributary all the same, and the Japanese may deem themselves very much honoured by being placed on an equal footing with a tributary of that mighty empire. Japan has long writhed under such treatment, and we suspect that before these war clouds roll over she will have made her feelings pretty unequivocally known to her big and insolent neighbour.

As to the reasoning embodied in the Declaration, it is observable that not one word is said about Japan's having, in all good faith and amity, invited China's cooperation at the outset, nor yet a word of China's having refused to cooperate in any way whatever. It has been alleged by some critics that China was precluded from cooperation inasmuch as no discretion was given her in respect of the proposed scheme of reform. That is a mistake. China declined to consider any scheme whatever; declined to negotiate on any basis for the regeneration of Korea. That vital fact is carefully excluded from the Declaration. China seeks to pose as the benevolent

willing to support the Government of a tributary by force of arms, nevertheless invariably avoids interference with the domestic administration of a tributary. The absurdities inseparable from her attempts to achieve such an impossibility never seem to strike her serene imagination. Always ready to despatch an army for the purpose of arranging a tributary's domestic quarrels according to the convenience of the dominant faction, she yet plumes herself on never meddling with the domestic affairs of a tributary. That farce, played in Korea's case, meant that a Chinese army was set to prop up one of the most tyrannous and corrupt administrations by which any nation was ever cursed, and to prop it up when its exactions and inhumanities had goaded its unhappy subjects into rebellion. It did not apparently occur to China that if the dominant faction in Korea set the example of appealing for, and invariably obtaining foreign military aid to secure it in the perpetration of its abuses, the dominated might one day adopt a similar device, and so Korea, like the horse in the fable, might find herself ridden by a Power that neither Japan nor China could afford to see in the peninsular-saddle. But that is China's way. She pursues the even tenor of her old-time majestic methods, wholly blind to their glaring inconsistency with modern conditions. Japan, looking farther ahead, perceived the disasters that must sooner or later result from such an anomalous state of affairs, and sought to put a final termination to the causes of Korea's domestic ferment and the consequent opportunities for Chinese interference. China saw nothing of this, and says nothing of it in her manifesto. She is conscious only that the "pigmies" ventured to interfere between herself and her so-called "tributary," and therefore she denounces them as international malefactors in the eyes of the world. "There is no law," she naively says, "for sending large armies to bully a country and compel it to change its system of government." But there is apparently, according to Chinese practical ethics, a law for sending large armies to bully a weak country into continuing to accept a system of government that impoverishes and oppresses the people, checks the development of their resources, and subjects them to all the worst cruelties of corruption and extortion. Majesty can be delightfully blind when it folds the purple across its eyes. China, persuaded that "all the Powers are united in condemning the conduct of the Japanese," is going to send armies "to root the pigmies out of their lairs." A number of armies will be required for the rooting, we suspect. But China, "following the paths of philanthropy and perfect justice," is prepared to sacrifice any number of armies in order that Korea may be saved from the horror of that new-fangled

thing called Occidental civilization, and may continue to enjoy the blessing of the most corrupt, tyrannous, unprogressive, and unenlightened despotism in the Orient. Poor China! She is engaged in the compilation of a chapter of history that will be sad reading for her people a few years hence.

THE FOREIGN COMMUNITY AND THE WAR.

WE are glad to observe that our article upon the attitude of the foreign community as interpreted by the local press has evoked declarations that many of the foreign residents sympathize with Japan and desire to see her arms crowned with success. Of course they do. No one with trustworthy information ever doubted that. It is precisely because the true feelings of the better classes of foreigners are so unhappily misrepresented by local journalists that we protested against the mischievous effects of the latter's writings. There are emphatically two kinds of Englishmen. There is the Englishman whom education and experience have taught to regard the affairs of foreign countries from a broad standpoint; who knows how to appreciate the efforts of a country like Japan, and whose natural impulse is to applaud her successes, condone her failures, and contribute as far as possible to the final attainment of the goal she has set before her. On the other hand; there is the Englishman who believes that only English institutions are tolerable; that every difference discernible between the customs of a foreign land and those of his own must be placed to the discredit of the former; that to concede any worthiness to strange fashions and alien methods would be an insult to England, and that everyone not prepared to subscribe to this creed of wholesale exclusiveness is an unpatriotic renegade. Of the first-named class of Englishmen there are happily a great many in the foreign settlements. Many others have visited Japan and have written about her with kindness and discernment, but many of the second class also are to be found. These are the men who decline to believe in the possibility of an intelligent and conscientious Japanese judiciary; whose tendency is to criticize Japanese laws unfavourably and even harshly; who, impelled by a rooted aversion to placing themselves under Japanese jurisdiction, and thinking that the best way to avert that conjuncture is to create a universal distrust of Japanese character and Japanese competence, are prone to draw intemperate and unjust inferences from any unusual incident, and to put the most uncharitable construction upon anything done by a Japanese. We do not by any means assert that these people are to be radically condemned. Still less do we venture to pronounce any sweeping denun-

ciation of their motives. On the contrary, every thoughtful person must recognise that the origin of their mood is perfectly intelligible and respectable. That origin is two-fold. Its first element is the strong aversion animating every community of Englishmen to submit to foreign domination anywhere and under any circumstances. Such a spirit is to be applauded. It is the spirit that has made the British empire. But there is no occasion for any special display of it in Japan. Japan is not to be added to the British empire, and her services can be utilized in the interests of that empire only by winning her friendship. The second element of the conservative Englishman's mood is his supreme respect for good laws and their good administration. The keener a man's appreciation of sound legislation and an efficient judiciary the more tenaciously does he cling to laws and judges that he knows to possess those qualities. If Englishmen were less sensible of the value of their legal and judicial system they would be more ready to exchange them for others. Their conservatism in that respect deserves all praise. Do any of our readers imagine that we ourselves should be pleased to pass under Japanese jurisdiction? Surely not. But we can not hope to have our predilections indulged for ever. We have long perceived the painful friction that must be developed by too persistent assertion of foreign privileges in defiance of Japanese rights, and while there was yet time to obtain from Japan such terms of compromise as must be acceptable to all reasonable foreigners, we urged the expediency of compromise. Since that time passed, since the current of events began to flow too strongly for gentle adjustments, we have held our peace. But throughout the controversy we never failed to appreciate the motives of our opponents nor ever found any difficulty in crediting the respectability of their obdurate mood, though it has pleased their journalistic representatives to apply to us the pleasant names of renegade, hireling, and other equally polite and moderate euphemisms. Probably the desire actuating some of the foreign residents that Japan should be beaten in the present struggle is a part of their general unwillingness that she should distinguish herself so conspicuously in any way as to command national respect or be worth conciliating. That is an ugly sentiment when stated thus nakedly, though it may have its roots in motives deserving respect. At all events, its displays are to be deprecated at present. It cannot be desirable that the Japanese should suppose the sympathies of the foreign community to be alienated from them at this crisis of their history. Such a notion would indeed be very mistaken, for it is only among a section of the foreign residents that any feeling of the kind prevails. But how can the Japanese judge? Are they unreasonable if they take the utterances of

the local foreign press as a guide? We do not think so; and not thinking so, we shall spare no pains to add the voice of the *Japan Mail* to that of the moderate far-seeing majority, and to denounce, with whatever force our pen possesses, the mischievous violence of the shallow and bigoted minority.

DIGNITY AND JUSTICE.

WE should like to know what element of "dignity" the *North-China Daily News* has discovered in China's Declaration of War. "The text of the Emperor of CHINA'S Declaration will be found in another column," writes our Shanghai contemporary, "and it is a dignified document, in which even the critical historian will find little to take exception to." Does the *North-China Daily News* find it dignified than an EMPEROR declaring war against a neighbouring empire, should apply an opprobrious epithet to its people, and should speak of them as wild beasts whom his armies are directed to "drive from their lairs"? That is a new variety of dignity. The civilized world is not accustomed to it, and will decline to become accustomed to it at any time, we suspect. As to the "critical historian," he must be a curiously blind reader of modern annals if he can reconcile China's professions with her practice. "Although we have been in the habit of assisting our tributaries, we have never interfered with their internal government," says the dignified document in one place; and in another:—"For the past dozen years or so Korea has been troubled by repeated insurrections and we * * * have as repeatedly sent succour to her aid." Insurrections, then, have nothing to do with "internal government," and the repeated sending of Chinese troops to support the dominant faction in Korea against rebellious fomented by its maladministration, is in no sense an interference with the little Kingdom's internal government! Neither was China interfering in any way with Korea's internal Government when, in 1884, she inveigled the KING'S father or board one of her men-of-war, and carried him off into a long captivity in the Middle Kingdom! Pshaw! Such glaring absurdities will be laughed to scorn by the "critical historian." If they seem logical, consistent, and satisfactory to the *North-China Daily News*, we must assume that our contemporary is gifted with some faculty of appreciation not vouchsafed to ordinary individuals. To folks of common intelligence and every-day sight it appears that China has been interfering most vigorously in Korea's internal government during the past 14 years; that she has lent military aid on several occasions to support the MING family against the rebellions caused by its glaring corruption and most cruel extortions; and that, precisely because of her ill-judged interference, Korea has fallen

deeper and deeper into the slough of bad government and national degradation.

In this context we may notice another extraordinary allegation of the Shanghai journal:—"Japan has no more right to insist on forcing reforms on Korea, than Russia has, for instance, to insist on enforcing reforms on Japan." Suppose we were to say:—"England has no more right to insist on forcing reforms on Egypt, than France has, for instance, to insist on forcing reforms on England." Would not such a proposition be deservedly ridiculed by every British subject? The *North-China Daily News* seems to imagine that Japan has no practical interest in Korea's fate; that the security of the Japanese empire would not be affected by any contingency occurring in Korea. Obviously that is an unreflecting assertion. Japan is very deeply concerned in Korea's destiny. Korea is at least as much to Japan as Afghanistan is to Great Britain. Had England been in Japan's place, there can be no manner of question that she would long ago have taken steps to avert the perils plainly involved in a state of affairs that crippled the peninsular's development, stifled its spirit of independence, and created constant opportunities for foreign interference. But in truth our Shanghai contemporary is embarrassed by its own propositions. In another article it writes:—"If Japan, without moving a soldier from her shores, had demanded of China that measures be at once adopted to rid the Korean people of the vampire now eating their vitals, she would have gained her point; and in gaining it would have secured the gratitude of the down-trodden Korean people, and the respect of every nation interested in the Far East." It appears, then, that although Japan had not the slightest right "to insist on forcing reforms on Korea," she would have gained the respect of all nations had she "demanded of China that measures be at once taken" to effect reforms in the peninsula. We leave to our Shanghai contemporary the task of reconciling these remarkable propositions. For our own part, we accept the latter, and note, accordingly, that Japan's one fault in our contemporary's eyes, the one error that robs her of the respect of all nations, was her practicality. Had she been so utterly fatuous as to imagine that China would have paid the smallest attention to a demand for reforms in Korea, preferred through the ordinary channels of diplomatic representation; had she been so very silly as to believe that the stubborn conservatives of the Middle Kingdom would have consented to undertake in the peninsula at her gentle instigation a programme of reform involving the disgrace and ruin of the corrupt statesmen on whose behalf Chinese military interference has been thrice exercised during the space of 12 years, "she would have gained her point" and "secured the

gratitude of the down-trodden Korean people, and the respect of every nation interested in the Far East." Gained her point, forsooth! Who on earth believes anything of the kind? Who on earth believes that China would have seriously entertained a proposition of that nature, submitted to the Tsung-li Yamén by the Japanese Representative in Peking? Surely Englishmen, eminently practical as they are, greatly belie their character when they talk in such a fashion. Japan simply took from the outset steps such as should secure her against being made a Chinese plaything and a laughing stock to outsiders. That her purpose was worthy of all praise the Shanghai journal itself admits. It was "to rid the Korean people of the vampires now eating their vitals," and, if achieved, it "would have secured the gratitude of the down-trodden Korean people as well as the respect of every nation." But because, instead of proceeding in such a manner as must have entailed failure, she adopted practical measures to ensure achievement, she is to be roundly condemned.

KOREAN NEWS.

THERE appears to be a persistent tendency on the part of certain local foreign journalists to conclude that whenever no special intelligence from the seat of war is published by the vernacular press, some disastrous news has been suppressed. The Japanese Government is roundly accused by these journalists of withholding the truth from the public and purposely concealing unfavourable details. Now it may very well be that the Japanese Authorities do not intend to have the people dosed with undiluted truth, and that they are resolved to prevent anything like a national panic such as might occur were evil intelligence circulated without any restraint. Were that their policy, it would be a perfectly intelligible and sound policy. Every one knows what care is exercised by commanding officers at the seat of war in Western countries to control the pens of newspaper correspondents, a precaution considered necessary not merely in order that want of success may not be exaggerated to alarming dimensions, but also for the purpose of checking the publication of military secrets. The official censorship of the press exercised in Japan at present must be admitted for these reasons to be an essential measure, and moreover we have to consider the special fact that unfortunately many Japanese newspapers, not having yet shown any sense of the responsibility devolving upon the press, could not be trusted to employ discrimination or scrutiny befitting the situation, and might work great mischief were they suffered to have an absolutely free hand. We believe thoroughly in favour of freedom of the press, and we also believe in the right of the

operation of general principles must be adapted to special circumstances, and we should no more think of granting full liberty to the Japanese press in its present condition than we should advocate the feeding of infants with beef and mutton. Censorship is an unhappy exigency. What we desire to point out, however, is that censorship does not necessarily imply the suppression of all unfavourable intelligence, as one, at least, of the Yokohama English journals insists in believing. Surely before formulating such a charge against the Japanese Government it is the duty of an editor to try and ascertain whether any unfavourable intelligence has really been suppressed. Have any serious mishaps befallen the Japanese navy or the Japanese army in Korea? We do not think so. The whole course of events is now perfectly clear. Belligerent acts commenced on the 25th of July. We know, as a matter of unquestionable fact, that on that day three Japanese ships-of-war encountered three Chinese, the result being that one of the Chinese vessels was captured, another was so shattered that she had to be beached and abandoned, and the third escaped to Wei-hai-wai in an evil plight. We know that on the same day a Japanese force set out from Söul, marched against the Chinese positions at Söng-hwan and A-San and carried them without difficulty. We know that the fortifications and obstacles built by the Chinese at these positions were demolished by the Japanese troops; that quantities of small and large arms and ammunition were taken by the victors, and that the Japanese force marched back to Söul into which city it made a triumphant entry. We know that the Chinese fleet has carefully removed itself from the seat of war and is hiding in some unascertained harbour. We know that a Japanese squadron is cruising in search of it. We know that Korean waters are entirely freed from Chinese men-of-war, and that the regular Japanese mail service is in operation from Chemulpho. What disasters can have occurred, then? What reason is there to suppose that the Japanese land or sea forces have suffered misfortunes of which the public is kept in ignorance? The one and only circumstantial allegation of disaster hitherto made by the foreign local press was that the *Yamashiro Maru* had been captured. But the *Yamashiro Maru* was not captured. Thus it appears, on a careful review of the situation, that no ground whatever exists for suspicions of concealed losses, and that, on the contrary, there is every reason to doubt anything of the kind. Truly, under the circumstances, we fail to appreciate the sense or wisdom of crying out that some concealment is practised, and that until the Japanese Government publishes intelligence of a disaster, its good faith will be questioned. Such criticism is extremely childish. Let us at least wait until we have valid cause to suspect defeat or

THE "KOWSHING" AFFAIR.

ON Tuesday morning we published the official report presented to the Japanese Government by Mr. SUYEMATSU KEN-CHO, Head of the Law Bureau, who had been despatched on a special mission to investigate the circumstances connected with the sinking of the steamer *Kowshing*. The treatment extended to the report by our local contemporaries is significant. It is the first official report given to the public; it deals with a subject that has excited the keenest interest and provoked the strongest journalistic comment; it embodies the testimony of three of the European survivors of the *Kowshing*, and from every point of view it is a document of the highest importance. Yet neither of our local evening contemporaries has thought it worthy of reproduction. One of them takes not the slightest notice of it, beyond extracting, without acknowledgement, a portion relating to an extraneous matter; the other refers to it only for purposes of criticism. Now it is notorious that both these journals habitually devote large spaces in their columns to the reproduction of reports, letters, and articles unfavourable to Japan. They have done so throughout the present complication and they continue to do so daily. They have thus republished from Shanghai journals statement after statement, concocted and put into circulation by the Chinese, or by friends of the Chinese, for the purpose of invoking public execration on the conduct of the Japanese in the *Kowshing* business. In the vast majority of instances they have republished these statements without any attempt to controvert their glaring improbabilities. Why, then, have they closed their columns to the official report of Mr. SUYEMATSU? We shall not attempt to answer the question, but are prepared to welcome any explanation that invests such procedure with a semblance of fairness.

As for the *Kowshing* business, the public has doubtless been able to arrive at a definite conclusion by this time. We refer not to the question whether or no the attack on the ship is justifiable by international law, but only to the methods employed in the attack. Above all, it is important to know whether the Japanese were guilty of the barbarity of firing upon Chinese soldiers while struggling in the water. With regard to that, the weight of testimony is clearly in favour of the Japanese. Indeed when we recall the indisputable fact that boats were sent from the *Naniwa Kan* to rescue the Europeans who were among the swimmers, and that they did rescue three of them while actually under fire from the Chinese, it becomes sufficient that the *Naniwa* can not have discharged her Gatling guns at the men in the water since she must otherwise have risked destroying her own boats. We are disposed to think, however, that the Japanese man-of-

war may have been continued against the *Kowshing* when she was already in a sinking condition and after some of her people had jumped overboard. It would be easy, especially for a man swimming, to mistake fire directed against the ship for fire directed against those who had just left the ship and were struggling in the water. Some such mistake probably was made. But there is assuredly no testimony to justify us in condemning the Japanese war-ship of such wanton barbarity as the deliberate slaughter of unarmed men swimming for this lives.

Whether the sinking of the ship can be defended, is a nice question; not from an international, but from a military, point of view. We ourselves are disposed to reply in the negative. Evidently the *Naniwa Kan* had the *Kowshing* completely at her mercy, and it is hard to persuade oneself that no procedure short of the steamer's total destruction would have served the purpose. It is true that the 1,200 soldiers on board the *Kowshing* were in a state of mutiny. They had refused to allow the Captain and officers of the ship to obey the orders of the Japanese man-of-war, and they had shown themselves ready to enforce their refusal by recourse to weapons. Being, in short, persuaded that surrender meant mutilation and death, they preferred a desperate resistance. Some display of destructive force was therefore unavoidable. But would not the *Naniwa's* Gatling guns have sufficed? Had the *Kowshing's* decks been swept two or three times, the Chinese could scarcely have continued to hold out. We are very sensible of the difficulty of judging such an affair from a distance. Only the actors are acquainted with all the directing circumstances. But it appears to us that the *Naniwa* set about sinking the *Kowshing* at once, so soon as the peaceful surrender of the Chinese soldiers became hopeless and that she made no attempt to save life after the vessel had gone down. Had she first tried the effect of her Gatling guns without success, the more radical measure would have been quite defensible; and had she made every possible effort to save the drowning men, a strong justification of her action would have been furnished under any circumstances. But the course she adopted certainly invites criticism.

THE BRITISH FLAG.

THE *Kowshing* incident has once more brought into prominence the piece of bunting that every genuine Briton is always seeking to nail to some mast or other. Of course we all feel considerably chagrined and mortified by the thought that a ship flying our country's flag should have been fired upon and sunk in times of apparent peace. But there are few, we should hope, who endorse the intemperate journalistic expressions of the

incident. One would imagine from the tone of the writing in the local press that HER MAJESTY'S Representatives in China and Japan were a set of craven incapables, and that HER MAJESTY'S captains and admirals had forgotten the traditions of their country and the duties of their service. Are not such tirades extremely silly, and can any spectacle be more mirth-provoking than that of a petty editor delivering brawling judgments on international law from the eminence of an office-stool, and screaming from the shelter of his printing-press invectives against statesmen and commanders in whose visible presence he would wilt incontinently? The British flag, we dare allege, never commanded more respect than it does at present, and if it has suffered any indignity, full reparation will assuredly be exacted. Admiral FREMANTLE is criticized because his arrangements were not such as to secure the presence of a British man-of-war on the scene of the *Kowshing* incident. It is invariably so whenever anything happens anywhere that might have been averted had a British naval force been in the immediate vicinity: the Admiral is roundly abused for not having contrived to have a force there. To satisfy the so-called "patriots" of the local press nothing less is required than an omniscient Admiral and a ubiquitous squadron. A little restraint might be usefully put upon the irresponsible clamour of the local Jingoes. Nothing could please Foreign Powers better than to see a breach made in the friendly relations between Great Britain and Japan at this juncture, and to that most undesirable issue certain English local journals are contributing as far as they can. There is no occasion to be excited. British diplomacy is not so invertebrate or timid as grandiloquent editors pretend to think, nor can delicate international questions be settled off-hand by a phrase that owes whatever sense it embodies to a superficially perused text-book, and whatever strength of diction it boasts to a thesaurus. Englishmen's jealousy for the honour of the British flag should not be merely of the *noli-me-tangere* type. If the flag claims universal respect it also imposes strong obligations, one of which is that it ought not to be used to cover operations of a questionable nature. War had not been declared when the *Kowshing* was sunk, but the Chinese Government had been warned by the Japanese that any attempt to re-inforce the troops at A-San must be counted equivalent to an act of war, and the ship was therefore employed for a belligerent purpose. These are points that have to be taken into account. In the interval immediately preceding a state of war, it may very easily happen that the rules embodying the rights of neutrals can not be literally observed without doing violence to the principles that form the bases of

rules. We feel every confidence that the *Kowshing* affair is receiving the fullest consideration, and that, should the honour of the flag require vindication, it will be handsomely vindicated. Nothing, meanwhile, can be more reprehensible than the conduct of journalists who endeavour to persuade the public that the captain of a Japanese man-of-war deliberately fired upon a ship flying the British flag because he knew that the British Government would be content to condone the wrong and "to compromise its dignity for the cost of the ship and a few additional dollars." Men who grossly insult their country by such monstrous charges are well qualified to champion its honour. The British flag has not "ceased to command respect in the East" or anywhere else, but the writers who, journalistically representing England in the East, do their best to cripple her diplomatists by publicly discrediting them, and to bring her officials into contempt by accusing them of pusillanimity and incompetence—these are the persons that work most injury to British interests and British influence.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE KOREAN IMBROGLIO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me, as one of your readers, to thank you for your lucid and eloquent historical statement of the causes which have led up to the present war between China and Japan.

As a Christian, I am opposed to any war which can be avoided without sacrifice of moral principle. Hardly any passage of the Old Testament appeals to me more strongly than the Psalmist's description of God as One "Who maketh wars to cease in all the world, who breaketh the bow, and snappeth the spear asunder, and binneth the chariots in the fire." Whether the Japanese Government absolutely exhausted all proper resources in the endeavour to avoid war I feel myself quite incompetent to judge. That they have shown wonderful patience and forbearance is plain enough from the history as you have stated it, though this patience and forbearance have been partially obscured by the promptness of action which, when the time came, took the world by surprise. But whatever one may think as to the question whether it might have been possible to be more patient still, now that war has been begun, I must confess myself unable to see how any humane and intelligent person, who looks simply at the essential facts of the case, and refuses to be led aside by extraneous considerations can do otherwise as between the two governments, than wish success to Japan as altogether in the right, and failure to China, as altogether in the wrong.

To make my view of the case clearer, let me say a word or two of some of these extraneous considerations that it seems to me ought to be laid aside.

China herself, in her proclamation of war, lays stress on her claim in the past to suzerainty over Korea. But no one can be called upon to pay the least respect to a claim which she herself has asserted or denied as has suited her convenience, least of all those nations who have concluded, without protest on China's part, treaties with Korea which acknowledge her as an independent nation.

Some persons seem to be swayed more or less in their sympathies by personal liking for the people of one or the other of the two contending nations. The patient industry and steadfastness of the Chinese people certainly appeal very strongly to the Anglo-Saxon race, and for one I hold these qualities in the highest admiration. But they have nothing in common with the lying and cowardly tyranny which the Chinese government has manifested in Korea. At the greatest

enemy of the patient and hardworking people of China is this same vile system as it is exhibited at home.

It has been said on the other hand, by the friends of Japan, that this contest is essentially one between the friends and the enemies of Western civilization. It is, no doubt, more than probable that the triumph of Japan would greatly further, if not make sure, the ultimate prevalence in the East of the type of civilization which she has adopted. But Western civilization is not immediately or necessarily involved in the case. What Japan demands is, first, respectable and responsible government for Korea, and next, such a strengthening of the physical and intellectual fibre of the nation by education and industrial development that she may eventually be strong enough to maintain her own independence. Neither of these things is necessarily or essentially connected with a Western rather than an Eastern type of civilization.

No. The contest is in its essence, on the one side for shameless corruption and tyranny, on the other for decent and just government. In its outward manifestation, it is the fight of bold and straightforward manliness against unprincipled lying and shuffling. If I am right in my statement of the case, as I am profoundly convinced that I am, no right-minded man who knows the merits of the case, can be other than a friend and well-wisher of Japan.

But we are told of foolish and boastful and even cruel things said and done by Japanese. The best of human causes, if it is in any degree popular, is supported from mixed motives and by a mixed multitude. If any war was ever fought upon grounds of high principle it was the American Civil War as carried on by the northern states for the maintenance of the Union and the abolition of slavery. Yet my own memory recalls to me things said and done at that time which might easily have led an unfriendly critic to overlook the serious enthusiasm and conscientious conviction which were the real motive force by which the final victory was gained. Indeed, such misapprehension was not only possible, but actual, and in some quarters wide-spread. So now, unfriendly critics may easily find texts on which to base their criticism. But a true text by no means insures a sound conclusion.

We are told also that the real motive of Japan is a selfish one, that whatever she may say of her wish to insure good government and independence for Korea, her ultimate aim is to make that Kingdom a part of Japan. It is, perhaps, a little hard, especially for Europeans, in this age of national land-grabbing, to believe in anything the least resembling political disinterestedness. Even so, there is only one fair thing to be said, and that is, Hands off! Let Japan prove by her actions what she has in her heart! Let Western nations take towards Japan (only in a more sympathetic spirit) the attitude which France has taken towards England in Egypt. Let Japan carry out her reforms in Korea. Let her use what force is necessary for the accomplishment of her purpose. And then let her be held responsible for her undertaking to secure Korea's independence.

But what if Korea should prove incapable of real independence? Well, suppose it. She must then be governed from without. And by whom more suitably than by a race so nearly allied in race and language as the Japanese? To leave her to China would be the worst of cruelty, and neither Russia nor England would have any other excuse to obtain control over her than pure covetousness. Possession of Korea is certainly in no degree necessary to the safety of either. Japan, however, does regard it as essential to her own safety that no European Power should obtain a foothold there. This is her Monroe Doctrine—as sound and beneficial a doctrine for the Far East, it seems to me, as the original Monroe doctrine has proved to be for the western hemisphere. In this point, Japan's self-regard can not rightly be called selfishness, nor is it in any way inconsistent with her professed desire to give good Government and independence to Korea.

But these are mainly questions of the future. The main point for the present is that whatever one's particular likes or dislikes may be, the cause of Japan as against China is the cause of honesty and decent government as against profound duplicity and shameless corruption.

I am, Sir, very truly yours,

THEODOSIUS S. TYNG.

August 12th, 1894.

"MISREPRESENTING THE JAPANESE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A communication, in yesterday's issue of the *Japan Mail*, entitled "More respecting the

Japanese," contains what is given as a quotation from the Earl of Harrowby's speech at the annual meeting of the B. & F. Bible Society. It reads, "We go to the islands of Japan, where we find a very backward and savage and degraded race." The writer adds "The noble earl ought to have been more explicit and accurate." But the noble earl was much more explicit and accurate than he is given credit for. His words, as given in "The Bible Society Monthly Reporter," for June, are: "We go to the islands of Japan, in a part of which we find the Ainu, a very backward and savage and degraded race," and he then speaks of the work being done among them by a devoted English missionary.

Evidently the "misrepresenting" has not been done by the Earl of Harrowby.

Yours, &c.,

B. CHAPPELL.

Kauizawa, August 11th, 1894.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your Correspondent, "F.P.D.," writing under the above heading, should in his turn guard more carefully against *misrepresenting* Lord Harrowby. Reading his quotation from the noble earl's speech in connexion with the preceding part of his letter and under its title, as given above, the ordinary reader would not readily infer that the Earl of Harrowby was speaking of the Ainu and not of the Japanese when he is reported to have said:—"We go to the islands of Japan where we find a very backward and savage and degraded race." The periods of omission between this quotation and the next are not conducive to the better understanding of the noble Earl, but even as it stands the latter quotation is not very damaging either to his lucidity or accuracy.

Yours truly,

L. B. C.

August 10th, 1894.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—"F.P.D." must not take newspaper reports of speeches and addresses in England quite so seriously. We who know Miss Cox (not "Box") were ourselves amused at the report alluded to and quoted from by your correspondent, but we are quite sure that an imperfect (and possibly inaccurate) summary has been published of her speech. Does "F.P.D." suppose that an address of half an hour or so can be adequately done justice to in a paragraph which it does not take a minute to read? And, is it fair to conclude that Miss Cox said no more than is reported, or that what is given is a faithful record of her actual words with all the qualifications and reservations she may have used? We missionaries know well how it is the custom of reporters unfamiliar with our topics to victimise us, and we are frequently more "surprised and pained" than any other readers can possibly be at the strange and ludicrous statements which are seriously attributed to us.

An interesting and significant instance occurs in "F.P.D.'s" final paragraph. Every one who saw the passage and who knows anything at all about missionary work in Japan, must have been, at first sight, puzzled by the report of the words of the Earl of Harrowby referred to. It is obvious enough, however, that the noble Earl was referring not to the "Islands of Japan," but to the "Ainu of Japan." Why did not "F.P.D." quote the whole paragraph? Does he seriously believe that there is only one missionary working among the Japanese? And, does he not know that the Epistles have been translated into *Japanese* for some fifteen or sixteen years? The reference in the passage quoted is to translation into the *Ainu* language.

The reporter, not being familiar with the word "Ainu" (or "Ainos" as the Earl perhaps pronounced it) misunderstood it for "islands," and hence the Earl of Harrowby is made to talk sheer nonsense. Substitute "Ainu" for "islands," and every word of the quotation is "intelligible, explicit, and accurate." Let "F.P.D." learn the lesson!

I am, Sir your obedient Servant,

G. H. POLE,

Acting Secretary C.M.S. Mission.

Osaka, 13th August, 1894.

"WOJEN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly state whether the translation of "Wojen" into "pigmies" may be taken as strictly accurate? I observe that the Japanese newspapers render it simply "people of Yamato," "Wo" being understood as equivalent to "Yamato." I should be glad to learn if you find on

examination, that the epithet has really the objectionable character you have attributed to it.

INQUIRER.

Tokyo, August 16th.

(The ideograph used for *Wo*, or *Yamato*, by the Japanese themselves is different from the ideograph *Wo* of *Wojen*. Williams says that the Chinese define *Wo* to mean "the country of dwarfs," and the term *Wojen* has been declared to have an opprobrious significance by the Chinese translators of the Imperial Declaration of War.—Ed. J.M.)

THE REPORT RELATING TO THE "KOWSHING" AFFAIR.

To His Excellency Mr. MUTSU MUNEMITSU, Minister for Foreign Affairs.

DEAR SIR,—Carrying with me your instruction to investigate the important facts relating to the transport-ship of the Chinese troops, as well as her complement, which was sunk by H.I.J.M.'s war-vessel *Nantao* near Sho-pai-out Island off the coast of Korea, I left Tokyo on the 29th ultimo and travelling day and night arrived at Sasebo at 5 a.m. on the 2nd instant, and at once proceeded to make necessary investigations. Although the essential points that I have obtained by these investigations have been already telegraphed to you from time to time, I hereby submit this paper to you in order to report more details in consecutive form.

The materials used for my investigations are as follows:—

- 1.—The statements of the Captain, first officer, and a quarter-master of the sunken ship. (The important points of these statements were written and signed by the narrators.)
- 2.—The written answers by the above-said Captain and officers to a series of questions put to them by the naval authorities of the Sasebo Naval Station.
- 3.—The reports sent by the Commanders of H.I.J.M.'s men-of-war relating to the naval engagement near Fernand Island off the Korean coast and other matters connected with it.
- 4.—The statements of the Commander of H.I.J.M.'s war-vessel *Yayeyama* who brought the above-said Captain and two others as well as the complement of the captured Chinese war-vessel *Sowkoo* (*Tsaochang*) to Sasebo.
- 5.—Statements of Mr. Mühlensteth, a Dane, who was on board the above-said Chinese war-vessel. (The important points of these statements were written and signed by the narrator.)
- 6.—The written answers of the Commander of the said Chinese war-vessel to a series of questions put to him by the naval authorities of the Sasebo Naval Station.

The name of the sunken ship is *Kowshing*, her owners are the Indo-China Steamship Navigation Co., London, whose agents are Jardine, Matheson & Co., and her nationality is British. She was built in 1883, her net tonnage was 1,354, her gross tonnage 2,134. As to other particulars of the ship, I omit here as they are all described in the Lloyd's register. Her complement was as follows:—

Captain, THOMAS RYDER GALSWORDTHY.

First-officer, LEWES HENRY TAMPLIN.

Second-officer, JOSEPH WELSH.

Third-officer, NATHANIEL WAKE.

First-engineer, WILLIAM GORDON.

Second-engineer, W. L. HALLEY.

Third-engineer, J. PRIMROSE.

(The above British).

Quarter-master, LUCAS EVANGELISTA.

Quarter-master, GREGORIO ALTILAR.

Quarter-master, PEDRO ORIAOTE.

Quarter-master, DONICIO.

(The above Manila-men).

And crew of 64 persons. The ship had on board one thousand one hundred Chinese troops, including Generals, both artillery and infantry, together with a large number of guns and a great quantity of ammunition. There was on board one Herr von Hanneken, who professed to be a passenger. Excepting these, there was no cargo or passengers, the ship carrying water ballast.

The ship was chartered by the Chinese Government. Although the dates of the charter-party has not been ascertained, the Captain received his first order from the agent at Shanghai, and proceeded to Taku, and having received the second order at that place and having taken in there, the Chinese troops and Herr von Hanneken on board, proceed for A-San in Korea. The object of her voyage was to disembark at A-San the Chinese troops and Herr von Hanneken. The Captain was also instructed that he was to return to Taku after the successful disembarkation of the troops.

The survivors of the complement of the *Kowshing* conveyed to Sasebo are the Captain, first officer, and quarter-master Lucas Evangelista, 3 in all. The *Kowshing* left Taku at 9.50 p.m., 23rd ultimo.

According to what the Captain says, eight transports carrying Chinese troops left Taku with sealed orders two days previous, *i.e.* 21st, and another left on 22nd and proceeded to A-San. According to what the 1st officer of the *Kowshing* states, three of those ten ships were British, seven were Chinese. Although I have good grounds for believing that the *Kowshing* was also furnished with a sealed order at the time of her departure, yet I reserve the source of this information at present. The statement that many transports with Chinese troops left Taku on the 21st and 22nd coincides with the intelligence obtained by our authorities, and although their destination is not clearly known, according to the report of the Commander of the *Yayeyama* to me, one of those transports was seen by H.I.J.M.'s war-vessel *Musashi* entering into the Gulf of A-San on the day preceding the naval engagement near Fernald Island. That ship may be one that left Taku on the 22nd.

The *Kowshing* proceeded to the proximity of the Sho-pai-ou Island early on the morning of the 25th ultimo, and the *Sow-kou* (*Tsao-kiang*) also approached the same islands at a short distance on her right hand side. The naval engagement between two Chinese war-vessels *Saiyen* (*Chae-yuen*) and *Kow-otsu* (*Kwang-i*) and three of our men-of-war *Akitsusu*, *Yoshino*, and *Naniwa*, took place from 7.5 to 8.15 that morning. The *Saiyen* passed by the *Kowshing* at about 8.30 and hurriedly proceeded westwards. The *Kowshing* dipped her ensign but no notice was taken by the *Saiyen*. Immediately afterwards, the three Japanese men-of-war appeared on the scene. They were in the pursuit of the *Saiyen*. When the *Kowshing* was seen, one of the Japanese war-vessels turned her bow toward the *Kowshing*. The *Sow-kou* (*Tsao-kiang*) observing all these, suddenly changed her course and ran westward. Two of the Japanese war-vessels proceeded in pursuit of the *Saiyen* and *Sow-kou*. Apropos the *Sow-kou* was overtaken by the *Akitsusu* at about 2 p.m. and finally captured. The *Saiyen* which was at first steering round very closely along the island apparently trying to conceal herself as much as possible from the sight of the Japanese vessels, suddenly changed her course, and crossing the bows of the *Sow-kou* made a rapid run south-westward. Her direction was apparently Shangtung Promontory. She escaped at last. If she proceeded direct to Tsen-shien, she must have afterwards changed her course.

Our vessel that went toward the *Kowshing* was the *Naniwa*. It was about 9 o'clock that they approached each other. As to what then took place between these two vessels, I will give subsequently the captain's own words extracted from the written answer in reply to the query of the naval authorities. The statement of the first officer entirely coincides with that of the Captain, and the statement of the quarter-master also in no way differs from them in describing the circumstances of the event. (See Appendix No. 1.)

"When nearing Sho-pai-ou Island, I was ordered by H.I.J.M.'s *Naniwa* to stop and shortly after to anchor, which I did.

"The *Naniwa* then steamed away evidently for the purpose of conferring with some other Japanese war-ship; I asked by signal, if I was to proceed, the *Naniwa* answering "Heave to or take the consequences," and shortly afterwards a boat was sent from her, the officers in charge coming on board the *Kowshing*; they asked to see my ship's papers which I showed them, also asked me several questions which I answered; they then asked me if I would follow the *Naniwa*, I said "yes," that I was powerless to refuse, as they were a man-of-war; the officers then returned to their ship and shortly afterwards I was ordered to "slip or weigh anchor immediately," but this the Chinese Generals on board would not let me do, telling me that if I attempted to follow the *Naniwa*, or if I attempted to leave ship, they would execute or shoot me, pointing me out to their men, some of whom were told off to watch me, they being either armed with large swords or rifles with fixed bayonets. I then signalled to the *Naniwa* "Send a boat, I wish to communicate personally;" when the boat arrived, the Chinese officers would not allow me to go to the gangway to meet the Japanese officers at first, but when they did allow me I asked the officers to tell their Captain that I was not allowed to follow the *Naniwa* by Chinese and that the only terms I could make with them were to take the ship back to Taku, also that we were a British ship and had left "port before war was declared."

"Shortly after the boat returned to the *Naniwa*, the latter signalled: "Quit the ship immediately." I answered "We are not allowed" and "Send a boat." The *Naniwa* then

called "Boat can not come," and shortly afterwards hoisted a red flag at the fore, sent a torpedo at and opened fire on the *Kowshing*, and sank her."

With regard to the resistance of the Chinese General to the Captain's intention, I obtained from him further particulars and I was convinced that the Generals were determined to resist *à mort* the orders of the *Naniwa*. The written statement of the Captain relating thereto is as follows:—

"When the Chinese Generals heard that I intended to follow the *Naniwa*, they objected to my doing so saying that 'They would not allow me to follow the Japanese ship.' I then told them that it was useless to resist, as one shot from the *Naniwa* would sink the *Kowshing*; they said then that they would rather die than follow her, and that they had 1,100 men and the *Naniwa* had only about 400; that they could fight the *Naniwa*. I again told them of the foolishness of this idea, also that if they wanted to fight, that I and my officers and engineers would go on shore. They then threatened me, making many gesticulations, that they would execute me or shoot me if I made any attempt whatever to leave the ship or follow the *Naniwa*." (See Appendix No. 2.)

The time when the *Kowshing* was fired at, was about forty minutes past noon, *i.e.* nearly 4 hours from the moment when she was first ordered to stop by the *Naniwa*. Thus we can see that the *Naniwa* had used every ordinary means before she at last appealed to the extreme measure of firing. The report that many Chinese transports left Taku on the 21st and 22nd were then already known to all our men-of-war there, and from the physical features of the place round Sho-pai-ou Island, it must have been most uncertain to our ships when and where any ships of the enemy might come and attack them from behind, so many islands being scattered there. Moreover, two companion ships of the *Naniwa* were in search of the enemy, and it must have been also very uncertain to the *Naniwa* what kind of severe fighting those two were engaged in. At such a critical moment, so long a time as aforesaid was spent in negotiation between the *Kowshing* and the *Naniwa* simply because the *Kowshing* happened to display the flag of England. This will be quite ample to show what kind of deliberate care was taken by the *Naniwa*, and also what amount of untiring patience she must have exercised. Besides these, the clamour and excitement of the Chinese soldiers on board the *Kowshing* was actually seen by the *Naniwa*; it must have been quite impossible on her part to try to capture the *Kowshing* by any common and ordinary measures. This fact is also plain from the statements of the Captain and others on board the *Kowshing*. (See Appendixes Nos. 3 and 4.) Thus you will see that the firing of the *Naniwa* was a measure quite unavoidable.

At the time when the *Naniwa* signalled "Quit the ship," and warned the *Kowshing* of danger by hoisting a red flag, the Captain of the latter vessel and his officers and others jumped overboard, one after another. At the moment, the Captain had already collected his officers on the bridge, and the emergency was already communicated to the engine department. When the Chinese troops saw the Captain and others jump overboard, they at once poured forth their rifle-bullets indiscriminately upon those in the water. While these things were going on in the *Kowshing*, the *Naniwa* on one hand sent a torpedo against the *Kowshing* first, and when it missed her, fired a side-gun which sealed the fate of the *Kowshing*, which gradually sank beneath the waves; and on the other hand, dispatched her boats and did her best in rescuing as many foreigners as possible. But alas! only three were saved, that is Captain, first officer, and a quarter-master as aforesaid. The Captain and the first officer were fortunately unhurt, but the quarter-master was shot through his neck and is still under medical treatment at the Hospital in Sasebo. As to the remaining members of the crew, their fate is still unknown, but it is most probable that they were mostly killed by the bullets poured down upon them by the Chinese soldiers. This is to be surmised even from the statements of the Captain and others. (See Appendixes Nos. 5, 6, and 7.)

I have already stated that there was one, von Hannecken on board the *Kowshing*. He is said to have professed to be a passenger, but it seems to me very strange that he alone was there while there was not a single passenger besides him. I therefore closely questioned and succeeded in obtaining the written statements (Appendixes Nos. 8, 9, and 10) from the Captain and two others. After deliberating in my mind, comparing these statements with other information which has come into my possession from other sources, I became

convinced in belief that he has more than ordinary connection with the Chinese Government or troops, and that he should not be considered as a mere ordinary passenger. I heard a report while in Sasebo, that a German from the *Kowshing* had boarded a German war-vessel. He must be von Hannecken.

The Captain and two others were sent to Sasebo on board H.I.J.M.S. *Yayeyama* together with the complement, &c., of the captured Chinese war-vessel *Sow-kou* (*Tsao-kiang*) and arrived at Sasebo on the 28th ultimo. With regard to their personal treatment, nothing but kindness and courtesy were shown to them from the time of their rescue throughout.

With regard to the relation between the Chinese Government and the owner of the *Kowshing*, although I am unable to obtain the details, I have good ground, taking into consideration several surrounding circumstances, in believing that the late affair, *i.e.* the *Kowshing* transporting Chinese troops, has more meaning than an affair coming into the company in the ordinary course of the traffic-business. Even from the written statement of the Captain, which was obtained in answer to my close question, it is plain that the ship was chartered by the Chinese Government, and that it was mentioned in the charter party, that the ship was to be handed over to the Chinese Government, should hostility commence; also the European crew was then to leave the ship. (See Appendix No. 11.)

The modes of my making investigations personally of the Captain and two others were thus: I first explained to them the object of my mission to Sasebo, and in the next place as I must put several questions to them and cause their statements to be written and signed as far as essential points are concerned, I asked them if they had any ground of objection to my questioning them and also committing to writing such statement. They answered that they had no objection whatever; whereupon I proceeded with necessary investigations. Now that I am writing this report, one thing which I feel most pleasant in my mind is to inform you of the fact that they were all feeling greatly the kindness of the officers on board our men-of-war and the staff-officers of the naval station in regard to their personal treatment, for which they expressed the warmest thanks. My investigations were finished in two days. I asked their wishes and was answered that they wished to be sent to Nagasaki. Thereupon, in accordance with your instructions and those of the Minister of Navy, I consulted with Admiral Shibayama, Commander-in-Chief of the Naval Station. As a result, an intimation was conveyed to them by the Admiral early in the morning on the 3rd instant that they would be sent to Nagasaki. The time of departure was fixed by mutual understanding at 11 o'clock in the next morning, and at the appointed hour, the Captain and his first officer, escorted by a staff-officer of the station was sent to Nagasaki on board a steamboat specially despatched for the purpose. With regard to the quarter-master, he desired to stop a little longer in the Naval Hospital of Sasebo in order to receive further medical treatment and this was assented to.

The preceding statements are the material parts of the matters, of which I have made investigation relating to the *Kowshing* affair. All the documents relating to them are put into a different envelope and presented to you together with this paper. It is not within the sphere of my duty here to discuss the merits of the action of the *Naniwa* from an international law's point of view; it is beyond all doubt from all the facts now in our possession that no impartial critic will ever pronounce that her action was wrong.

Your obedient Servant,

KENCHO SUYEMATSU,
President of the Imperial Board
of Legislation.

August 10th, 1894.

APPENDIX. No. 1.

(EXTRACT FROM THE WRITTEN STATEMENT OF THE FIRST OFFICER IN ANSWER TO THE QUESTIONS OF THE NAVAL AUTHORITIES OF THE NAVAL STATION, SASEBO.)

I was on watch on the morning of Friday twenty-fifth with the Captain and third mate, nearing Sho-pai-ou Island when we were ordered to stop by signal from a Japanese man-of-war. We immediately stopped and signalled having done so, then we were ordered by signal to anchor and did so.—The man-of-war then steamed away to confer with two other ships of H.I.J.M.'s Navy. I then was instructed by Captain Galsworthy to enquire by signal if we could proceed, and was answered by the man-of-war, "Heave to or take the consequences." After a short interval the *Naniwa* returned and sent a boat to us; the officer in

charge examined our papers and returned to the *Naniwa*. The signal was then hoisted from the *Naniwa* to "Weigh or slip immediately and follow me." This signal excited the Chinese greatly and the General emphatically and with many threats (even to ordering an executioner, and a soldier with loaded rifle to attend immediately behind myself and the Captain) refused to allow the Captain to do so. We then signalled to the *Naniwa* "Send a boat, I wish to communicate personally." The *Naniwa*, answered, "Send immediately," and a boat with some officers came alongside. The Chinese General refused to allow me to be present at the interview, but I understood that the Captain asked to be allowed to return to China. The boat returned to the *Naniwa* and the signal was hoisted to "Quit the ship." We signalled in return that, "I am not allowed," and again, "Send a boat." The latter signal was answered, by "Life boat cannot come." The Chinese were very anxious to know what we were hoisting and to obtain time to study our position and keep them from firing at us, we told them that we were asking instructions. The *Naniwa* whistled several times and hoisted a Red Flag at the fore; all our officers were collected on the bridge and word was sent to the engineers' staff to prepare for emergency. A torpedo was discharged from the *Naniwa*, followed by a broadside, which struck amidships. I then jumped overboard to avoid a rush on the part of the Chinese soldiers and was fired at on coming to the surface. I swam towards the *Naniwa*, and was picked up by a boat from the *Naniwa*, which had been sent with another boat to pick up the Europeans.

(EXTRACT FROM THE SAME STATEMENT IN ANSWER TO A QUESTION RUNNING THUS: WHAT ORDERS DID THE CHINESE GENERALS GIVE AT THAT TIME?)

Issuing ammunition and rifles to the men and ordering his bodyguard to fire at us if we showed the slightest intention of following the *Naniwa* or leaving the ship in any way.

No. 2.

FROM THE WRITTEN STATEMENT OF THE FIRST OFFICER.

As a fuller account of the resistance to the orders of the warship *Naniwa* by the Chinese is required, I beg to submit the following:—

That the Chinese General, on having the instructions explained to him, distinctly refused to allow us to obey, and when argued with about the folly of his conduct, threatened our lives and placed men to watch us and to fire at us immediately that we observed any signs of either obeying the orders of the warship *Naniwa* or of leaving the ship ourselves, and I was also told by one of the engineers that they had been prevented from going into the engine room.

No. 3.

(FROM THE WRITTEN STATEMENT OF THE CAPTAIN.)

I am quite convinced that if the *Naniwa's* men had come in boats to take the *Kowshing* that the Chinese soldiers would have fired at them.

I am certain that the bullets that were falling around me in the water were fired by the Chinese soldiers on board, as, not only did the position of the *Naniwa* prevent anyone on board her reaching me with a bullet, but that I actually saw the Chinese soldiers firing at me.

No. 4.

(FROM THE WRITTEN STATEMENT OF THE FIRST OFFICER.)

And I am of the opinion that if the Japanese boats came again alongside with the intention of taking the vessel, that the Chinese troops on board would most certainly have resisted with force.

Also that whilst in the water, and swimming from the *Kowshing*, I was fired at by the Chinese on board. This, I am certain of, not only from the position I was in regarding the two ships, as the *Naniwa* shots would have passed over me, but also because I distinctly saw the Chinese soldiers firing from the upper deck and also from the 'tween-deck ports.

No. 5.

(FROM THE WRITTEN STATEMENT OF THE CAPTAIN.)

By the amount of shots that were fired at me, I should think it very probable, that some of my officers and engineers and quarter-masters must have been killed by shots from the Chinese soldiers' guns.

No. 6.

(FROM THE WRITTEN STATEMENT OF THE FIRST OFFICER.)

I am afraid that from the amount of firing by the Chinese at the Europeans whilst in the water, that some of them must have been killed before reaching the shore.

No. 7.

(FROM THE WRITTEN STATEMENT OF THE QUARTER-MASTER.)

I looked round but I found neither Captain nor any European officers remaining there; I found a deck bucket which I thought was good enough to save my life, so I jumped into the water with it. At the time I was fired at by Chinamen from the scuttles with 5 or 6 rifles at a time. I narrowly escaped from being fatally wounded but only got my neck pierced through by a shot. I lost my senses for a while, and when I returned to sense, I cried out: "A Spaniard, a Spaniard, save me," etc., and presently I was picked up by a boat which turned out to belong to the Japanese man-of-war. When I was picked up, men in the boat cried, "Any more Europeans, any more Europeans," to which I could give no answer, as I was exhausted. I was the first foreigner who was picked up; soon afterwards the Captain and then the mate were rescued.

No. 8.

(FROM THE WRITTEN STATEMENT OF THE CAPTAIN.)

Mr. von Hannecken, the passenger on board the *Kowshing*, I fancy was a German. He joined the vessel at Taku just before she left. On arriving on board he asked me if I had been waiting for him? I answered No, that I even did not know that he was coming. He then told me his name was von Hannecken and that he had the Viceroy's permission to proceed to Korea in the *Kowshing*. He had a lot of conversation with the Chinese Generals and other Chinese officials on board during the voyage, which naturally led me to suspect that he was in some way connected with their business, although he told me that he had nothing to do with them. He acted as interpreter between the Chinese and myself. Mr. von Hannecken was a big man of fine physique. I saw him last after the *Kowshing* sunk, in the water some good way ahead of me and should fancy that he would reach the island of Shoo-pai-out.

I first heard of Mr. von Hannecken, I think it was in 1887, he was then the head of a firm of contractors who were building a dock at Port Arthur (Lee-shun-kan).

No. 9.

(FROM THE WRITTEN STATEMENT OF THE FIRST OFFICER.)

Among the Europeans on board the *Kowshing*, but not belonging to the ship's company, was one gentleman, whom I believe was a German, and apparently a military man from his bearing. He was evidently known to the Chinese officials on board, and spoke their language fluently, though he stated that he was only a passenger going to "Korea" for his own pleasure. On several occasions when I wanted various things done by the soldiers, such as keeping certain parts of the ship clear for our use, and other things, I went to him and he always managed to effect the work or thing I required. Also, during the period previous to the *Naniwa* opening fire on us, he was in close consultation with the Chinese Generals.

When I last saw him he was well on his way to Shoo-pai-out Island and swimming powerfully and well. He was apparently a man about 40 years old, above the average height, and with dark hair and moustache with a decided military bearing.

No. 10.

(FROM THE WRITTEN STATEMENT OF THE QUARTER-MASTER.)

There was one passenger on board. I consider he was a German. He was in constant conversation with the Chinese officers. I think he was a sort of Chinese General, although there were two other real Chinese Generals.

No. 11.

(FROM THE WRITTEN STATEMENT OF THE CAPTAIN.)

I understood by the terms of the Charter Party, that in the event of hostilities taking place between China and Japan, that the *Kowshing* was to be taken over by the Chinese Government and also that the European officers were to leave the ship.

REPORT WITH REGARD TO MR. MUHLENSTETH.

His Excellency Mr. MUTSU MUNEMITSU, Minister for Foreign Affairs.

SIR,—The result of investigations which I have made while in Sasebo, and the measures I have taken therewith in accordance with your instructions, concerning Mr. H. J. Mühlensteth, a Dane, who was found on board the *Tsao-kiang*, the captured Chinese man-of-war, are as follows:—

His profession is a telegraph constructor and operator.

He came to China under a six years' agreement with the Great Northern Telegraph Company.

in 1881, and remained in the service of that Company until 1886, when he was engaged by the Imperial Chinese Telegraph Administration and was sent at once to Korea. It is said that he took a prominent part in the construction of the Chemulpo, Seoul, and Echow telegraph line. He remained as a telegraph engineer in that country until May last year, and was transferred to Tientsin that month as an assistant to the manager of the Telegraph Office there.

According to what he says the office in which he served is called the Imperial Chinese Telegraph Administration and he says that it is under a quite distinct administration from the lines belonging to the Central Chinese Government.

The Chemulpo, Seoul, Echow line is under the control of so-called Imperial Chinese Telegraph Administration. The latter has its Central Office at Tientsin, and is controlled by a Taotai specially appointed for the purpose.

He confessed that, although his contract expired on the 10th of March this year and it had not been renewed as yet, because the original contract, which was to be produced to get the necessary endorsement affixed, was in safe keeping in the Imperial German Consulate in Seoul, yet he did not consider his connection with the Imperial Chinese Telegraph Administration severed, as he had been still paid his salary as before.

The amount of his salary was at present 250 dollars per month.

He says that he has saved over 8,000 dollars, and that besides, he possesses some property and moneyed interests in Seoul.

According to his statements, his voyage to Korea this time was principally to protect his property, as a war seemed to be at hand, and he was instructed by the Taotai to look after as much as possible the property belonging to Imperial Chinese Telegraph Administration should it be endangered by the war; although he was not specially dispatched for that purpose.

He further stated that the ownership of the Chemulpo, Seoul, Echow line could be transferred to the Korean Government should the latter pay for it, but until then it belonged to the Imperial Chinese Telegraph Administration, and also that buildings of the Telegraph Office at Seoul belonged to the Korean Government, so that the property he was instructed to look after virtually meant only the telegraph instruments and office fixtures in Seoul, and the house and its contents in Chemulpo.

He added that he was going to Korea on two month's leave and boarded the *Tsao-kiang* at Chefoo by introduction of the Taotai.

I cannot vouchsafe whether the foregoing has exhausted all facts which concern him, but I considered his confession that he was still connected with the Imperial Chinese Telegraph Administration was enough to decide upon what measures should be taken about him. So I refrained from questioning him further.

With regard to his capture with the ship, he distinctly stated that he could not blame the Imperial Japanese Government; in fact, he could not see how the Naval Authorities could have acted otherwise under the circumstances.

He further stated that during his detention on board as well as on shore, he had met with nothing but courtesy, and had nothing whatever to complain of. He said that if he had known that the war was so near at hand he should not have attempted to go to Korea at all under any circumstances.

He regretted that he boarded the *Tsao-kiang* because of the China Merchants' Ships and those of the Nippon Yusen Kaisha stopping their services between China and Korea. He grieved that his health was not good recently, and lamented that his future would be entirely ruined should his detention be prolonged.

He proposed to offer any kind of pledge could he be released by giving any pledge. Thereupon, I caused him, in accordance to your instructions, to give a pledge, as shown in the accompanying document, that during the war he would not serve the Chinese Authorities either Central or Local, that he would do nothing prejudicial to the interests of Japan, and that he would neither visit nor reside in any Chinese port North of Shanghai, nor in any port of Korea at all. When this was done, I consulted with Admiral Shibayama, Commander-in-Chief of the Sasebo Naval Station, in accordance with your instructions and those of the Minister of Marine and decided to send him to Nagasaki in compliance with his (i.e. Mr. Mühlensteth's) desire.

This was intimated to him by Admiral Shibayama early in the morning of 6th instant, and he was sent to Nagasaki, escorted by a Staff-officer of the Naval Station.

The foregoing are the important points of the investigations made and the result obtained with regard to the Dane taken prisoner on board the

Tsao-kiang, and I have the honour to respectfully submit them to you.

Your obedient Servant,

(Signed) K. SUYEMATSU.
President of the Imperial Board of
Legislation.

August 10th, 1894.

(APPENDIX.)

I hereby pledge my word willingly and freely to the Imperial Japanese Government through its Representative His Excellency K. Suyematsu, President of the Imperial Board of Legislation, not to act or serve the Local or Central Government of China during the war carried on between Japan and China nor to take any steps prejudicial to the interests of Japan during the said war, and further that I will not reside in or visit any port in China north of Shanghai nor go to Korea at all so long as the war is carried on. The above statement is written on the understanding that the conditions are binding only so long as the present war is un-terminated.

(Signed) H. J. MUHLENSTETH.

Sasebo, August 5th, 1894.

THE KARUIZAWA CONFERENCE.

The third session of the Karuizawa Conference has opened most auspiciously. The first meetings were held on Saturday, 12th inst. The little gymnasium building, used as a place of worship, was crowded to its utmost capacity on Sunday morning, when Rev. B. Chappell preached the opening sermon—an inspiring address on Isaiah 33:16 and 17, The estate and prospect of the righteous. The evening subject was "The Christian's Peace," John 16:33, presented by Rev. W. C. Buchanan.

The Monday morning session was opened with devotional exercises conducted by Rev. H. M. Landis. The subject of the morning was Mission Work in China, presented by Leonard Wigham, of the Society of Friends' Mission in West China, and Rev. Dr. McGregor, of the English Presbyterian Mission in Amoy, South China.

Mr. Wigham's address was a carefully prepared and highly interesting account of Chung-king, the westernmost open port in China, and of the Christian work carried on there. Chung-king is a city of 300,000 people in the south-east part of Sz-chuan. Though not the capital, it is the leading commercial centre of the province. The city became accessible to the missionary and mission work first in 1877, after the Chefoo Convention. The lecturer gave a vivid description of the 1,600 mile journey up the Yang-tze and Chung-kiang—the magnificent scenery of the river gorges and the varied experiences, now amusing now distressing, of house-boat life, which must be endured for at least one month, and possibly two.

Next followed an account of the location and surroundings of Chung-king and of its foreign community. The city is well situated at the junction of the Yang-tze and a smaller river. The streets are narrow and dirty, and there is no public lighting. Outside the city, the land is covered for miles with graves. The foreign community consist of the British Consul, a half-dozen Europeans in the Customs, three or four in trade, and a missionary body of twenty-five divided among four missions.

The second part of Mr. Wigham's address dealt more directly with the missionary and his work; the heart-breaking struggle with the language, the first preaching, the care to avoid "rice-Christians," the many disappointments—and on the other side, consistent, tenacious Christians with-stand trials unknown in Christian lands; street preaching, itinerating, passports, escorts and other help afforded by authorities. Opium is a great foe. Quite two-thirds of the population of China are supposed to be smokers. No smoker is admitted to the Church. The lecturer spoke also of schoolwork, boys and girls, of women's work and its difficulties, and of medical work and the favour it receives. It is impossible to go further into the details of his admirable address. Although he showed mountains of difficulty and discouragement, the speaker closed with a strong expression of hope for bright days in China.

Dr. McGregor's address dealt with the more general aspects of the work in China—the present condition of Christianity in the whole of China, diplomatic relations, the privilege of inland residence, and "the distinct hostility of the Chinese Government." Interesting and entertaining instances were given of the pretenses on which unfor-
tunate landlords and others favouring the mission-ary or his keepers are thrown into prison and otherwise brought into trouble. There is a law against gambling; but all Chinese gamble; hence it is always possible to hale a poor landlord up

on a charge of gambling. When renting a place for Christian work, it is commonly said that it is only after 10 years' fighting that the place is finally and indisputably secured.

The next move after obstacles and renting is rioting—ostensibly popular, but really official. However, when appealed to, the officials are, of course, bound to protect. When attacked, the missionaries hasten to the yamen and there remain till their claims are attended to, meanwhile making themselves as agreeable (?) as possible by turning the public office into a place of public worship. Speaking more particularly of the work in South China, Dr. McGregor described the methods fol-
lowed in the branches—Evangelistic, medical, and educational. There is the greatest freedom for preaching. The Buddhist idol-worship has no great hold on the people. They only half believe in it, and will not even resent ridicule of it. But it is different with their ancestor-worship; the utmost delicacy must be exercised in speaking of it. The mission hospital is a great ally. Native medical science is very backward in China, and the foreign science is a grand means of reaching the people.

There are elementary schools in which the Chinese classics, the Scriptures, Geography, Arith-
metic, &c., are taught. The Dutch Reformed and the English Presbyterian Mission, which are united in their work in Amoy, conduct also a High School and a Theological College. All the work is done in Chinese. Women's work is more ad-
vanced than in many other parts of China.

Dr. McGregor gave also much information about church administration, constitution of church courts, salaries of preachers, status of missionaries in the native church, the sort of men reached in the work, and other matters of which no details can be given here. He also answered numerous questions put to him by those present concerning various aspects of the work in China. The morn-
ing session closed at noon, having opened at 9.30 o'clock.

The evening session was presided over by Rev. E. S. Stevens, of Tokyo. Rev. J. C. Ambler gave an able, fervid address on "The Gospel of power." The spirit and words of the speaker made a deep impression on all present. Earnest discussion followed, for which the time of adjournment had to be prolonged a full hour.

The conference meetings are to be held on alternate days—Wednesday, Friday, and next Sunday, August 19th.

LETTER FROM HAKONE.

Hakone Mura, August 12th.

Among the many objects of interest in and around Hakone is "Great Hell." Why the most beautiful places on earth are designated by such infernal names is beyond comprehension. It may be the outcome of theological training. It may be in consequence of the awe-inspiring grandeur of the towering cliffs and deep ravines, but it is true that men often give to glens and ravines, mountains lakes, and valleys, names as repulsive to the imagination as they are libellous to the places to which they refer. "Deadman's Cave," "Devil's Gully," "Hell Gate," and such like euphonious names are applied to places where nature seems to have been most lavish in rockery, slopes, and verdant foliage, and where the solemn mountains and silent valleys, bathed in the sunlight of heaven, speak rather of the majesty and glory of God than of infernal deities.

There are near Hakone two scenes of desolation, surrounded by scenery so magnificent as to make the desolation more marked and real, called "Great Hell" and "Little Hell." Having never visited these classic regions, and having, from early infancy, imbibed a morbid curiosity to know the particular locality wherein they were situated; and having permitted my imagination considerable latitude in regard to my conception of the atmospheric conditions of these places, and feeling, moreover, a desire to know something more definitely about them than is supplied by our theologies, a party was made up, and, supplied with the indispensable lunch-basket, we set out for the regions which popular legend has assigned as the residence of his Satanic reverence.

Our way lay across Hakone Lake, a beautiful sheet of water lying in the valleys formed between the bases of the Hakone range of mountains, in whose liquid depths the peak of peerless Fuji is reflected with mirror-like fidelity.

The lake is of immense depth, and far below there stands, like a spectral forest, the trees which once looked out upon the sunlight, but whose branches, now leafless and bare, and whitened by long soaking in water, reach out their arms as if in mute appeal.

The lake is about three miles long, and in several

places two miles wide. It is of irregular shape, bathing, as it does, the bases of the mountains which form its shores. Sloping gently and gradually in depth, the mossy growth at the bottom forms a fine place for bathing, and many a swim we had in its clear water—so clear that it was possible, in many places, to see the roots of neigh-
bouring trees, like streaks of white coral, grasping the rocks some twenty feet below. In other places the mountains shelve down below the water as abruptly as they rise above it, and are lost in the blue darkness of its depths. No shore, no shingle is here, but a sheer plunge at an angle of 45 de-
grees clear down.

Reaching the other shore, our tramp began—a tramp of three miles up the mountain slopes. The way was narrow, and led anon between avenues of trees, whose friendly branches formed a grateful shade from the sun's too ardent rays; and then through open valleys, where the *lilium japonica* hung their bell-like clusters amid a luxuriance of ferns and rocks.

The wild raspberry was conspicuous in plen-
titude, and suggested the possibilities of raspberry short-cake on the morrow. They grow on every hillside, and although somewhat insipid to the taste, are a very good addition to the sugar which is necessary to make them presentable in the form of jam.

Nature is kind to nature. Foliage will grow in uncongenial soil, and moss and lichen will cover up the old rocks and make them beautiful. But there are places where neither moss nor lichen will find a home, and where nothing but barren rocks and arid sand is found. Such a place is "Great Hell," near Hakone.

Walking through a shady lane, narrow and overgrown with foliage, and hiding from view the surrounding scenery, we became conscious of a strong smell, like the burning of human flesh in a kiln. The air becomes laden with sul-
phuric fumes, and a turn is the lane brings into view an open space covered with the roots of trees half buried, but whitened with the fumes and heat of the sulphur which rises from beneath. The ground is hot, and in some places it is not safe to tread, for the earth is soft and the foot might sink a considerable depth into the hot mass.

Huge stones and pieces of rock lie about, and the general formation of the earth presents the appearance of having been the bed of a great mountain torrent. It is scooped out, and in the central course is a deep ravine cut out like the bed of a cataract. At the head of this ravine is a well of water, impregnated with sulphur, and constantly boiling. Standing at the top, overlook-
ing the boiling-spring, the steam, laden with sulphur, enveloped me and covered my glasses so that I could step no further without removing them. I then discovered that every bit of silver which had come into contact with the sulphurous steam had been turned black; watch-guard, coins, seals all were black. The earth is soft and whiten-
ed near the top, and looks like the quartz from a gold mine. It is yellow with sulphur, and near the spot are several kilns, where the quartz is boiled down and the sulphur extracted as a marketable commodity. Looking around upon the desolate scene, and then upward to the grand and verdant heights of the neighbouring mountains all my theo-
logical conceptions of hell were swept away. Glory and majesty and strength and immutability seemed to be stamped upon the grand surroundings. I had oftentimes before given expression to doubts upon the popular theory regarding a material hell. My preconceived notions evaporated in the vapour of the boiling-spring with the exception of the immediate vicinity of the burning earth the air was pure and serene, and I have come to the conclusion the "Great Hell" is wrongly named, for it is one of the most congenial places near which to spend a summer vacation.

The recent rain, falling upon the hot earth rose up in clouds of vapour, had made the place more desolate to look upon. For 50 hours the rain poured down in one incessant stream. Hakone Lake, already deep as the mountains are high above it, rose as much as four or five feet in two days. Boats, which were hauled up high and dry on Friday night, were found full of water and half sunk the next morning. Bridges were damaged, the Hakone Pass in places was strewn with uprooted bushes and bamboo reeds; great holes were made where rocks had been washed away; and the little streams of yesterday had become the raging torrents of to-day. The rain kept off for many a day, but made up for its long absence in the plenitude of its downpour when it came at last.

F. STANILAND.

The total issues for 1893 of the three Bible So-
cieties working in common in Japan were 2,949
Bibles, 17,684 Testaments, and 60,002 Portions—
80,633 in all. In the previous year the total was 43,810.

LETTERS FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, July 12th.

In the July *Arena*, the editor, Mr. B. O. Flower, makes a strong plea for "Justice for Japan," in the matter, of course, of the revision of the treaties. *The Altruistic Review* for July contains an article on "The First American Treaty with Japan," which is made the occasion of a plea in behalf of treaty revision.

Rev. Geo. Hayes, formerly of Tokyo, and now of Denver, Colorado, has an article in the *Standard* for July 5th on "Some Defects in Tolstoi's Teaching."

The following item speaks for itself:—"A movement is well organized for an Educational Museum at Philadelphia, and much valuable material is already in hand from various sections of our own and foreign lands. The entire collection from Japan was secured with the pledge that it be kept up-to-date by the school authorities of Japan. Supt. Edward Brooks, Dr. Yoshiniko Yambe, Prof. Wm. P. Wilson, and Richard Waterman, Jr., are taking a lively interest in this work, as are many of the leading public-spirited citizens of Philadelphia. This is of the utmost importance to the city, and also to the country, for if she takes this work up promptly and develops it with her usual vigour, it will be contagious, and other cities will do their best to rival her, in this most worthy educational undertaking."

Thomas Stevens, the bicyclist, has been interviewed in New York with reference to his recently acquired knowledge of the secrets of the Hindoo miracle workers. He asserts that these Yogis do not play tricks and work optical illusions upon the spectators, but perform actual miracles. He says that he took snap-shots during the performances, and that his camera, which could not be mesmerized, "faithfully recorded the astonishing feat of the Yogi." He believes that the wonderful magicians have "control of some forces unknown to the western world." These miraculous powers, however, "are in accordance with the teachings of modern science and show the existence of forces hitherto only suspected." Mr. Stevens is to give a season of photographic lectures illustrating his discoveries, and promises in time to reveal these secrets. He claims that the subtle force of a Yogi "may eventually develop in the hands of practical Western people into something more valuable to mankind than either steam or electricity."

The latest reports from Samoa tell of an unsuccessful night attack by the rebels, and of both parties being on the offensive.

In Hawaii all was quiet up to June 29, though there were rumours that the Royalist party were aiming and getting ready for a *coup d'état* on the Fourth of July when the new Constitution was to go into effect.

It was on the Fourth of July, that the Midwinter Fair at San Francisco came to an end. The total attendance from Jan. 27 up to the last day was 2,140,154.

July 5 was the date of another big fire in the World's Fair grounds. It began in the Terminal Railway Station, and quickly spread through the Administration Building, the Mines and Mining Building, the Electricity Building, the Manufactures Building, Machinery Hall, the Agricultural Building and the Stock Pavilion. The Transportation Building caught once, but was saved by water and wind. The Government Building escaped only through the vigorous work of the firemen. The Hodden, on Wooded Island, was out of danger all the time. But, if the wind had not been blowing toward the lake, all of Jackson Park and indeed, Hyde Park, would have been in great danger. All the fire-engines in the city could not have stopped the fire which gained a terrific force from the large dry buildings of the Columbian Exposition. It was an awful but a magnificent sight, especially the collapse of the enormous Manufactures Building, and was watched by an immense crowd. One spectator was killed and several were injured by the cave-in of an electric subway.

Part of the frame of the Mines and Mining Building still stands, and the entire iron framework of Machinery Hall is standing; the statue of the Republic and two pillars supporting Neptune with his trident look down upon the mass of ruins of the once magnificent Court of Honour. And this final "illumination" was on a grander scale than that of any "fête night" during the Fair. The origin of the fire is unknown; the loss falls upon the Salvage Company.

The Tariff Bill passed the Senate on July 3 by a vote of 39 to 34. Two Populists (Allen and Kyle) voted "aye;" and two Populists (Peffer and Stewart) and one Democrat (Hill) voted "no;" otherwise the division was on party lines. It is

now in the hands of the conference committee of the two Houses, and is not making rapid progress, as each House is rather stubborn.

Ex-Congressman and ex-Governor Edwin B. Winans, of Michigan, died on July 4.

In Minnesota, the Populists have nominated S. M. Owen for Governor, and the Republicans have put up Governor Knute Nelson for re-election.

Judge Windes of this city has issued a decree dissolving the Gas Trust and compelling the gas companies and the individuals interested to operate separately.

The jury in the Prendergast case declared the murderer sane; Judge Payne refused a new trial; Justice Bailey, of the Illinois Appellate Court, denied a supersedeas; so that, unless Judge Grosscup to-day grants a writ of *habeas corpus*, or Governor Altgeld interferes, the assassin will be hanged to-morrow.

The Chicago Directory for 1894 is out, and makes the population of the city 1,635,000.

America's crack yacht, the *Vigilant*, has been three times beaten by the *Britannia*. In the first contest the *Valkyrie* sunk in a collision with the *Satanita*.

There is a report, not yet positively accredited, that James J. Hill, the Great Northern Railway magnate, has given \$1,000,000 for a new educational establishment in St. Paul.

In the million dollar fund recently raised by the University of Chicago is included a gift of \$100,000 by Mrs. Frederick Haskell for an Oriental Museum and Lecture Hall. The University also gets the Kenwood Observatory, valued at \$30,000; and now has property and endowments amounting to about \$8,000,000, of which Mr. Rockefeller has given \$4,300,000. The Convocation Exercises on the campus were interesting, but were marred by the absence of the orator, Prof. Mendenhall, who, on account of the railroad troubles, could not get here.

Official reports by the directors of the different state weather services call the conditions favourable, and say that the crops promise well. In view of the present disturbances in business affairs these reports are encouraging.

There are still a few "common-wealers" abroad in the land. The 600 "Hoganites" from Montana have passed Kansas City on rafts; and Kelly's army has been arrested in West Virginia for stealing a freight train.

Miners are still riotous on the Gogebic Range, in Idaho, and in Illinois Spring Valley; and Ladd, in this State, were for two or three days at the mercy of a mob of 3,000 who looted stores and private houses and obstructed the Rock Island Railway. Gov. Altgeld had to send two companies of the State militia to quell the riots. Yesterday a large number of rioters were arrested.

But all these things have paled into insignificance before the doings in connection with the railroad strike which grew out of the Pullman boycott. In spite of an injunction issued by Judges Woods and Grosscup against interference with the U.S. mails, the strikers went on with their work of stopping trains and derauling cars and engines. Even the trains carrying deputies or soldiers were stopped by the rioters, who were so numerous as to overpower the officers of the law. Hisses, jeers, and derisive shouts greeted U.S. Marshal Arnold when he read the Federal injunction to the mobs. The stoppage of freight traffic at once advanced the price of provisions, especially of meat, fruit, eggs, and potatoes. For instance, I bought one evening a peck of potatoes for 30 cents, and the next morning should have had to pay 60 cents.

Finally, on July 3 it was decided at the Cabinet meeting that decisive action must be taken, and that the situation warranted the use of troops. All the soldiers at Fort Sheridan were ordered to Chicago "to enforce the laws of the United States" under the Statute relating to inter-state commerce. Even then the rioters did not refrain from working ruin, as opportunity offered, by wrecking cars to blockade the tracks. They were yet too numerous for the small body of troops to be able to move trains.

Just at this point the Anarchist Governor of Illinois opened his mouth to protest against the invasion of the State by U.S. troops; but he was effectually silenced by President Cleveland, who suggested that it was a time for action and not for words. The Governor thereupon ordered out the State militia on the request of Mayor Hopkins. The police, deputy sheriffs, deputy marshals, and militia were divided, and sent to the various dangerous localities, such as Pullman, Grand Crossing, Hammond (Ind.), and the Stock Yards. As the rioters continued both secretly and openly to carry on their work of devastation, looting and firing freight cars and stoning passenger trains, the troops were instructed to shoot. The first "battle" took place at the Grand Trunk Cross-

ing, corner of Loomis and 49th streets; another at Hammond. In both places an innocent spectator was killed.

Last Saturday night the mob set fire to hundreds of empty and loaded freight cars in the yards of the Pan-Handle Road, and destroyed \$750,000. The Burlington road also suffered to the same amount. Sunday was comparatively quiet, as the troops were getting into more advantageous positions. President Cleveland ordered more troops to Chicago from the East—and from the West, and issued a proclamation to the mob to disperse and to all good citizens to keep away from the dangerous localities. This seems to have had a good effect, for there has been but little rioting the past few days.

So far as the railroads centreing in Chicago are concerned the strike is broken. They are all running passenger trains, even with Pullmans attached, and also freight trains; although in many cases the trains go out heavily guarded by deputies and even by soldiers.

Another attempt at arbitration has failed, as the Pullman Company insists that it has nothing to arbitrate. Debs has been indicted by the Grand Jury on a charge of conspiracy against the United States of America in interfering with inter-state commerce, with the passage of the mail and with governmental officials. The Pullman Building downtown, Mr. Pullman's residence, and the Sub-Treasury are carefully guarded, the last by U.S. troops.

The latest move on the part of Debs was an attempt to pull out the Knights of Labour and the Trades Unions; but it has thus far been a comparative failure. A few labour organizations have not caused much embarrassment. There are plenty of unemployed glad to find work. Other prominent labour leaders, like Arthur and Wilkinson, condemn the strike, and predict its speedy collapse. This evening's paper, just at hand, says that President Gompers and other officials of the Federation of Labour hope to find a peaceful solution of the present difficulties.

Judge Grosscup has refused a writ of *habeas corpus* in the case of Prendergast, but is considering a stay of execution to give opportunity for an appeal to the U.S. Supreme Court.

The bill for the admission of Utah into the Union has passed both Houses of Congress.

Chicago, July 21st.

A sensational dispatch from Washington the other day made it out that Secretary Gresham had represented to the Japanese Government, that "the United States views with regret the levying of an unjust war by Japan upon a weak and defenceless nation like Korea;" and that, "as the Japanese would be sure to resent the Secretary's expression as an unwarrantable interference," it might result in "a serious diplomatic complication." Later, however, it was given out on good authority from Washington, that no such representation had been made, and that the Department of State had simply instructed Minister Dun at Tokyo "to use his diplomatic offices to secure peace." And, if any credence can be put in a dispatch dated yesterday at Washington, the outlook for such a peaceful settlement of the difficulties *in re* Korea is very promising.

Admiral Skerrett, just retired, is to be succeeded in the Command of the Asiatic Station by Commodore Carpenter, who, by virtue of this command, will have the rank of Rear-Admiral. The new commander will probably sail from San Francisco, Aug. 7, on the *Gaelic*.

The barque *Emma T. Crowell*, laden with 40,000 cases of petroleum for Shanghai, was destroyed by fire off Fire Island, near New York City. The crew were all saved.

The new U.S. cruiser *Minneapolis* now holds the war-ship record with an average speed of 23.05 knots per hour on her trial trip. The contract called for 21 knots per hour with a bonus of \$50,000 for each quarter of a knot above that figure; so that Cramp and Son, the builders, will receive on extra \$400,000 for the vessel.

The latest reports from Nicaragua say that Costa Rica and Nicaragua have reached an agreement of all the difficulties in the Mosquito country, but that the region is still "in a state of practical anarchy."

The House of Representatives has passed a bill which provides, that Consuls shall examine immigrants before they allowed to come to the United States. The same body has also passed the Bailey Bill, which is "purely a voluntary bankruptcy measure," and by a vote of 125 to 27 has endorsed President Cleveland's course in the strike.

The conference committee has utterly failed to bring about an agreement between the House of Representatives and the Senate on the tariff question. The following is a summary of the results:—

Schedule A, chemicals, oils, and paints—Agreements on all points of dispute were obtainable.
Schedule B, earthen-ware, and glassware—Agre-

ments on main differences were made and minor differences could have been adjusted.

Schedule C, metals and manufactures of—The disagreement was wide on ores and manufactured metals, with little common ground for agreement.

Schedule D, wood and manufactures of—Agreement could have been secured.

Schedule E, sugar—The disagreement was positive and vital.

Schedule F, tobacco and manufactures—No trouble was apparent in reaching an agreement.

Schedule G, agricultural products and provisions—The differences were open to adjustment.

Schedule H, spirits, wines, and other beverages—A basis of agreement had been reached.

Schedule I, cotton manufactures—An agreement could have been reached.

Schedule J, flax, hemp, and jute—An agreement was not considered difficult.

Schedule K, wool and manufactures of wool—Differences could have been adjusted.

Schedule L, M, and N, silk, paper and sundries—Agreements were easy.

From this summary, it is evident, that iron ore, coal, and sugar are the most troublesome items.

A letter has been made public from President Cleveland to Congressman Wilson, and has created great excitement. It takes strong ground in favour of the Wilson Bill as embodying real tariff reform "within Democratic lines and guided by Democratic principles," for short of the consummation for which we have long laboured, and as being a mark of "party perfidy and party dishonour." It is one of the President's characteristically courageous utterances, and, as such, is receiving, of course, bitter denunciations from Democrats as well as from Republicans. It is difficult to predict the outcome. The House of Representatives recede one point on the Wilson Bill; and the Senate is amused to anger by "Presidential dictation." Senator Hill alone among the Democrats is happy; for the President's recommendations agree, in the main, with the amendments he tried to make in the Senate Bill. Pilate and Herod are friends again to-day, will their renewed friendship brings about the crucifixion of the Senate Bill?

President Cleveland has signed the bill admitting Utah to state-hood; and has appointed Congressman C. R. Breckinridge, of Arkansas, to be U.S. Minister to Russia.

Prof. T. C. Mendenhall has been offered the position of Director of the Worcester (Mass.) Polytechnic Institute.

The Mid-winter Fair at San Francisco claims to be "perfectly and absolutely solvent," and to have left "a number of splendid, handsome buildings" for the park commission.

The World's Columbian Exposition still has assets amounting to \$436,473.70, with acknowledged liabilities of only \$15,434.14. The total of receipts has reached the sum of \$28,715,472.91. Inasmuch as the work in the Treasurer's office is no longer complicated, Mr. A. F. Seiberger has resigned that position and goes out July 31.

Priendergast, the assassin of Mayor Carter H. Harrison, was hanged on Friday, July 13. On the scaffold he exhibited no fear but an unexpected firmness.

Four soldiers were killed, several soldiers and unintentional spectators were more or less injured, and many residences were seriously damaged, by the sudden explosion of a caisson while a battery of U.S. Artillery were out on parade the other afternoon. The terrible accident occurred at the corner of Grand and Oakwood Boulevards in this city.

The "commonwealers" have lately been unlucky; at Pittsburg, Toledo, and Wheeling bands have been arrested and sent either to jail or to the work-house.

I am happy to be able to announce that the railroad troubles are over, and the reign of "Dictator Debs" has come to an end. The labour organizations that were expected to tie up all the industries of Chicago by a huge general strike did not feel called upon to show their "sympathy" in any such practical way. There were probably not 15,000 workmen, all told, who stopped work; many of those who refused to strike showed their true sympathy in another very practical manner by making contribution of money to the Pullman Relief Fund. The only new strikers who caused any serious trouble were the butchers at the Stock Yards. The 13th inst. was the date of Waterloo of the strike. On that day F. W. Phelan, Debs's agent at Cincinnati, was sentenced by Judge Taft to imprisonment for six months; Debs sent to the Railway Managers a proposition (which they returned unopened) to declare the strike off, if the roads would take back the strikers; and the American Federation of Labour refused to join in a general strike. Although for several days thereafter Debs indulged in big talk, yet no one paid any attention to what he said.

On the 18th inst., Debs and three other officers of the American Railway Union were arrested for

alleged violation of the injunction of Judges Woods and Grosscup. Declining professed bail (at \$3,000 each), they went to jail, where they are still posing as martyrs and waiting for their trial which is set for next Monday (23rd).

On the same day General Miles issued a formal order to the U.S. troops to quit Chicago; and they have since left, although a large force is retained at Fort Sheridan. Part of the State militia have also returned home; but some have been retained at Pullman, Kensington, Hammond, and in the Stock Yards district. Railroads are now running their trains as usual. A few days ago two mails from Japan arrived together; they had been delayed in California, and I presume that two or three letters preceding this one were similarly detained.

The strike assumed very serious proportions also in California. In Sacramento the mob was so desperate that the regulars had to fire and kill. But there the strike has been especially disastrous on the fruit business.

The rioting has not yet entirely ceased. A Grand Trunk train was wrecked at Battle Creek, Mich., and the fireman lost his life; Nelson Morris and Co.'s, wholesale market at 4121 and 4123 Halsted Street in this city was destroyed by an incendiary fire; and the new employees in the Stock Yards are often attacked by toughs.

The Pullman Palace Car Company is hoping soon to re-open for work. The laundry department, in fact, has resumed work; and some of the girls yesterday had a narrow escape from a mob of raving women.

The railroads estimate their losses at about \$1,000,000, of which the Pennsylvania Company (the "Panhandle") claims \$500,000, the Illinois Central about \$130,000; the Burlington about \$75,000; the Fort Wayne \$30,000; and other roads various small amounts. They hope to make the city liable for these losses.

President Cleveland, under authority of the O'Neill Act, is going to appoint a commission to investigate the causes of the strike; and the Civil Federation of this city is planning to hold a Congress of Employers and Employés.

Miners are still giving some trouble at Brazil, Ind., and Peru, Ill., but are now pretty generally under control.

R. G. Dun and Co.'s review of trade says to-day:—"The effects of the two great strikes have not yet entirely worn off, and meanwhile disagreement between the two Houses of Congress has made tariff uncertainties more distinct and impressive."

Charles O. Cedarquist, private, Company H, Second Infantry, stationed at Omaha, has been sentenced by a court-martial to hard labour for six months, and a forfeit of \$10 per month of his pay, because, on account of religious scruples, he declined to attend rifle practice on Sunday.

"St. Paul's Institute" is the appropriate name of a school for training evangelists and teachers in Tarsus, Asia Minor.

The papers are talking of a proposed union or consolidation, on some basis not yet made known, of the Columbian University, Washington, D.C., and the University of Chicago, under the Presidency of Dr. Harper. The idea seems to be to combine in one organization or administration the special advantages of both Chicago and Washington.

Work will soon begin in Chicago on the Crevar Library, for which \$2,000,000 are now available from the Crevar Estate.

The Baptist Young People's Union is now in session with a large attendance at Toronto, Canada.

The Young People's Society of Christian Endeavour met this year at Cleveland, Ohio. Heavy gains were reported from Japan, China, India, Turkey, and other foreign countries. The convention adopted the "missionary extension" idea, by which the various national and local missionary boards unite in securing good lecturers to deliver a series of lectures on missionary topics in different localities.

A royalist commission has just arrived at San Francisco from Honolulu to find out what President Cleveland intends to do in Hawaiian affairs. But U.S. Minister Willis has already recognized the new Republic of Hawaii.

Some people in England imagined that M. Carnot's curious Christian name, Sadi, bore testimony to Eastern origin or connections. This, however, was not the case. The peculiar name M. Carnot inherited from his uncle and godfather, who, born under the Revolution; when extraordinary and out-of-the-way classical and Pagan appellations were in vogue, was named after the Persian poet whose works had been "discovered" by advanced Parisians about that time.

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, N.Y., July 6th.

This is the era of summer schools. It is beginning to be understood that the long vacation taken by most scholars and teachers is long enough for both agreeable rest and agreeable work. Probably in no previous year has there been witnessed such an aggregation of religious and intellectual activity. All over the land, from Mt. Desert Island to the Golden Gate, and from Lake Superior to Florida, there are assemblies, conventions, and conferences in session or to be yet gathered. In the old days of half a century or more ago, there was little or no long summer vacation; both the farmers and professional folks kept on, nominally at work, during the summer as well as winter days. The percentage of those who travelled abroad or at home was comparatively small. The schools were of course closed, but only for a comparatively short interval.

Then, with the days of railroads came the days of long vacations, in which still only a small percentage of people kept regularly at work. Now in our days the reaction has come. Work and play alternate, and almost all the religious, educational and fraternal societies have their summer schools in which recreation is taken through some form of allotted tasks. After the great religious gatherings of the early summer, at which the varied benevolent and routine business of the different Christian societies is transacted, follow the great denominational conventions. Among these are the missionary reunions, the Young Men's Christian Associations, the Christian Endeavour Societies, and the Woman's Christian Temperance Unions.

The educational associations usually meet at the sea shore or among the mountains. Those devoted to economic, historical, charitable and other objects for the public good, choose various cities throughout the country; so also do the various fraternal orders, medical, political, athletic, and labour organizations. While Saratoga Springs, Asbury Park and the White Mountains are favourite places of assembly, the attractions of the great cities like San Francisco, Chicago, New York, Philadelphia, and Washington draw many thousands who are glad of an opportunity to take an outing. Such general demands upon the facilities for transportation usually compel the speedy adjustment of difficulties between capital and labour and the quick settlement of railway strikes—one of which, the great Pullman affair is now on us.

The fashion affects all classes of minds. While Protestant people have long enjoyed their Chautauqua combinations of work and fun, the Roman Catholic people follow their example and meet on Lake Champlain near Plattsburg. With schools of Applied Ethics, Christian Philosophy and Christian Sociology, held numerously and successfully by people of the "orthodox way" of thinking, those of the "liberal mind" have also their gatherings and conferences. It would be difficult even to count up these various summer schools which meet under the trees amid the mountain shadows or within sound of the sea waves. Yet even these miscellaneous gatherings do not exhaust the list of intellectual activities. One's mail bag is pretty well filled with the programmes and announcements of the courses of study at the universities. Here, at Cornell, the summer school, which offers a dozen or so of courses in the various humanities and sciences, lasts about six weeks, begins July 11th and attracts about one hundred and fifty ladies and gentlemen who are mostly teachers, who wish to refresh their minds and increase their usefulness. Harvard and Columbia Universities, the Massachusetts Institute of Technology, the Universities of Michigan, Indiana, Minnesota, and Virginia, all offer admirable courses of instruction, from whose privileges no one is debarred on account of age, sex, colour, or previous condition of servitude. In nearly all these institutions, sufficient provision is made for social, athletic, and hygienic refreshment and recreation.

In the educational world, one is impressed with the rapid advance of co-education. Gradually but surely, the first-class colleges and universities are opening their doors to women. One also notices a sure and steady growth of the University Extension system of lecture-studies. In the sixteen-page prospectus issued by the University of Chicago, June 1st, we notice the names of two gentlemen who had experience in Japan. One of these is your Chicago correspondent, Professor Ernest W. Clement, who lectures on the general subject of "Japanese Institutions," his two courses being under the headings "Japan and the Japanese" and "Japanese History and Civilization." In each course there are six lectures, which, when

desired, can be expanded to twelve, with illustrations from the stereopticon.

The other lecturer, who is a Fellow in Comparative Religion, is Edmund Buckley, A.M., who takes his degree of Ph.D. this autumn. Mr. Buckley has been for several years one of the instructors in the Doshisha University. While living in Kyoto and travelling extensively in Central and South-western Japan, he made a thorough examination of Shintō, and especially of Phallicism. Extending his travels around the world, he continued his study of this once world-wide cult. He has also made a large collection of the cultus implements of the various ethnic religions, which he has deposited in the museum of the University of Chicago. Besides photographs, models of temples and "religious goods" of many kinds, he has put into the museum a dozen or so of Phallic emblems from Japan. These are of various materials, iron, stone, terracotta, wood, etc. The Phallic worship, which was prohibited by the decree of the Imperial Government in 1872, cannot of course be suppressed in one generation. That there has been a return to it in out-of-the-way places in recent years is proved by the testimony of many travellers. The subject of the thesis, which Mr. Buckley has submitted for his doctor's degree, is Phallicism; and his pamphlet will be on sale at the University probably in October. He lectures on "Shintō, the Ethnic Faith of Japan;" creed, ritual and ceremony, in six lectures. His second course of lectures is on the "Science of Religion." I think we may confidently expect before many years an authoritative work on Shintō from the pen of this gentleman. Of the organic connection between Shintō and the Phallic cult there can, I think, be no doubt, though it is highly probable that this nature worship was aboriginal and existed pretty generally throughout the Japanese archipelago even before the rise of Mikaddoism, which is the heart of Shintō. This is the position which the undersigned takes in his forthcoming volume, "The Religions of Japan," which Charles Scribners Sons will issue during the coming autumn.

Another gentleman well known in Japan is Rev. Edward Warren Clark, now living at Rockford, Ill. Mr. Clark, while in Japan, was at Shizuoka one year or more ago; and was for several years in the Imperial College in Tokyo. He expects to conduct a party of ladies and gentlemen around the world under the auspices of Henry Gaze & Sons of London. He leaves San Francisco early in September, expecting to be absent seven months.

We have lost our foremost American scholar in the death of the late Professor William Dwight Whitney. Although without the popular style of writing which makes the name of Max Müller well known throughout the world, Prof. Whitney was a man fully the peer of the great Anglo-German in scholarship and in amazing capacity for work. He is the honoured teacher of every Sanscrit scholar of eminence in the United States. He has edited most important Sanscrit texts from worm-eaten palm leaves and from strange manuscripts found in out-of-the-way places. Innumerable papers have come from his pen, and books for technical and popular use have issued steadily from his literary workshop. His fame is as great in Germany as in America. He was not especially popular in some parts of Europe, largely because he exposed remorselessly the carelessness, not to say the charlatanism of certain ones who made rather sensational uses of minor discoveries. It is remarkable, how many endowed professorships of Sanscrit there are now in this country, which had hardly begun its national life when the literature of Sanscrit was first made known to Europe. Professors Whitney was not only the chief labouring man but the animating spirit of the American Oriental Society. He had a wonderful power of arousing enthusiasm in others. He was a man of great simplicity and personal charm. How he ever managed to accomplish so much work is, and will always be, a mystery. The Century Dictionary, which is one of the signal achievements of prodigious and exact scholarship applied to popular use, was his creation. One who studies that great work carefully will be surprised to find how liberally the stores of the learning of specialists has been put within the reach of the ordinary reader.

Lest one might suppose that blood was as thin as water, it is well to remember how much there is not only in the past, but in the present, which serves to bind Americans and Englishmen together. Here is the American monument to Keats, which is to be placed in the parish church at Hampstead, England. The consummation of the enterprise is due to the enthusiasm and energy of Mr. Norwood Day, of Norwood, Mass., who is now in England with the marble bust of the poet, the work of Miss Anne Whitney of Bos-

ton. Although the popular furore about Keats, which passed over our country two or three years ago, has somewhat subsided, yet the critical and ordinary editions of the works of the poet are still in demand. No doubt the thousands of readers of the poet of beauty will make the parish church at Hampstead one of their literary Meccas. Indeed, already, the American in England finds himself like an iron filing between many magnets, for in his necessarily short stay in the ancestral island, he is drawn hither and thither, to visit the places sacred to literary and ancestral associations. The librarian of the British Museum once told me that the majority of readers, during July and August, under the great round sky-light, were Americans who came to study genealogy and English local history. The recent hearty reception of our Captain Mahan, who wrote the "Influence of Sea Power on History," has been a pleasing illustration of this friendly feeling which even the Fenian or his successors cannot seriously disturb.

I must add a postscript about another American returned from Japan. Prof. Benjamin Smith Lyman, so long and honourably connected with the geological survey of the Hokkaido, is living in Philadelphia engaged in the active duties of his profession, but still fond of Oriental studies. For the numismatic and antiquarian society of the City of Brotherly Love he has written learnedly and readably about Japanese swords. Before the Oriental Club of Philadelphia he read a paper, now reprinted in pamphlet, on "The Change from Surd to Sonant in Japanese Compounds," which throws a good deal of light upon the *nigori* and its relation to the derivation, the true meaning of words, and the structure of the language. Another pamphlet, now before the American Philosophical Society on "Some New Red Horizons," treats in a scientific and interesting way about that new red sandstone formation so prominent in the geology of New Jersey, and, I believe, not altogether unknown in Japan. W.E.G.

LATEST TELEGRAMS.

RUETER "SPECIAL" TO "JAPAN MAIL."

London, August 11.

The Prorogation of Parliament is expected to take place on the 22nd inst.

Wrangling over the Tariff Bill has been resumed, but nothing is yet settled.

Sicily has been visited by an earthquake, thirteen persons having been killed and twenty-nine injured.

Cholera is increasing in Holland.

London, August 14.

Two more German war-vessels have been ordered to China.

In the United States Senate the Tariff Bill has been accepted and passed. In the House of Representatives bills were introduced to place on the free list coal, iron, and sugar, and that dealing with coal has passed.

The debate in the House of Lords on the Evicted Tenants Bill has been adjourned.

London, August 15.

In the United States, the House of Representatives has passed a bill for including iron ore and sugar in the free list, but the action of the Senate with regard to these articles is doubtful.

The House of Lords has rejected the Evicted Tenants Bill.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Nagasaki, August 17.

The captain and officers of the *Kobe Maru* have been turned over to the *Kumamoto Maru*, the *Kobe* having been selected to proceed to Korea on service as a hospital ship.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS"]

London, August 4.

Santo, the assassin of the late President Carnot, has been sentenced to death.

Three German cruisers and one Spanish cruiser have been ordered to Korea.

The German gunboat *Illis* witnessed the sinking of the *Kowshing*, and rescued one hundred and fifty persons.

Committees of Chinese merchants have been

formed in China for the purpose of raising subscriptions to a large War Fund.

London, August 6.

An Imperial Edict affirms China's claims to the suzerainty of Korea, and invests Viceroy Li Hung-chang with control of the military officials.

On the 29th ultimo the Japanese routed three thousand Chinese who were entrenched at Yashan (A-San) and captured four guns and much material of war.

The Chinese loss is put down at five hundred men, against a loss of eighty men on the Japanese side.

London, August 7.

The French traveller Dutreil has been thrown into a river by Tibetan tribesmen and drowned. The Chinese Government has expressed regret and offered to recompense the family of the murdered explorer.

London, August 8.

The British Naval Manœuvres, which have had for their object the reproduction of possibilities in warfare with France, have ended in a complete victory for the squadron representing France.

The steamship *Baltimore*, from St. Petersburg, has arrived at Gravesend with five cases of Asiatic Cholera on board, and one death occurred during the voyage from the same cause.

Speaking in the House of Commons, Mr. Morley stated that the rejection of the Evicted Tenants Bill by the House of Lords would render it very difficult to maintain peace in Ireland.

(FROM THE "N.C. DAILY NEWS.")

London, August 10.

A remarkable rise has taken place in all the best stocks, which is accounted for by the plethora of money and by Bankers reducing the interest on deposits to one half per cent. per annum.

The prospect of passing the American Tariff Bill also contributed to the revival of business.

The *Times* states that it is rumoured that the conversion of another Indian Loan is probable at an early date.

There have been further great finds of gold at Coolgardie.

(FROM SAIGON PAPERS.)

Paris, July 17.

Clemenceau and Deschanel have fought a duel with swords in consequence of Wednesday's scene in the Chamber. Deschanel was wounded in the face.

The Chamber has voted the whole Bill by 268 to 163.

(FROM THE "ASIAN.")

London, July 7.

At Kennington Oval to-day the Players defeated the Gentlemen by an innings and twenty-seven runs.

The following were the scores: Players—First innings, three hundred and sixty-three; Gentlemen—First innings, two hundred and forty-four; second innings, ninety-two.

For the Players R. Abel made one hundred at sixty-eight not out.

London, July 11.

At Lords the Gentlemen obtained a victory over the Players by an innings and thirty-nine runs.

The following were the scores:—Gentlemen: First innings, two hundred and fifty-four; Players: First innings, one hundred and eight; second innings, one hundred and seven.

(FROM JAPANESE PAPERS.)

Hongkong, August 13.

Between the 4th and 11th 25 deaths were reported here, 40 patients being under medical treatment; while there were 10 deaths at the Chinese hospital on the mainland, where 31 patients are receiving medical treatment.

Niigata, August 13.

Owing to the overflow of the Igarashi river six men and four women, have been drowned, two men and eleven women being more or less seriously injured. Twelve men and sixteen women were rescued from drowning, having

been swept from their dwellings by the outrush of the water.

Utsunomiya, August 13.

The traffic on the O-u Railway, which was interrupted in consequence of the inundations, has been resumed.

Fusan, August 13.

The military telegraph wire between Söul and this port has been completed. The Koreans cut the line yesterday between Taikyo and Shoshu for a distance of about two *ri*. The working of the wire will, therefore, be delayed for a day or two.

Hongkong, August 13.

The pest has broken out at Amoy. It is said that the local authorities displayed great indifference in regard to enforcing the Quarantine Rules.

Koriyama, Yamato, August 13.

A fresh dispute has broken out in reference to the water privileges, and the Superintendent of Police, a Councillor of this Prefecture, and over one hundred police constables have proceeded to the spot to maintain order.

Shimonoseki, August 13.

The *Kumamoto Maru* arrived here from Fusan this morning with over one hundred disabled Japanese soldiers and coolies.

Nagasaki, August 14.

Mr. Komura Jutaro, Japanese *Chargé d'Affaires*; Mr. Nakajima, a Secretary; Mr. Ogoshi and Mr. Arakawa, Japanese Consuls, and upwards of two hundred other Japanese residents have arrived here by the French mail steamer *Farra*. They left for Tokyo this afternoon.

Osaka, August 14.

The *Tenkyo Maru*, said to have been captured by the Chinese Government at Taku, was insured in the Osaka Marine and Land Insurance Co. The firm has, therefore, asked the Tientsin Branch of the Mitsui Bussan Kaisha to obtain information upon the matter. A telegram which reached Osaka from Tientsin says that the vessel has been confiscated, but her captain and crew have been allowed to return home by a French ship.

Later.

The *Tenkyo Maru* was insured for yen 20,000 of which yen 7,000 was held by the Tokyo Marine Insurance Co., yen 6,000 by the Osaka Marine and Land Insurance Co., and yen 6,000 by the Imperial Marine Insurance Co. These companies are said not to be liable for the discharge of the insurance as no arrangement was made providing against capture during war.

Shimonoseki, August 14.

The authorities yesterday gave orders for the supply of 3,500 tons of coal to the owners of Tagawa, Kanada, and two other mines. An order for the supply of 15,000 tons (some say 10,000 tons) was given to the mine owners at Karatsu. About 30,000 tons of coals are in store in Moji.

Nagasaki, August 14th.

The *Farra* arrived here to-day from Shanghai, and left for Kobe shortly afterward. Mr. Komura, Japanese Minister Resident in China, Japanese Consuls at Tientsin, Chefoo, and Shanghai, and many Japanese residents were on board.

Nagasaki, August 15.

The Chinese Minister and suite arrived here yesterday in the *Salasie*, and left at once for home.

Later.

Some 168 Japanese residents at Shanghai have reached here per the *Angers*.

Kochi, August 15.

A serious quarrel exists among the farmers at Kureta-mura, Nagaoka District, which is likely to lead to disturbance. Twelve constables have proceeded to the spot.

Hakodate, August 15.

Public subscriptions raised here towards the military expenses exceed yen 20,000, and further subscriptions are being received.

Fusan, August 15.

The Chinese officers and soldiers, captured at A-San, arrived here per the *Tagonoura Maru*. They are to be sent to Japan.

Private telegrams received in Tokyo on the 14th.

Four Chinese war-vessels, and two torpedo

boats, which had been anchored at Taku, have left for Shanhai-kwan.

Cholera is very prevalent at St. Petersburg. There were 141 new cases the day before yesterday, of whom 50 were fatal; upwards of 400 patients are receiving medical treatment.

Fusan, August 15.

Some Chinese soldiers are in the neighbourhood of Hei-jo, but their number is not known. A rumour is current that a number of vessels have been chartered as transports.

Later.

The *Togaku-to* adherents are active again at Rijin in Chinsei-do. Officials were yesterday dispatched to advise them to maintain order and peace.

Fusan, August 15.

The Fusan-Söul telegraph wire has been opened.

Later.

The Fusan-Söul wire, which was opened this morning, has been cut again by the Koreans between Pakuto and Yukoku.

Shanghai, August 15.

The Mining Bureau at Kaiping has chartered the following foreign vessels:—*Brunhilde*, *Tamarind* (Norwegian ship, 885 tons), *Peak* (Norwegian ship, 691 tons), and the *Smit* (Danish ship, 822 tons).

Ninsen, August 13.

A rumour that General Seh, Vice-Commander-in-Chief of the Chinese army at A-San, who fled to Ryo-shu despite the severe wounds which he had received during the fight, has finally died in the latter Province is generally believed to be a fact. General Yeh, the Commander-in-Chief, has mustered 900 of the defeated Chinese soldiers, and marched them, on the 29th ult., towards Heijo by a round-about route to meet the other Chinese army.

Shimonoseki, August 14.

A man suspected of being a Chinese spy, was arrested here last night.

Fusan, August 15.

Chinese soldiers have entered Kokaido in order to obtain provisions.

Later.

The advance guard of the Chinese troops have reached Chinwa.

Fusan, August 15.

A detachment of 4,000 Chinese soldiers, comprising artillery, infantry, and cavalry, have arrived in the neighbourhood of Heijo.

Söul, August 15.

The Korean Government has resolved to declare the abrogation of the Treaties between China and Korea, and this decision will shortly be put into operation.

Kobe, August 16.

The crew of the *Tenkyo Maru*, which was captured by the Chinese Government in the neighbourhood of Taku, arrived here this morning.

Later.

Messrs. Komura, Japanese Resident in China; Arakawa, Japanese Consul at Tientsin; Ijuin, Japanese Consul at Chefoo, and Ogoshi, Japanese Consul at Shanghai, arrived here this morning by the *Farra*. Mr. Komura left for the capital by train at noon, the remainder come on by the same steamer.

Fusan, August 17.

The Chinese soldiers who were defeated at A-San have joined the other Chinese troops in Kyoshu. The combined forces have left for Rosen *via* Shunsen.

Later.

The Chinese soldiers recently encamped in the neighbourhood of Daido-ko, have reached Hozan.

Shimonoseki, August 17.

Some 129 disabled Japanese soldiers arrived here from Fusan in the *Tagonoura Maru* yesterday. They were at once conveyed to Ujina. Three Chinese captives were also brought along in the same vessel.

Nagasaki, August 17.

The British dispatch-vessel *Alacrity* has left here, but her destination was not made public.

Shimonoseki, August 17.

It is stated that nine Chinese transports left Taku of late.

Osaka, August 17.

All the Chinese residents of this city, with the exception of two, left here for home to-day.

Shimonoseki, August 17.

The *Kobe Maru* has been chartered as a military transport. The *Hyogo Maru* left here for Fusan last night, and the *Sakata Maru* and *Toyo Maru* reached here to-day. They are expected to leave for Fusan as soon as they have finished shipping cargo. The *Takasago Maru* proceeded to Fusan yesterday.

Fusan, August 17.

The Korean Government has resolved to dispatch messages to Chinsei-do, Zenra-do, and Keisho-do in order to advise Koreans residents to refrain from cutting the telegraph wires. The report that the *Togaku-to* rising is gathering force has been found to be groundless.

Later.

The Fusan-Söul telegraph line was opened at 7 p.m. yesterday.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 134.

WHITE.

1—Q to R 5

2—K to Q 6, dis. mate,

2—R to R 6, mate,

2—R to K 3, mate,

2—Kt (R 7) to Kt 5, mate,

2—Q to Q 5, mate,

2—Q x P, mate,

2—B to R 2, mate,

2—Kt (B 7) to Kt 5, mate.

Correct answers received from Shogi, E.D.; W.H.S., Digamma, and J.D.

Solutions to End-game No. 10 by Loyd (Q to K 6, etc.) have been sent in by Shogi and Digamma.

PROBLEM No. 136.

By B. G. LAWS.

BLACK.

White to play and mate in two moves.

SHOWALTER-HODGES MATCH.

This drags its slow length along, and we have heard of no finish yet. The sixth game was a draw, also a Ruy Lopez. We are getting rather tired of this eternal Ruy Lopez opening; but the modern school keep at it, and seem to look upon it as the only attack worthy of attention. We are anxious to see what Steinitz will say about his favourite defence of 3—P to Q 3, which so signally failed him in his recent contest with Lasker.

We give the fifth game in the Hodges-Showalter match, with notes furnished to the *New York Recorder* by J. W. Showalter:—

Position after Black's twenty-third move, B to K 6.

BLACK—HODGES.

WHITE—SHOWALTER.

NOTE.

- (a) Another good continuation of this point is 4—P to Q 4. P x P (Kt x K P transposes into a well-known and favourable continuation for White if 6—Q to K 2; 6—P to K 5, Kt to K 5; 7—R to K sq., Kt to B 4; 8—Kt x P, etc. The text move forces the reply, 4—P to Q 3.
(b) If 6—Q to K 2; 7—R to K. Castles (f); 8—B x Kt, and the famous "Farrach trap" is set and sprung.
(c) Good as a routine move in obedience to the principle. "Seize the open files with your rooks," but here inferior to B to Q 3.
(d) For now White could, and, of course, should, advance the K P to considerable advantage, inasmuch as the Kt would be at once driven into difficulties. The text move is inescapably weak.
(e) But this is worse still, and, in fact, loses the exchange outright. However, after White's failure to grasp his opportunity, in pushing the K P in the fourteenth move, Black at once acquires rather the better game.
(f) Now the only possible defence.
(g) If P x P, 22—Kt x P and White gets an attack that seems to equalize the game at least.
(h) Black would have experienced less difficulty in scoring his game if he now proceeds as follows: 22—Q x Q, 23—R x Q, B to Q 5 (not B to Q 7; 23—R x R ch, R x R; 24—Kt to K 4, B to B 5; 25—Kt to B 5, and wins a second P; or 24—B to K 6; 25—P x B, B x P; 26—Kt to Kt 3, etc.); 22—P x P, B x P; and White could not avoid another exchange of pieces.
(i) If P to K R 4, B to Q 5; 23—Q to Q sq., Q to Kt 3 now loses a piece; R x Kt; 24—B x B, P x P and wins easily.
(j) Loss of time, H to B 5 forcing the exchange of queens was now the move.
(k) Here White misses his way again. He should have played B x B, Q x B (R x B loses a piece after 25—Q x P); 25—Q x P, Q to Q ch. (the only line of play); 26—R to B 2, Q to Kt sq. 27—Q x B, P x P; 28—Q x Q P, and White should draw without difficulty; perhaps win, as his Q side Pawns are formidable and his K is safe. See diagram.
(l) The only move. If Q to Q 4, White wins by Q to R 4.
(m) H to K 4, P x P (not B x B; 26—R x B, P x P; 27—Kt to B 6 ch., P x Kt; 28—P x P ch., H to Kt 6; 29—P x B, Q to Kt 4; 30—R to B sq., with an excellent attack); 26—B x B, P x Kt; 27—B x P, B to B 5, etc.

(n) First K to B 5, driving back the R would have materially strengthened his attack and improved his prospects.
(o) B to B 5 is much stronger, and would have preserved his pawns intact.

Fresh news from the South. Mr. Balk sends us word that he is hospitably received at the Sydney Chess Club and finds himself able to hold his own well against the ordinary members. But when it came to meeting the ex-Champion (Crane) even as one of twelve in simultaneous play the amateur had to succumb. We give the game, played 22nd June, with remarks and notes from the *Sydney Mail* of 30th June.

SIMULTANEOUS CHESS.

On Friday evening, the 22nd instant, Mr. Crane played at the School of Arts 12 games at once, winning 5, losing 2, and drawing 5. The opposing team was fairly strong, and included three inter-colonial men. Mr. Crane won against Messrs. Cartright, McDonnell, Stack, Dunn, and Balk; lost to Messrs. Britton and Tolley; and drew with Messrs. Jacobsen, Handley, Bieler, Mackenzie, and Elkington. The games lasted two and a half hours, in which time Mr. Crane played over 300 moves.

GAME NO. 153.

SICILIAN DEFENCE.

- | WHITE.
Crane. | BLACK.
Balk. |
|-----------------------------------|--------------------|
| 1—P to K 4 | 1—P to Q B 4 |
| 2—Kt to K B 3 | 2—P to K 3 |

Per British steamer *Ancona*, for Hongkong via ports:—Silk, 466 bales; Waste Silk, 11 bales.

REPORTS.

The Japanese steamer *Nagato Maru*, Captain Barstow, reports:—Left Manila the 4th August at 9 a.m.; had strong winds and high seas during the passage. Arrived at Yokohama the 12th August at 5 a.m.

The American steamer *City of Rio de Janeiro*, Captain J. T. Smith, reports:—Left San Francisco the 26th July at 4.27 p.m. Arrived at Yokohama the 13th August at 7.55 a.m. Passage, 16 days, 22 hours. Had moderate to strong westerly winds nearly the whole passage; the 11th and 12th had strong S.W. gale with very high sea; dense fog from Noshima.

The British steamer *Belgie*, Captain Walker, reports:—Left Hongkong the 1st August at 1.55 p.m., via Amoy, Nagasaki, and Kobe; had light variable winds and fine weather throughout the passage. Arrived at Yokohama the 13th August. Time, 12 days, 4 hours, 11 minutes.

The Japanese steamer *Iburi Maru*, Captain A. Keith, reports:—Left Otaru the 10th August at 2 p.m.; had moderate breeze and fine weather; at 8 p.m. wind freshening from south-east and barometer falling; off Cape Blunt at noon on the 11th strong E.S.E. winds and heavy sea, barometer very low and still falling, with threatening appearance; turned round and made for shelter in Hakodate, arriving there at 2 p.m.; whilst there had moderate winds and cloudy with rain at times; at 5 a.m. on the 12th barometer reached lowest point 29.20 and wind backing to N.W. Left Hakodate at 9 a.m.; had moderate westerly breeze with very heavy easterly swell to Shiriyasaki; passed Kinkasan at 10.30 a.m. on the 13th had it foggy from 4 a.m. to noon, and then fresh southerly breeze and hazy till midnight; Inuboye light abeam at 4 a.m. on the 14th, heavy rain for two hours and thence moderate winds and fine weather to port; experienced very heavy south and south-east swell all the way from Shiriyasaki to Su-no-saki, causing ship to roll terribly. Arriving at Yokohama the 14th August at p.m.

The Japanese steamer *Miike Maru*, Captain W. Thompson, reports:—Left Kobe the 14th August at noon; passed Oshima at 9.21 p.m. the same day, Rock Island the 15th at 11.48 a.m., Sagami at 4 p.m. the same day; had fine weather with light to moderate easterly and north-easterly winds throughout the passage; experienced heavy easterly and south-easterly swell from Oshima to entrance of Gulf. Arrived at Yokohama the 15th August.

LATEST COMMERCIAL.

IMPORTS.

Nothing good to be said. Sales of Yarn are of trifling amount, and of Grey Goods nil. Buyers seem to be taking delivery of their old purchases in fairly good shape, but do not buy anything fresh. The only sale reported in Fancies is 100 pieces Silk Satins. We leave all quotations unchanged, but they are more or less nominal in the absence of business.

COTTON PIECE GOODS.

	PER PIECE.

METALS.

Market quiet, but still there have been some sales at quotations, and deliveries are fair for the time of year. Iron prices unchanged, but Wire Nails are lower, and Tin Plates being scarce are the turn dealer.

	PER POUND.
Flat Bars, 1 inch	\$3.35 to 3.40
Flat Bars, 1 inch	3.45 to 3.50
Round and square up to 1 inch	3.45 to 3.50
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.70 to 4.85
Galvanized iron sheets	9.40 to 9.60
Wire Nails, assorted	5.80 to 6.30
Tin Plates, per box	6.00 to 6.10
Pig Iron, No. 3	1.60

KEROSENE.

Market strong with upward tendency. The interior markets seem fairly active; and holders here would ask an advance for further business.

Chester	\$1.72½ to 1.75
Comet	1.70 to 1.72½
Devoc	—
Russian Anchor	1.70 to 1.72½
Russian Moon	1.67½ to 1.70

SUGAR.

Browns—Native reports have it that Chinese holders sacrificed their stocks last week; but that since these forced sales the market is fairly firm at quotations. Whites—In better demand and prices well maintained.

	PER POUND.
Brown Takao	\$4.50 to 4.60
Brown Manila	5.10 to 5.20
Brown Daitoo	3.30 to 3.40
Brown Canton	3.70 to 4.40
White Java and Penang	7.30 to 7.40
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 11th instant, since which date settlements on this market amount to 2,325 piculs, divided thus: *Hanks*, 20 piculs; *Filatures*, 1,619 piculs; *Re-reels*, 580 piculs; *Kakeda*, 106 piculs. Direct shipments have been 188 bales, making the total export for the week 2,500 piculs. There was very little doing until the 13th instant, when the largest buyers on this market stepped in holdly for *Filatures* and *Re-reels*.

suitable for the American trade. It would seem as though the final passage of the Tariff Bill at Washington had given one or two of the importers in New York more courage and the result has been the spurt in our market. Prices have not advanced very much—about \$10 all round is the difference between quotations at the beginning of the month and those which we give to-day.

In spite of the large business done, dealers are anxious to go on and would have no objection to turning their holdings into money, so that if the market should remain quiet for a few days, we may probably see resumption of old prices.

There have been three shipping opportunities since we last wrote. The French mail *Salasie*, 11th instant, had 303 bales for Europe, and the German mail *Nuernberg*, 13th instant, 190 bales for the same destination. The *Belgio*, which left port on the morning of the 15th, had 713 bales for the New York trade. These departures make the present export figures 5,884 piculs, against 2,442 piculs last year, and 5,270 piculs at the same date in 1892.

Hanks.—There have again been two or three small purchases, *Maibashi* bringing \$560 and a parcel of *Shimonita* going forward on consignment. Stock small and insignificant.

Filatures.—The chief rush has been in these, mostly in full sizes. Among the sales made are the following chops in big quantity: *Kaimetsu*, \$685; *Tokushinsha*, \$685; *Choshinsha*, \$700; *Gakosha*, \$700; *Hirayoshi*, *Inashosha*, *Gajosha*, *Kaishinsha*, \$670; *Taiyosha*, \$730, which other chops at proportionate prices. Holders now ask some little advance, and the latest prices made include *Inasha*, \$705; *Ryokan*, \$685; *Seven Stars*, \$680; *Tokosha*, \$670. In fine sizes, not very much has been done, and prices are, if anything, slightly easier.

Reels.—Considerable business in these at the following figures: *Kanra*, \$655; *Tortoke*, \$650; *Koriyama*, \$645; *Shorusha*, \$635; *Kirihana*, \$620. Prices are now a little higher, and \$660 is reported to have been paid for *Free Girl* chop.

Kakeda.—Rather a small trade at the following rates: *Daruma*, \$645; *Horsehead* and *Musume*, \$625. Holders now ask a rise of \$5, but we do not hear of its being paid.

Export Raw Silk Tables to 17th Aug., 1894:—

	1894-95.	1893-94.	1892-93.
Europe	2,506	1,789	2,752
America	3,100	614	2,424
Total	5,606	2,403	5,176
	Piculs 5,884	2,442	5,270
Settlements and Direct	7,750	3,400	7,150
Export from 1st July	8,400	7,000	4,650
Stock, 17th Aug.	16,150	10,400	11,800

WASTE SILK.

Settlements for the week amount to 7 piculs of *Kibiso*, with no direct shipments.

The market remains quite stagnant. There are some enquiries in town; but buyers want concessions in price which holders will not grant, and there is absolutely nothing doing.

There has only been one shipping opportunity since we last wrote, the German mail *Nuernberg*, which vessel carried 270 bales for Europe. This

departure makes the present export figures 2,606 piculs, against 650 piculs last year, and 1,750 piculs at the same date in 1892.

Pierced Cocoons.—The stock has now acquired some importance but no business has been done, the views of sellers and buyers being wide apart; the former ask \$120 while the latter offer \$90.

Noshi.—Absolutely nothing done, and the same difficulty occurs here, buyers and sellers being too far apart.

Kibiso.—The only transactions of the week have been in this class, and consist of retail purchases of *Filature*, at \$97.

In other sorts, no business.

Export Table Waste Silk to 17th Aug., 1894:—

	1894-95.	1893-94.	1892-93.
Waste Silk	2,606	650	1,750
Pierced Cocoons	—	—	—
	2,606	650	1,750
Settlements and Direct	7,750	850	1,100
Export from 1st July	15,800	10,700	10,100
Stock, 17th Aug.	17,550	11,550	11,200

Exchange.—This is now apparently on the upward grade, and rates have hardened to the following quotations:—London, 4m/s. Credits, 2/2½; Documents, 2/2½; 6m/s. Credits, 2/2½. New York, 30d/s. U.S. \$53; 4m/s. U.S. \$53½. Paris, or Lyons, 4m/s. fcs. 2/74; 6m/s. fcs. 2/75.

Estimated Silk Stock, 17th Aug., 1894:—

	RAW.	PICULS.	WASTE.	PICULS.
Hanks	65		Cocoons	1,150
Filatures	5,335		Noshi-ito	7,480
Re-reels	1,065		Kibiso	6,890
Kakeda	815		Mawata	100
Oshu	10		Sundries	180
Taysam Kinds	10			
Total piculs	8,400		Total piculs	15,800

TEA.

Rather more done the last few days; demand running on the better grades, which are firm in price. Common grades are not much wanted and are in full supply, consequently quotations for these are easy. Settlements to date this season show a reduction of 5,000 piculs, when compared with last year at same date; but the export is 4 million pounds in excess, showing that Teas are being rushed over to the other side as quick as possible.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

THAMES ELECTRIC & STEAM LAUNCH CO^Y

ELECTRIC LAUNCH "GLOW-WORM," CAP. BY THE CO.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 25TH, 1894.

MARRIAGE.

On the 22nd inst., at the U.S. Consulate, Yokohama, and at the residence of D. B. McCartee, M.D., No. 7, Taikiji, Tokyo, by Rev. D. Thompson, D.D., assisted by the Rev. B. Chappell, A.M., RANSFORD S. MILLER, Y.M.C.A. Sec'y., to LILY MURRAY of the Joshi Gakuin.

DEATH.

On the 21st inst., at Kugenma, FRIEDRICH HUGO ORTH, of Deutz Rhenish Prussia, in his 42nd year.

SUMMARY OF NEWS.

THE funeral of the Imperial Prince, who died on the 17th inst., took place on the 21st inst.

MR. WAKAO IPPKEI, a member of the House of Peers, resigned his position on the 20th inst.

THE total number of Opposition candidates in the forthcoming general elections is at present 100.

AN agreement has been made for the purchase of the German steamer *Daphne* by the Nippon Yusen Kaisha.

THE British ship *Senator*, from Cardiff for this port stranded on Saratoga Spit in coming up the bay, but got off on the next tide.

MR. INOUE, Minister of Education, who has been staying at Dzunshi for the benefit of his health, returned to Tokyo on the 19th inst.

THE ordinary telegraph line north of Fusan has been interrupted since the 18th inst.

reason for this has yet been ascertained. The military telegraph line between Seoul and Fusan has been working very smoothly.

ABOUT a month ago the Chinese residents at Yokohama numbered 3,200; they have decreased to 2,000. In Kobe the Chinese population has fallen from 1,400 to 250.

H.I.H. THE EMPRESS, who has been staying at Hayama, Kanagawa Prefecture, for some time for the benefit of her health, returned to the capital on the 20th inst.

H.B.M. MINISTER, the Hon. P. Le Poer Trench, arrived here on Monday last by the Canadian mail steamer, and has since been received in audience by His Imperial Majesty the Emperor.

THE 18th inst. being the Birthday of H.M. Francis Joseph, the Emperor of Austria, the Governor of Kanagawa and various Consuls in Yokohama proceeded to the Austrian Consulate to offer their congratulations.

As a result of the defeat of the Chinese Fleet off Phung-do, the Chinese merchant vessels are afraid of going out; steamship communication is almost entirely interrupted, and the port of Taku is filled with Chinese merchant steamers.

A MILITARY conference was held at the Palace on the 17th inst. in the presence of H.I.M. the Emperor. Amongst those present were H.I.H. Prince Arisugawa, General Count Yamagata, Count Saigo, Count Oyama, Viscount Kabayama, and Lieutenant-General Kawakami.

RUMOURS are current relative to the whereabouts of Yuan, ex-Chinese Resident in Korea. Some state that he died in Peking, while others say that he is hiding at the residence of Viceroy Li, who is also receiving severe criticism as a consequence of China's failure in Korea.

A MUSICAL entertainment to be given at the Yayoikan, in Shiba Park, Tokyo, on the 20th inst. to raise money for the purchase of comforts for the Japanese soldiers in Korea, has been postponed until the 26th inst. owing to the death of H.I.H. Mitsuno-miya Teruhito.

THE crew of the *Tokwa Maru*, which put into Kobe on the 20th inst. from Shimonoseki, state that when about to leave Shimonoseki two Chinese and one Korean, disguised in Japanese uniform, were discovered on board the ship, and were at once handed over to the Japanese police.

AN application for permission to manufacture noiseless and smokeless powder by Mr. Sakurai Heikichi, of Nagano, the inventor, was sanctioned by the Authorities on the 17th instant. The powder has often been experimented with by the officers in the War Department, and very satisfactory results have been obtained.

THE volume of water in the reservoir of the Yokohama Water Works at Noge has been considerably increased in consequence of the recent heavy rains, and the supply of water cut off between 9 p.m. and 4 a.m. for some time owing to the scarcity of water caused by the continued dry weather, was resumed on the 20th inst., but water will not be supplied between 9 a.m. and 5 p.m. daily.

THE regular general meeting of shareholders of the Bank of Japan took place in the capital on the 18th inst. Mr. Iida, Assistant Chief of the Imperial Treasury Bureau; Mr. Tajiri, Vice-Minister of Finance; Mr. Matsuo, Chief of the Accountant's Bureau in the Finance Department, and many other shareholders were present. The receipts during the first half of this year amounted to yen 1,568,811.160, and the expenditure yen 374,496.618, leaving a profit of

yen 1,199,314.542, to which yen 180,091.546, brought over from the previous account, was added, making a total of yen 1,374,406.088. Of this yen 300,000.000 was declared as ordinary dividend at the rate of 6 per cent. per annum, yen 250,000.000 was added to the reserve fund, yen 89,000.000 voted as bonus to officers, yen 50,000.000 deducted in payment for construction of new buildings, and yen 450,000.000 declared as a second dividend at the rate of 9 per cent. per annum, yen 235,600.088 being carried forward to the new account.

THE Japan Cast Iron Foundry Joint Stock Co. is experiencing fresh trouble in consequence of the war between Japan and China. The Company has to make 450 tons of iron pipes for the Tokyo Waterworks in August and September, but since the declaration of war numbers of workmen, hitherto employed by the Company, have gone to other factories, and the work of the Company is greatly delayed.

ACCORDING to Reuter, there is a remarkable rise in all the "gilt edged" stocks due to the plethora of money and to banks reducing the interest on deposits by one-half per cent. The prospects of the passing of the United States Tariff Bill also contributes to a revival of business. The United States Senate has ratified the New Emigration Treaty with China. A brilliant review has been held at Aldershot in honour of the German Emperor. The agreement with France in regard to the Congo States has been signed in Paris. The Tariff Bill of the United States will be enforced forthwith. Santo, the assassin of President Carnot, was executed in Lyons. He trembled with terror as he was led to the guillotine. The Chinese Government is negotiating a loan in London and Berlin of one and a half million pounds sterling, at five per cent. interest, two-thirds of the loan to be payable in silver. The United States Senate has shelved the tariff bills for admitting coal, iron, and sugar duty free. Sir William Harcourt has said that the question of the veto of the House of Lords on the House of Commons Bills was one of the gravest moment, but that he would be unable to make a definite statement thereon during the present session.

In the Import trade, the situation has not changed; indeed whatever intention existed among buyers to operate has been checked by the rise in exchange, as they hoped to see lower prices, while holders decline to make any reduction. Manchester goods all round may be described as utterly stagnant and quotations consequently nominal. In the Metal trade, perhaps a little more might have been done by holders making some concession, as offers have been declined, the only transfers recorded being Iron Plates and Galvanised Iron in small lots. There have been fresh arrivals of Kerosene, but no transactions to record. The market is firm, however, with an upward tendency. In the Sugar trade there have been a few sales of Manila sorts, but Formosa have remained untouched. There is a steady demand for Whites at late rates. The Silk business has been well maintained, and settlements amounting to 2,000 piculs have been effected, but at the close business seems to hang fire. A slight improvement has taken place in the demand for Waste Silk, and a few small parcels have been taken. There is an immense stock to work upon, with no immediate prospect of a large reduction. The Tea trade has seen a good spurt, and the stock of leaf on hand has been much reduced, large parcels having been moved off the market at an advance in prices. Exchange has further advanced, and rates close firm with an upward tendency.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The chief topic in the vernacular press is still the war. But the general election, which is to take place in a week, has begun to attract public attention. All the papers agree in calling upon the people to be most careful in the choice of their representatives at this extraordinary crisis. The party spirit, formerly so conspicuous in nearly all the papers at election times, is now not to be noticed in a single paper. The unanimous cry is for the best men, independent of party. The new House of Parliament is advised, while holding retrenchment of expenditure its chief duty, to act even more ministerially than the Ministers themselves in providing for the war, and warned not to show even a shadow of the mistaken party zeal so apparent in recent sessions, but, putting aside all conflict, to act in harmony with the Government.

Much is said concerning the war fund, several means of raising money are suggested, among the rest an increase of taxation. The *Yiji* thinks that the duty on *sake* might be doubled, or even quadrupled. Our contemporary enters into minute statistics to prove that this increase is far within the limit of the practical rule of economy embodied in the story about "killing the goose that laid the golden eggs," and that it will not inflict any serious hardship on the lower classes. To give a brief account of the *Yiji*'s calculations; the tax on *sake* amounted to over 13,000,000 *yen* last year, the *sake* produced being 3,290,000 *koku*, and the tax, 4 *yen* per *koku*. Suppose this tax were doubled, we have over 26,000,000 *yen*, but this sum would not really be raised, since the amount manufactured would be diminished in consequence of the increased duty. As to this diminution, the *Yiji* states that it will not exceed 5,000 *koku*, basing its argument on previous excise statistics. Reducing 3,290,000 *koku* by 500,000, our contemporary calculates the tax on *sake* after the proposed increase would amount to 22,300,000 *yen*, which shows an increase 9,300,000 *yen* on the sum total the state obtains under the present system. This sum, nearly ten million *yen*, is, the *Yiji* says, more than sufficient to pay off the interest of a national loan amounting to as much as 100,000,000 *yen*. The *Yiji* gives reasons for the possibility of quadrupling the present excise, making 4 *yen* per *koku* 16 *yen*, and states that even the latter rate is not higher than the duty on alcoholic beverages in several Western countries. The *Mainichi* attaches great consequence to the retrenchment of Government expenditure and opposes the *Yiji*'s proposal. The *Chuo* is also opposed to the scheme. The *Yiji* speaks of the tax on sugar and declares it would be inexpedient to increase this for sugar is not a luxury but a necessary.

The rumour concerning the new Treaty between Great Britain published by the *Yokohama* contemporary is alluded to by the *Nippon*, the *Kokumin*, and several others. None of them, however, have much to say, being wholly ignorant of what the terms are. The sentiment of several journals that have touched upon it is that the Authorities had better defer its final conclusion until the war has ended. The issue of the war, in the opinion of many contemporaries, cannot but have great influence upon the possibility of treaty revision and the nature of the revised treaties.

The *Asahi* advises the public not to be blinded to the momentous question of treaty revision even in the face of the war, and warns the constituencies not to forget this question of state importance at the approaching general election. The war, our contemporary says, is of but transient importance as compared with treaty revision; the latter question ought, therefore, to occupy more space in the electors' minds than the former.

The *Hochi* publishes an article on the duties of the navy. Considering the Chinese navy to

be no match for the Japanese, our contemporary says it is most important for the Japanese navy to blockade the port of Shanghai. This port, so important to Chinese trade being blockaded (we quote the words of the *Hochi*), China will be speedily forced to come to terms. The *Jiji*, speaking of arbitration, says that whether Foreign Powers will offer to arbitrate at this juncture depends on the relative influence two opposing forces: 1. That of merchants, who lose directly or indirectly, in consequence of the war. 2. That of politicians, who see that China's corrupted morals and debilitated strength must sooner or later lead her to a fate similar to that of Poland, and who count upon the probable victory of Japan as a propitious preparation for their future work. Our contemporary says "if the influence of the former be stronger than that of the latter, foreign powers will hasten to arbitrate; and if the reverse, they will remain mere spectators as long as the war continues, notwithstanding the losses their traders must suffer in its consequence."

The *Nippon* declares that it must be to the advantage of Japan to bring the war to a conclusion as soon as possible, but not until China has been thoroughly chastised. Unless this last be done it fears the present war will become the cause of another in the near future. Japan, we are still quoting the *Nippon*, ought to awaken China to the benefits of civilization and lead her away from the suicidal path she is now pursuing unawares.

Speaking of the voluntary contributions to the War Fund, the *Yiji* and other papers advise the nobles to hasten to make theirs. The people know that when the *Hokoku-kwai* invited them to join it, their representatives answered that the nobles were considering among themselves what steps to take by the increase of the war fund, and that therefore they could not join the association. Many days have gone by since that time, and yet the public has not learned from them for what reason they declined to join the *Hokoku-kwai*. A longer delay, the *Yiji* fears, may cause the people to cry out against them and to advocate the abolition of their order. Our contemporary does not consider the Japanese peerage less patriotic and large-minded than the masses, and ascribes their backwardness in forwarding their contributions to little differences of opinion among themselves, which, says Mr. Fukuzawa, the editor of the *Yiji*, they ought instantly to overcome and hasten to fill the military chest with their wealth.

The *Yomiuri* writes fully about Korean reforms. It says nothing is so important as to reform the people themselves, who in civilization are behind the Japanese people at least a thousand years. And nothing, it proceeds to state, is so effective in improving a people as freedom of speech, and our contemporary concludes by declaring that the Korean authorities should take steps to see good newspapers started. As to the political reforms necessary to be instituted, our contemporary is of opinion that the military and financial systems should be attended to before anything else.

As regards the new educational system to be started in Korea, the vernacular papers unanimously express their ardent desire to hear the opinions of a meeting of eminent educationists of Japan invited by the Oriental Society to hold a conference in its rooms on Thursday last. They agree, however, in stating that the improved Japanese system should be made the foundation upon which to build the new Korean schedule of education, while the old customs and usages of Korea should not be unheeded in its institution.

The *Nichi Nichi* writes in a forcible strain that China is an ignorant country, and that since she declines to learn, she must be chastened to enlightenment. By suffering she must learn to fight her mission in the East, which is to

follow Japan in the path of civilization, and thus to be enabled to preserve her independence. The *Nippon* writes in the same tone, and advises the Chinese authorities to bow, the sooner the better, before the Japanese civilization and knowledge of the tendencies of the present age, and to be persuaded of the good she may derive from a close friendship with this island empire. Our contemporary proceeds in a matronly style, a style quite contrary to its usual tone, to warn the Middle Kingdom of the danger in which it is placed amid the whirlpool of European ambition.

The *Hinode Shimbun*, of Kyoto, describes a means of destroying the Chinese fleet suggested by Mr. Hasegawa Yoshinosuke, *Kogaku-hakushi*, to an interviewer during his sojourn in Fukuoka. He suggests the forming of some hundred and fifty Japanese whaling vessels into a fleet, instructing their crews in the use of torpedoes. The fishermen on board these vessels are men of daring character and are so skilful in managing their vessels that they can easily run their boats at the rate of 13 or 14 knots per hour, a speed not exceeded by many Chinese men-of-war. These vessels will be able to accomplish much creditable work in destroying Chinese warships. Many of these vessels will doubtless be destroyed in attacking the Chinese fleet, but their crews are men who think it nothing but honour to die on the waves.

As to the question whether the European Powers had better sympathize with Japan or with China, the *Kokumin* and the *Yiji* write in the following strain. Looking at the present state of affairs, China is a better customer of European merchants than Japan, so it appears more advantageous for them to show their sympathies towards the Middle Kingdom, even if it be impossible to give her some secret aid. This, in their opinion, is very short-sighted, for deeper reflection must show these tradesmen what a great customer of theirs China must become, if she be defeated and forced, as she must be in the natural order of things, to adopt Western systems in order to develop her military, industrial, and agricultural interests. So their commercial interests should direct their sympathies in part towards Japan, even if other reasons lead them toward China.

The *Chuo* tells us that the way to keep China in subjection after the conclusion of the war is not only the imposition of a large indemnity, but the annexation of some of her provinces and the revision of the commercial treaty, advantageously to Japan's interests.

The *Yiyu* speaks of Li Hung-chung as dead all but physically, and says his death marks the annunciation of social and political rebirth in China. This journal and some others say that, unless China will accommodate herself to the new life, she will share the fate of the great Viceroy.

The *Shin Choya* refers to the dullness of the Japanese money market just now. It ascribes the present dullness, which almost threatens a general panic, not to the flowing out of Japanese money abroad, but to its deficiency in the market. The bankers and money-lenders, according to our contemporary, have tightened the strings of their purses since the breaking out of the war. The *Shin Choya* calls upon those whose business it is to see the economical wheels of the country well greased to make all possible haste to remedy the present evil.

EDITORIAL NOTES.

THE MINISTER OF FINANCE ON THE WAR FUND LOAN.

H.E. MR. WATANABE, Minister of Finance, summoned on the morning of the 18th inst. Messrs. Shibusawa Yeichi, President of the 1st National Bank; Yamamoto Naonari, one of the Managers of the Peers Bank; and Yasuda Zenshiro, Pre-

sident of the 3rd National Bank, all of whom are managers of the Bankers' League of the Kwanto district, and spoke to them as follows concerning the raising of the war fund loan:—

The present war with China was unavoidable on the part of this Empire. If we wish to know which of the two belligerents has right on its side we have merely to examine their respective declarations of war. There is no doubt that the future of Japan is deeply concerned in the result of the war. A modern war, unlike that of former times, requires an enormous expenditure, and it is no exaggeration to say that success largely depends upon the amount of money the belligerents can respectively command. It was upon this consideration that the Government decided to raise a national loan of fifty million yen.

The patriotic sentiment of the nation gains in fervency as is manifested by the eager presentation of contributions towards the war expenses, and the vigorous unanimity of the whole people in support of the war policy is without parallel in Japanese history. With confidence, therefore, the Government has determined to raise a loan for war purposes. The Treasury has decided, after mature deliberation, to raise this patriotic loan at the current rate of interest. The Treasury wishes to raise the loan at the ordinary rate of interest for two reasons; first, it has confidence in the patriotic fervour of the people; secondly, it fears that the raising of a loan at an unusually high rate of interest might create disturbances in the stock market. The war between Japan and China is proceeding toward its crisis, and though tidings of the success of the Japanese forces both by land and sea have been received it is not possible to predict with any certainty that the termination of this gigantic struggle is yet near at hand. Therefore any person who wishes Japan to occupy its proper position in the world and desires to further its diplomatic and commercial interests, should devote himself towards supplying the war expenses so as to enable the military and naval forces of the country to pursue the attainment of their aim unfettered by considerations of expense. I am convinced that the loyalty and gallantry of the Japanese people will lead them to respond enthusiastically to the demand of the Government. Now that the eyes of the world are centered on the empire, the greatest attention must be exercised even in insignificant matters, and the raising of this war loan is a matter of special importance, for the world will judge of the warmth of Japanese patriotism by the rapidity with which the amount required is provided. It was in view of this consideration that I summoned you to meet me and disclosed my ideas on this grave question, with the hope that you will convey what I have said to the other bankers in the League, who, in turn, will consult with the capitalists with whom they are on business relations, and will with cordial unity cooperate in this important design.

Mr. Shibuzawa replied, on behalf of those present that what the Minister had told them coincided exactly with their wishes, and that they would at once convey his ideas to their colleagues and would strive most vigorously to float the loan.

It is stated in the *Mainichi* and other papers that the amounts thus far known to be subscribed for the loan are 7 million yen by the Peer's Bank, 3 million yen each by the Mitsui and the Mitsubishi, and 1 million yen through the hands of Mr. Shibuzawa. It is said that the original intention of the Government to fix the rate of interest at 6 per cent. has been changed and the rate was reduced to 5 per cent., owing to the representation of bankers that to pay an interest higher than 5 per cent. would be attended with pernicious results to the market, and also to their assurance that, even if the rate be reduced to 5 per cent., they would pledge themselves to supply the amount. By the way, the plans of the Patriotic Association which leading capitalists of Tokyo and Yokohama have organized to raise a fund in aid of the military chest, will become, it is believed, more or less altered, several who had at first resolved to contribute having been induced subsequently to subscribe to the loan. Many others there are, however, who, led by Mr. Fukuzawa and others, adhere to the original resolution and will offer contributions besides subscribing to the loan.

The leading bankers of Tokyo and Yokohama have arrived at a commendable resolution at their latest meeting at the Clearing House, Sakamotocho, Tokyo. In order to prevent dis-

turbances in the money market, they have decided not to reduce the value of various shares received as mortgages. The bankers deserve praise in thus discharging the grave responsibility incumbent upon them. The fall in the value of shares is not necessarily due to a loss of credit, but depends chiefly on the tightness of the money market due to the present war.

PARTICULARS ABOUT THE "TENKYO MARU."

SIXTEEN of the crew of the *Tenkyo Maru* besides her Captain, Mr. Yoshida Daikichi, have returned in a French steamer with the members of the Japanese Legation at Peking. The following particulars were, it is said, related by Mr. Komura, Acting Japanese Representative at Peking. The ship left Hokkaido two months ago laden with railway sleepers that the Chinese Government had ordered for the extension of the Tientsin and Shanhai-kwan railway to Manchuria. They reached Taku on the 2nd instant. China having declared war against Japan by that time the Chinese Authorities were uncertain what steps to take with the vessel. At last they resolved to arrest the principal members of the crew, and the captain and five others were arrested by Chinese soldiers and conveyed to Tientsin. The rest of the crew then got on board an English steamer and fled to Shanghai. In the meanwhile, the captain and the others were strictly examined, for they were suspected to be spies. Their answer was very plain, for they knew nothing about the war, having started from Japan long before its commencement. Fortunately at that time the Acting Minister of Japan happened to pass through Tientsin on his way home, and hearing of their case, he extended his aid and protection. They were at last suffered to go free. They were imprisoned for a few days only, but it is lamentable to learn that two of them died at Tientsin. The ship was thus detained in Tientsin and of course not a *sen* had been obtained for the cargo which she carried to Taku. The affair will be brought up for discussion when the war is over.

FUNERAL OF H.I.H. MITSUNO-MITA.

THE funeral of the late Prince Mitsu Teruhito took place in Tokyo yesterday. Prior to the departure, at 6 a.m., of the coffin from the residence of the deceased Prince at Azabu, the representatives of Their Imperial Majesties the Emperor, Empress, and Empress-Dowager, H.I.H. the Crown Prince, and the members of the Imperial family, peers, and high officials in various Departments worshipped at the remains. As previously arranged, the bier, which was escorted by a regiment of infantry and followed by a large number of carriers of flags, flowers, and various other ceremonial offerings, was taken out of the house at 6 a.m. The body arrived at the grave-yard on Toyoshimagawa at 8 a.m., and the interment was concluded at 10 a.m. The most conspicuous among those present were Their Imperial Highnesses Prince Arisugawa and Kanin, the representatives of Their Imperial Highnesses Princes Kitashirakawa, Fushimi, Kwacho, and Nashimoto, Counts Ito, Kuroda, Saigo, Oyama Goto, Higashi-kuze, Kawamura, Soyejima, Inouye, Marquises Hachisuka and Tokudaiji, Viscounts Kaiyeda, Enomoto, Tanaka, Niire, and Hiyouka, Lieutenant-General Yamaji, Commandant of the First Army Division; and Mr. Hamano, President of the Imperial University.

IMPERIAL MESSENGERS TO KOREA.

THE *Tokyo Asahi* says that Their Imperial Majesties the Emperor and Empress of Japan have decided to dispatch messengers to the Korean Court with presents, it is said, to the King and Queen of Korea and Tai Won-kun. Marquis Konoye and Mr. Tanaka Kenzaburo, a Master of Ceremonies, have been ordered to proceed there for the purpose. They left Tokyo on the 20th inst.

NEW DISCOVERIES AT MOUNT SINAI.

In a recent number of the *El Mouktataf*, a periodical published in the Arabic language at Cairo, an interesting account is given of some new discoveries made by Dr. Friedrich Grote, of some very old manuscripts, perhaps older

than any of the Gospel MSS. heretofore discovered. Dr. Grote is at present in Cairo preparing the photographic plates of his newly discovered MSS. for publication. As these discoveries have already attracted considerable attention among scholars in Europe, the following résumé from the account given in the *El Mouktataf*, will doubtless be of interest to our readers. The *Mouktataf* first speaks of the old Greek cloister at Mount Sinai which was erected by the Emperor Justinian in the year of our Lord 528, and was well fortified by him, in order to protect the monks against the "dangers of the wilderness." Of this an account is given by Eutychius the historian; Ibn Batreek, the patriarch of Alexandria in the latter half of the ninth century; and by Procopius, one of his predecessors. This cloister has been kept in perfect condition up to the present, and the "ravages of time" have left no traces, while in the course of bygone centuries many other cloisters and great cities have entirely disappeared. The library of this cloister contains some of the oldest New Testament manuscripts, for instance the *Codex Sinaiticus*, which was discovered by Tischendorf, a German scholar, and which was, by the aid of the Emperor of Russia, brought to St. Petersburg in the year 1859. In one of our last numbers, the *Mouktataf* continues, we referred to the fact that Dr. Grote, a German scholar, had discovered many ancient manuscripts in this cloister which seem to be of unusual interest. He has meanwhile sent us a number of photographic copies which we have examined and the Arabic we have endeavoured to decipher. The characters of the oldest of these manuscripts are not familiar to us, but they seem to be related to the Hebrew and old Syrian, known as the Estrangelo. At a cursory inspection they also remind one of the Hymjarian characters. In one passage the word *Ailia* occurs twice. The first letter of this word looks like an old Syrian *alef*, while the second is similar to a Hebrew *jod*, and the third a Phoenician and Hymjarian *lamed*. In this manner we get the word *Ailia*—Elias. The fact is, that the sentence in which this word is found, is actually a passage from the Gospel of Mark (9.11-12.), in which the name of Elias occurs twice. Perhaps by means of this key every letter may be identified. The syntax of this manuscript agrees with that of the Aramaic dialect, which was the spoken language of Syria in the time of Christ, and it is just possible that we have here in the form of an ancient Aramaic translation the oldest known manuscript of the Gospel. On the last page of Dr. Grote's photographs, there is an old Arabic translation from the Gospel, which reads as follows:—"The Word spread among the brethren and they believed, &c.,—and there are many other things which Jesus did, which I believe (if) they were all recorded the world could not contain the books. The Holy Gospel of John was completed at Ephesus. The copy of the four Holy Gospels was completed in the midst of the time of fasting; for Stephen the proprietor, a son of Freih, from Antioch, who is known by the name of Rues. He was a layman, and when the Holy Gospel was copied he became a monk and received the name Arsani. And it was copied for him by a sinner, a poor devil who had no virtues and—from the countrymen, known by the name of Surur, a son of Freih who deserves the hell-fire. God be merciful to the reader and writer, and graciously remember to pardon the writer. Amen. And this was in the months of the year four hundred and thirty-eight, in the moon-era, and this copy is exact." The writing resembles the Kufic, while the diacritic marks seldom occur. In place of words which were not clear to us, we have put dashes. The word "if" is always missing and must be understood from the connection. Most of the MSS. found by Dr. Grote are of a religious character. However, there are several which treat of scientific and philosophic subjects. There is one page taken from a medical work in which occurs the following passage:—"There is no remedy with which to produce hair on a naturally bald head. This has a natural cause, it is conditioned on the vitality of the skull and the vitality of the head." One page is a copy

from an astronomical work from which we take the following:—"March 12th. Ledaiah goes down and the head of Aries appears. On the 15th, the south wind blows, and on the 24th, God willing, day and night will be alike." From a writer on morals, we reproduce the following: "O man, if you have found your Lord, and you have avoided the path which leadeth unto evil, even then be careful that evil will cause thee to fall." Dr. Grote has also sent us two sheets of parchment, one of which is religious, written in an ecclesiastic style and is not very old. But the one in Arabic hand-writing is very old. Only faint traces of the characters remain. From these we have deciphered the following sentence:—"He who willfully commits murder, cannot enter into possession of an inheritance." Both of these leaves seem to hail from a work on jurisprudence. The original handwriting was either intentionally blotted out or has faded from old age, and subsequently the religious part was written over it. Our (*Mouklataf*) space will not permit us to note even half of the MSS. discovered by Dr. Grote, and the photographic specimens prepared by him. However, what we have stated will suffice to show that the Cloister at Sinai still contains very valuable literary treasures.

OFFICIAL CANARDS.

THE Chinese Authorities seem perfectly contented to scatter broadcast official information of imaginary successes, notwithstanding that they must be well aware that in the end the "truth will out." Here is a sample from the *Singapore Free Press*:—

We have received the following communication from the Chinese Consulate-General here:—
Chinese Consulate General, Straits Settlements.

Singapore, August 5th, 1894.

Sir,—I have the honour to apprise you that the following official telegram was received at the Consulate this morning from H.E. Kung, the Chinese Minister at London:—

On 25th ult. Japan sunk our transport with 2,000 soldiers aboard. On 27th and 28th, two Japanese gunboats were disabled (in battle). Japanese suffer 2,000 loss in A-San battle. Minister Wong recalled.

It goes without saying that if H.E. Kung favoured a journal so near to China as the *Free Press* with bogus information he has not neglected the opportunity of doing the same thing nearer to the seat of his mission.

CONTRABAND OF WAR.

THE *Asahi* learns that no regulations will be issued with regard to contraband of war. Contraband of war cannot be clearly defined, for the same goods may or may not be contraband according to circumstances. Moreover, should Japan definitely proclaim certain articles to be contraband, she would have to undertake a very serious task. For as the law, if once issued, should be efficaciously carried out, it would be necessary for Japanese war-vessels freely to exercise the right of search over foreign vessels in the China sea. This would be attended with various troublesome complications with foreign Powers, which should rather be avoided at present even at the expense of incurring more or less disadvantage on that account, for the maritime power of the country had better be employed elsewhere, in other more important purposes. Needless to say, however, that even though regulations of the kind be not promulgated, any neutral ship discovered to be supplying China with articles required in war would be seized by the Japanese war-ships, in accordance with recognized principles of international law.

WAR FUNDS.

OUR readers will have observed that, in addition to the loan of 30 million yen, the issue of which is now announced, another Imperial Ordinance, issued on the 13th instant, empowers the Government to appropriate the special funds, and all sums that fall under the heading of special funds, for military purposes. Such funds are the capital and profits of Government business; the money set apart for the redemption of paper notes; the Central Famine Relief Fund; deposits and interest accumulating thereon, and funds for Government institutions and libraries—all these amount to about 90 million yen ac-

cording to the estimate of the *Hochi Shimbun*. But there are several undertakings, such as the Railways, the Mint, and so forth, that have been carried on for years past and cannot be readily dispensed with by the Government. In short, the *Hochi's* opinion is that the items which may be appropriated by the Government are the funds for redeeming the paper currency and the deposits. On this calculation the whole amount rendered available by the Ordinance of the 13th instant is from 30 to 40 million yen.

NEWMAN AND THE "ZEITGEIST."

MR. LILLY concludes a review of Mr. Wilfred Ward's *Witnesses to the Unseen, and other Essays* with the following interesting passage on Newman's relation to the scepticism of the age:—

There can be no doubt that Newman's way of thought was essentially sceptical, that he was profoundly influenced by the *Zeitgeist*. How could it have been otherwise with his open eyes, his keen perceptions, his delicate sympathies, his subtle intellect? But Newman's scepticism, like Descartes', was not applied to the multiplication of reasons for doubting; it was directed to the discovery of a solid basis of belief. He, like Descartes, might have said, "Totus in eo eram ut aliquid certi reperirem." Some of the best pages of Mr. Ward's book are those in which he deals with this "scepticism" of Newman's and shows what it was and what it was not. It was devout, humble, legitimate, and fruitful, and no one who has enjoyed the privilege of Newman's friendship can be other than amazed at the caricature of it which has passed into the popular mind. Shortly after he was made a Cardinal a witty person said to me, "Dear old man! what a comfort that hat will be to him!" I asked for an explanation of the dark saying. My friend replied: "Why, I take it that Newman is an inveterate doubter. God, the soul, immortality—they are all for him a Great Perhaps. But he will hang that hat up in his bedroom, and will turn to it the last thing at night, and will say, 'Whatever is doubtful, this is clear—that there is a Holy Roman Church and that I am a Cardinal of it; there's the hat.'" Well, this is but a whimsical way of representing the very common error about Newman so elaborately stated by Dr. Abbott, and so conclusively confuted by Mr. Wilfrid Ward in the present volume. I add that Cardinal Newman's own life and writings illustrate admirably the true answer to the problem with which Mr. Wilfrid Ward's book deals. Physical science is not the only science, nor are its facts the only facts. There is without its sphere a vast number of facts of which it can give no rational account. Among these are two great facts of human nature, the sense of the Absolute and the sense of sin. If we want an explanation of these facts—and who does not?—we must go for it elsewhere than to the professors of physics. We must go to those elect souls to whom, in every age, the Infinite and Eternal, from an object of faith, has become an experience of knowledge, according to the saying of the great Master, "Beati mundo corde, quoniam ipsi Deum videbunt." There is a fine maxim of Joubert's well worth citing in this connection: "Il faut craindre de se tromper en poésie, quand on ne pense pas comme les poètes, et en religion, quand on ne pense pas comme les saints."

CHINESE MONEY AND THE PRESS.

THE News Agency takes the trouble to inform the public that large sums of Chinese money have been disbursed to influence the tone of the foreign local press in this empire and in the Middle Kingdom. By way of proving this allegation, the Agency says that whereas the local press originally spoke in contemptuous terms of the incapacity of the Chinese naval and military forces, as displayed by their failure to oppose the Japanese, several journals are now beginning to pervert Chinese defeats into victories, and to assume a tone of greater respect when estimating the military prowess of the Celestial Empire. It appears to us that the News Agency completely misinterprets the situation. Things seem to our eyes to be precisely the opposite of the Agency's account. At the outset there certainly was a strong disposition on the part of the foreign local press to condemn the Japanese and to give publicity and apparent credence to Chinese versions of the encounters between the naval and military forces of the two empires. But when the journals displaying that tendency learned—as, indeed, they should have known from past history without any fresh teaching—that the stories put into circulation by the Chinese were gross falsehoods, they began to doubt the whole Chinese case, and their tone at present, if not distinctly favourable to Japan, is at any rate neutral.

This change is very marked in Yokohama. We no longer read any violent denunciation of Japan or predictions of disaster to her arms, such as were originally penned. The News Agency, therefore, has chosen the wrong time for its offensive accusation.

MR. INOUE JUKICHI AND THE "JAPAN GAZETTE."

QUITE a lively correspondence has been going on recently between the *Miyako Shimbun* and Mr. Inoue Jukichi, a writer or translator on the staff of the *Japan Gazette*. The *Miyako* began its attack on Mr. Inoue by remarking that, judging from the articles which had appeared in the *Japan Gazette*, especially those paragraphs confessedly translated from Japanese journals, Mr. Inoue had lost all sense of patriotism; if it were true, as it seemed to be, that he was infatuated by the Chinese, he had better become Chinese outright. A number of paragraphs were then quoted, all of which were stated to have been penned by Mr. Inoue, in confirmation of the assertion of his loss of interest in Japan's welfare. The criticism was exceptionally severe, and called forth an immediate reply from the object of the *Miyako's* attack. Mr. Inoue disclaims having any part in the articles which appear in the *Japan Gazette*; he does not share that journal's views. He is, he states, a mere translator and as such has to do as he is bid, and may not exercise his own choice in what he translates. The *Miyako*, however, does not appear to be mollified by this emphatic disclaimer. Mr. Inoue once held a good position in educational circles in Tokyo; why should he remain on the staff of a paper to all intents and purposes unfriendly to the Japanese? Such conduct is not consistent with true patriotism. Mr. Inoue is therefore urged either to cause the tone of the paper to change, or else to resign his post. We give the above without comment. The *Nippon*, *Mainichi*, and a number of other metropolitan journals write in a similar strain.

TYPHOON IN THE CHINA SEA.

INFORMATION was received in Hongkong to-day, says the *China Mail* of the 11th inst., that the British four-masted ship *Muskoka*, Capt. Crowe, was badly damaged in the recent typhoon and towed into Amoy by the B. and S. steamer *Nanchang*. The *Muskoka* is a four-masted steel barque of 2,357 tons, built at Stockton-on-Tees, and owned in Windsor, Nova Scotia, by Messrs. Keeney and Mahon. Her captain is brother of the captain of the *Selkirk*. The *Muskoka* was bound from Shanghai to Saigon in ballast, to load rice for Europe. She got her ballast shifted in the typhoon, and was in very great danger several hours. The foretopmast was carried away, and a great deal of damage was done to her running gear. The rudder was also disabled. She will probably have to be brought down to Hongkong for repairs. The Agents here are Messrs. Dodwell, Carhill & Co.—It was reported to-day that the *Bidston Hill* was disabled, and was picked up by the *Deuteros*, but we have not been able to verify the report.

A RIOT AMONG COOLIES AT NAGOYA.

A DISTURBANCE recently took place at Nagoya between coolies enlisted for employment in Korea and their agents, resulting in some bloodshed. There are in Nagoya two coolie agencies, the Tamura-gumi and Okura-gumi. The coolies were informed that the daily wage paid by the Nagoya Barracks was 40 sen per man, but the Tamura-gumi gave them only one half of this. The coolies attached to the Hospital asked the Chief of the Hospital whether this news was true, and learning from him that it was, they became highly incensed with their employer, considering he was making an excessive profit. The Chief of the Hospital appears to have shared this view, and he sent five foremen-coolies to the office of the Firm to demand a satisfactory explanation in the matter. The members of the firm regarded the messengers as simply representing coolies and not as sent by the Chief of the Hospital, and so as soon as they appeared at the office, the clerks attempted to intimidate them and even aimed

pistols at them. The messengers made a statement of their grievance and demanded a reply, at the same time one of them partially unsheathed a sword that he carried in a sword-stick. Seeing this, one of the clerks sprung upon the holder of the sword-stick and, in the struggle that ensued between the two, the sword was unsheathed and the messenger was wounded in the palm. The alarm that one of their spokesmen had been wounded at the office of the Tamura-gumi soon reached the head-quarters of the coolies, and at once some fifty of them rushed to the rescue. The party of the firm, anticipating this, made ready for defence both on the roof of the office and in the office itself, armed with swords, pistols, or any other weapons that came to hand. An affray at once took place between the two parties, and before the police could come and restore order two men belonging to the firm and three of the coolies were wounded. Seven arrests were made by the police. The discontent spread to the coolies of the Okura-gumi that evening, and more than a hundred and fifty of them marched towards the office of the firm. Fortunately, however, the matter reached the ear of the Police, and the latter compelled the coolies to return to their homes.

AN IMPORTANT DECISION.

A DECISION of great importance to Japan and to shipowners having steamers trading in Far Eastern waters is reported from Shanghai. Her Majesty's Minister at Peking, following the dictum laid down by the Authorities at home that belligerents were not to be permitted to decide what is and is not contraband of war, has declared that rice in transit for Japanese ports is not to be considered contraband. The occasion that brought about this result was the arrival in the Shanghai river of the steamer *Sikk*, which had on board a quantity of rice from the South for Kobe. The Chinese Authorities deemed this cargo to be contraband, and took measures to treat it as such, ultimately moving a gunboat alongside the berth occupied by the steamer. Representations in the proper quarter, however, resulted as stated above, and the *Sikk* brought the rice on to its destination. This of course establishes a precedent for future cases of the kind, and is a good thing for Japan inasmuch as the rice crop in this country, though at present going on well with every chance of a good average outturn, may, possibly, yet be seriously injured by floods which are not unusual between this and harvest time. It was only to be expected that the Chinese would attempt to lay an embargo on food stuff for Japan when the opportunity presented itself, and the sooner a decision was arrived at in the matter the better for all concerned. The agents of the *Sikk* have laid a claim for demurrage at the rate of £50 per diem, their steamer having been detained several days at Shanghai pending the settlement of the contraband question.

Since the above was in type, Hongkong papers have come to hand which contain an official letter in reference to rice not being contraband of war, probably the outcome of the case of the *Sikk*—

Colonial Secretary's Office.

Hongkong, August, 16th 1894.

SIR,—I am directed by the Governor to inform you that, in reply to a communication from His Excellency on the subject, he has received a telegram this morning from the Secretary of State to the effect that Her Majesty's Government refuses to treat Rice as contraband of war.

I have the honour to be, Sir, your most obedient Servant,

J. H. STUART LOCKHART,
Acting Colonial Secretary.

The Secretary Chamber of Commerce, &c., &c., &c.

COURTESY.

We read in the *Nichi Nichi Shimbun* that the Emperor has directed Marquis Saionji to proceed to Korea, accompanied by Mr. Tanaka, of the Board of Chamberlains, for the purpose of conveying expressions of consideration to their Majesties the King and Queen of that country. The official title under which Marquis Saionji acts is *Go-imon-shi*. He carries with him various presents for the Sovereign of the peninsula,

among them being the Korean national flag in rich brocade and some handsome *cloisonné* vases. The evident purpose of this move is to assure the Korean Court of the friendly and courteous attitude of the Emperor. We should imagine that their Majesties in Seoul must have learned to find the international attentions of which they are the object somewhat irksome, but this last step of the Emperor's should afford them some comfort.

COUNT GOTO.

COUNT GOTO has been much observed of late by the Tokyo newsmongers, and has been moved about in a manner which, were it real, must have caused the veteran statesman no small inconvenience at this hot season. We suspect, however, that the ex-Minister has remained quietly in the capital all the while, and that the news of his voyage to Seoul for the purpose of becoming uncrowned King of the peninsula was as much news to himself as to anyone. Rumour is now beginning to deal more gently with the Count. He is no longer credited with large designs, but only with opinions. The *Kokkai* says that he deprecates the idea of attempting to reform the Korean administration on Japanese lines. Anything of that kind, he thinks, would be too drastic. Whatever is undertaken must be carefully adapted to Korean public opinion. Hence the Count recommends that the persons selected to inaugurate and carry out the reforms should be, not zealous young men trained in the new school, but greybeards of long experience and conservative caution. Very likely Count Goto thinks so. We could have predicted that such would be his view. But such is also the view of Japanese statesmen generally. The Korean national intellect is not likely to be shaken into an addled condition by the violence and suddenness of the reforms introduced.

A CHINESE LOAN.

TELEGRAPHIC intelligence, apparently trustworthy, says that a Chinese loan of a million and a half sterling has been placed upon the foreign market. Whether it is floated by the Chinese Government or by the Viceroy Li the telegram does not distinguish. The rate of interest is 5 per cent. and two thirds of the loan are to be in silver, but what that means we are perplexed to decipher. At any rate the division of such a paltry sum is almost farcical. The transaction is petty in the extreme and quite out of proportion to the evident needs of the time. A great Power like China coming to the foreign market to borrow a million and a half sterling at the commencement of a war with a neighbouring empire, is a spectacle not calculated to inspire confidence. We find difficulty in crediting the story as it stands. Probably fuller information will greatly modify the aspect of the case.

THE VICEROY LI AND RESIDENT YUAN.

MANY rumours have been circulated of late about the Viceroy Li and his trusted Lieutenant Yuan, who for so many years wielded paramount diplomatic influence as Chinese Resident in Seoul. The Tokyo News Agency now alleges that these rumours are, for the most part, false. Its inquiries have disclosed the fact that the Viceroy Li recently contracted a severe cold, which has now developed into typhoid fever, and may have fatal results. As for Mr. Yuan, he was summoned to Peking to make a report on Korean affairs, and probably he has proceeded to the capital, for nothing is known in Peking as to his whereabouts. The story that he had committed suicide seems quite baseless.

THEOLOGICAL LOGIC.

In an article on Frederic Denison Maurice, Mr. Jaws tells the following amusing story:—I remember Henry Sidgwick (of Cambridge) saying to me at Trinity College (we were undergraduates together) in the old days:—"In Maurice's hands you feel like a horse being led up to a five-barred gate, which is your theological problem, how will you get over it? Maurice shows you the gate, dilates upon its bars, its height, its insuperability, strokes your nose a

little more, and all of a sudden you find yourself looking at the gate from the other side. You know you have not got over it legitimately, but how you find yourself on the other side you do not know."

TARUMAI-SAN.

THE eruption of Tarumai has been announced by telegram from Sapporo. This volcano is situated in a very sparsely populated district on the shores of Chitose Lake. The village of Chitose is twelve miles distant to the east and Sapporo about thirty miles. On the western shore of the lake there is a sulphur spring and a bathing establishment, and near the *onsen* are sulphur collecting works. The lake itself is distinctly an ancient crater, several miles in circumference, and the forces at work at the time of its formation must have been of immense magnitude.

GENERAL MESNY.

THE *Kokkai* refers to the appointment of a foreigner to be Commander-in-chief of the Chinese forces in Korea. The Tokyo journal says his name is "Menissy," and that he is appointed because the Chinese have "no other fit person" for the post. Considering the number of years that General Mesny has been in China living entirely among Chinese, his military methods may be set down as somewhat out of date, especially as tactics have undergone such radical changes during the past two decades. The *Kokkai* is wrong in stating that General Mesny is an Englishman.

METHODISTS IN THE CAROLINE ISLANDS.

THE Congress of Deputies at Madrid, on July 4th, commenced the discussion of the Budget. The Marquis del Vadillo questioned the Government respecting the indemnity of \$17,500 in gold paid to the Methodist missionaries expelled from the Caroline Islands. The Minister of the Colonies, in reply, stated that he considered the payment of the indemnity to be a reasonable settlement of the question. The Government had entered into no engagement to readmit the Methodists into the islands.

EARTHQUAKE IN HONGKONG.

MANY persons, says the *China Mail* of the 11th inst., distinctly felt the shock last night just before 11 p.m. Several describe it as three separate tremors of about two seconds each, with a few seconds interval. Residents at the Peak and the Queen's Gardens levels experienced the eerie sensation. The clock in the charge room at the Central Police Station, stopped at 10.55 exactly, and the earthquake was noticed at the time. It caused some alarm in the top storey of the station buildings.

THE PLAGUE IN AMOY.

THE Amoy correspondent of the *N.-C. Daily News* writes:—"I have made further enquiries as to the causes of death among the Chinese here, and there seems to be little doubt that in many cases the disease has borne a remarkable resemblance to the Hongkong plague. In its suddenness and rapidly fatal character as well as being difficult to treat, it certainly looks as though a few sporadic cases of the true plague have occurred here. But there is no real epidemic such as to cause any scare."

THE KOREAN GOVERNMENT'S REVENUE.

"ACCORDING to investigations conducted in Korea," writes the *Kokkai*, "the revenue of the Korean Government consists of 25,000 *hoku* of rice and 40,000 *yen* in cash, making about 170,000 *yen* in all." We find it difficult to credit the accuracy of these figures. However impecunious the Korean Government may be, seventeen thousand pounds sterling seems an absurdly small income.

WAR NEWS IN THE SOUTH.

HONGKONG papers to hand give much space to news about the hostilities in Korea, and, as they receive their reports from Shanghai, have printed all the *canards* that have appeared in the Shanghai papers. The most recent issues of the Colonial journals, however, have at length published correct accounts of the naval affair off Phung-do and the engagement previous to it.

KOREAN AFFAIRS.

Trustworthy news appears to have at last arrived about the movements of the Chinese troops long ago reported to have reached Wi-ju. The vernacular papers state that a telegram reached a certain quarter late in the evening of the 16th instant to the effect that about four thousand of the Chinese Army, infantry, artillery, and cavalry combined, reached Phyoŋ-yang on the 13th instant, and began at once to establish a patrolling cordon. Phyoŋ-yang is situated in a plain watered by the Dan-dong-gang, and is some miles westward of this river. The river is said to be clear and the current rapid, and of a width of about five or six times that of the river Sumida. Its upper course is, however shallow, and fordable on horseback. The place is therefore said by the *Kokumin* to be far from being as strong for defence as A-San. The Chinese troops appear to be imperfectly equipped in provisions, according to the report of the *Kokumin*. It says that they are believed, during their march from Wi-ju toward Phyoŋ-yang, to have devastated the northern district of Hwang-hai-do for the collection of provisions.

The prediction that the two hostile armies would come into collision at Phyoŋ-yang or in its neighbourhood proved untrue, the following expresses lately arrived show. A most trustworthy message reached a certain quarter in the evening of the 16th instant, says the vernacular press, that a portion of the Chinese troops that had arrived at Phyoŋ-yang crossed the Tai-dong-gang, and marched toward Sŏul. The *Asahi* publishes a telegram from Fusan, under date of 10.50 a.m. of the 17th instant, to the effect that the Chinese vanguard that crossed the Tai-dong-gang had reached Pong-san, which is situated some 14 *ri* southward from Phyoŋ-yang, and is therefore 44 *ri* from Sŏul. The *Nichi Nichi* also learns that the Chinese advance guard that crossed the Tai-dong-gang had marched to Hwang-ju, and seemed to be preparing for battle.

According to these later telegrams the Japanese Army did not appear to have advanced to Phyoŋ-yang, as reported a few days ago. Perhaps a scouting party may have proceeded so far. Where the main body of the Japanese army lies, whether it is entrenched near Sŏul or has advanced to meet the Chinese army, is not now known. Several metropolitan papers say that the plain that lies between Pong-san and Phyoŋ-san will be the next battlefield. If so, the Japanese Army must have marched out of Sŏul to encounter the enemy. It is said that the Chinese army marching toward Sŏul consists merely of infantry, artillery, and cavalry, and has no commissariat and no engineers. Without commissariat, nothing is left for them but to plunder along the line of march.

The military telegraph from Fusan to Sŏul has been completed at last, according to a telegram that reached Tokyo from Fusan under date of the morning of the 17th instant. It is stated in that message that the repairs were completed at 7 o'clock p.m. of the 16th instant, and that the whole line between Fusan and the Korean capital was at once opened for the transmission of messages. It is further stated that guards have been stationed at various places along the line to prevent any further injury to the wire. A portion of the Chinese overland telegraph, that is the line that connects Sŏul to China via Wi-ju, is also said to have fallen to the service of Japan. The line has been unserviceable since the skirmish of the 23rd ult., in Sŏul, but the Japanese Army has since despatched experts and workmen and has restored some portion to order. How far this telegraph has thus been repaired is not known.

The *Nichi Nichi* learns from a trustworthy authority that the total of the Chinese troops stationed between Wi-ju and Phyoŋ-yang is not less than 20,000, and that these men are in the most important places between the two above named places.

From a letter that reached the *Nippon* from Peking under date of 1st instant, we take the following:—

On the 30th ult. an Imperial decree was promulgated to the effect that 4,000 Manchurian soldiers, that is a half of 8,000 Manchurians usually stationed on the border between Korea and Siberia, should be despatched from Moukden, the capital of Shing-king. Several distinguished officials of that Province started for their official seats to carry this order into effect. The *Nichi Nichi's* representative has waited upon Mr. Komura, deputy Minister to Peking, who has just returned to Tokyo. We take the following from the account of the interview given in that paper. The news of the naval engagement at Phung-do reached the Tsung-li Yamén on the 18th instant, from Viceroy Li, who appears to have purposely delayed the despatch of the message, as the preceding three days were national holidays in honor of the Emperor's birthday. The news, however, conveyed only the loss of the transport *Kowshin*, and not a word was said about the capture of the *Tsao-hiang*, the beaching of another Chinese vessel, and the serious damage sustained by the *Chi-yuen*. Yet the consternation of the Tsung-li Yamén was indescribable. Mr. Komura heard this story from the French Minister in Peking, who happened to be in the Tsung-li Yamén at the time. If this report is a fair specimen, we may judge how all news is garbled in China before it reaches the Emperor. Any news of importance undergoes modification, first of the hand of the Viceroy and then by the statesmen in the Yamén, so when it reaches the Emperor it may be hardly recognisable. The Viceroy, with all his outward bravery, is said to be in a melancholy mood, in consequence of the disasters that have befallen Chinese forces both by land and sea. It is said that should these disasters continue, he, being responsible as Viceroy, will be liable to capital punishment. That the Court of Peking was disposed towards a pacific policy and that the declaration of war was forced upon it by Viceroy Li, is evident from the great consternation with which the statesmen in Peking heard of the sinking of the *Kowshin*. The Viceroy underrated Japan, which he regarded as incapable of taking any decisive step. His anger is now chiefly directed against Mr. Yuan, late the Chinese Resident in Korea, by whom he regards himself as having been misled, and hence entangled in so critical a situation.

Yuen is now virtually the centre of hatred in Tientsin in connexion with the present affair. He has found Tientsin too hot for him to live in and is said to have secretly concealed himself somewhere. Since the naval engagement at Phung-do the Japanese navy appears to be regarded with great awe in China. Ten steamers of the China Merchant's Steam Navigation Company are lying idle by the Wharves of Tientsin, and others are said to be similarly idle at Shanghai.

The *Nichi Nichi's* Fusan correspondent has sent the following under date of 9 a.m. of the 17th instant:—

The Korean Government has decided to despatch Imperial messengers to the three districts of Chhung-Chhŏng, Chŏl-la, and Kyŏng-sang, to remonstrate strongly with the people on account of their obstructing military affairs, meaning evidently obstruction to military telegraphs. There is no foundation for the report that the *Togaku-to* disturbances have recurred.

The *Shogyo Shimpō* has received alarming news from its Shanghai correspondent, under date of 8.24 a.m. of the 18th instant. It is to the effect that the Southern fleet is rumored to be about to attack an important harbour on the eastern coast of Japan. This news lacks confirmation.

The *Nichi Nichi* has received the following message from its Fusan correspondent, under date of 7.07 p.m. of the 17th instant. Some Chinese troops have crossed the Tai-dong-gang by constructing a bridge over its upper course, and have marched toward Hwang-ju via Chug-hwa. These are probably troops forming the main body of the army that came from Wi-ju. Some Japanese papers hesitate to believe that the Chinese have constructed a bridge over the Tai-dong-gang, since it was reported that no engineering division had accompanied the army. But it must be remembered that the upper course of the river is said to be narrow as well as shallow, especially so this summer when a fearful drought is prevailing in Korea, and it would be no difficult task to build a bridge over such a river. The Chinese soldiers reported to have reached Pong-san must have been a scouting party. Where the Japanese army is quartered is not very clear, but if the following message which, according to the *Kokumin*, reached a certain quarter on the evening of the 17th instant be trustworthy, then the Japanese troops appear to be stationed not very far from Pong-san. The message runs that some twenty mounted Chinese scouts were observed to come out from Pong-san to the neighbourhood of Pha-san, and to watch the movements of the Japanese troops. Pha-san seems to be the name of a mountain pass, but exactly where it is situated it is difficult to say.

The Tokyo papers contain news that bodes ill for Li Hung-chang. The sole responsibility in the conduct of the present war rests on him, and for every disaster that the Chinese land or sea forces may sustain he is held accountable. The *Nichi Nichi* says that Wang Jung-hŏ and Li Hung-tso, who were commissioned a few months since by the Peking Government to watch over the actions of the Viceroy, are going to take active measures now that the intelligence of the defeats of China both on land and sea has reached the ears of the statesmen of Peking. This Wang Jung-hŏ is said to be on bad terms with the Viceroy, and as his influence over the Court of Peking is known to be considerable, the situation of the Viceroy must be an anxious one. The *Hochi* and several other papers even state that a committee for the impeachment of the Viceroy has been appointed, and that Wang Jung-hŏ, Li Hung-tso, Chang Ch'ung, and an elder brother of this Chang, all enemies of the Viceroy, have been appointed its members.

The *Jiji* learns that the crew of the *Tenkyo Maru* who were imprisoned at Tientsin numbered two. When they were released they received 200 dollars as travelling expenses. The ship and cargo are said to be in charge of the American Consul. Two of the crew died of *kakke* in Shanghai, not in Tientsin. The *Nippon* remarks that the official who brought the 200 dollars to the captain demanded a commission and that the latter was obliged to give the official 10 dollars!

A rumour that the ex-Chinese Resident Yuan has died is corroborated by the Tokyo News Agency. It is said that Mr. Yuan was ill even when he was staying in Sŏul and was under treatment by Mr. Furushiro Baikai, a Japanese doctor living in the Korean capital. The corpses of more than five hundred Chinese soldiers, who fell in the battle of Sŏng-hwan, have been buried by Korean coolies in the employ of the Japanese. According to the Sŏul correspondent of the *Yomiuri*, whose letter under date of the 12th inst. is given in its latest issue, the Japanese troops at Sŏul have undoubtedly marched towards Phyoŋ-yang. The letter says that owing to the partiality of the Koreans living in the Phyoŋ-yang district toward the Chinese, the Japanese army is believed to be taking some measure to conciliate the Koreans of that locality, and that the Korean Court, to further that object, has sent a Korean official with the army.

The *Nippon* publishes a note on the situation of Li Hung-chang. It says that the Viceroy was aware that a collision between his country and Japan was unavoidable sooner or later, and he was anxious that it should occur while he lived. That he succeeded in compelling the conservative and peace-loving Court of Peking to consent to declare war was certainly creditable to the Viceroy. He had, however, another aim in urging the Court to declare war. It was to oblige the Government to give him a large amount of money as a war fund, a large portion of which he intended to apply towards constructing railways and fortresses, for he underestimated the present complication from the first and thought that it would be over promptly. It was especially difficult for the Viceroy to persuade the Court to declare war during the ceremonies

for the celebration of the Empress Dowager's birthday; but two Germans, Mr. Detring, of the Chinese Customs, and Mr. von Hannecke, a military adviser of the Viceroy, joined the latter in urging upon the Tsung-li Yamèn the necessity for the declaration of war. In fact the influence of Germany is predominant in Tientsin. The army is drilled in German style, and is furnished with German weapons, while the forts along the coast of the Gulf of Pechili are also of a German pattern. Further the two great sister warships, *Ting-yuen* and *Chen-yuen*, were constructed in Germany. In consequence of this, it is said that the French residents in Tientsin, Shanghai, and elsewhere, are favourable to the Japanese cause.

The *Mainichi's* Fusan correspondent reports upon a difficulty that lately occurred in Fusan between the Korean authorities and the commissariat officers of the Japanese army. The Korean local authorities are generally ignorant or are insensible of the great changes that have taken place in the Central Government. They are frequently arrogant towards the Japanese, but the latter usually bear this with patience. The other day, however, the Custom House Authorities insisted on levying duty upon the rice sent as provision for the Japanese troops in Korea. The matter was at once conveyed by telegram to the Central Provision Office, whose officers came to the Customs and remonstrated strongly at the unreasonableness of what the officials intended to do. The officials were firm, and the commissariat officers were obliged to seize the Chief of the Office and to submit a report to the Sôul Government on the affair and to ask its intercession.

An amusing account of the Chinese prisoners of war is given in the *Mainichi*. The other day they asked the superintending officers to prefer on their behalf a demand to the Chinese Government for their pay. It is said that they are extremely afraid of being sent back, so that whenever they are threatened with it in jest, they earnestly beg to be allowed to remain till the war is over.

The *Nichi Nichi* and the *Yiji* say that the following two messages reached Tokyo from Shanghai under date of the 18th instant with reference to the *Kowshing* affair.

A British Marine Court of Inquiry held an investigation on the 17th instant with respect to the *Kowshing* affair, and the result of the investigation is favourable to Japan. A later telegram ran thus. The Admiral of the British Squadron in China and Japan has reported to the English Government that in his opinion the action of the Japanese war-vessel in sinking the *Kowshing* was perfectly proper.

Several other metropolitan papers add that the Admiral has also advised his Government that it would not be proper to demand any reparation from Japan.

According to the *Nichi Nichi's* Shanghai correspondent, the Chinese Government has informed the Consuls of that port that the Yangtze-kiang may be closed any time should it be deemed necessary for military purposes. The *Nichi Nichi* says that should this message be trustworthy then the Chinese Government must have forgotten its previous avowal that Shanghai shall not be made a seat of war. In fact that Government has already proved itself false to its original promise, its action in engaging the service of foreigners living in Shanghai for its Army and Navy is decidedly opposed to the spirit of the first declaration. Japan therefore has no longer any obligation to observe her part of the agreement, and for the bombardment that Shanghai may suffer from the Japanese war-vessels China is entirely responsible.

The *Yiji* states that the following message has reached Tokyo from Shanghai under date of the morning of the 19th instant. The Northern fleet of China is now being equipped with new guns and is taking in coal. As soon as these preparations are completed the vessels are to put to sea.

The Bikan correspondent of the same paper wires some other particulars concerning the attack on *Wei-hai-wei* by the Japanese fleet.

Finding at first no Chinese man-of-war, the fleet caused one of the vessels to proceed into the Port and inspect its condition. It was then discovered that the two Chinese war-vessels the *Pan-wei* and the *Hi-ko* and three transports were lying in the harbour. To decoy them out the Japanese fleet began to fire, but the Chinese vessels did not answer the enemy's fire, leaving this task to the Forts. The Japanese fleet then withdrew after having cut the torpedo wires laid in the mouth of the port.

The previous news that the main body of the Chinese army had crossed the Tai-dong-gang and that its vanguard had already reached Pong-san, requires some alteration according to later intelligence. The *Kokkai* and many other papers state, according to telegrams despatched from Sôul under date of the 20th instant, that the main body of the Chinese troops does not seem to intend to cross the river, but appears to be resolved to entrench itself at Ph्यों-yang and to await the attack of the Japanese army, and that the soldiers number about 3,000. Another telegram states that the Chinese troops in Ph्यों-yang are collecting provisions by plundering the natives along the banks of the Tai-dong-gang. If so, it is probable that the bridge constructed by the Chinese was simply for the purpose of plundering the neighbourhood of Ph्यों-yang. A detachment of Chinese troops reported to have been seen at Pong-san was either a scouting party or a plundering party.

The *Yiyu* publishes two notes more or less unfriendly to England. The British fleet could not bear to see the Chinese land and marine forces vanquished, and eight British war-ships arrived at Chemulpho on the 5th instant. Then follows a blank of about a line long after which the Organ of the Radical party says there are at Chemulpho one American, one Russian, one French, and one German war-vessel, all of which are said to complain at the coming of the British fleet in such force. Mr. Gardiner, further says the *Yiyu*, had, acting on his own responsibility, in various ways given assistance to China, and so when the intelligence that England would observe neutrality in the present war reached him he is said to have been in a very awkward position. According to the vernacular papers the other powers are much exercised about the movements of the British fleet.

On the 8th instant, when a British squadron composed of the *Centurion* and four other vessels entered the harbour of Chemulpho, the Japanese residents began to entertain some suspicion, for they did not know at that time that England had declared neutrality, while they were aware that the *Kowshing*, an English vessel, had been sunk near Phung-do. On the following day the *Severn* left the harbour, the rest lying at anchor. Early on the morning of the 9th instant, so soon as the *Severn* steamed back at full speed from the direction of Wei-hai-wei, the others weighed anchor and steamed away, no one knew where. Their destination was known at last when the news reached Chemulpho in the evening of that day that the Japanese fleet had attacked the harbour of Wei-hai-wei. Upon this news all the war-vessels anchored in the harbour also started for Wei-hai-wei. It is said that the British Government has ordered Admiral Fremantle to watch closely the movements of the Japanese fleet during the operation of the war, and that in pursuance of that instruction some British war-ships always follow the Japanese fleet and bring tidings to the flag-ship once or twice every day. What is noteworthy in this connection is that a war-ship of some other country always follows those British vessels that dog the Japanese fleet.

The *Fomuri* and some other papers say that a Japanese scouting party suddenly met with a large number of Chinese troops at Chung-hwa some 8 ri southward from Ph्यों-yang on the 12th instant. A skirmish ensued between the two and the Japanese at last succeeded in putting the Chinese to flight. When it was over five Japanese soldiers were found missing. Lieut.-General Viscount Nozu, commander-in-

chief of the 5th Corps, reached Sôul on the 18th and took command of the Japanese army there the next day. He took with him six chargers in all.

The Tokyo News Agency says that a message has reached Tokyo from Shanghai under date of the afternoon of the 20th instant to the effect that Chao Ch'nan has been appointed inspector of military and naval affairs and arrived at Tientsin in the evening of the 19th instant. He at once called upon the Viceroy Li.

According to the same source China has arranged for the purchase of several warships from a South American State, believed to be Chili.

The majority of the vernacular papers affirm that further news has been received in Tokyo from Shanghai about the judgment of the British Marine Court of Inquiry in connexion with the loss of the *Kowshing*. The President of the Court was the Admiral of the British fleet in China and Japan. According to this later message, the court has decided, it is said, that the Japanese war-vessel at first dealt with the *Kowshing* with the respect due to a vessel flying the British flag, and that the Captain of the *Kowshing* on his side was willing to carry out the reasonable requests of the Japanese. The Chinese troops on board the vessel, however, refused to obey the Captain's orders, threatened him, and even actually fired at him. The command of the vessel was in short forcibly taken from the captain by the Chinese troops. Under these circumstances, it was perfectly legitimate for the Japanese to take the extreme measure of sinking the *Kowshing*, since she could no longer be regarded as being under the protection of the British flag. This message is not published either by the *Nichi Nichi* or the *Yiji*. Indeed, the latter paper casts suspicion upon similar information that appears on the subject in the previous issue of the Tokyo papers. The *Yiji* says that Admiral Fremantle may, after he had proceeded to Korea and had carried out inquiries into the loss of the *Kowshing* have submitted a report on the affair to the Home Government. But even if the Admiral has done this, it is difficult to see how any one can know the nature of this report, since it must have been transmitted in cipher. The *Yiji* therefore cautions the public not to place confidence in this news.

The public are anxiously expecting news of a second battle between the Japanese and the Chinese troops since the two armies were reported to be gradually approaching one another. At this juncture the *Mainichi* publishes a rumour that a second battle has actually taken place at Ph्यों-yang, with the result that on the Chinese side the killed and wounded exceeded two thousand five hundred, while the number was only two hundred on the Japanese side. This, however, is probably a fabrication, though the *Miyako* publishes a similar report. The *Yiji* says that there are three generals in the Chinese army who have marched southward from Wi-ju. One is Sung Ch'ing, formerly Governor of Port Arthur, who is reported to be at the head of three or four thousand men from the neighbourhood of Port Arthur; another is Wei-zhu-Ch'i, said to have come to Korea at the outset of the disturbance in command of seven thousand picked soldiers from Tientsin and Taku. The name of the third general is not known, nor the number of troops he leads. He has come from Manchuria with the soldiers of that district. Of the three generals Sung Ch'ing is the Commander-in-Chief, and his official rank corresponds to Lieut.-General of the Japanese Army, the other two correspond in rank to the Japanese Major-General. Wei is, however, said to be as influential as Sung, inasmuch as his troops are numerous and are believed to be braver than the others. The Chinese army now in Korea is therefore believed to be managed by the three generals acting in concert.

The latest news of the whereabouts of the Chinese troops defeated at Sông-hwan is that given in the *Yiji*. According to this paper, a telegram reached Tokyo from Fusan under date of the 1st instant to the effect that the Chinese fugitive soldiers to the number of about

one thousand appear to be reassembling in the district Sak-nyong. The *Yiji* says that this place is situated midway between Wön-san and Kai-song, and is distant only twenty *ri* from Söul. China appears to be anxious about the defence of its southern coast, and a telegram that reached Tokyo from Shanghai under date of the 20th instant says, according to the *Yiji*, that a squadron of six Chinese war-vessels has just left Woo-sung for the defence of the southern coast.

The latest news about the *Tosa Maru* is that the Yusen Kaisha is negotiating with Viscount Aoki, Japanese Minister to the Court of St. James's, on the matter. The British Government, it is believed, must have forbidden the transfer of the ship to the purchaser owing to a suspicion that she would be used for war-ship purposes, but since the ship is the property of a private firm it is presumed that the Government may be persuaded to allow the vessel to leave. The *Nichi Nichi* says that the vessel was not seized, but that when she put in to Cardiff to coal she was for a time forbidden to proceed, and underwent an official inspection. A message has not, it is said, been received by the company stating that the inspection was at an end and that the ship had been allowed to proceed on her way.

The news that five Japanese soldiers, after a skirmish between two scouting parties were missing, is corrected by the vernacular papers. They say it was not the men that were missing but their horses, which were stolen by Koreans while the party was at dinner. The report of the skirmish with the Chinese is therefore probably fictitious.

The *Nichi Nichi Shimbun* publishes the following telegram from its Moji correspondent, under date of 2.30 p.m. on the 22nd instant:—"A battle was fought in the neighbourhood of the Tai-dong river on the 18th instant, and the Japanese were victorious."

A telegram reached Saseho from a watch-tower in Tsushima that Chinese war-vessels had been sighted cruising in the vicinity. On receipt of this message the *Nichi Nichi* took steps to ascertain its truth, but failed to obtain any confirmation. Our contemporary appears to be equally uncertain about the Moji telegram. Other journals publish the same statements, having evidently obtained them from the same source.

The *Nichi Nichi's* Fusan correspondent has wired as follows, under date of 2.40 p.m. on the 21st instant:—"Chinese troops to the number of about ten thousand have reached Phyöng-yang from An-ju, and by threatening the Governor of the place, have succeeded in levying a contribution of some five thousand *koku* of rice. Two thousand Chinese soldiers have been detached to Po-san-chin, at the mouth of the Tai-dong, to construct forts against an attack by the Japanese Navy. The Chinese troops are busily engaged in collecting provisions from the adjoining districts.

An-ju is a Korean town some 40 miles north of Phyöng-yang, and Po-san-chin is situated on the right bank of the Tai-dong at a distance of about 15 miles from Phyöng-yang.

The same paper received a telegram from Shanghai on the afternoon of the 21st inst., to the effect that the British fleet had removed its headquarters to Chefoo, and that the British and Russian Ministers contemplate a conference at some place not mentioned. This last statement is scarcely intelligible.

The *Shogyo Shimpö* has the following message from Fusan under date of 2.35 p.m. on the 21st instant:—"Two thousand Chinese troops now in Hwang-ju were expected to march to Sö-heung on the 18th instant. The Japanese troops were also expected to proceed to the same place either on the 17th or 18th, and consequently an encounter between the two is imminent."

The *Asahi* also has received similar news from Fusan under date of 3 p.m. on the 21st instant. Its messages says that the van of the Chinese army quartered in Hwang-ju is expected to reach Sö-heung on the 18th instant.

Another message received by the *Asahi* on

the same day from Fusan, is to the effect that the enemy appear to have crossed the Tai-dong, having probably been induced to do so by a feint of retiring on the part of the Japanese. The latter are moving on Phyöng-yang. This news, however, has been considerably mutilated in transmission, so that the precise meaning is not clear. A later message, wired from the same place at 9 a.m. on the 22nd instant, says that six thousand Chinese troops then in Phyöng-yang showed signs of moving southward. This intelligence, which, according to the *Yiji*, reached Tokyo on the 22nd instant, is at variance with the telegrams received by the *Shogyo* and *Asahi* and published above. It denies that the Chinese have made any attempt to cross the Tai-dong river, and represents them as lying inactive in Phyöng-yang. Thus nothing is yet certain about the movements of the two armies beyond the fact that the Chinese have arrived at Phyöng-yang and have pushed a reconnaissance probably as far as Pong-san (or Hon-san), and that the van of the Japanese army marched from Söul toward Phyöng-yang about the 7th instant. This latter point is placed beyond dispute by the latest correspondence sent to the *Nichi Nichi*, whose war correspondent accompanied the van and whose letter conveys news up to the 12th instant, when the van reached Kai-phyöng, a town situated about 42 miles north of Söul. The van is under the command of Majors Ichito and Muraki. The same correspondent says that a Japanese reconnoitring party came into collision at Chung-hwa with a force of Chinese cavalry and infantry, that several Japanese soldiers were subsequently found missing, and that the Koreans in the neighbourhood of Phyöng-yang are friendly to the Chinese and hostile to the Japanese, despite the exhortations of a messenger despatched from the Korean Court to those districts a few days before the departure of the van. He adds that a portion of the advanced guard had already pushed beyond Kai-phyöng toward Phyöng-yang.

The *Asahi* reports that, according to intelligence sent to a certain quarter in Tokyo, the two armies were separated by an interval of less than 50 miles on the 22nd instant, and that their encounter would probably take place in two or three days.

The metropolitan papers allege that five Koreans, who were sentenced to capital punishment for having cut the Japanese military telegraph had their sentences commuted owing to the intercession of the Japanese Minister.

The *Asahi* has a message from Fusan, to the effect that Ming Yei-shun is in Phyöng-yang busily employed levying contributions on behalf of the Chinese troops. The same journal speaks of the Chinese that escaped from the engagement at Ya-shan. According to the information of an eye-witness, General Yeh marched toward Phyöng-yang from Kong-ju on the 9th instant, at the head of some nine hundred of these fugitives, and his troops were in good condition, giving no indication of having sustained a defeat. A Russian officer is said to have told some one in Nagasaki that six Chinese war-vessels have proceeded toward Louchoo. A similar message has reached the Authorities from Nagasaki obtained from the same source, but the vernacular papers do not place any confidence in it.

The Söul correspondent of the *Nichi Nichi* writes that the new currency Regulations were sanctioned by the King on the 11th instant, and promulgated the next day. It is further alleged that about 230,000 *yen* in coin minted some time ago but hitherto kept in store at Chemulpho, will be issued, and in accordance with Art. 7 of the Regulations, Japanese silver coins will circulate side by side with Korean.

At present there is a calm over the sea of Korean affairs, no news of importance having reached the capital. A telegram is said to have come to the Authorities from Fusan under date of 11 a.m. of the 23rd instant, to the effect that the military telegraph had become unserviceable from 4 a.m. of the 23rd inst. at a point to the west of Sang-ju. Another message says that

the military wires became unfit for service from the morning of the 23rd at a place to the north of I-dong.

The news published by the *Nichi Nichi* that a battle was fought near the Tai-dong river on the 18th instant, is now retracted by that paper as unfounded.

The *Yiji* has received the following messages from its Bakan correspondent:—Major Nishiyama returned by the *Tatsuta Maru* this morning (23rd) from the Japanese headquarters in Söul. He says that Chinese troops to the number of about four thousand are in Phyöng-yang, but up to the 19th, when he left Söul, not so much as a reconnoitring party had crossed the Tai-dong river. It follows that no battle has yet been fought.

At a certain place about 37 miles from Söul, a party of Chinese soldiers who had escaped A-San, disguised in Korean costume, suddenly attacked a Japanese reconnoitring party.

On about the 18th or 19th inst., a number of Koreans cut the wires of the military telegraph throughout a length of 12 miles, at a place to the west of Taiku. The district officials captured four of the men and put three of them to death.

A detachment of 3,500 Chinese soldiers staying in the neighbourhood of Tai-rin left there for Korea by land early this month. Some 4,000 Chinese soldiers staying at Ryo-chun followed them on the 14th inst. A large quantity of powder has been shipped in a steamer at Tsong-cheng for Korea.

The total number of Chinese soldiers who have arrived in the neighbourhood of Phyöng-yang is over fourteen thousand. There are in addition 200 or 300 Korean soldiers. Another detachment of 2,000 Chinese troops has arrived at Ka-san, and they are likely to proceed to Phyöng-yang.

THE WAR LOAN.

In accordance with the Imperial Ordinance recently published, the Government has advertised the sale of War Bonds (*Gunji Kosai*) to the amount of 30 million *yen*. The denomination of the Bonds is to be 100 *yen*, and they will be allotted to the highest bidders. They are to bear interest at the rate of 5 per cent. Applications should be sent in from the 10th to the 13th of September, and a deposit of 10 *yen* per Bond is required. The results of the subscriptions will be announced by the Minister of State for Finance on the 20th of September. The 10 *yen* originally deposited will be regarded as the first call. The second, also of 10 *yen*, must be made between the 16th and the 31st of October; the third, of 10 *yen* between the 16th and 30th of November; the fifth of 10 *yen*, between the 16th and 28th of February, 1885; and the remaining installments, all of the same amount, in consecutive months up to the 30th of June.

The terms upon which this loan ought to be issued have been under public discussion for the past few days. Some of the vernacular papers were disposed to advocate interest at the rate of 6 per cent., but the bankers of Tokyo and Yokohama held a meeting in the Tokyo Clearing House on the 16th instant, and decided unanimously to recommend 5 per cent. They saw no reason to go beyond the market rate, since there is no emergency of any kind, the war chest being already well filled and the people only too anxious to contribute. They were also of the opinion that the Bonds should be of low denominations, so as to come within reach of small capitalists, but the Government has not adopted the latter suggestion, being probably persuaded that anybody unable to invest 100 *yen* had better refrain altogether.

Some man-of-war's men ashore at Gibraltar for the day had a try at donkey-riding. Seeing one sailor sitting very far back on his animal, an officer called out to him, "Jack, why don't you get up more amidships?" "Well, sir," cried Jack, "I'm in the front command I've ever had, and it's hard if I can't ride on the quarter-deck."

THE BRITISH REPRESENTATIVE'S AUDIENCE.

His Excellency the Hon. P. Le Poer Trench was received on Thursday in audience by the Emperor for the purpose of presenting his credentials. Mr. Trench left the Legation at 9.30 a.m., accompanied by Mr. R. Paget and Mr. J. H. Longford, and by His Excellency Marquis Kido, of the Foreign Affairs Section in the Imperial Household Department, who had come on the Sovereign's behalf to escort the Minister. Mr. Trench spoke as follows in presenting his credentials:—

It is with feelings of sincere satisfaction that I have the honour of approaching your Imperial Majesty, to present the Letter by which Her Majesty the Queen and Empress has been graciously pleased to accredit me to Your Imperial Majesty as Her Envoy Extraordinary and Minister Plenipotentiary to Your Imperial Majesty's Court.

I have already had the advantage of a residence of six years in Your Imperial Majesty's Dominions and of making many friends among Your Imperial Majesty's subjects, and the opportunity I now have of renewing both my residence and friendship is to me a source of the deepest gratification.

I venture to express the hope that I may be an instrument for strengthening the relations of amity and of peaceful commercial intercourse which already happily exist between Japan and Great Britain, and which it must always be the desire of both nations to render as intimate as possible.

It now only remains for me to assure Your Imperial Majesty that it is my earnest desire that in the discharge of the duties which Her Majesty has been graciously pleased to intrust to me, I may earn the confidence and regard of Your Imperial Majesty and of Your Ministers.

His Majesty the Emperor replied as follows:—

I am much gratified at receiving the Letter of Her Majesty the Queen of England appointing you Envoy Extraordinary and Minister Plenipotentiary in Japan. By your Excellency's former sojourn in Japan I am already well acquainted with Your Excellency, and I am convinced that you will thoroughly acquit yourself of the Mission entrusted to you in strengthening the good relations that happily exist.

I trust Her Majesty the Queen is in good health.

I am much gratified that the new Treaty between England and Japan has been concluded, and I trust Your Excellency will promote it by your good offices.

The Letter of Her Majesty the Queen informing me of the birth of a Prince, Son of the Duke of York, has given me much pleasure, and I offer my sincere congratulations.

I am glad to see Your Excellency in good health, and I shall have the pleasure of seeing you again.

THE SITUATION IN KOREA.

Correspondence published by the *Nichi Nichi Shimbun* from its special correspondent, who is now with the van of the Japanese army, confirms our general view of the situation in Korea, as stated in these columns on the 23rd instant. We there expressed the opinion that a decisive engagement was unlikely to take place before the 28th or 29th instant, our reasons being that the Japanese army could scarcely have completed its preparations for a general advance before the 12th or 13th instant, and that, leaving Sŏul on the 14th instant and moving at the rate of 10 miles a day, it could not be in a position to assault the Chinese within their entrenchments at Phŏng-yang—which is 135 miles from Sŏul—before the 29th. The *Nichi Nichi's* correspondent, whose intelligence is conclusive as to dates since he is actually with the van of the army, says that the advance guard set out from Sŏul on the 7th instant. Hence it appears that the Japanese have been acting with even more celerity than we imagined. The expedition sent against A-San did not return to Sŏul until the 4th instant, and the reinforcements without which an advance northward in sufficient force could not be made, were embarked only at the close of July. Yet on August 7th the van of the army marched out of Sŏul. That was remarkably quick work. On the other hand, this advanced guard did not reach Kai-phŏng, 40 miles from Sŏul, until the 12th instant, from which we infer that its rate of advance was only from 7 to 8 miles per diem. We further learn that the two armies were still

separated by an interval of about 50 miles on the 22nd instant, so that 15 days must have been occupied by the Japanese in covering 85 miles—the Chinese position at Phŏng-yang being 135 miles from Sŏul. This gives us a new rate, less than 6 miles daily. All the country to the north of Sŏul is exceedingly unfavourable for the transport of troops, roads being very scarce and their condition terrible. We are not surprised, therefore, to learn that the advance has been at a speed of only 6 miles daily. If, then, the armies were separated by a distance of 50 miles on the 22nd, our calculation that a general engagement could not take place before the 29th seems correct. The error, if there be any, is on the side of too sanguine an estimate. There may, of course, be collisions at an earlier date between advanced guards or reconnoitering parties. Something of the kind seems to have already taken place. But, assuming that the Chinese are determined to make a stand at Phŏng-yang, the general attack upon that place can scarcely be delivered before the 29th or 30th. There is, however, another contingency: if the Chinese outposts are severely handled, the main body may not wait to be attacked, but may fall back and even re-cross the frontier into Manchuria. It is a Chinese habit to act in such a fashion, and we shall not be surprised if they obey precedent in this instance. Their trouble, in the event of a hasty retreat, would be the difficulty of obtaining supplies. We are inclined to think that they look to a water basis *via* the Tai-dong river, but if the Tai-dong can bring supplies, it can also bring Japanese gunboats, and the latter are much more likely to appear upon the scene than the former.

FAREWELL DINNER AT THE ROKUMEIKAN.

A farewell dinner was given on the evening of the 21st instant in the Rokumeikan, by the German members of the Tokyo Club, to Lieut.-Colonel Baron von Grutschreiber, who for some years has held the important post of Adviser to the Imperial Japanese War Department, and Count Wedel, Military Attaché of the Imperial German Legation. Both of these gentlemen are leaving Tokyo, the former on the completion of a term of service that has placed Japan under great obligations to him, the latter to conclude the preliminaries for permanent entry into the Diplomatic Service of his country. The attendance at the dinner was of course less than it would have been in the cool season when Tokyo is not denuded of its foreign residents, but all the Germans present in the capital assisted at the demonstration, and atoned for the comparative paucity of their numbers by the heartiness of the reception accorded to their guests. Among those who sat down we may mention Count Quadt, Secretary of the German Legation; Dr. Schmidt-Leda, German Consul-General; Mr. Kallen, Vice-Consul; and Dr. H. Weipert. Dr. Baelz, who occupied the chair, proposed the toasts of the evening in a very happy speech, and Baron von Grutschreiber replied in well chosen and much applauded terms. The room was gaily decorated and the entertainment was marked by all the heartiness and geniality that the Germans are such adepts in imparting to an affair of the kind.

The Austro-Hungarian *Chargé d'Affaires* in Tokyo, will shortly leave for Shanghai, Tientsin, and Sŏul on official business, and Baron H. von Siebold, Secretary, will take charge of the Legation during his absence.

The Minister of Communications issued on the 23rd inst. a notification to the effect that money orders payable in the following countries and colonies will be transmitted through the British Post Office:—Hawaii, Orange Free State (South Africa), the Republic of South Africa (or Transvaal), Tunis, Constantinople (Turkey), Panama (South America), Smyrna (Turkey), Lawang (North-Western coast of Borneo), Sarawak (Borneo), British Bechuanaland (South Africa), and Mombasa and Lamu (Eastern coast of Africa).—*Official Gazette*.

ARRIVAL OF THE HON. P. LE POER TRENCH.

Her Majesty's Minister to Japan arrived here on Monday morning in the Canadian mail steamer *Empress of India*, and shortly after the vessel was moored several officials from the Legation in Tokyo and H.B.M. Court and Consulate in Yokohama went off to greet His Excellency on board. Later on Mr. Trench came on shore in the steam-pinnace of Her Majesty's ship *Caroline*, under a salute from that vessel in accordance with his rank, and on passing H.M.S. *Redpole*, her Marines, drawn up on deck, presented arms. Mr. Trench was accompanied on shore by Captain Norcock, R.N., and Judge Wilkinson, and on reaching the Hatoba was met by all the principal British residents at present in Yokohama, and many hearty greetings followed. Mr. Trench does not appear to be in quite such good health as when he left Japan nearly five and a half years ago, but this is accounted for by reason of his having suffered from sickness in Mexico, the cause of which was principally climatic, however, and will doubtless disappear after a short residence in Japan. After Mr. Trench had shaken hands with many old friends, a move was made, and the crowd escorted the Minister to H.B.M. Consulate, where a numerous signed address of welcome was to be presented to him.

Mr. John Rickett had been selected to present the Address, which he did shortly after the company had assembled at the Consulate. Mr. Rickett said—Sir, I have been asked to present an address to your Excellency, which has been numerously signed by your countrymen, welcoming you back to Japan and to the exalted position in which you have returned here as Her Majesty's representative. At this time of the year, as you doubtless are aware, many of the residents of Yokohama are up country, otherwise there would have been a still larger gathering present to greet you on this occasion. I now beg your Excellency's permission to read the address.

Mr. Rickett then read the Address as follows:
Yokohama, August 15th, 1894.

To the Honourable P. LE POER TRENCH, H.M. Envoy Extraordinary, Minister Plenipotentiary, and Consul-General, Tokyo.

SIR,—The news of your appointment to the post of British Minister in Japan, in succession to the late Mr. Hugh Fraser, was received by your countrymen here with feelings of great satisfaction.

When you left Japan five years ago, after a lengthened period of service in the British Legation in Tokyo, they took occasion to present you with an address expressing their esteem, and their regret at your departure.

They then entertained the hope that the experience you had acquired in this country might at some future time be utilized by you in a still more responsible position than you had previously filled, and it is therefore now a source of gratification to them to be able to welcome you on your return, and to congratulate you on your appointment to the highest position which an Englishman can hold in this country.

We remain, with sincere esteem and respect, your faithful servants,

[Signatures.]

Mr. Trench, who listened with evident pleasure to the Address, said—Before I refer to the address, I should like to say what great pleasure it affords me to return to this country and to be met here by so many old friends, for to see you all on the Hatoba reminds me of a return home more than to a foreign country. I shall never forget the kindness you showed me and the assistance that you gave me in the discharge of my duties during the time I was *Chargé d'Affaires* in Japan some years ago. In Berlin and in Mexico I did not forget your kindness, and it was always my wish to return to this country. I can tell you that it was with great pleasure that I received a telegram from Lord Kimberley, which stated that he had recommended my appointment as Her Majesty's representative in Japan. When I left Japan you were good enough to present to me an address thanking me for the manner in which

I had looked after your interests whilst Chargé d'Affaires, and if I did at that time carry out my duties to your satisfaction it was largely owing to the support I at all times received from you; and in the future I shall do my utmost—with your assistance—to safeguard the interests of Her Majesty's subjects in this country.

Applause followed the conclusion of Mr. Trench's remarks and the company dispersed.

A STRANGE REPORT.

There is current in Tokyo a singular story. People say that the intended secrecy of the Japanese attack upon Wei-hai-wei was effectually frustrated by the English Admiral. Sir Edmund Fremantle, it is alleged, was in Chemulpho up to a short time before the Japanese squadron left that place on its plucky quest. He met the squadron not many miles from its objective point and saluted it, whereat the Japanese ships, being compelled by courtesy to return the salute, a din was made that warned the Chinese of what was on the tapis. This tale implies some remarkable circumstances. In the first place, Admiral Fremantle is not in the least likely to have done anything of the kind for the simple reason that to salute a squadron of ships almost within sight of their enemy's coast would be the act of a child. In the second place, naval salutes are not fired at sea when ships are under weigh. In the third place, if the salute was fired at all, it must have been fired during darkness, for the Japanese Squadron got up to Wei-hai-wei at dawn, and must therefore have met the English Admiral—if it did really meet him, some time before dawn. Conceive the notion of a British Admiral saluting a squadron at sea under weigh before daylight within a few miles of a fortified harbour which he must have known to be the object of the squadron's attack! Conceive the notion of his saluting any Chinese or Japanese ships at any time within the arena where their mutual encounter signifies an engagement! Never was there a more ridiculous story. Yet we are told that certain folks in Tokyo believe it, and that comments very unfavourable to Admiral Fremantle are made! We did not imagine that any educated people in Tokyo could be so lacking in perception.

THE MARINE COURT IN SHANGHAI.

There are elements of perplexity in the reports published by vernacular newspapers with regard to the finding of a Marine Court said to have been convened in Shanghai to inquire into the loss of the steamer *Kowshing*. It is easy to conceive the holding of such a Court, inasmuch as the finding of the Nagasaki tribunal may not have been legally sufficient for all purposes in China. But what we fail to understand is that a Marine Court should have been asked to formulate any decision with regard to the legality or illegality of the sinking of the *Kowshing*. No issue of that kind ought to have come before such a tribunal. All that it could properly have been asked to determine was whether the master and officers of the ship were in any sense blameworthy on account of her loss. As to whether a Japanese war-vessel had the warrant of international law in firing upon and sinking a British vessel under given circumstances—that is an affair falling within the purview of a totally different tribunal. We are disposed to think that the private and press telegrams said to have been received from Shanghai are misleading. Very likely the Court did determine—as it is said to have done—that since the Chinese troops mutinied and deprived the Captain and officers of all control over the steamer, the latter—*i.e.* the captain and officers—must be wholly exonerated of all blame in connection with her loss. But that does not affect the procedure of the Japanese man-of-war, so far as the Court was concerned, seeing the Court had no competence to pass judgment upon the doings of the *Naniwa*. There is a mistake somewhere.

ENGLISH NEWS.

In the House of Lords, on July 6th, Lord Salisbury introduced a Bill to check the immigration of destitute aliens into this country, and also to give the Government power to expel foreigners who used the asylum of this country to perfect dangerous schemes against other nations. Lord Rosebery would not object to the first part of the proposed Bill, but he dissented from the statement that England was a focus of conspiracy against other States. Lord Salisbury explained that it was to prevent a charge being made against England of willingly harbouring foreign conspirators that he sought to give the Government additional powers.

On this *The Times* comments as follows:—Lord Salisbury's Bill was not received in a very friendly spirit by the Government spokesmen. Possibly they felt that, if the new powers which it confers were really necessary, they ought to have asked for them themselves, and not to have left it to a private member and a political opponent to offer them. Lord Rosebery does not think that the exclusion of destitute aliens is a matter just now of immediate and pressing importance, although he admits that it may become so presently. On the propriety of excluding idiots and insane persons he says nothing. We must remember, however, that the Government, of which he is the nominal head, does not command general confidence among the educated classes of this country. The party wire-pullers may possibly think that the imported idiot will be naturalized in due course, and, if so, will be a safe voter for the Gladstonian candidate.

It is distressing to find the leading English newspaper descending to such ridiculous personalities, and appearing to mistake them for argument.

On July 6th a meeting of those interested in public house reform was held at Grosvenor-house, under the presidency of the Duke of Westminster. Mr. J. Chamberlain, M.P., moved a resolution for the establishment of a public-house reform association. He referred to his own endeavours in 1877 to introduce the Gothenburg system into this country, and he pointed out that one of its features was the granting of fair compensation to every interest involved, and he expressed his conviction that no extensive reform of the licensing system could be successful unless that principle were adopted. The principal element in the success of the system was, he said, that feature by which the seller was deprived of all interest in the sale of liquor.

Commenting on the Colonial Conference at Ottawa, *The Times* writes as follows:—

The problem [that of encouraging trade with our colonies without in any way injuriously affecting our trade with the rest of the world] would be greatly simplified if this country had adhered to the fiscal notions that still dominate the greater part of the commercial world. But our free-trade system, great as are its benefits to ourselves and to the Empire as a whole, leaves us with little means to strike bargains and little power to discriminate in favour of our own colonies.

It is remarkable that Englishmen should have acquiesced as calmly as they have done in arrangements which place them, as regards food, in a precarious and partially dependent position. Every other nation, while willing and anxious to carry on a profitable commerce with the outside world, betrays the most nervous anxiety to remain self-sufficing in an emergency. That feeling is the real strength of Protection. Other nations prefer to pay more for their commodities so long as they know that they cannot be deprived of them altogether by the action of their neighbours. They keep ships as we do, but they like to be independent landed proprietors as well. England is not an independent landed proprietor, but the British Empire may be. By adhering to and developing the Imperial idea, and not in any other way, can we regain that self-sufficing position which United Kingdom has so conspicuously lost. Thanks to modern science, we may make our scattered Empire as compact as any other. The sea does not divide, but rather unites, so long as we take care to remain its mistress. As our Navy is the assurance of our command of the necessities of life in all emergencies, so it constitutes the main guarantee for the independence which our colonies enjoy.

In our naval supremacy must be sought the real bond of Empire and the permanent security for the welfare of the Empire alike at home and beyond the sea."

At Christie's on July 7th, the highest price (£11,000) ever realized by auction for a picture in England was bid by Mr. Charles Wertheimer for Sir Joshua Reynolds's portrait of Lady Betty Delmé and her children. Another portrait by Sir Joshua sold for £7,500.

Several previous expeditions have acquired some knowledge of the natural conditions of Franz Josef Land, and it is confidently expected that game, in the shape of bears, seals, and birds, will be abundant. Accordingly a complete outfit of sporting guns, rifles, harpoons, &c., is being taken. The expedition is, however, fully provisioned for four years with the most highly condensed and thoroughly preserved foods obtainable. Much reliance is placed on the fresh bear and seal meat, expected to be shot, for the prevention of scurvy, but Mr. Jackson also proposes to use port wine as a specific. The use of alcohol and tobacco, which has recently been entirely discarded in Arctic work, is one of the peculiar and probably not unpopular features of the present attempt on the Pole.

The arrangements for travelling include boats for crossing open water. One of aluminium, measuring 18 feet by 5 feet, weighs only 150 lbs., and can carry twenty people; it is made in three sections for convenience of transport, on sledges, and each section will float by itself. A similar copper boat, weighing about 200 lbs., is also carried, and three light wooden Norwegian boats. A fast steam-launch, appropriately named the *Markham*, is expected to be of service if it is found possible to proceed from the base for some distance by sea, or up Austria Sound.

Eighteen sledges of exceptionally light and strong construction, each calculated to carry 1,000 lbs. weight if necessary, are taken; these are to be drawn by Siberian dogs or ponies. There are three collapsible tents, and suits of Samoyed clothing for use in winter, the cumbersome looking garb of these Siberian nomads being considered better adapted for rough work in bad weather than the tighter-fitting costume of the Eskimo pattern. The scientific instruments carried are perhaps the finest that have ever been taken into the far north, the extensive use of aluminium ensuring a lightness and strength never before attained in Arctic exploration.

After landing the exploring party in Franz Josef Land about the end of August, the *Windward* will return to England, if possible, and sail again next year with fresh supplies.

The whole cost of the expedition is estimated at £25,000.

Apropos of the new Lord Coleridge's difficulties, the *Westminster Budget* publishes the following poem:—

THE LATEST PROBLEM IN HEREDITY.

"O my offence is rank,"—Othello.
Kind people who pass, throw a "brown"
And have ruth on my pitiful looks!
I was up in the world; now I'm down;
For no longer I'm plain Mr. Snooks!
What reverses attend upon pride!
I was turning Q.C. and M.P.,
When a next-of-kin suddenly died,
And they made me Lord Snookville, you see!
I'm as poor as a church-dwelling mouse,
I kill time with a (borrowed) cigar;
For they won't let me sit in the House,
And they won't let me work at the bar!
One must beg for the meat and the drink,
Unemployed, one no longer affords;
But to one thing I never will sink—
I'll be d—d if I'll sit in the Lords!

The poem is unquestionably amusing, but still more amusing is the fact that the quotation cleverly distorted by the *Westminster Budget* is not in the play of "Othello." The words:

"Oh my offence is rank, it smells to Heaven,
It hath on it the eldest primal curse,
A brother's murderer"

are in the third scene of the third act of "Hamlet." They are uttered by the King when his conscience has been strongly stirred by witnessing the play.

THE ATTACK UPON WEI-HAI-WEI.

THE action of the Japanese Navy in attacking Wei-hai-wai was decidedly plucky. Its dash and daring offer a striking contrast to the timidity and inaction of the Chinese. For several years past the Middle Kingdom has been spending large sums upon the purchase of powerful men-of-war, and in times of peace the squadrons flying the Dragon flag cut an imposing figure, the ships being in fairly good order, so far as outward appearances are concerned, and being also manoeuvred with sufficient skill. Indeed, on the eve of this struggle, opinions were very freely expressed that China would prove more than a match for Japan on the sea. Some went so far as to allege that the Japanese Navy would not have the slightest chance in an open fight, and one expert, whose dictum deserved all respect, gave it as his verdict that not only did the superiority rest with China in armour, armament, and tonnage, but that her people knew how to manage their ships better than the Japanese. As to this last point probably very few would have been found to endorse it. At all events, there can be no question that if marked advantage in respect of material and equipment constitutes any encouragement to a belligerent, the Chinese Navy ought to have been found not merely willing to accept a conflict but even eager to provoke one. But China has shown a very different spirit. Her one aim seems to be the seclusion of her men-of-war in some inaccessible position where they shall remain unharmed, indeed, though comparatively useless. We say "comparatively" not "totally," because it must be evident that so long as China can keep her fleet intact, Japan's position is uncomfortable. With a powerful squadron lying within easy striking distance, the task of guarding her communications with the Korean peninsula is perpetually onerous, whereas, could she destroy or cripple that squadron, her Navy would be relieved from patrol service, and might at once engage in operations of a character exceedingly hurtful and galling to the Middle Kingdom. Hence China's fleet, even when lying inactive under the guns of Wei-hai-wai or Port Arthur, serves a useful purpose. The policy that keeps it there is not wholly dictated by timidity. Even when anchored beyond the immediate reach of the Japanese cruisers, China's ships act as a kind of moral menace and bulwark. But if a crippling blow delivered by Japan at sea would possess great advantages for this empire, the same consideration applies with palpably greater force in China's case. Were the command of the sea possessed by China, the position of Japan's forces in Korea would become practically untenable. Cut off from their basis of supplies and reinforcement, their annihilation or capitulation would be only a matter of time, and in the

interval the coasts of Japan as well as her merchant marine would lie at China's mercy. It is impossible to conceive a more terrible disaster for this empire than would be entailed in the disabling of her fleet. She labours under the disadvantage of having to carry on a campaign beyond the seas, whereas China is virtually fighting on her own territory so far as military purposes are concerned. If all this brings into stronger salience the craven character of China's belligerent methods at sea, it also imparts an element of more marked daring to the conduct of the Japanese Navy, which, with such large interests at stake, went to seek the Chinese ships under the shelter of their own forts in order to compel them to fight the battle from which they shrink so timidly. The expedition was unsuccessful, so far as concerned its main object. The Japanese failed to discover the whereabouts of the Chinese ships, the latter having apparently retired to some spot even more secluded than Wei-hai-wei. Under the circumstances it may be supposed at first sight that the Japanese squadron should have bombarded Wei-hai-wei and demolished its fortifications. But such a proceeding would have been imprudent. If the Chinese fleet possessed any information of the movements of the Japanese and any dash whatever, it might easily have steamed down to Korea, leaving the Japanese engaged in their task of bombardment, and might have wrought serious mischief in the absence of all effective resistance. We do not think that the Chinese would have essayed any such enterprise, but there is a limit to the reliance reposable in a big enemy's pusillanimity, and the Japanese, we think, would have passed that limit had they stopped to bombard Wei-hai-wei. But the moral effect of their courage and *elan* is not to be underrated. All the laurels rest with them thus far, and if they can only force events so as to drive China from her Fabian position, they will have won prestige of a most solid character.

A PEACE PARTY.

JAPAN wants a peace party just now. It is very inspiring and admirable to see a whole nation stirred as one man by warlike enthusiasm, and ready to afford substantial proof of its mood by putting up great sums of money for military purposes. But such unanimity of fighting sentiment has its dangers. It is only too apt to push the country to some enterprise which, if not actually beyond her resources, would at all events strain them inconveniently. Experience has taught us to dread one thing in Japan above all others—fashion. Let it once become the fashion to do or say anything, and the tide of saying and doing sets immediately with temporarily irresistible force. We have seen some quaint and also some disquieting illustrations of this during the past

twenty-seven years. We have seen the despotism of fashion assert itself in the cause of pigs, of rabbits, of roses, of railways, of orchids, of monuments, and of anti-Government politics. While each of these things was *à la mode*, the people seemed to bow their heads with absolute abandon. No one ventured to be singular. Everyone that could afford to buy a pig, bought one; everyone that had a place for rose culture, procured a rose-tree; everyone that had access to a platform or to the columns of a newspaper, abused the Government. This last fashion was, perhaps, the strangest of all. There must have been some journalists who believed that the statesmen credited with the making of modern Japan were worthy of a measure of credit; some politicians capable of seeing that as between untried men with nothing to recommend them but the vigour of their invective, and men of proved legislative and administrative ability, the choice should lie with the latter. Yet neither in the press nor in parliament did any one venture to declare himself a supporter of the Government. Furtive coöperation was doubtless given, but open alliance seemed to be regarded as actually discreditable. If a man rose in the Diet to traverse the arguments of the Opposition, he took care to qualify his speech by some declaration of general hostility to those in power; and if an editor ventured to endorse any official proceeding, he invariably protected himself by a display of reluctance. We dread this tyranny of fashion at a time like the present. Should it become a national crime to speak of peace, what is to be the end? A time must arrive when Japan will feel tired. War is all very well while the excitement of victory deadens suffering and checks sober thought. But war involves its sacrifices, terrible sacrifices, from the effects of which a nation does not recover for years. Japan will be successful. From the first we never had the smallest doubt of that. She will beat the Chinese wherever she can find them. But what then? She does not want to annex Korea. She does not want to appropriate a portion of China. At least, if she has a shred of prudence—and we believe that she possesses a great deal—she does not want anything of the kind. It is to be desired, therefore, that she should not waste her resources; should not seek to strike a blow out of all proportion to her purpose; should not allow her head to be turned by success; should not alienate the sympathy and good will of Western Powers by any display of aggressive intemperance. It has always to be remembered that Western Powers are deeply interested in this fight. The spectacle is not offered to them *gratis*. Each pays for witnessing it the price of interrupted or crippled trade. They will not interfere so long as Japan keeps reasonably within the limits of her originally declared purpose. But should they find

her fighting merely for lust of fighting or of conquest, they will not sit idle at such a cost. It may seem premature to speak of these things, but in truth we dread lest war become the fashion in Japan, so that success, instead of bringing contentment, may merely fire ambition. A peace party is wanted; that is to say a party prepared to hold the nation back when the time for halting shall have fairly arrived.

SAIKAKU AND THE GENROKU LITERATURE.

IN the early part of last month the Educational Department took a decided and unusual step in prohibiting the further sale or publication of the works of SAIKAKU. And this was all the more remarkable as, only two months before, the Hakubunkwan had been permitted to publish in an expurgated form, a most complete edition of this famous writer: an edition in which it was fondly hoped that all downright indecencies had been left blank or else put in such a form as to be unintelligible. This was, however, by no means the case, for although a number of impurities had undoubtedly been blotted out and their place taken by blanks, still enough remained of the context to fill out the blanks in their entirety. And so, on the whole, the prohibition of the Educational Department is one with which every right-thinking man will coincide, for it is absolutely impossible to avoid the publication of obscenities in giving any part of SAIKAKU'S works to the reading public, great and remarkable writer though he was.

Between the compilation of the old *monogatari*, such as the *Heike* and *Genji*, and the date of the establishment of the TOKUGAWA Shogunate, there was a literary void. Centuries of warfare had so far impoverished the Empire that there was neither time nor inclination for literary effort of high type. What works were published, with few exceptions, were unworthy of incorporation with the national literature. It was the *Sturm und Drang* period of Japan, in which the latent talents of the people found no opportunity for development. But with the long period of peace inaugurated by the regency of IVEYASU there came a different spirit. Great painters and potters, great novelists and dramatists took the place of military geniuses, renowned forgers of keen swords and fencers of unparalleled ability. Within forty years after the death of IVEYASU, the new literature of the Empire was an established fact, and works had appeared that are to-day at once the model and despair of modern writers. IHARA SAIKAKU was the retainer of one of the *daimyos* of lesser rank. SAIKAKU was his most popular pseudonym, his real *na* or given name being unknown, while among his many other *noms de plume* NIMANO is still remembered.

on account of his having earned it by composing no less than twenty-three thousand *hokku* or *haikai* (short poems containing only seventeen syllables) in the course of a single day's sojourn in the picturesque village of Sumiyoshi. For of all *hokku* writers SAIKAKU is undoubtedly the greatest, although very few of his poetical compositions have come down to the present day. Of his many dramas, two or three are said to be still extant, yet whether these were actually written by him or not is a question which modern literati have not been able to decide. CHIKAMATSU, who followed him and is supposed to have taken him for a model, was by far the greater playwright; TAKIZAWA BAKIN, who speaks of SAIKAKU in reverent terms as his master and predecessor, was incomparably his superior as a novelist. Yet Japanese critics love to compare SAIKAKU with CHAUCER; for he was the forerunner of the splendid Genroku literature (*i.e.* the literature written in the period of Genroku in the sixth year of which era SAIKAKU was born), and did for those who followed him very much what CHAUCER accomplished for the writers of the Elizabethan Age. Prior to this period there was no universally popular literature, but SAIKAKU'S works at once achieved popularity, and thus paved the way for men of far greater ability. Yet his sketches and tales are not very interesting, even when viewed with lenient criticism and making full allowance for the immorality of the age. He was more impure than ROCHESTER, more frankly intolerant of straightlaced views than VANBRUGH or WYCHERLY. In many parts we meet with grammatical errors, while etymological and syntactical mistakes are still more numerous. There are not a few passages in SAIKAKU'S works that even the learned fail to understand; yet his style is pithy, fluent, and eminently graceful, with a sort of blank verse undercurrent that sometimes reminds one of WALT WHITMAN. Even to-day he has his imitators; KOYO, one of the best, if not the best, of modern novelists, and ROHAN being ardent admirers of his style.

SAIKAKU'S greatest work was the series of stories entitled *Koshoku Go-nin no Otoko*, or the "Adventures of Five Licentious Men," the title of which is sufficient indication of the contents. Only one perfect copy of this work is now known to exist, and this is kept under lock and key in the Uyeno Library. ZOLA never wrote in a more realistic style; the adventures of the *Chevalier de Faublas* are highly moral when contrasted with this book. Yet, SAIKAKU'S admirers, while admitting that his writings are essentially impure, contend that it was not his intention to inculcate immoral ideas or tendencies; that he wrote novelettes of demimondaine adventure simply to show that all love is nothing; that he unconsciously touched on impure matters in

order to preach the deplorable results of impure love. This is hypercriticism. SAIKAKU wrote to be popular. His was an age in many points resembling that which followed the restoration of the STUARTS. The whole tendency was one of perverted morality, and SAIKAKU wrote in keeping with his surroundings. Far juster is the verdict of BAKIN, who says that the novelist simply portrayed the daily life of his age, and added to his pen-pictures the spice of wit and the grace of poetic expression.

AMERICAN NATURALIZATION AND THE JAPANESE.

THE decision of Judge COLT, in the lowest United States Federal Court, at Boston, that Japanese are not eligible to naturalization in that country is shown by his opinion (which we have already published in full) to rest upon a single and direct issue, viz., the interpretation of the term "white" in the Naturalization Act. Remembering, on the one hand, that the judge was thus strictly limited in his task, and on the other that there was still room left him for much discretion, we wish to consider here the grounds of his decision and their validity.

The opinion may be reduced to two main propositions: I., the terms of the statute will of themselves in their natural interpretation exclude the Japanese; II., in any case, the Congressional debates show that the Japanese were intended to be excluded. The first main proposition, again, rests on three successive propositions: (1.) the race-stocks of the world are to be distinguished according to the general colour-quality of each stock taken as a whole; one of these being known as the yellow race, variously designated by Judge COLT as "Mongoloid," "Mongolian," "Asiatic;" (2.) the Japanese fall under this category of "Mongolian," etc. It is these propositions that must be examined.

I. (1).—What must be pointed out is that, for the purposes of applying the Naturalization Act, the term "white" cannot be systematically applied on any such general theory as that adopted by the learned judge, or on any other general theory; that it is in fact thoroughly inefficient as to the basis of distinction, and that all such general theories must be disregarded in applying it. It will be seen on reflection that "white" may here be interpreted on one of three lines: (a) that it adopts literally a colour-quality as the test; (b) that it designates the people of that original race-stock known as the "white" or Aryan race; or (c) that it applies to the European people and their colonial progeny.

Now (a) the national-stocks of northern and southern Europe differ so decidedly in general colour that the latter cannot in any ordinary sense be termed "white," but only in contrast with the African negro. The original from

Semites, the Balkan peoples, the Greeks, the Italians, and the Hispano-Portuguese in Europe and in Latin-America. In the very classification of Professor HUXLEY, quoted by Judge COLT, these peoples are termed "melanochoic" dark-coloured, the words "melano" and "African" both meaning "black" in the vernacular. If, then, these peoples are to be termed "white" by contrast, it follows that others showing the same or a greater contrast must be included, whether European or not, whether Aryan or not. These are the Hindus, the Arabs, and the Japanese. If a "white" colour is the criterion, one of two courses must be followed—either the first and larger group must be refused naturalization or the second group must be admitted. It is useless to urge that the general complexion of vast groups only is to be regarded, and the distinction between northern and southern Europe thus disappears. The dilemma is inevitable; this marked class of "melanochoics" are either "whites" or not; if they are not, they are ineligible; if they are, then they carry with them into citizenship such peoples as the Hindus and the Japanese.

(b) But, it will be answered, the statutory "white" is not literally the colour white, in the sense that every nation that can be called "white" is to be included; it is a popular term for the "white" or Aryan race and its descendants, and the canon of interpretation must so limit it. As to this, the Aryan race went southeast as well as west. If it includes as eligible the Slavs, Celts, Italics, Greeks, Germans, and Scandinavians, whose eligibility to naturalization is unquestioned, yet it also includes the Afghans, Persians, and Hindus, whose eligibility can hardly be said to be conceded. On the other hand, it excludes the Hungarians, whose name commemorates their Tartar origin, as well as much of the European population subject to the Tsar of RUSSIA (in particular the distinct community forming the province of Finland), natives of the Turkish communities in Europe, and perhaps the population of mixed blood in Latin America,—all of these being persons about whom there has apparently hitherto been no doubt of eligibility. The disposition of the Semitic peoples, especially the Hebrews, caps the climax with the wholesale exclusion, on the supposed interpretation of a race whose industrious works are found in all the States of the Union. Such consequences oblige us to say that this interpretation of the statute is difficult, if not absurd.

(c) That by "white" is meant the peoples domiciled in Europe and their colonial offshoots can hardly be accepted in view of its consequences, the exclusion of the Armenians (one of the longest known Aryan populations, white as well as Christian, and represented in the United States by hundreds of respectable citizens).

as well as of all the Semitic peoples except the European Hebrews, none of whom, it is believed, have ever been refused citizenship. On the whole then, we are reduced to conclude that the systematic application of the term "white" is attended with the greatest difficulty, but that by any interpretation which does not involve inconsistency with conceded principles the Japanese must be allowed to be covered by the term.

II., (2).—There is, however, one possible loophole, an argument which may be expressed as follows:—"The term 'white,' as you have said above, must be held to admit (if taken in its literal sense) people of dark or olive-skins, like the southern Europeans; but it does not follow that all who are not black may be admitted, because there is admitted to be a so-called 'yellow' complexion, which is not black and yet also is not white, and if the Japanese belong to this class, then they may still be excluded." This brings us to the question of the Japanese race, and the situation may be put thus:—Here is a people who, so far as complexion goes, could pass for Bulgarians or Spaniards in those countries, and are therefore "white" enough to satisfy the statute; many parts of their population could also be made to pass in a "yellow" nation, as the Tartars; their colour therefore being not thoroughly decisive, shall their ethnological history be made to decide? One may well argue that this is a case if there ever was one, for liberal interpretation of the statute; but the argument from ethnology ought nevertheless to be met, as a similar question is likely to arise under the Chinese Exclusion Act. The question, then, is whether the Japanese are a Mongolian race? We here meet first that persistent notion of the good people of the Occident that the Japanese are in some way the brothers or the scions of the Chinese. Of course it need hardly be said here that racially the Japanese have nothing whatever to do with the Chinese stock as far back as history can tell us anything. The original and main Chinese stock goes back with the Egyptians and the early Chaldeans or Accads into the as yet unknown dates of the past. Their Tartar or Mongolian conquerors of three centuries ago are, however, very well known; they are new in time, much newer than their relatives who invaded Europe so often in the first few centuries after CHRIST but traceable with the greatest ease. Now as to the Japanese, the thing to note is (1) that ethnically there is no known connection in historical times between themselves and the Chinese proper, while (2) they were settled in Japan at least five and probably ten centuries before the early European invasions of the Huns and their relatives. In other words, (1) using "Mongolian" in its popular American but corrupt sense of "Chinese" meaning (the people of China) whatever, and (2) the Japanese are not "Mongolian" (a

using "Mongoloid" in the sense of "those peoples now known as "Mongols," with their existing relatives the Manchurians, Tartars, Kurds, etc., the Japanese have historically nothing to do with them or with their ancestors as far back as the Christian era reaches. The connection, if any, can only be expressed by that broadest word "Turanian," which includes such early stocks as the Accads, and Chaldeans, Chinese, Esquimaux, and Malays, in one common name of the loosest significance. In just what proportions these stocks supplied the original Japanese population the investigators are not agreed. Perhaps the most plausible opinion is that (1) the Yemishii, a race akin to the Ainu and the Kamskatkans, formed a conquered slave population; (2) the first invaders and conquerors were a very early Turanian stock, coming from the West through Korea and forming the Izumo dynasty (not Chinese by any possibility, because they brought nothing of the culture then existing in China proper); (3) the next and last stock, under the so-called Emperor JIMMU, came from Malay regions and obtained the general mastery over the others. Now all these elements are Turanian, but it is impossible to apply to them the term "Mongoloid" in any sense in which that word can correctly be used.

The result is that *first*, the Japanese nation has racially nothing to do with the Chinese Empire and its inhabitants by virtue of any connection within historical times; and *second*, that the Japanese stock is Turanian only in the sense of being one of the earliest offshoots of that vast stock in a period not yet exactly determined. Standing thus near the dividing-line of great race-stocks, and having as good a claim in colour to be termed "white" as the Southern European and the Semitic peoples, and having to-day greater affinities with them in culture and progress than with any other Asiatic people, it would seem that the general limiting clause of the statute should, in such a doubtful case, be construed in the direction dictated by American national sympathy and honour.

II. Nevertheless, all this is naught if it appear that in the Congressional debates of 1870, when the limitation was practically re-enacted, direct reference was meant to the Japanese people. But nothing could be further from the facts than this assertion of Judge COLT'S. In the desultory but extended debate, occupying parts of over 50 pages of the *Congressional Globe*, upon Mr. SUMNER'S motion to strike out the word "white," the sole opposing influence was the fear of Chinese immigration, then first threatening the United States. The opposition, led by Senators STEWART of Nevada and WILLIAMS of Oregon, had no other thought whatever. Beyond two casual references to "Hottentots" and the like, there is

nothing to indicate opposition to any but the Chinese. This is the whole burden of the numerous and lengthy speeches. Judge COLT'S words, "the Chinese (and therefore the Japanese)" show how pernicious is the popular notion that the Japanese are similar to or a part of the Chinese. It led him to make an interpretation of these debates for which there is absolutely no foundation. The legislators had in mind none but the Chinese, and there can be no doubt at all that but for the Pacific Coast antagonism to the Chinese Mr. SUMNER'S amendment would have succeeded ultimately (as indeed it did at one stage of the debate). The Japanese treaties had then been 15 years in force, and it seems certain that if there had been any fear of their immigration some reference to their people would have been made.

We are left therefore without any aid from these debates, except that we know that the Japanese were not aimed at in the re-enactment of the limitation; and we are still entitled to claim that the Japanese should have the benefit of the doubt in the interpretation of the statute.

Whatever the result be, it seems clear that the statute as it stands is incapable of systematic application with satisfactory results. The true course is to avoid broad phrases, and to declare specific nationalities to be eligible for naturalization. The latest advices are that Dr. EVERETT, Congressman from Massachusetts, has introduced a bill making Japanese eligible, and this indicates the method that will probably hereafter be followed.

THE DELAY IN KOREA.

THE fact that no decisive news is received from Korea begins to excite comment. According to the latest intelligence, some of the Chinese forces that have assembled at Phyöng-yang (Jap. Hei-jo) crossed the Tai-dong (Dai-do) river on the 19th instant and took up positions at Hong-san and An-ak, two places separated by at interval of about 15 miles (English). Hong-san is a town on the main road leading northward from Söul, and its distance from the latter city is about 100 miles (English). Judging from Japanese military maps, the place possesses no special topographical advantages for purposes of defence, being situated in a plain with hills behind it. An-ak, however, is protected in the rear by the river Tai-dong, on the east by a tributary of that river, and on the west by mountains. It lies within easy reach of the sea-coast. There appears to be a well founded doubt whether the main body of the Chinese army has advanced to these places. The view taken by the Japanese press is that the forces at Phyöng-yang are fortifying that place with the intention of making a stand there, and the troops sent across the Tai-dong to Hong-san and An-ak are

merely outposts. We find it a little difficult to accept that idea, for Hong-san is fully 35 miles (English) from Phyöng-yang, and no one ever heard of an army having its outposts at such a distance from the main position. Another hypothesis is that the Chinese, not being furnished with any organized commissariat, are compelled to levy contributions on a very large district, and that their forces are consequently much scattered. Of course if that supposition be correct, the Japanese Generals may move with all deliberation, since they have an ally that must ultimately drive their foe back with far more certainty than rifles and cannons offer. But where are the Japanese Generals, and when did the Japanese army commence its northward advance from Söul? These are questions that have not yet received any public answer. Let us see if we possess any data for forming a conclusion. We know that the Japanese force despatched to attack A-san left Söul on the 25th of July and returned thither on August 4th having accomplished its mission. That is to say, in 11 days it marched a told distance of 126 miles, fought one battle, and demolished some fortifications. We may assume that the troops were 9 days actually on the march, and that they therefore moved at the rate of 14 miles a day. But their number was comparatively small. In the case of the much larger army sent northward from Söul, we can not reckon on an average rate of advance faster than about 10 miles *per diem*, unless some exceptional reasons counselled speed, and there were apparently no such reasons. Now it was not till the 30th of July that Japan had embarked forces sufficiently large to undertake a campaign against the armies said to have poured from China into northern Korea. These forces can not have assembled in Söul before the 5th or 6th of August, and if full preparation for a general advance from that city were completed by the 12th or 13th instant, it was remarkably prompt work. Let us assume that the start from Söul was made on the 14th instant. Then, on the hypothesis of 10 miles *per diem*, 90 miles would have been covered by the evening of the 22nd, and the army would have been within a day's march of the Chinese outposts at Hong-san and An-ak, and within four or five days' march of the chief position at Phyöng-yang. A full day, however, must be allowed for the crossing of the Tai-dong, and yet another day for rest before going into action. Thus, finally, the collision may be expected to take place on the 29th. Of course it is within the competence of troops to move much more rapidly under favourable circumstances. But the circumstances are not favourable in Korea. They are emphatically unfavourable. We shall be surprised if intelligence of a fight on a large scale reaches Tokyo before the closing days of this month, unless, indeed, the

supposition that Phyöng-yang has been selected by the Chinese as the field of battle prove erroneous. If, instead of waiting there, they push steadily southward, the two armies should be within striking distance to-day. That seems to be the forecast of the vernacular press. But it is not the custom with Chinese armies to exhibit steadily progressive tendencies when a strong enemy is in their front, and we incline to the belief that the crisis will be deferred longer than our Japanese contemporaries appear to think.

We have spoken here of the Chinese army, but truly it is difficult to know of what that army consists. According to Tientsin and Shanghai accounts, there is the Kirin corps, numbering some thirty thousand, which has moved into Korea overland; and there is the Peiyang division of about twenty thousand, which has been transported to the peninsula by sea. But whether there figures are worthy of credence we do not pretend to decide. At all events it seems pretty certain that China is putting forth whatever strength of men and arms she can muster speedily, and as the two empires fight under tolerably equal conditions, the issue of this first campaign will definitely decide their respective military merits. It is not staying power but ability to strike quickly and effectively that constitutes the standard of fighting excellence now-a-days.

MR. BALFOUR ON THE JAPANESE JUDICIARY.

MR. F. H. BALFOUR laboured under an evident disadvantage in the compilation of the clever and bright essay read by him at the last meeting of the Japan Society. He set himself the difficult task of discussing a great many subjects in a very few words. Under such conditions some of the subjects are bound to be treated superficially if not unjustly. That is how the Japanese Judiciary fared at Mr. BALFOUR'S hands. Any one listening to his address, or reading it as it has been reported, must inevitably conclude that Judges in Japan are appointed without any real regard to their qualifications, and that the results of such an ill-directed system are frequent miscarriages of justice. "In Japan it often happens," says Mr. BALFOUR, "that a young man virtually serves his apprenticeship to the law by sitting for three or four years upon the Bench; and when he has distinguished himself by a sufficient number of vagaries in the way of judgments which are usually reversed on appeal, he resigns his post and appears as a duly qualified barrister." Now among all the Japanese topics selected for criticism by foreign writers there is not one, perhaps, concerning which they are more thoroughly ignorant than the Japanese Judiciary. About the working of the Judiciary they are without any of the information accessible to inquirers in

Europe or America. As yet the press of this country has not elaborated any efficient system of reporting and publishing the proceedings of Courts of Law. There are, it is true, one or two periodicals containing brief digests of important cases and of the decisions rendered. But even if these were legible to ordinary foreigners, they would be insufficient, and as a matter of fact they quite illegible, being written in ideographs that convey no meaning to any except the earnest student. When, therefore, Mr. BALFOUR sat down to pen a succinct *résumé* of the Japanese Judiciary and its qualifications, he was obliged to depend upon hearsay for his materials, and hearsay is frequently a deceptive guide. We have often observed, too, that the old rule, *omne ignotum pro magnifico*, is reversed where Japanese affairs are in question. Whatever is unknown to foreign observers in Japan usually receives a very bad character. The Judiciary is conspicuously unfortunate. Glib critics have condemned it in the most unmeasured terms, but almost invariably upon the strength of evidence that would not bear a moment's careful analysis. We do not say that Mr. BALFOUR is a glib critic. On the contrary, we deem his opinions in general worthy of all respect. But what is this he tells us about Japanese Judges? That "it often happens that a young man virtually serves his apprenticeship to the law by sitting for three or four years upon the Bench." That is a surprising statement. It implies distinctly that men of no legal training are often raised to the Bench, and that they make the acquaintance of the law by administering it. Has not Mr. BALFOUR heard that the qualifications of a Judge in Japan include several years of probationary service in the Law Courts after having successfully passed an examination to test his knowledge of law? It can not be truly said that a man who has satisfied those conditions "serves his apprenticeship to the law by sitting on the Bench." And Mr. BALFOUR intensifies the unfavourable impression conveyed by his misleading dictum, for he adds:—"when he has distinguished himself by a sufficient number of vagaries in the way of Judgments which are usually reversed on appeal, he resigns his post and appears as a duly qualified barrister." One could only conclude from such an assertion that erroneous Judgments, reversed on appeal, are a frequent experience in Japan, and that the resignation of an ill-trained Judge for the purpose of becoming a practising barrister is a common occurrence. Neither proposition is consistent with the facts. The Judgments of Japanese Courts of First Instance are not reversed on appeal in greater proportion than the Judgments of Law Courts in Europe or America, and instances of Judges resigning in order to practise as barristers are rare. Moreover, it so happens that such resignations—few as they are—have been made chiefly by

men who had distinguished themselves on the Bench, but who considered the rewards of a judicial career insufficient. There, in truth, lies the chief blemish of the Japanese system, and we are entirely at one with Mr. BALFOUR when he points it out. But in endorsing his opinion we have to make the distinct reservation that we speak from an English point of view. A seat on the Bench in Japan does not offer, either as to social position or as to emoluments, such inducements as are calculated to attract or to retain men of sterling merit. This country can never hope to have Judges equal to those of England until the status of her Bench is greatly raised, and until the pecuniary reward of a seat upon it is very largely increased. But Japan is not singular in that respect. If her system errs, it errs in company with the systems of the most highly civilized nations of Europe. These, however, are questions apart. They certainly justify some of the strictures uttered by Mr. BALFOUR as an Englishman, but they do not justify the unwarrantably harsh inferences suggested by his general survey of the Japanese Judiciary.

THE PRIZE COURTS.

IMPERIAL ORDINANCE.

We hereby give Our Sanction to the Prize Examination Regulations and order the same to be promulgated.

[His Imperial Majesty's Sign-manual.]
(Privy Seal.)

Dated August 20th of the 27th year of Meiji.
Countersigned.

COUNT ITO HIROBUMI,
Minister President of State;
COUNT SAIGO TSUKUMICHI,
Minister for the Navy;
MUTSU MUNEMITSU,
Minister for Foreign Affairs.

IMPERIAL ORDINANCE, NO. CXLIX.

PRIZE EXAMINATION REGULATIONS.

CHAPTER I.—ORGANIZATION AND COMPETENCE OF PRIZE COURT AND HIGHER PRIZE COURT.

Art. I.—A prize affair shall be adjudged in the first instance in a Prize Court and in the second instance in the Higher Prize Court.

Art. II.—In a Prize Court one Chief Judge and six Assistant Judges shall be appointed.

The Chief Judge shall be a judge of a Court of Appeal.

Of the Assistant Judges one shall be a Naval Officer, two Judges of Courts, one a legal expert of the Navy, one a Councillor of the Legislative Bureau, and one either a Councillor or Secretary of the Foreign Department.

Art. III.—In the Higher Prize Court one Chief Judge and eight Assistant Judges shall be appointed.

The Chief Judge shall be a Privy Councillor.

Of the Assistant Judges one shall be a Privy Councillor, two Admirals, three Judges of the Supreme Court, one the Head of the Legislative Bureau, and one the Head of the Political Bureau of the Foreign Department.

Art. IV.—The Chief Judges of a Prize Court and of the Higher Prize Court shall superintend the affairs of the respective courts. When incapacitated from the discharge of their official duties they shall appoint assistant judges of the respective offices to take their places.

Art. V.—Two Procurators shall be appointed in both a Prize Court and the Higher Prize Court.

The Procurators of the Prize Court shall be Public Procurators and those of the Higher Prize Court shall be Higher Executive officials.

Art. VI.—The Chief Judges, Assistant Judges, and Procurators of a Prize Court and of the Higher Prize Court shall be appointed by the Minister President of State with the sanction of the Emperor.

Art. VII.—Clerks shall be appointed in a Prize Court and in the Higher Prize Court.

shall be of *hannin* rank and shall be appointed by the Heads of the respective Offices.

Art. VIII.—For the judgment of a Prize Court the joint deliberation of not less than five members, of whom the Chief Judge shall be one, shall be required, while for that of the Higher Prize Court that of the Chief Judge and not less than six of the Assistant Judges shall be required.

Art. IX.—The opening and the closing of a Prize Court shall be determined by express Imperial Ordinances. The Higher Prize Court shall be established in Tokyo, while the situation of the Prize Courts shall be determined by Imperial Ordinance.

CHAPTER II.—PROCESS OF EXAMINATION AND JUDGMENT IN PRIZES.

Art. X.—The commander of a war-ship that has captured a prize shall take the vessel to the harbour where a Prize Court is situated, or shall make one of his officers take charge of the prize and take it to that harbour, where a written statement bearing on the case shall be forwarded at once to the Court.

In the written statement the cause of the capture and any other facts tending to legalize the proceeding shall be set forth, and books and documents received from the captain or crew of the ship discovered in it shall be forwarded at the same time.

Art. XI.—When the Chief Judge of a Prize Court has received the written statement described in the preceding article, one of the Assistant Judges shall be appointed to take charge of the particular case.

The Judge commissioned to take charge of the particular case shall proceed at once to open the documents in the presence of the commander or his deputy and the captain of the captured vessel.

Art. XII.—The Judge commissioned to take charge of the particular case shall proceed to hear the statements which the captain and the crew of the captured ship have to make, and, when thought necessary, the statements of the vessel that has effected the capture and those of the passengers of the captured ship. Notes of these statements shall be made by the clerks.

Art. XIII.—In case the commissioned Judge has completed investigations necessary to decide whether the captured vessel and (or) cargo are a lawful prize or must be set at liberty, he shall embody the result of his investigations in documents, and, together with the written statement given in Art. X. and the documents accompanying it, shall forward them to the Procurators of the Prize Court.

Art. XIV.—The Procurators shall draw up documents embodying their views on the judgment and shall forward them to the Court, together with the documents sent in connexion with the case.

In case the Procurators deem it necessary in drawing up documents embodying their views, they may ask the commissioned Judge to carry out further inquiries into certain specified points.

Art. XV.—In case the Procurators urge in their documents the instant liberation of the captured vessel and (or) cargo and in case this is deemed proper by the Court, the latter should draw up a decision for instant liberation, and shall forward it to the Procurators.

Art. XVI.—In case the Procurators urge that the capture should be adjudged a prize, or in case the Court deems the instant liberation as urged in the Procurators documents improper, the Court shall proceed to a certain public announcement. The announcement shall be published in the *Official Gazette*, in which shall be notified that any one who deems his interests affected by the captured vessel being adjudged a prize may send in a written petition within 30 days computed from the next day after the announcement.

In case no petitioner appears within the prescribed period of time, the Court shall at once proceed with its enquiry.

Provided that in case the Procurators have no further representations to submit, the Court shall, without further enquiry, give judgment at once and the document embodying it shall be forwarded to the Procurators.

Art. XVII.—In a petition, the principal points bearing on the case shall be set forth and any documents bearing on the case shall be forwarded at the same time.

Art. XVIII.—In case a petition has been submitted within the period of time specified in Art. XVI, an oral examination shall be held at an appointed time, when the Procurators and the petitioner shall state their views. The petitioner may be represented by a barrister of the Empire.

When the oral examination is concluded, the judgment shall either be given at once or at a certain specified time. If a petitioner fails to appear for judgment shall be given at once.

Art. XIX.—In case the court deems it necessary to re-examine witnesses before the judge-

ment is arrived at, the commissioned Judge may be ordered to carry it out.

The Procurators or a petitioner may forward fresh facts or testimonies before the judgment is given.

Art. XX.—Besides the foregoing provisions given in the preceding Articles, a Prize Court shall have power to determine rules relating to the process of examination and judgment.

Art. XXI.—The Procurators or a petitioner may appeal to the Higher Prize Court against the judgment of a Prize Court.

Art. XXII.—The period of appeal shall be limited to twenty days computed from the day after that on which the judgment has been awarded.

Art. XXIII.—An appeal shall be made by filing a document in a Prize Court. In the document the principal points for appeal and the grounds for the appeal shall be given in detail.

To the document of a petitioner the signature of a barrister of the Empire should be affixed.

Art. XXIV.—Of the Procurator's document of appeal a copy shall be prepared by the Court to be shown to the petitioner, and the appeal document of the petitioner shall be shown to the Procurators; the reply of the petitioner to the Procurators, or *vice versa*, shall be made within the space of ten days. To the reply of a petitioner the signature of a barrister of the Empire should be affixed.

Art. XXV.—When the period for filing a reply has expired the court shall transfer the documents pertaining to the appeal to the Higher Prize Court.

In case the Higher Prize Court deems it necessary to renew the inquiry into facts or testimonies, it shall return the documents specified above to the Prize Court and shall cause it to carry out the inquiry.

The Prize Court shall cause the commissioned Judge to carry out the specified inquiry, and the documents embodying the renewed inquiry shall be shown to the Procurators and the petitioner before they are submitted to the Higher Prize Court.

Art. XXVI.—The Higher Prize Court shall undertake judgment upon the documents.

Art. XXVII.—Additional Rules pertaining to the process of examination and judgment of the Higher Prize Court shall be determined by that court.

Art. XXVIII.—Articles adjudged prizes shall belong to the State.

Art. XXIX.—Ships and other articles captured till the judgment has been given shall be placed under the care of Naval officers to be determined by the Navy.

Art. XXX.—Judgment shall be carried into effect by the Procurators of a Prize Court. With respect to the enforcement of judgment, the Procurators of a Prize Court may seek the aid of Naval Officers and many employ Police officials.

Art. XXXI.—Even in cases where, owing to special circumstances, the seizure of a ship has not been effected, the present provisions shall be applied within the scope where they are deemed applicable.

APPENDIX.

Art. XXXII.—The present Regulations shall be enforced from the date of promulgation.

CORRESPONDENCE.

THE "AINU HOSPITAL REST."

SIR,—A concert, in which Japanese, Foreigners, and Ainu took part, was given in the Temperance Club, Sapporo, this evening, for the benefit of the Ainu Hospital Rest established here. The concert was very fully attended and much enjoyed; a song, sung by the Ainu to the tune of "Auld Lang Syne," especially eliciting much applause from the audience. I shall be very much obliged if you can kindly afford space in the *Japan Mail* for the enclosed Report on the work done for the Ainu in our "Rest." Thanking you beforehand for your courtesy,

I am, Sir, yours truly,

JNO. BATCHELOR.

Sapporo, August 4th, 1894.

REPORT.

The "Ainu Hospital Rest," for whose benefit this entertainment is given, was built and furnished at the close of the year 1892 at a cost of yen 203.963. Of this amount yen 103.050 were proceeds obtained on a lecturing tour taken by the Rev. John Batchelor and his Ainu servant to the Southern Ports of Japan, and were collected from both foreign and Japanese audiences, while the remaining yen 100.958 were private donations chiefly contributed by foreigners.

The "Rest" is a purely philanthropic institution,

and was established under the auspices of the Hokkai Temperance Society. It is worked under the direction of a Committee of Japanese gentlemen, and managed by Mr. Batchelor, who acts as general superintendant on their behalf.

Until the end of June this year (1894) Dr. Sekiba, formerly head of the Sapporo City Hospital, kindly gave attendance and supplied medicine to all Ainu entering the "Rest" free of charge. Dr. Sekiba has now left the City Hospital and become head of a private one. And, while able and willing to give attendance free, though he has no control over the supply of medicine, has so used his influence as to get all medicines supplied at half-price. We are deeply grateful to Dr. Sekiba for his sympathetic kindness, advice, and generous help.

The first patient entered the "Rest" on December 24th, 1892, and until the present time 163 persons have been treated in it. The Ainu appreciate the institution greatly, and their gratitude is unbounded. There has so far been but one death; 51 have gone away cured; 85 much benefited; and 6 have proved to be incurable. At the present time there are 21 persons with us.

The expenditures for the year ending Dec. 31st, 1893, were yen 310.148, and the income yen 287.185, thus leaving a deficit of yen 22.963. This income was made up as follows:—

	yen. sen. rin.
(1) Donations from Foreigners.....	172.75.0.
(2) Donations from Japanese	44. 1.0.
(3) From Ainu sources	56.30.5.
(4) By sale of Photos	14.12.0.

Total 287.18.5.

The expenditure from January 1st to June 30th, 1894, including deficit from previous year, and credit till June 30th this year, was yen 207.67.6, and the income yen 207.67.6. This income was made up as follows:—

	yen. sen. rin.
(1) Donations from Foreigners.....	141.11.0.
(2) Donations from Japanese	3.56.0.
(3) From Ainu sources	15.66.0.
(4) Credit advanced.....	160.33.0.

Total 207.67.6.

The present month (July) so far leaves us with a deficit of yen 7.51.5, and 21 persons to provide for. In conclusion, we therefore earnestly ask for your kind sympathy and help.

(Signed) S. FUJIMURA, President,
K. SUZUKI, Secretary,
S. IWAI, Treasurer.
JOHN BATCHELOR, Superintendant.

July 31st, 1894.

P.S.—Donations will be thankfully received by S. Iwai, Esq., Minami Ichijo, Nishi ni-cho-me, Sapporo; and by the Rev. JOHN BATCHELOR, Sapporo. We also take this opportunity of thanking those who have kindly assisted us hitherto in this work.

THE EARL OF HARROWBY'S SPEECH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As Mr. Chappell has vindicated the Earl, it only remains for me to explain that I quoted from the *Record* (which I enclose). You will see that in this apparently *verbatim*, but doubtless incorrect, report, the Ainu are not named. Many people might think that the speaker referred to the Japanese; and hence I blamed him for not being explicit. The only words I omitted were "where a most wonderful work is being done by a devoted missionary and the people are being raised." The devoted missionary would presumably be the Society's agent.

Yours truly,
August 16th, 1894.

F.P.D.

"WOJEN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You will kindly excuse me for objecting to your statement contained in the *Mail's* issue of to-day, that "the ideograph used for *Wa*, or *Yamato*, by the Japanese themselves is different from the ideograph *Wo* of *Wojen*." The fact is, that the Japanese have not one, but two ideographs for *Wa*, or *Yamato*, which can be interchanged with each other, the one being 和, the other, the ideograph in question, being 倭. This latter ideograph, identical with the Chinese *Wo* in *Wojen*, has not at all an opprobrious character in Japan, although it may have so in China, and in many combinations it is used by the Japanese quite as well as 和 to express *Yamato* or *Japan*, for which see Gubbins' Dictionary of Chinese-Japanese Words, p. 1,040. The Japanese therefore are quite right in translating *Wojen* by "people of Yamato," and not by "dwarfs," although the ideograph 倭 originally may have

had some similar meaning, for I should add, that the original meaning of 倭 is entirely obscure, the meaning "country of dwarfs" as given by Williams being by no means well established.

Thanking you beforehand for inserting this, I am, Sir, yours very faithfully,
August 16th, 1894.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have taken some pains to discover the precise signification of "Wojen," in the minds of the Chinese who use it as a derisive or opprobrious epithet, and if the information I gather is correct, the idea conveyed—or intended to be conveyed—is much more offensive than the designation of "pigmies" would be. Words are frequently distorted from their strict original meaning, to accommodate the feeling of those who employ them. As Oliver Cromwell said:—"Words have not their import from the natural power of particular combinations of characters, or from the real efficacy of certain sounds, but from the consent of those that use them, and arbitrarily annex certain ideas to them." In the case of "Wojen," I am led to believe that by a long-continued employment of the term, with a constantly increasing purpose to indicate contempt, it has come to imply something infinitely more degrading than "dwarfs" or "people of dwarf-land," and that the English word best calculated to express its intention, as uttered by the Chinese, is "vermin." The Japanese word said to be most nearly applicable is "uji," although it is explained that a Chinaman would attach additional significations, not less odious, to his favourite phrase for the inhabitants of Japan. I have no claim to an acquaintance with the language of China,—much less its *argot*; but I am assured, upon what seems to be trustworthy authority, that the above mentioned renderings—"vermin" and "uji"—give as close an interpretation as is possible to the "Wojen" of the Chinese. The question may be thought trivial by some. I am not of that opinion, for I believe that the introduction of a grossly insulting phrase toward an adversary in an imperial proclamation of war, will have the effect of depriving the government that sanctions it of the respect and goodwill of all Western communities.

H.

Tokyo, August 19th, 1894.

JAPAN AND WESTERN CIVILIZATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your learned paper, in regard to the Nippon-China war, speaks always in a tone which to my narrow understanding suggests that you mean to say that the said war has its causes in the conflict between the Western Civilization in the East and Oriental Conservatism. In that understanding I beg to say a few words and to have your kind explanation to my humble enquiry.

It is of course beyond doubt that Japan has adopted whatever is best of Occidental institutions; but she thinks there is no graver error than to assert that the civilization in which she has advanced is the so-called Western civilization.

I am assured by many that there are indeed many things in the West which are very poor and inferior compared with those of the Eastern origin.

We Nippon-jin in the process of improvement have selected the things that are best for our advancement, and have never made any distinction whatever between the things East or West while they are best for us.

We are not blind admirers of the so-called West as we are not blind detesters of the East. There are indeed many, many things in the East to which we are firmly attached as they are best for us.

Nippon-jin are Nippon-jin! and their present civilization is their own production.

They are always awaking to the world's advancement at large and are quick to improve their own defects by welcoming the world's civilized and beneficial institutions and have improved until the present.

Some one would like to say that the world's civilization is nothing but the civilization of the West. But this is nonsense: Nippon-jin have their own productions originated and made by themselves.

Western civilization we admire in many points, yet Nippon has surely her own civilization peculiar to herself with which Western civilization has nothing to do.

Your papers, allow me to say, too much emphasize Western civilization, so I want and request you to have my sincere opinion expressed publicly in your valuable paper's column.

Trusting you would be liberal enough toward your most humble and faithful servant,

R.K.O.

MR. F. H. BALFOUR ON COURT AND SOCIETY IN TOKYO.

Mr. F. H. Balfour, whose name is familiar to all residents in the Far East, gave an interesting lecture on Court and Society in Tokyo at the last meeting of the Japan Society in London. The latter portion of the lecture is re-produced in the *London and China Express*, but we are enabled to lay the whole before our readers. The address was enthusiastically received by a large audience.

Mr. BALFOUR said—It is with some diffidence that I come before you to-night with a sketch of life in Tokyo. In the first place, I have lived there about three years only; whereas I have spent twenty years in China. In the second place, so much has been talked and written about Japan that I feel a reluctance to add even so short a paper as this to the matter already existing; in fact, I regard it as rather a distinction, on the part of any one who has visited the country, not to have recorded his impressions. The amount of misleading and one-sided matter that has been published upon this subject during the past ten years is something melancholy to contemplate; from the indiscriminate gush of many persons who ought to have known better, to the extremely offensive abuse indulged in by a theatrical critic on the stump, who was there only a few weeks, and saw nothing but tea-houses and tea-girls of the lowest possible description. I think, however, I may promise you that I shall not err on either side, as I am entirely without prepossessions. And I do not intend to tell you about Japan in general, but only about Tokyo in particular.

Let us take the city first, and then make acquaintance with its inhabitants. Whether it is the largest city in the world I don't know; probably not; but it is larger than London, which covers only 64 square miles, while Tokyo covers a hundred. In fact it is less a city, as we understand the word, than a huge straggling, beautiful village, or rather perhaps a group of villages; for often you may find yourself in some green rural spot, and imagine that you have reached the country, only to turn the corner and lo, you are in a bustling street again. There is a story, for the truth of which I do not vouch, that an American once got into a *finrikisha* and was pulled about for a week, trying to find Tokyo. He gave it up at last, persuaded that there was no such place. Others, however, have been more successful. I was myself; and I have no hesitation in saying that in my opinion Tokyo is one of the most peculiar and most beautiful cities in the world. True, when you get out at Shinbashi Terminus, its beauty does not strike you. In front stretches the great main street—part of a thoroughfare 300 miles long, known as the Tokaido—lined with shops of all sorts, trams, omnibusses, and *finrikishas* careering hither and thither, this way and that, newspaper offices covered with posters announcing, probably, the last row in the Diet, telegraph and telephone wires over your head, the chimneys of great factories smoking here and there, and life, business, and bustle all around. This is interesting, but it is not picturesque. Follow the street, however, for about three miles, and you will come to one of the great playgrounds of the metropolis, Ueno Park; and here, in addition to magnificent cryptomerias, lovely sylvan glades, gorgeous old temples to dead Shoguns, and a big, though I am sorry to say exceedingly ugly Buddha—the only ugly one I have even seen—you will find a switch-back railway, numberless restaurants and tea-houses, a beautiful Zoological Garden, a School of Art, a School of Music, a Public Library, a Museum, a Fine Art Exhibition, and many other resorts of pleasure and instruction. Or, if you bend your steps inland from the bay, you come upon the three great concentric moats encircling the Imperial Palace, with their grand grassy slopes crowned with immemorial pine-trees growing in all sorts of contorted shapes: the remains of ancient *yashiki*, or *daimyo's* palaces: Shiba Park, with its precipitous hills, deep shady groves, and temples of peculiar sanctity: broad, high, undulating roads, which wind upward in the bright sunlight like the pathways in some theological allegory: palaces again, standing in ornamental grounds, and hidden by gigantic trees: the modern residences of Imperial Princes and members of the nobility, all handsomely appointed mansions that would not discredit Park Lane; and then, here, there, and everywhere, abrupt cliffs or bluffs, richly wooded, commanding extensive views, and topped by some pleasant suburban villa surrounded by an undulating lawn. A little further yet, and you find yourself in the country in good earnest; strolling through lanes like the lanes of Devonshire, a yellow cornfield here, a

stretch of blue-green rice fields there, so much foliage that you can never get quite as good a view as you would like, the pleasant throbbing of a water-mill in your ears, and a general sensation of smiling, sunny peace. Let us suppose it is in November. The foliage presents great masses of rich colouring—green, golden, crimson and bronze; the hawk sails, noiseless and graceful, through the air; the feathery bamboo copse in which you stand waves almost imperceptibly in the breeze; the bees hum slumberously among the tea-plants; ever and anon the mellow tones of a temple-bell come booming from some neighbouring country shrine, the sky is as clear and as blue as a great sapphire, and the whole world seems to lie basking in a flood of golden heat.

Naturally it is only residents who see this side of Tokyo. The globe-trotter lives in one of the hotels, and devotes his attention to what may be called the show-places of the town—the curiosities, the University, the principal temples, and a few well-known restaurants. These are all interesting in their way, but the true charm of Tokyo, to me, lies in its gardens and its rural districts. There is one garden that is worthy of special mention. Close to the entrance there is a big, unsightly Arsenal, the red-brick chimney of which belches out volumes of thick, black smoke. Within five seconds after you have passed through the gate you find yourself in what I can only describe as a stretch of wild Highland scenery—glens, groves, waterfalls, and all complete. The Korakuen is one of the glories of Tokyo, and a favourite place for garden-parties. The first time I went there was when the young Marquis Kuroda, formerly Prince of Fukuoka, gave a great entertainment to celebrate the completion of his political majority. Part of it is so arranged as to represent, in miniature, the stretch of country between the capital and Kyoto, including Fujiyama and Lake Biwa. The whole was laid out by an eminent Chinese refugee nearly three hundred years ago.

Now of course it is impossible to describe Tokyo in a few score of lines, and of course I don't pretend to have done it. All I have tried to do is to give you a general idea of the place, an impressionist's daub, not a pre-Raphaelite, highly-finished picture. There are many streets that are narrow, and squallid, and rather smelly; there are disagreeable sights, too, for the Japanese cleanliness of which we hear so much is, in my opinion, rather a legend—and the weather, at certain seasons of the year, is frankly detestable. But the charms of the place outweigh its drawbacks. I lived for over two years in a bungalow on the top of Bird-rest Hill in the suburban ward of Azabu, and from the height of my hanging-garden I looked over a section of the city that spread beneath me, framed in by the thick foliage of Shiba Park on one side and Mita Hill on the other, the blue waters of the Bay, flecked by scores of white-sailed fishing-boats, sparkling in the middle distance, and the mountains showing lavender-gray beyond. To others, Tokyo may be a dull uninteresting place. To me it is one of the very few places that I know of in the Solar System worth living in.

I pass from the city itself to its inhabitants; and the most important of these is his Imperial Majesty the Emperor. Now the Emperor is an exceedingly good monarch. He has the interests of his people at heart, as is shown by the extreme anxiety he evinces whenever local disaster befalls them, the urgent inquiries he makes, and the generous pecuniary assistance he affords; he takes an active part in the councils of his Ministers, and, whatever his constitutional powers may be, he is by no means content with the part of a puppet Sovereign. Torn with political factions as the country now is, the Throne is the pivot, the rallying-point, which keeps the whole together, and without which it would break up to-morrow, and fulfil Sir Harry Parkes's prediction that its future would be that of a South American Republic. We may smile at the superstitious reverence with which the Japanese regard their Emperor; but it is at the present day a political factor of the greatest possible importance. Let me give you an amusing instance of the way in which it finds expression. On a recent occasion, in the Diet, an address was being voted to the Throne in which occurred the words, "The wise and enlightened advice so graciously bestowed upon us by your August Majesty," or something to that effect. This was opposed by a certain elderly member of the House, who moved that the words "wise and enlightened" be omitted. You may imagine the consternation, the indignant astonishment of the House. "What! Is not his Majesty's advice wise, is it not enlightened?" was the question that arose on every side. "Who are we," was the reply of the member, "that we should presume to characterise his Majesty's utterances? If it lies within our scope to pronounce them wise and

enlightened, then it is equally open to us to condemn them as the reverse. Who will be thus audacious? It is not from disloyalty, but from the highest and most loyal reverence, that I protest against the House arrogating to itself the power to criticise the words of the Emperor at all." And the House agreed with him at once.

The Emperor is a good and thoroughly honest man, with a large amount of practical common sense; but happily for Japan he has no ambition to pose as a genius, and he can be, on occasion, extremely tenacious. His great passion is for horses and military reviews; he is always reviewing this or the other garrison, and takes the very keenest interest in the army. He is also a keen critic of ladies' dresses, and it may interest some present to hear that his Majesty detests the present fashion of sleeves puffed out at the shoulders. He says they are like angels' wings, and altogether ridiculous.

Then there is the Empress, who is a year older than her husband. She interests herself greatly in the development of art, and of female education, and is a constant visitor of schools, where she distributes prizes, and of hospitals, where she never passes by a patient without a kind and consoling word. Both sovereigns keep up a friendly personal correspondence with the crowned heads of Europe. The Emperor writes to the King of Italy among others, and the Empress Frederic is on very friendly terms with the Empress Haru, to whom she sends charming letters and water-colour sketches painted by herself. It is a significant and deplorable fact that so far from any similar courtesies passing between the Mikado and his nearest neighbour, or next-door neighbour but one, they simply ignore each other's existence. For the Emperor of China, there is virtually no such person as the Emperor of Japan. How must longer will this folly last?

I must now give you an account of the Imperial garden parties given by their Majesties in the spring and autumn of each year. The former is known as the Cherry-blossom party, the latter as the Chrysanthemum party. On the occasion I am about to describe, we presented ourselves at the gate of an Imperial residence known as the Detached Palace on the Beach, and spent nearly an hour in chatting to each other and arranging ourselves in two rows, one on either side of the gravel walk, along which our august host and hostess were to pass on their arrival. Frocks coats and silk hats are of course *de rigueur*; one unlucky man, an English colonel, who had been foolish enough to disregard the published warning, and presented himself in a morning coat, was actually turned out at the last Chrysanthemum party after having passed the barrier. Nor may sticks or umbrellas be carried in; the obvious reason being that sticks and umbrellas sometimes contain swords, and swords are dangerous things; so they have to be given up; and if it is rainy, very common, but perfectly innocent umbrellas, worth about \$1 apiece, are distributed among the guests, who, I believe, are at liberty to stick to them if they feel so disposed. But we are waiting for the Imperial procession; and now we hear the Emperor's band, which has been playing ever since our arrival, suddenly strike up the Imperial Japanese hymn. This, slowly and majestically given by a full orchestra, has an imposing effect. We turn our heads, we see the procession defiling across an ornamental bridge that spans the lake, and, as it approaches, down go all our heads. First comes the Emperor in his black patrol-jacket and square-peaked cap, bestowing sharp, short nods from right to left in acknowledgment of our profound bows. He is attended by gentlemen of the Court, who walk in a deprecating sidelong fashion, and then comes the Empress, in a Paris-made dress and pretty bonnet, followed by her ladies. The European frocks of these ladies are undeniable, but sadly unbecoming, their gait and figures are alike unsuited to the exigencies of Western dress; one wishes the occasion were less grand and formal, that one might see them in their own beautiful Court costume.

As the Court party comes to an end, we fall in line with them, and proceed in a long cortège through the garden and by the seaside to the Banqueting Pavilion, the Mikado leading the way. Here the presentations take place, his Majesty entering into conversation with the representatives of foreign Powers and shaking hands with them in conclusion. We notice that the Chinese and Korean Ministers stand nearly twice as far from the Emperor as their European colleagues, and are a thought more punctilious in their demeanour. This function is followed by a banquet, at which the champagne is excellent and everything done in first-rate style. The Imperial table is, of course, headed by the Emperor, on whose right hand sit the Princes of the Blood; on his left is the Empress, and beyond her the Ministers of the Court. Everyone else stands,

and that a pretty respectful distance. In half-an-hour or so the word is passed round that the Emperor is leaving. This is the signal for again forming ourselves into two rows, and once more we bow as low as circumstances permit while Imperial Majesty passes by and vanishes.

The Chrysanthemum garden-party is held at another Palace in a different part of the town; but the procedure at both is the same. I have never seen a grander show of chrysanthemums than at the party given last October. Plants bearing three, four, and five hundred flowers each were numerous, but the greatest triumph of the Imperial gardeners was an exposition of no fewer than 701 flowers all springing from a single root. I suppose it was the largest and most prolific chrysanthemum-plant known to the annals of floriculture.

The Court of the reigning Emperor and Empress represents in every important particular New Japan. But there is another Court in Tokyo, in which Old Japan still survives. This is at the Palace of the Empress Dowager, the widow of Komei Tenno, and stepmother to the present sovereign. Here foreign costumes are never worn—at any rate, by the ladies; the etiquette is that of the old *régime*, and very rigid; and the Empress herself always appears in the scarlet and white of an Imperial Dowager according to the ancient usage. Her Majesty is a rather tall, handsome woman of fifty-five or six, with frank, gracious manners; she is exceedingly fond of the theatre, and makes frequent excursions to her various country villas, both inland and at the sea-side.

I leave the Court and pass to a few words about Society. Now society is impossible without ladies—by which I mean that without the intermingling of the sexes there can be no society as we understand the word; and this is the reason why there is no society in China. It is of course very different in Japan. The society of Tokyo consists, as elsewhere, of the Cabinet Ministers and their wives, the Court nobles (or persons who have been accorded titles of nobility by the Emperor for services rendered or some other special reason), and the representatives of the ancient daimiates or princedoms, who have received titles in the new hierarchy by prescriptive right. These are not, as a rule, the most gifted members of the aristocracy, but they represent a great and striking political revolution which appeals vividly to the imagination. By your side in a railway carriage, or at a dinner-table, or in a smoking room, you have a pleasant, well-dressed gentleman, who reads his paper, and drinks his champagne, and smokes his cigarette just like anybody else; he is not particularly brilliant, but he has probably taken a degree at Cambridge, and knows something about ecclesiastical architecture, and remembers a ballet he once saw at the Alhambra; essentially a man of the nineteenth century A.D. And then you think to yourself,—Now, five-and-twenty years ago, that man would have been invisible; if ever he went out of doors he would have been carried in a close-shut chair, and accompanied by a great cavalcade of formidable armed men; and if I meeting him, were not to have got out of his way, or had abstained from going on my knees and head before him, his retainers would have cut me down with their swords, he knowing or caring nothing whatever about it. Truly a change has come over Japan since then, and the gentlemanly if slightly uninteresting marquis or viscount, who used to be a rather barbarous feudal prince, epitomises that change in his own person. The Court nobles, on the other hand, are often men of very humble origin. Thirty-five or forty years ago there was an obscure lad who acted as stirrup-holder to the Prime Minister of a certain daimio. The Prime Minister was subsequently Minister to Peking (where I served under him), and is now a quiet old gentleman whom nobody knows, living somewhere in the suburbs; while his quondam stirrup-holder is known to fame as his Excellency Count Ito, Prime Minister, not of a daimio, but of Japan.

But I am forgetting the ladies. Now there is a Japanese word which I hear, or used to hear, constantly in the mouths of foreigners in China, in Europe, and elsewhere, but which I never remember to have heard in Japan itself. The word is *mustum*; and the ideas associated with it is that of a plump, dimpled little person, much given to giggling and squirming, and characterised by a primitiveness, in innocence (to put it mildly) in her demeanour towards the other sex which was frequently misunderstood. Now the dimpled person undeniably exists, and you will find her in every tea-house in Japan. Sometimes she is rude and forward, in which case you may be sure she has been spoiled by Europeans; sometimes she is modest and unaffected—a very nice little person indeed, though too fond of giggling; but she does not represent the ladies of Japan, as some visitors, including one whom it is unnecessary

to particularise, do foolishly and vainly boast. The eminent critic in question saw only the lowest and most unattractive variety of tea-house girl, and then, with astounding dishonesty, exclaimed, "This is the Japanese woman." The Japanese woman might have hoped for a more clement estimate. I do not hesitate to say that her traducer never saw a lady during the whole of his visit; because he has told us where he went and where he did not go. He saw nothing of the society of which I am speaking now, society which is composed of ladies who, in all essential respects, are the counterparts of their European sisters. The stately Marchioness Nabeshima, formerly Ambassadress at Rome, who gives delightful balls: the beautiful Countess Toda, formerly Ambassadress at Vienna, and generally considered the belle of Tokyo; the homely but gracious and kindly Countess Saigo, one of the very best women in Japan; good old Viscountess Hijikata, in her everlasting black silks; the pious and charitable Princess Mori and Princess Sanjo, as constant in their attendance at the great Hongwanji, or Temple of Reformed Buddhism, where the Archbishop of Osaka attracted such crowds by his eloquent sermons only a short while since; these, and many others I could mention, are the women who lead society in Tokyo to-day, and to ignore their existence for trivialities about a pack of ill-bred waitresses, as the most largely circulated critic in the world has done, is to write oneself down an ass. No man who so far commits himself can expect to escape scot-free. It is from ladies of this class that the Imperial family is recruited by marriage. Their Imperial Highnesses the wives of Prince This or That are Imperial by marriage only, not by birth; and it is here that a very curious anomaly prevails. Where as the Princesses of the Blood to find husbands? They cannot all marry their own relations; other considerations apart, there are not enough Princes to go round, so as foreign alliances are unknown, some of the Princesses have to marry very much beneath them. A peculiar case occurred just before I left Tokyo. Immediately opposite my front gate was the front gate of Princess Kuiri, a widow of the Imperial family with a very large number of daughters and very little money. So the eldest daughter had to do the best she could, and married Mr. Somebody, the son of a certain Viscount; by which she resigned her rank, her title, and her precedence, and became simply a "Mrs." You may see the married daughter of a peer enthroned in state at the top of a ball-room and receiving royal honours as an Imperial Highness, in virtue of her union with a Prince; while a real Princess-born, so I am informed, who has married a commoner or a noble, would, if present, have no such precedence, her Imperial birth being so to speak sunk, or cancelled by her marriage. One meets members of the Imperial family everywhere. Some are of course always present at the Emperor's Birthday Ball on Nov. 3, and generally speaking the private balls which are given by the different Ministers of State, Diplomatic Representatives, and others in high positions, are similarly honoured. They dance with immense spirit, and their frocks and jewels are, as might be expected, much criticised and admired.

I may here mention that mixed marriages are by no means unknown in Japan. There are many cases in which European ladies live very happily with their Japanese husbands. The wife of Mr. Sannomiya, Master of the Court and Vice-Grand Master of Ceremonies to the Empress, is an Englishwoman. By her extraordinary tact and *savoir-faire* she has attained a high and most influential position, being deep in the confidence of her Majesty and a valued friend of all the Imperial Family. In fact, it has been said that the Sannomiyas run the Court. Many other instances might be adduced; among them, one which it would be manifestly improper for me to allude to more particularly on the present occasion. Altogether, however, the conditions under which Tokyo society is seen to the best advantage are those of the garden-party. Japanese gardens possess a unique charm, being laid out in the most piquant landscape style; and when one of these delightful pleasaunces is full of graceful Japanese girls and young married women in their own flowing yet clinging robes bound about with a great gorgeous obi or broad sash, sauntering under the brilliant sunshine by twos and threes and always hand in hand, one seems really to have been transported to an earthly fairyland populated with real live fairies. In fact, there is a poetry about life in Tokyo under its most attractive aspects that is not easily recognised elsewhere, and a prettier sight than a garden party in the Mikado's capital it is difficult to conceive. Even the men are, generally speaking, well dressed. This was not always the case. There is a well authenticated story of a high Court official being met one bitterly cold New

Year's Day over twenty years ago in what he believed to be full European costume. He had on a very old, battered silk hat, a dress coat, I think a shirt, and—that's all. He was not aware that trousers were *de rigueur*. At present many of the men one sees would pass for well dressed in Bond-street, where, indeed, their clothes have very possibly been made.

I now wish to interrupt the course of my paper to make three rather irrelevant remarks. They will appear somewhat disconnected, I am afraid, but the point at which we have arrived is, perhaps, the least unsuitable for their introduction. The first is, that whenever the Japanese come in contact with European art the taste and insight they naturally possess in æsthetic matters appear to fail them utterly. Now it is Japanese ideals that have delivered us from the bondage of all the heaviness and hideousness which disfigured our houses a quarter of a century ago. Fluck papers, and clumsy furniture, and crude, knock-me-down colourings are now things of the past, and we owe our deliverance from their tyranny in a large measure to the influence of Japan. One would naturally expect, therefore, that when the Japanese come to furnish their own foreign built houses in European style they would do so with a delicacy and precision of taste which would serve as a model, an object lesson, for ourselves; that their instinct for artistic combinations both in form and colour, would here come out in all fullest force, and that they would show us how the æsthetic principles they understood so well should be applied to our own domestic furniture. But here there has been disappointment. Go into almost any foreign house furnished and inhabited by a Japanese, and what do we find? On the floor, a carpet consisting of huge, pink, sprawling cabbage-roses; a round table in the middle of the room, covered with a yellow-edged dark green tablecloth; prim, common chairs, upholstered in green rep, arranged primly round it; and, on the mantel-piece, a couple of china shepherdesses, or a pair of coarse glass flower-vases, suggestive of the ornaments dear to lodging-house-keepers at the seaside. I have a Consulate or two in my mind's eye at this moment. And I know a mansion in Tokyo, inhabited by a very illustrious personage, the appointments of which are said to be a monument of ungainly ugliness in the stiffest German style. Now, it is impossible that any Japanese can see beauty in anything so unbeautiful as this. Why, then, does he adopt it? Is it to be supposed that he really thinks he is reproducing an æsthetic standard recognised as such in Europe? Has he taught us better things himself only to fall back upon mantras that his own nation has helped us to discard?

That is my first remark. Now for the second. I have been pleased to notice a growing reaction on the part of upper class young men in Tokyo in favour of their national costume. In the club reading-room, at the billiard-table, or driving in a well-appointed brougham, the Japanese nobleman is constantly to be seen in *kimono*, *hakama*, and *haori*. But, alas! he has no cap to go with them, and so he sports the hard, black billycock of England. Now, I call that an outrage on good taste. I have heard it said that the Japanese have no national head-gear. If so, the sooner they invent one the better. But I believe the statement is not true. The students of the Uyesio School of Art wear a sort of casque, something in shape between a Cap of Liberty and a Britannia's Helmet, and made of some light, stiff, open work material, which suits the dress to perfection. This might well serve as a model for a head-covering adapted to general wear, if only somebody would have the moral courage, or the energy, to start the movement. Berlin wool comforters and dirty flannel shirts are universally worn by the poorer classes, who find their own garments quite insufficient to protect them from the cold of winter? How they managed before these useful, though unsightly, articles were imported from Europe, I do not know; and anything is permissible when it is a question of warmth and health. But against the combination of bowler-hat and *hakama*, adopted as a fashion by persons capable of better things, I respectfully but emphatically protest.

My third parenthesis has nothing to do with either of the preceding ones. We have all heard a great deal about that most charming feature of the Japanese, the inborn and ineradicable politeness which prompts them, among other things, to talk of honourable hot water and honourable tea. Here is a specimen. It is politeness exercised under the most trying circumstances—when a young gentleman, having behaved in an unseemly manner to a friend under the influence of too much warm *sake*, publishes an apology in the public press. The paper in which this most touching document appears is the *Shin Choya*

Shimbun, or *Court and Country Gazette*, and the advertisement itself is as follows:—

"On the 9th inst. at a friendly meeting, I, in a fit of drunkenness, not only without any malicious intention against you who are usually most virtuous and of high repute, but even without any preliminary parley whatever, suddenly attacked you and injured your reputation. Though I was intoxicated at the time, I afterwards repented of my violence and entreated your forgiveness through my neighbours and relatives and Mr. Hatanaka Shichiro. And you were generous enough only to require my confinement in a room for three months and warn me to be more careful in future. Your clemency in forgiving me under such light conditions has pierced my heart and soul, and I shall never forget it. And if I ever forget it, I will willingly submit to any penalty you may impose on me. I hereby express my contrition with my relatives' counter-signatures as witnesses."

And now, although political and religious questions of a controversial nature are, very justly, excluded from the topics discussed by our society, I may be permitted to say a word upon the political situation, which I will sum up in the briefest sentences at my command. I deem this brief reference to politics absolutely necessary, as they are inseparably connected with social life in Tokyo. The Diet consists of a House of Peers and a House of Representatives. The members of the Lower House are paid a salary of \$800 per annum, and the House sits for only three months every year, during which time it throws out every measure presented to it by the Government. Were it not that the Cabinet have a tolerably free hand for the remaining nine months the Government of the country could not be carried on, so bitter is the jealousy and opposition of the Diet. The roof of the trouble is that ever since the restoration the reins of power have been in the hands of members of the two great clans of Satsuma and Choshu; and the struggle in between the Haves and Have-nots. The Cabinet Ministers are not members of the Diet, and are responsible to the Emperor alone; he, conversely, is entirely in the hands of the Cabinet Ministers; the House appeals to the Emperor against his advisers, knowing that his Majesty's reply will simply have been dictated by the Prime Minister; this they dare not criticise, as it is ostensibly an Imperial utterance, and so they feel, rightly or wrongly, that they are waging war with a Minister who shelters himself behind the unapproachable figure on the Throne, and has them at an unfair advantage. They are fighting for party government, and logically they ought to have it; but they are unfit for the responsibilities it involves, they have no men able enough to take the place of those now in power, and their behaviour in the House is often discreditable to the entire country. The Diet is a constant scene of violent quarrels, the pettiest jealousy, the most ill-considered and self-stultifying vacillations. Even personal violence is not unknown among the members. There is in Japan a class of youthful rowdies who, for their daily rice, attach themselves to the persons of prominent men. These are called *soshi*; "strong chaps," or bullies. Sometimes, when a member has made a speech more than usually distasteful to another member, the aggrieved gentleman sends two or three of his *soshi* to waylay the offender in his *jinrikisha*, and beat him over the head. Even Cabinet Ministers keep their *soshi*, though, to their credit be it allowed, generally for purpose of self-defence.

The burning question for many years past has been that of Treaty Revision. This means that the treaties are to be so revised as to do away with extra-territoriality, and bring foreigners under the jurisdiction of Japanese Courts of Law; in return for which we are to have freedom to travel all over the country just as though we were Japanese, and live, trade, build, and purchase lands and houses wherever we like. Hitherto, foreign nations have not agreed to this, and for very many reasons; but I need only mention one here, and that is, the very questionable competency of the native judiciary. Now a judgeship in England is generally regarded as one of the prizes of the profession: in any case it is never given to any but men advanced in middle age who have won their spurs at the Bar. In Japan it is different. There it often happens that a young man virtually serves his apprenticeship to the law by sitting for three or four years upon the Bench; and when he has distinguished himself by a sufficient number of vagaries in the way of judgments which are usually reversed on appeal, he resigns his post and appears as a duly qualified barrister. I know one case in which a youth was appointed to the Bench within a few weeks of having passed his schools. This fact, and the equally undeniable fact that many of the judges do not bear that reputation for ferocious impartiality which an exacting public is disposed

to look for, furnish one most potent reason why foreign Powers should hesitate to resign the privileges of extra-territoriality in return for free transit through the country. But now there has arisen a clique of feather-headed politicians who demand that the treaties shall not be revised, but denounced; that all foreigners shall be brought under native jurisdiction, but that they shall not be allowed the corresponding advantages of free trade, free travel, and free residence in the interior. It is as though I were to offer to sell you a piano for a hundred pounds, and then say, "No, I have raised my terms; you must give me the hundred pounds, but I shall keep the piano for myself." It sounds incredible, I know, but it is a sober fact. And the argument put forward by these Anti-Mixed Residence agitators is the most self-mutilating ever used by any so-called patriots. "Foreigners," they say, "are so much cleverer than the Japanese, that if they are allowed an equal footing with ourselves they will get the better of us at every turn; they are so much richer, that they will buy up all the country; they are so much more unscrupulous, that they will appropriate all the pretty women, and leave none for us." Of course these men are doing all they can to arouse an anti-foreign feeling among the people, and I am sorry to say that they have met with some small success: but the statesmen now in power are not likely to be swayed by such unheeded foolishness, and the Anti-Mixed Residence agitation will soon die a natural death.

At the same time there is no doubt that the present passport system has certain elements of vexatiousness. The only grounds on which any foreigners can obtain permission to travel in the interior are those of health and scientific research; so that a missionary, for instance, who wants to visit some inland station, is forced to tell a lie. Of course, it is only formally a lie. Nobody is deceived, and nobody wants to deceive. In fact, it is the Government which provides the machinery for its own deception, and says, virtually, "Unless you do make this statement, which, between ourselves, of course I don't believe, you cannot go into the interior." The same anomaly exists with respect to living out of the foreign settlements.

If it wouldn't bore you too much, I should like to say a few words in conclusion upon the intellectual and religious condition of the educated classes in Japan. Shintoism, or the worship of deified ancestors, is the religion of the State, and has of course numerous adherents; Confucianism, which is taught in all the schools, has saturated the Japanese mind for centuries, and is now only beginning slowly to give way before the more systematic teachings of Herbert Spencer, John Stuart Mill, the German schools of metaphysics, and the best writers on political economy. The bulk of the people are devotedly and profoundly Buddhist, and it is in the hand-to-hand fight now being waged between Buddhism and Christianity that the interest of the situation centres. If the introduction of Christianity into Japan has done nothing else, it has done this—it has given an impetus to Buddhism that would have rejoiced the heart of the great King Asoka. Before, Buddhism was asleep; now it is very much awake, and the air rings with controversy. Week after week, the vernacular Christian press, representing Roman Catholics, Greek Orthodox, Anglicans, Presbyterians, Methodists, Unitarians, Universalists, and I believe, Quakers, engages in wordy warfare with its Buddhist contemporaries, and the battle is fought on the highest ethical and metaphysical grounds. An excellent spirit, too, animates the combatants, whose well-reasoned and often very learned articles afford most interesting reading. In China, Buddhism makes priests, like Jeroboam, of the lowest of the people. It is not so in Japan. Among the priesthood, there, you will find men of the highest families and the deepest erudition, who are not only versed in Eastern and Western metaphysics, but know as much about Christianity as you and I do. Where do you think we shall find one of the completest libraries of Christian evidences in Japan—a library containing all the standard controversial works, from our old friend Archdeacon Paley down to "Lux Mundi," and the latest volume of the fervent Farrar? In some theological training-school under missionary superintendence? No; but in the great Temple of Reformed Buddhism at Kyoto. All these are healthy signs. The Buddhists are fighting for their faith and for their lives; they do not regard Christianity with indifference, but attack it with honesty and boldness; they are foemen worthy of our steel, and every inroad that is made upon their ranks is a very hard-won victory.

It is a mistake to suppose that Buddhism is a homogeneous religion. Its broad divisions into Red Church and Yellow Church, Mahayana and Hinayana, Northern Buddhism and Southern Buddhism, are of course, known to the most super-

ficial student; but included by these, as far as any rate as Japanese Buddhism is concerned, there are numerous sects, answering very much to the churches and sects of Christendom. Now Buddhism is, and always has been, one of the great missionary religions of the world; and of the various sects into which it is divided in Japan, none is more amply endowed with the missionary spirit than the sect of Nichiren; or Sun Lotus—so called from the name of its founder. Its aggressiveness is most remarkable, for it holds, according to its own views, the only true pure doctrine originally taught by Sakyamuni; while in its street processions, temple services, and public demonstrations generally, it calls to mind the enthusiasm of the Salvation Army. Now a few months ago I received a visit from one of the leading clergy of this sect, the Right Virtuous Abbot Kobayashi, President of the Nichiren College, near Shiba Park. He told me he was anxious to bring the doctrines of the Nichiren school of Buddhism before all leaders of philosophical and religious thought the whole world over, in order that all mankind might have a chance of salvation; there was a Digest of these doctrines, he said, drawn up by the Most Learned and Virtuous the late Archbishop of Ikegami, and this he wanted put into a readable English form, printed, published, and then scattered broadcast over Europe and America, copies being sent to all the universities, colleges, and other seats of learning, all the learned societies, Mr. Herbert Spencer, the Archbishops of Canterbury and York, his Holiness the Pope, the Patriarch of Constantinople, and every representative man alive. I need scarcely say that I did not undertake this colossal task of distribution; but I prepared his pamphlet for the press and saw it through, and very interesting work I found it. The doctrines of Nichirenism are abstrusely metaphysical, and I will not tax your patience by enlarging on them; suffice it to say that they assure every man and every woman in the world of the possibility of attaining to the Buddhahood in this present life. Sakyamuni was no more a Buddha than any one of us may become if we only go the right way to work; and the Buddha which forms the object and the centre of the Buddhist creed is, esoterically apprehended, not an individual at all, but that state of mind in which the hidden unity, the underlying, eternal reality of things is recognised behind the ephemeral phenomena which compose the universe. It is strange that so abstract a theory should appeal to such numbers of uneducated men and women as constitute the sect in Japan; but of the fact there can be no question, while the enthusiasm of the members is shown as clearly in their daily lives and action as in the wonderful and far-reaching missionary effort in which one of their foremost ecclesiastics invoked the assistance of a foreigner.

The CHAIRMAN complimented the lecturer upon his interesting paper, and said that much of it was new and interesting to those who, like himself, had not visited Japan for some years.

Baron von SIEBOLD said that he had heard with very great interest Mr. Balfour's vivid description of the modern life and society in Japan. He thought that description was in general quite in accordance with the facts, but he felt compelled to allude to one or two points with struck him as being, perhaps, not quite founded on what he had himself observed during the time he had been in Japan since the Restoration. He thought the description given as to how rapidly Japanese Judges were promoted from the school bench to the high office of judicature was exaggerated. With regard to the suggestion that the Judges were not impartial, he could only say there had never come to his notice either in the Press or in social intercourse during the last ten years any criticism of the kind. It might be questioned whether they were equal in judicial training to their European brethren, but the integrity of the Judges had never in the slightest way been questioned. On the contrary, he thought the universal opinion was that they endeavoured, with the greatest diligence and honesty of purpose, to decide rightly in all cases. From the testimony of foreign jurists who had been actually engaged with Japanese legal officers he could only say that the general opinion was very favourable as to their honest will of mastering the new system of law, which, although not in name, was in reality based on what is generally called Christian jurisprudence. Their integrity had never been questioned. As to the general description of the society of Tokyo, it was only fair to bear in mind that it was in a state of transition. Some of the ludicrous caricatures which the lecturer had drawn of the present forms of customs and fashions were entirely owing to this state of transition. This condition of blind imitation had for some time begun to give way to a kind of reaction in the sense of a return to national customs.

For one thing, Japanese ladies were returning to their old costumes, which were decidedly better than any of the French Court dresses. A stand had also been made against European dancing in society, and, above all, against the Western system of throwing young girls suddenly into social contact with the other sex, a social innovation which been proved to be entirely unsuited to the character of the young Japanese ladies. The society of Japan had also one particular branch which he thought their eminent lecturer did not perhaps allude to. These were the special Japanese forms of meeting for certain poetical, social, and ethical purposes. One of these, which was somewhat remarkable, it might perhaps be of interest to allude to. This was the so-called tea societies, not, however, like the modern five o'clock tea parties in this country. It was a society established with the idea that a meeting of its members should take place in certain small and unpretending constructions specially erected for the purpose of a culture of the mind and heart in an æsthetic sense, where all differences of social rank should be entirely abolished, and nothing so to speak, of the outside life be allowed to enter in. The idea was that there should be perfect calmness, and that they would discuss artistic or ethical subjects. There was no doubt that in the turmoil of daily life to be able to repair once a month with a few select friends to a quiet house to discuss nothing that was disturbing to the mind was an excellent method of calming the nerves, and he thought such an institution would be of great advantage to the too excitable people of Europe. Japanese artists met together in a similar way. They each made a sketch on one large white screen, attaching their name, and this was kept as a sort of remembrance of their friendly association. The poets also had meetings of this kind. Everyone present wrote a few lines of poetry and exchanged it with his neighbour, and these were also kept as souvenirs of a happy gathering. These meetings in Japanese life were essentially poetical, and Europeans would do well to copy them. If one desired to know the real character of Japanese society and comprehend their mode of thought it was absolutely necessary to study them from their own enjoyments and native social condition, and not by the caricatures of foreign imitation, which it would only be hoped would soon be so far amalgamated with the original elements that some of the unharmonious characteristics which the lecturer had revealed would soon disappear.

Mr. DIOSY, referring to the description given by the lecturer of the Japanese gentleman who, in the early days of the Restoration, walked about in Tokyo in a very incomplete Western costume, alluded to the grotesque blunders which Europeans always fell into when they attempt to don Japanese costumes. These attempts were often just as absurd as the particular instance to which Mr. Balfour had called attention in Japan. In a French play produced at Paris some years ago a Shogun appeared on the stage clad in the *shitatare* of a *Samurai*. On his head he wore the hat of a *jirikisha* man—(laughter)—and below the belt he was clad in the breeches of a coolie—(more laughter)—while on his feet he wore the straw sandals of some peasant.—(Laughter.)

Mr. MARCUS B. HUISE, LL.B., proposed a vote of thanks to the lecturer.

Dr. ERNEST HART, in seconding, said that he was in Japan lately, and he found that there was really a very great thirst for European knowledge. As an example of what he meant, he said that some Japanese students, before breakfast one morning, wanted an answer to two or three questions which they propounded to a friend who was with him, the President of Toynbee Hall. These were the questions: Could he give them some account of the principal reasons which underlay poverty and crime, and what promised most for the progress of the East End of London?—(Laughter.) The second question was: Could he explain to them the working of the Holy Ghost?—(More laughter.) And lastly: Could he give them a slight sketch of the development of his own mind, and how he had arrived at his position as a Broad Churchman?—(Laughter.) He (Dr. Hart) concluded by bearing testimony to the great politeness of the Japanese people.

The resolution was carried with applause, and the meeting terminated.

Ludwig Barnay, the famous German actor, has retired after making a fortune. He is not an old man, but his health has been poor lately. He has made his fortune, and some of it was made in the United States, where he was justly esteemed above all other German actors who have gone there since Dawson and Seebach—not counting the Hungarian, Janaschek, who came to stay. Barnay lately played Bolingbroke in a revival of Schiller's "A Glass of Water," at the Berliner, with great spirit.

LETTER FROM NEW YORK.

(FROM AN OCCASIONAL CORRESPONDENT.)

New York, July 5th, 1894.

New York changes rapidly. To one who has been absent a few years this fact is particularly noticeable.

On reaching the Metropolis of our home-land, after some four years residence in Japan, I stood on Broadway amazed at the changed appearance of that main artery of the city's business life. The frenzied activity is more intense than ever. The Astor House, that old land-mark of half century ago and the hotel of that day, is over-shadowed by the tall modern buildings towering above it. The up-town of even half a decade ago has become "away down-town." "Printers Row,"—or Franklin Square—is fast moving two or three miles farther up and taking possession of Union and Madison Squares, and Broadway in the vicinity of 25th Street. Since the unveiling of the bronze statue of Horace Greeley a few weeks ago at the junction of Broadway and Sixth Ave., opposite the palatial building of the *Daily Herald*, that triangular area is known as Greeley Park. Within a few years business has encroached also upon the residence portion of "bon-ton," Fifth, and Madison Avenues. Houses of merchandise now reach even beyond the palatial house—"Marble Palace"—of the late merchant multi-millionaire, A. T. Stewart, which advanced the corner of 34th Street and Fifth Avenue some four miles from the Battery. Six and eight stories were the usual height of the business structures, but now "Sky Scrapers," fourteen to seventeen stories, meet the eye on every side. A contract has just been awarded for a new building, for offices, to stand twenty-one stories above the foundation.

What have been known in Tokyo, "from time immemorial," as hot-soup carts, have recently been introduced into New York, on an enlarged scale, as "All-night hot lunch vans." They are the size of a small railway car on four wheels and drawn by two horses: Within one of these portable restaurants one can secure quite a substantial meal at any hour of the twenty-four.

The fashionable drink, for both the wine-bibber and teetotaler, in the past few years has become the iced fresh buttermilk, sweet milk, and "milk shakes." Near the curbstone on various corners down amid the busy marts of trade, from Wall Street to City Hall, can be seen these neatly-painted, attractively-canopied, one horse caravans, dealing out this healthful beverage to thirsty multitudes at a penny or two a glass. This is one of the marked changes of the past half decade!

The rapid transit problem is not much nearer solution for the million and a half of people on Manhattan Island, notwithstanding surface cable cars and elevated steam railways have taken possession of the prominent streets leading up-town. The underground system—as used in London and elsewhere—does not seem feasible for New York City.

Summer's heat drives the tens of thousands out of the city, but leaves the hundreds of thousands to swelter on the scorching hot pavements and amid the crowded oven-like structures of brick and stone. New York has its "East Side" as London has its East End.

This season finds us on the Hudson River—the Rhine of America—some sixty miles above New York City and within two miles of West Point. On these Highlands, back of the towns and villages lining the Hudson, one finds tonic every hour of the day and night. The pure air of the country, the freshness of the fields, and the fragrance of the woods produce exhilarating recreation for mind and body. These attractions, coupled with the historic associations all along these banks and the ever fascinating scenery of this water course, charm hither many health and pleasure seekers during the summer.

The Constitutional Convention, in session at Albany, the State Capital, ninety miles above us on the Hudson, is wrestling with the various problems in political economy. It has been twenty years since the present constitution of this commonwealth was framed. Among the prominent questions of the day before the Convention is "Woman's Suffrage." Women Attornies-at-Law, and physicians, as also women leaders in philanthropy and general public matters, have appeared before the Convention with yards of petitions, bearing hundreds of signatures of mothers, wives, and daughters, praying that woman be granted the ballot in this Empire State. Men and woman, prominent in literary and professional circles, are discussing this subject vigorously on the platform and through the press. Both sides are ably advocated by both men and women.

About a fortnight ago the Eleventh Annual Conference of the International Missionary Union

led the writer to take a trip nearly three hundred miles farther, in a North Westerly direction, across this State. At Clifton Springs this international and inter-denominational body held a week's conference with three daily sessions. One hundred and forty-one missionaries from the foreign fields were in attendance, representing every phase of the Christian work from all parts of the globe. They, with the temporary and permanent residents of Clifton, filled the capacious Tabernacle daily with interested audiences. Japan had twenty representatives, China twenty-three, India thirty-three, Korea two.

The following persons answered the roll-call for Japan:—Dr. and Mrs. J. L. Ammerman, A. W. Beall, Miss G. S. Bigelow, Dr. and Mrs. J. H. De Forest, Rev. and Mrs. G. F. Draper, Mrs. G. Draper, Rev. C. W. Green, Rev. and Mrs. J. M. Leonard, Mrs. C. S. Long, Miss E. A. Preston, Miss Mary A. Priest, Miss L. Smith, Rev. and Mrs. Frederick J. Stanley, Miss N. J. Wilson, Dr. W. S. Worden. On the fifth day the afternoon session was devoted to the "Kingdom of the Rising Sun." The religious, political, educational, and social status of Japan were ably and justly presented. Other countries on their respective days were duly represented, bringing the whole world in a panorama before the people by the close of the week. The members of this International Union are generously entertained a week, in June every year, by Henry Foster, M.D., and his estimable wife, the President and founder of the now famous Sanitarium at Clifton Springs. This regal hospitality costs nearly two thousand dollars in gold; but the host and hostess are so unconsciously gracious in this generosity that the recipients feel, from the very beginning, they are being entertained personally by friends.

"The gift without the giver is bare." Every guest soon becomes conscious that he is receiving hourly the heart's love and goodwill from these magnanimous donors. The fame of this institution has become world wide. It has a unique history. Doctor Foster came forty-four years ago to this place, as a young physician with one thousand dollars capital.

The Seneca Indians for centuries had used these Sulphur Springs as also the early settlers of the "Pale face" were wont to come from far and near to drink and bathe in these mineral waters.

The young Doctor found a wayside inn and ten small rude dwellings stretching along a country road, beside this sulphury marsh and brook. A rough-hewn tub sufficed as the public bath house for all the inhabitants and visitors. Ten acres of virgin forest, including the desired springs, this disciple of Æsculapius secured. At once he erected a wooden structure capable of accommodating fifty patients. Doctor Foster was the proprietor, physician, manager, office clerk, and bath-attendant the first two or three years. This brought him to study practically every department of the Sanitarium. Soon the growth of the institution demanded additional room and help. An indefatigable student and worker, with a well-balanced mind, evenly poised disposition, a sturdy Christian character, and intent on benefiting his fellow-man physically, mentally, and spiritually,—he soon made the institution known to those oppressed with the—"ills which flesh is heir to." Step by step this healing resort has grown till now handsome brick buildings, covering nearly two acres in the midst of some fifty acres of beautifully kept lawns, flower gardens, and artistic walks, stand in the centre of a model village of 1,200 inhabitants. Over six hundred guests, in the busy season, crowd the capacious halls, corridors, and rooms. A skilful corps of six men and two women physicians direct all medical treatment, while two hundred well trained officials and attendants await the patrons' behests. Such thorough discipline and efficient management pervades the whole that the absence of all bustle or confusion and the reign of "perfect order" impress one as marvellous. The Sanitary farm of 400 acres adjoining, with the 125 Holstein and Jersey cows, furnish fresh milk, cream, and butter daily.

This life work of Dr. Foster for nearly half a century has resulted in a Sanitarium, with grounds, valued at over half a million dollars, and in making Clifton Springs not only famous but a household word of blessing in homes in every quarter of the globe.

Thousands of business men and society women, weary and worn with the cares and the frivolities of life—otherwise well and strong—and scores of tourists from all lands, overcome with fatigue incident to travel, have here sought that rest and recreation so beneficent to mind and body.

For nearly two scores of years the magnanimous founder of this institution has treated all clergymen, physician's families, and missionaries free of charge, and from a mere nominal rate for the room and board. This magnificence now amounts to about

twenty-five thousand (\$25,000) dollars per annum. The predominant desire of Dr. Foster's life has been to establish an institution which, for generations, would benefit suffering humanity, especially those classes of worthy persons usually unable financially to avail themselves of such blessings. To this end, a few years ago, the Doctor and his estimable wife transferred this valuable property, with all appliances, to a Board of the thirteen Trustees, representing seven Evangelical Christian denominations. He remains as Superintendent. This Board is to manage the Sanitarium in such a way that it will eventually become a free health cure and resting place to these four classes: (1) Foreign Missionaries, (2) the clergy, (3) Christian teachers, (4) indigent Church members of all denominations. With the large patronage at present and gifts from the grateful and liberally disposed, this purpose is annually approaching accomplishment. Bred in Allopathy, the Doctor has been broad-minded and wise enough to use every good element or discovery found in Homeopathy, Electropathy, and every other "pathy." He bases all on the "germ theory of disease" and the water cure as Nature's most powerful remedial agent. Simple and unostentatious in his whole demeanour, yet of commanding appearance, as he stands before you over six feet in stature, he is a man of positive convictions; and wins graciously at once your highest respect and confidence, though you may differ with him on medical or religious matters. The basal principle of the whole institution is the lifelong conviction of the founder, wrought out by successful experiment here these two score years, namely, that God created man with a three-fold nature; Spiritual, emotional, and physical, in the order here named. "Mind over matter," he firmly believes, but he expresses it, the spirit and emotions controlling the body. Man's spirit, will power, and affections must be at rest, at peace within and without, before any medical treatment of the body can be permanently successful. The unparalleled success of this institution, conducted on these well-defined lines, might profitably lead general practitioners in medical science everywhere to consider favourably these principles underlying the entire system of healing the maladies of the human race.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, August 3rd.

The New York Recorder says:—"There are 375 permanent Japanese residents in this city, and they all mind their own business, which is a good thing to do."

At the Commencement exercises of Mount Union College, Alliance, Ohio, the honorary degree of D.D. was conferred upon Rev. Y. Honda, of Tokyo.

The return of Minister Tateno to Japan is much regretted in diplomatic circles in Washington, where he is highly respected. In taking leave of the President, Mr. Tateno said:—

In saying good-bye to you, Mr. President, although the occasion is not one which calls for a formal utterance, I cannot refrain from expressing to you my personal appreciation of the unvarying kindness and consideration for which I am indebted to you and to the honourable Secretary of State. I may be pardoned if I see in the treatment that has been accorded to me the evidence of your desire to increase the relations of cordial goodwill which exist between our countries. For the perpetuation of those relations I could wish no stronger guarantee than is to be found in the spirit manifested on all occasions by yourself and the officers of your government.

In response the President said:—
Mr. Minister: You have resided so long at this capital and your official duty has been so well and so courteously discharged that you have won the respect and esteem of those among our people with whom you have been associated, and made your departure from our country a matter of sincere regret. The friendliness of the United States for Japan has long been manifested by constant assurance of good will, by our gratification upon every advance your country has made in the pathways of substantial development, and by a desire for closer intercourse between the two peoples. You have been in a position to appreciate those sentiments, and by your own cordiality and zeal you have actively contributed to the harmonious feeling that exists. Mindful as you have always been of the interests and policy of your own country and earnest in upholding them, I am pleased to bear witness to your conscientious fulfilment of your representative task as well as to the personal courtesy which has made your relations with this government most agreeable. I trust, Mr. Minister, you will lose no opportunity to make our friendly sentiments known to your countrymen and that you will assure your Sovereign and his advisers of the heartfelt wishes of the government and people of the United States for the peace, prosperity, and happiness of Japan.

Mr. Wm. Q. Judge has been acquitted of the charges of forging a Mahatma's hand-writing and of misusing a Mahatma's name.

Hon. Chas Denby, U.S. Minister to China, had been home on his vacation only about three weeks, when he received word from the State Department, that, in view of the war between China and Japan, he had better return to his post. He and his wife are now on their way back to China.

The hostilities in the Orient have received plenty

of advertising in the newspapers of this country in spite of some trouble with the telegraph service. We do not pin implicit confidence to the cable dispatches, but are waiting for more accurate and detailed press accounts from the seat of war. Public opinion in America seems to be strongly in favour of Japan.

Reports from Samoa and Honolulu are in this morning's paper. From the former place comes the news, that "the native troubles here have undergone little change," and that there is still some fighting. In Honolulu political affairs are now very quiet and "business is improving;" contracts have been let "for the building of a railroad to run around the island of Oahu."

There are conflicting reports about the purpose of the party of Hawaiian Royalists now in this country. Some say that they will try to get monetary damages out of the U.S. Government for the deposed Queen; others that they are to find out what President Cleveland intends to do in the matter of her restoration, and that they will also work to induce the President not to recognize the new Republic; and still others, that they are now favourable to annexation.

It is now quite probable that the French claim of about \$70,000 for exhibits destroyed by fire in the Manufactures Building will be paid by a special appropriation in the sundry civil appropriation bill.

The Committee appointed by the Senate to investigate the charges, that certain Senators had speculated in sugar has practically exonerated all the accused, except Senator Quay, who never denied the accusation with reference to himself. But the fact remains evident that the sugar schedule of the tariff bill was constructed just as the trust wanted it. In fact, it has often been stated, with apparently no mistake, that "the Senate bill is a trust bill."

It is still uncertain what will be the issue of tariff legislation in this Congress. Senators Gorman, Brice, Smith, Vest, Harris and others have vehemently assailed Pres. Cleveland's letter to Congressman Wilson; while Senators Vilas, Hill, Palmer, and others have vigorously defended the President. After a vain attempt to patch up a peace in the Senate and to get the Democratic Senators to recede partly from their position, the tariff bill, by a tie vote, was sent back to the conference committee without instructions. Just at present there is another attempt being made to agree on a compromise bill.

On July 31, at the close of business, the cash balance in the Treasury at Washington was \$125,519,538, of which the gold reserve amounted to only \$5,550,168.

The Labour Commission to investigate the causes of the recent strikes is to be composed of U.S. Labour Commissioner Carroll D. Wright, Chairman *ex-officio*; Hon. N. E. Wadsworth, ex-Congressman and now Circuit Judge, of Peoria, Ill.; and John D. Kernan, ex-Railroad Commissioner, of New York City. This commission will hold its first meeting in Chicago August 15th.

The Republicans of Michigan have put up Governor Rich for re-election; and those of Wisconsin have named Major W. H. Upham for Governor.

On the 1st inst., Governor Tillman, of South Carolina, re-opened the State liquor dispensaries in defiance of the State Supreme Court which has pronounced unconstitutional the act for their establishment. The Governor is "determined to enforce the law more vigorously than ever," and its opponents are bitter; hence there is likely to be serious trouble.

Two more ex-Treasurers of Wisconsin, one Republican and one Democrat, have been declared by Judge Siebeck, of the Dane Co. Circuit Court, to be liable for interest on State funds to the amount (aggregate) of over \$180,000.

A citizen's committee in New York City claim to have made important discoveries of gigantic frauds, involving \$15,000,000, in connection with aqueduct bonds.

Two prominent old-timers have recently died: Frederick F. Low, ex-Congressman, ex-Governor of California and ex-Minister to China (1869-1874); and Joseph Holt, who, as Judge Advocate-General during Lincoln's administration, conducted the prosecution of Mrs. Surratt and the other conspirators.

The casualty list this time is a long one. Forest fires in Wisconsin not only destroyed a large amount of lumber, but practically wiped the town of Phillips (6,000 inhabitants) off the map: only 39 buildings out of 700 were left standing, and 13 lives were lost; Belle Plaine, Iowa, was also almost entirely destroyed; and Minneapolis lost \$500,000 in a big fire in a lumber yard. Chicago, of course, need not be outdone in anything by any other place. It had four big fires in two days. The one which before last was in a lumber district on the West

Side, but illuminated us here in Hyde Park; its losses foot up about \$2,000,000. The other three fires were minor ones that figured only about \$350,000.

The last week in July was a scorcher with July 26th as the hottest day. A hot wind from the South was prevalent and blasted everything. It began to look as if the crops every where would be utterly ruined; but, providentially, within the last few days some rain, but not too much, has come; so that the reports from the different parts of the north-west with reference to the crops are much more favourable.

It was also July 26th when "General" Coxey bade a final farewell to his "commonwealth army" near Washington, and advised them to beg in order to get arrested. Many of Coxey's men went over into Virginia to Frye's camp, where there are nearly 1,000 men.

When the officials of the American Railway Union were brought before Judges Woods and Grosscup on the charge of contempt of court in interfering with the Inter-State Commerce Act, their attorneys moved to quash the indictment, but were over-ruled by the Court. The case was then continued till September 5th. Debs and his associates, becoming tired of playing martyrs in jail, gave bail at \$7,000 each, and were at once released from custody. Since then the defendants have appealed to the U.S. Circuit Court of Appeals in the clancery proceedings, and have been granted their appeal.

The Pullman Car Company has been trying to re-open its works, but did not succeed till yesterday, when the repair shops were opened with 458 men. Many of the strikers, in the face of starvation, have given up their membership in the union and have gone to work. Inasmuch as the relief committee is not abundantly supplied with money and supplies, there is much suffering among the strikers. Their fortitude, in maintaining so long their rights, is certainly wonderful.

All the State militia have now been called in except four companies, of which one is stationed at East Hammond and three at Pullman. I went on a train yesterday through Grand Crossing, Burnside, Pullman, and Kensington, and saw no signs of any present disorder, but found plenty of reminders of the recent riots in the shape of wrecked and burned cars.

The American Railway Union is now in session in this city, and will probably pass a vote, formally declaring the strike off. The delegates seem inclined to admit that the strike method is a failure, and are talking of settling their grievances hereafter by going into politics. Presumably, they will support the Populists.

The Illinois Steel Company's Works at South Chicago have re-opened with 2,700 men.

This evening's paper says that the number of workmen in the Pullman shops to-day was 552, and that, as applications continue to come in, it is expected that 800 men will be at work by next Monday.

THE KARUIZAWA CONFERENCE.

The second day opened Wednesday at 9.30. The people appreciate the discussions; and the little chapel was filled with about one hundred who came here for the benefits of a delightful climate and happy associations. The morning session was taken in by the ladies on the subject of Woman's Evangelistic and School Work. Miss Gundry, of the Friend's Mission, Tokyo, presided. After singing "Rescue the Perishing," reading Matthew 15 chapter and prayer, Miss Cozad, of the Congregational Mission, Kobe, read an excellent paper, only a mere outline of which is here included:—

WOMAN'S EVANGELISTIC WORK.

1.—The distinction between woman's evangelistic work and the general evangelistic work must be borne in mind. This distinction involves a special preparation in the study of the language. A systematic course in language study with examinations thereon is to be highly recommended, but that course should be especially adapted to the needs of the lady missionary in her special work. In the course of study and in selection of teacher care should be taken that the woman's style of language may be acquired.

In preparation for special work the lady missionary should strive to acquire a manner of speech, of action, of carriage, which shall be pleasing to the Japanese women. The method of work for men and women should differ, the lady missionary avoiding as much as possible speaking in large mixed public meetings and devoting herself to the quiet hand-to-hand work of calling on

the women or holding women's meetings and Bible classes.

2.—It should also be borne in mind that the spirit in which she works is of more importance than natural abilities or attainments. The magnetic power of a heart filled with the love of Christ and going out in love and sympathy to the Japanese being an essential in missionary work. Especially should the habit of brooding over the discouragements of the work and criticizing the Japanese and their foibles be strenuously avoided.

3.—It is most important of all that the Bible should be studied first devotionally, secondly systematically, with the latest and best helps to careful scientific study, Harper's Inductive Series of Bible Lessons being especially helpful both in private study and in teaching the Japanese.

Remarks followed by Miss Phelps, of the Methodist Episcopal Mission at Sendai. Miss Phelps spoke of a profitable experience she had with women's meetings as well as with general evangelistic meetings. She would urge the utmost simplicity of speech with numerous illustrations.

Mrs. Chappel, of Aoyama, Tokyo, mentioned her work with the women believers,—to prepare them to do work of their own accord. Their King's Daughters do for the poor and the sick and are rendering kind help to the soldiers in Korea.

Miss Cunningham, of the M.E. Mission at Kanazawa, spoke well of the Fujink-wai work, that all the women they had were secured by that means. She has taught the Life of Christ in the meetings and plans home readings.

Mrs. Elliott, M.E. mission, Toyama, reaches them by means of same the handiwork.

Miss Alexander, of Tokyo, sang an appropriate Hymn, "I have toiled all night."

Miss Porter, Pres. Mission, Karnizawa, explained her work among children in the Kindergarten. Her school being for the children of the well-to-do people is largely supported by them.

Mrs. McCauley, Pres. Mission, Tokyo, gave a soul-stirring account of her work among children in her school. She has a tuition fee of 20 sen except with a few too poor to pay it. The pupils keep up a collection which goes to the support of an evangelist to the Ainu people.

Mrs. Pettee, of Okayama, gave a brief account of Mr. Ishii's Orphanage.

Three ladies from China, Doctors Walder and Poyndexter, and Mrs. Wigan gave accounts of their work in two different parts of the Empire. As it is inevitable that the Chinese and Japanese undergo comparisons, a good deal of information was given us by our co-labourers in China. The Chinese hate foreigners; scheme for their own profit; have no conception or desire to know the true God. Of the women, not one in a thousand can read; show no such independence and freedom as is seen in Japanese women; but after a systematic schooling compare in mental culture favourably with any in the world. They ask strange questions. "Yours eyes are different from Chinese eyes, how deep in the ground can you see? Is there any sun in your country? Do you live by eating and drinking or can you live without it? In your travels, have you ever seen a country where only women live?"

The morning session closed in the midst of great interest.

The night session was presided over by Mr. White, of Tsukiji, Tokyo.

Mr. Price, of the Pres. Mission, Tokushima. Mr. Price's paper was one of the best received by the conference. His subject was "The Spiritual Dangers peculiar to the Student of the Language." A few sketches of the address is given below. "The human mind is not capable of being filled by two lines of thought at one and the same time. It is true that some persons of a remarkably versatile nature can with ease and freedom turn their attention from one subject, which has occupied it for a while, to another of an entirely different nature and become seemingly lost and absorbed in its study. But the average man must experience decided wrenching of the mental faculties before accomplishing such a feat, and I might almost say, that such a sudden change from subjects so widely separated as purely linguistic studies and the contemplation of things divine is almost an impossibility. Of course, in speaking of the student of Japanese, I have in my mind the man who with a solemn determination to master this most difficult of tongues, cuts loose from other absorbing duties and applies himself with all the fire and energy of a heaven-dedicated nature to accomplishing the desired end. Unless some such spirit animates the young missionary, the danger is that the cords of his tongue will never be loosened, and, like the Corinthian prophets, he will speak in an unknown tongue with no one to interpret.

What can be more conducive to this (intellectual tendency), than the removing of all the conscious and unconscious influences of home, church, and society? These like the lapidary's wheel have polished and smoothed the naturally defective parts till they glisten and shine with an unnatural brightness. Transplant the missionary to the mission field, place within his hands, books of etymology and syntax of an unknown tongue, in a strange land and amid a people of strange customs. At first the people seem so much inferior physically, mentally, and spiritually, that we are rendered incapable of being benefited by them. Then it is that unconsciously but most surely pride, the fatal enemy to that most Christlike of virtues, humility, springs up in the heart: thus pride, desire to control, suspicion, and undue sensitiveness, together with other failings gain a control over the missionary which can only work evil to his spiritual nature.

Lack of patience.—Often have I heard older missionaries acknowledge that they were more irritable and had less patience than when they left home. They may attribute it to the climate, or to various other reasons, but I fear that often the origin is found in the trying period we pass through when first mastering this tongue. It is not the direct temptations of the mission field that shake and blunt man's moral nature, but the temptations growing out of our constant presence in the midst of sin and idolatry. Miss Bird, the authoress and traveller over Unbeaten Paths, while visiting the Moravian missionaries living just outside the territory of Tibet, was astonished, impressed, and delighted at such spirituality and heavenly mindedness so far from the stimulating and elevating influences of Christian Society. In reply to an inquiry how they preserved their spiritual life in such a place, the truly Christlike answer came, "By diligent study of God's word and prayer." Christ in reply to his chagrined disciples, why they could not cast out the evil spirit, replied in like strain, "Such kind goeth out only by prayer and fasting." Thus the only solvent remedy is within the reach of every earnest missionary.

After the services at 2 o'clock a party started for the ascent of Asama-yama. The company was led by Mr. Kirby, of Tokyo.

FRIDAY, AUGUST 17TH.

At the Friday morning Session, Rev. G. E. Albrecht read a scholarly paper on "The Teaching of Jesus in its Relation to Judaism." The following is an abstract of the essay:—

For a true appreciation of the teachings of Jesus it is indispensable to consider them in their actual relation to contemporaneous Jewish Religious thought and life. For this purpose it is important to ascertain the standpoint from which this relation is to be determined. Is it a relation chiefly of similarity or of contrast? Did the teaching of Jesus have its root in the religious ideas of his time, or did he introduce new elements and new principles? A study of the development of Judaism during the preceding centuries must furnish the answer. Jewish history from the time of the return from exile to the time of Christ is divided sharply into two epochs, viz., those before and after the persecution by Antiochus Epiphanes. Either one of these two periods has its distinctive religious characteristics. The period from Ezra to the Maccabean revolt is marked chiefly by an ever increasing tendency towards externalism, legalism, and separatism, as well as a more and more transcendental and lifeless conception of God. During the following period a strong nationalistic element entered again into the religious thought of the people, imparting to it new vigour; but the externalism and transcendentalism inherited from the previous period directed all the hopes of the people towards the future world, when God would by supernatural interference destroy all the enemies of his people, giving to the latter the full possession of all longed-for blessings. This nationalistic and eschatological Messianism were joined with externalism, separatism, and transcendental, almost deistic, conceptions of God. Looking at the teaching of Jesus as related to this type of religion, which was that of the Jews of his time, it is evident that the relation is one of contrast. The teaching of Jesus is a development of Old Testament ideas, but it is a protest against the Judaism of his time. This is proved again by a comparison of the pivotal ideas of Christ's teaching with the corresponding ideas of Judaism, e.g., God and his relation to this world; the meaning and purpose of human life; the Kingdom of God; the Son of Man, etc. The teaching of Jesus was not a revivification of latent germs of Judaism, but the revealing in full measure of truths made known but partially by the ancient prophets. It was not a development out of Judaism, but a bringing into the religious life of the Jews and of the world of a new revelation from heaven.

Considerable discussion followed the reading of the paper.

The Evening Session was given to a "Question Box," presided over by Rev. J. M. McCauley, D.D. Thirty-eight questions had been put into the "Box," consequently but a short time could be given to each question.

The first question discussed was, what effect is the late Parliament of Religions likely to have upon Japan and Christian Missionary work in Japan? To this question Rev. Dr. McGregor, of China, Rev. J. H. Pettee, and Miss Alling responded. Miss Alling (of Aoyama) spoke from actual observation, having attended the Parliament. Dr. McGregor thought that greater effects would be felt in Japan than in China. There was no real Chinese religious representative present. One result of the Parliament would be to give people at home too high an opinion of Oriental religions. Many even carried away the impression that Mahomedanism is a tolerant religion.

Another important question taken up was, "In calling in the homes of the Japanese and in our social intercourse with them, how far should we conform to the customs and etiquette of the Japanese?" Interesting addresses pro. and con. were given by Messrs. Wigham (of China), Albrecht, and Pierson. Lack of space forbids more than the slightest mention of the other questions. Some were of vital interest to the missionary and his work, as, for instance:

From this time until the revision of the Treaties is it advisable for Missionaries, either individually or through their organized bodies, to evade the strict letter of Japanese law and practically own property in the interior?

Is membership in the ecclesiastical bodies or in the individual churches in Japan on the part of mission workers desirable?

Answered for the most part in the negative.

Is it desirable that a General Conference of Missionaries in Japan be held some time in 1895?

Answered. No.

What about industrial education as a factor in Mission work in Japan?

Answered, not of great importance in a country so well equipped with industries as Japan is.

How can the Kogisho work be carried on most effectively?

The time was specially extended for the discussion of this important question of preaching-place work. Instructive suggestions were given by Messrs. Albrecht, Patton, McKenzie, and others. At what age did Christ come to the consciousness of His Divinity?

Not discussed.

Other questions dealt with the relation of the Baptism of John to Christian baptism, questions in Biblical criticism, the Christian Endeavour movement, the work of the Bible Societies, Mission schools, the adaptation of Chatangia methods to Japanese needs, etc. Only one session had been given to the "Question-Box," but, as only eight questions were passed the first night, it was found necessary to hold two extra sessions on Monday, 20th inst. The presence of Rev. Dr. Verbeck on Friday night was esteemed a great privilege. He gave earnest exhortation to young missionaries to master the language as a prime essential to success.

The Conference Committee was composed of Revs. Chappell, Laidis, Patton, McKenzie, and Price. This Committee and others who contributed directly to the success of the Conference received hearty votes of thanks at the final session on Monday evening. The Conference closed with the Benediction pronounced by Rev. Dr. McCauley.

Rev. J. H. Pettee gave an address on Sabbath evening, choosing for his theme Christianity applied to Life.

After taking his bearings from Scripture, and showing the vital sequence between creed and conduct, doctrine and duty, he reviewed the history of the church, showing how it had failed largely in its mission through a neglect to fully appreciate and embody the personal command of love to one's neighbour and the self-sacrificing service of its divine Lord.

Following the line of reasoning adopted by Dr. Josiah Strong in his "New Era," and other recent writers, he claimed that we are living now in the sociological age of the world. He quoted Dr. C. H. Parkhurst's famous aphorism "God and one man could make any other religion, but it requires God and two men to make Christianity." He emphasized strongly the duties of individual Christians and of the Church as a whole to society at large, depicting especially the present state of depraved needs of the Orient. He reviewed the good work already done in Japan, dwelling particularly upon the work for orphans

and ex-convicts; and offered in conclusion the following practical suggestions.

1.—Every Mission Station (if not every missionary) should study the peculiar needs of its own city and discover the *meibutsu* of opportunity.

2.—As much as possible should be done in aid of those needy classes to be found everywhere. Young children, young people, coolies, the sick, and the wretchedly poor, especial importance attached to kindergartens, sewing, night, and English Schools and nursing.

3.—Aim after union of effort so far as possible. Keep down the number of competing institutions of a similar character in the same neighbourhood. Forget sectarian differences. Be wide as well as generous in your charities.

Mr. Loomis reported the work of the Bible Societies. The British and American being combined, and the proceeds divided equally, the copies of whole bibles and parts of the bible sold last year were about forty thousand copies. Thirteen colporteurs are employed. One only is paid a salary. The remainder work on commission. The scriptures are sold to the people at a price that will cover the cost of printing and binding. A peculiarity of the sales in Japan is that of a demand for the best binding. The total sales since the Bible Societies commenced work is about one million copies.

On a query concerning study of the language, a thorough course was recommended, such, if possible, as is pursued at the British Legation. Dr. Verbeck advised a study of the Chinese character, but if the student has not a good eye for form, he will not be greatly benefited by using the *fude*; also a knowledge of Chinese is entirely distinct from that of Japanese.

Apologetics in preaching was considered, and the opinion prevailed that it should not form a considerable part of sermons.

Kogisho work was the most interesting question. It was brought out that the open kogisho is more successful than "closed doors," a plan pursued by the Greek Church; that these preaching places may be moved occasionally with profit to the general work; that charity schools, dispensary work including a "district nurse," is being profitably connected with the kogisho.

These are a few of the most interesting out of thirty-eight questions that formed a fit closing of the Conference.

JAPAN AND CHINA IN KOREA.

The following article on the situation in Korea, is from the *Daily Telegraph* of the 5th ultimo:—

Most of the public comments lately made upon the Korean Question have been deficient in information and calculated to mislead British opinion. A brief and precise statement of the facts may be useful at the present juncture to show, not only the importance of the problem, but the clear identity of interests which exists upon it between England and Japan. The kingdom of Korea, lying close to the last-named Empire, is a fertile land of some eighty thousand square miles, with a population of about eight millions. The people call their country "Cho-Sen." It is rich in minerals, which are very poorly worked, and might be fruitful and wealthy but for its incapable Government. It has for long been under the titular vassalage of China, but this was and is quite nominal, as is proved by the repeated instances wherein the Chinese Government has refused to be answerable for the Korean Court, and left that Court to settle its own relations with foreign Powers. The real basis of the existing situation is the Treaty between China and Japan made in 1885, which virtually placed Korea under the joint protection of the two Empires, which had the common right to send troops to Seoul upon due notice. This absolute right of Japan to share in the maintenance of good order in the peninsula, or even to maintain it, alone, furnishes the central point of the situation. Of late the corrupt and tyrannical conduct of the Korean Government has provoked its miserable subjects to rise in revolution. This had happened more than once before, and the revolt had been repressed by cruel measures of coercion; but the recent movement had the special characteristic of threatening foreigners. To judge of what the Korean Court is like, we may mention that not long ago a political refugee from its enmity residing in Japan was allured to Shanghai and there murdered in his hotel by commissioned assassins, not without, it is feared, the connivance of Chinese authorities. At all events, the assassin and his dead victim were sent in the same steamer to Chemulpo, where the body was officially treated with public indignities, and the murderer covered with honours and lodged in a palace. Such a Court had neither the will nor the power to protect the foreigners who were threatened by the leaders of the new revolution; and when it is

understood that Japan has twelve thousand of her citizens commercially engaged in Korea, while China has only two thousand, it will not be wondered at that the Emperor of Japan sent his ships and troops in haste to defend the lives and property of his people there, as well as the vital interests of his Empire. Chinese troops and ships were already on the spot, but the reason of their presence was rather to keep a footing in the land with a view to eventualities than to restore order and peace. Chinese diplomacy, perceiving that it would not be allowed to fish all by itself in the troubled waters, suddenly pretended that the insurrection was at an end, and requested that the Japanese troops and ships should be withdrawn. This Japan declined, most reasonably demanding that order must be first restored and proper steps taken to prevent a recurrence of similar dangerous troubles by introducing necessary reforms in Korean administration under the joint supervision of the Chinese and Japanese Governments. Never for one moment has Japan departed from the honest interpretation of the Li-Ito Treaty, her one object being to reform the barbarous system prevailing in the peninsula, because—leading to Anarchy as it must—it would make the country an easy prey to the designs of the ambitious Power which China, Japan, and England have equally to guard against in Asia.

Of course, the power which we have in mind is Russia, and it is already stated that she has so far intervened in the present dispute as to urge the withdrawal of both Chinese and Japanese troops, and an endeavour to arrive at an amicable settlement. The intervention of Russia, however, in the cause of peace, is not to be viewed without suspicion. For the real hidden peril of the present state of affairs lies in the allegation that Li Hung-Chang, contrary to the Treaty of 1885, has concluded a secret agreement with Russia. Diplomacy must not be so bold as to say all it knows, but here is the key to the problem: At present Russia cannot afford wholly to develop its programme in Eastern Asia. The Trans-Siberian Railway must first be finished. That line has been so energetically pushed on that 1901 instead of 1904 will see the completion of the principal section, and the Trans-Baikal line will be ready in 1898. China, therefore, has to confront the approaching fact of direct contact with Russia along all her frontiers; and, although much of the Russian border country is now empty, the Czar's officers could soon pour into it by the new line military colonists by tens of thousands. When this danger ripens China knows that she cannot defend Korea, if Russia laid hands upon it; and Russia immensely desires Port Lazareff, in Korea. That would give her Asiatic fleet a military port always open in winter, whereas Vladivostok is closed by ice for many months; that also would give China the opportunity of driving a bargain with St. Petersburg in the interests of its own provinces; and that also would be almost a death-blow, to the maritime and commercial expansion of Japan, to have a Muscovite Sebastopol within a few hours by steam of the Japanese seaboard. Not long ago the Russian Chargé d'Affaires at Seoul nibbled at the beginnings of the business by trying to get a Russian submarine cable laid from Vladivostok to Port Lazareff. He was foiled, but the design of securing a footing for Russia in Korea has never been abandoned, and our St. Petersburg Correspondent yesterday reported that Russia has put forward claims of a quite inadmissible character in view of the present dispute between China and Japan. Thus on the one hand we see Japan, faithful to the terms of the Treaty with China, protecting Korea, and asking for no special rights except that of reforming the administration and keeping Korea out of the clutches of Russia; while China, probably with secret motives of a nature adverse to British as well as Japanese interests, forsakes the treaty, and would leave Korea to fall back again into anarchy and bloodshed. For Japan it is a duty of self-preservation that a good state of affairs should be established in Korea, and that by a friendly understanding with China it should be made safe against any foreign Power. If China alone could and would defend the peninsula Japan would be satisfied; but Li Hung-chang's Government cannot be trusted either diplomatically or materially with this important duty, which, therefore, Japan has to assume. She possesses ample powers. Her Navy, already formidable and admirably manned by nearly ten thousand officers and men, will soon be still more powerful, and she can put into the field a well-drilled army of a quarter of a million disciplined and fearless troops. Her outpost of Tsushima is within half a day's steam of Korea, and it is quite certain that at any cost the Government of Tokyo will not allow the Treaty of 1885 to be disregarded or Korea left to chance.

While it is much to be hoped, therefore, that no collision may occur between China and Japan, the British Foreign Office must face the facts. England gave up Port Hamilton, demolishing a costly station there, and wasting a good naval "plant," on the clear understanding with Russia that she would not attempt to lay hold of any port in the Japanese Sea. It is the plain policy, therefore, of Great Britain at the present moment, consistent at once with honour and with interest, to support Japan in the just action which she is taking to guarantee Korea against the intrigues and perils that threaten its security. The true advantages of China in this question are identical with those of Japan and our own. The Japanese Minister in London, being questioned on the subject, has given emphatic expression to the policy of his Government. That policy may be summed up in a few words. It is to effect reform in the administration of Korea and safeguard Japanese rights there. Japan seeks nothing more than the integrity of the Korean kingdom and the preservation of tranquillity in her immediate neighbourhood. Its Government has invited that of China to take part in a joint commission to reform Korean administration. Japan knows well that any half-measures will only result in fresh rebellions and new occupations. Therefore, either China must sincerely unite with her in doing what is necessary, or Japan is resolutely bent on herself accomplishing what is necessary. Nobody can doubt that Japan, which has naturalised most of the institutions of the West, pre-eminently represents civilisation in these waters, and there is not a single motive in her present line of policy which is not harmonious with English interests there. It will cost this country the price of another naval squadron if Russia is ever allowed through China to occupy Korean ports. If a conflict should, indeed, shortly occur between the Japanese and Chinese forces, it is quite likely that it will be one between progress in Asia and reactionary intrigue. Lord Rosebery's foreign policy, however, inherited as it is by Lord Kimberley, would forsake the strong Imperial foresight it has hitherto shown if it did not take all possible measures to let Russia and China know that the course of events at Cho-Sen is perfectly comprehended in London.

MARINE COURT OF INQUIRY.

LOSS OF THE "KOWSHING."

We take the following Finding and Order of a Naval Court held at H.B.M. Consulate, Nagasaki, on the 7th August, 1894, from the *Rising Sun*:—

The steamer *Kowshing* was an iron vessel, schooner rigged, of 1,355 tons registered tonnage, Official Number 87,000, built at Barrow-in-Furness, and belonging to the port of London. It appears from the evidence given before this Court, that she sailed from Taku on or about the 23rd day of July, 1894, bound for Gusan, in Korea, with no cargo, but with 1,100 Chinese troops on board. That everything went well until the morning of the 26th July, when about 9 a.m. the *Nanima Kan*, a Japanese man-of-war, signalled to her to stop, and anchor, which she did in 11 fathoms of water, with the island of Sho-paiou bearing about N. by E., distant about 1½ miles. That after communicating with the *Kowshing* twice by boat, and ordering the officers to quit the vessel, which they were prevented doing by the Chinese troops, the *Nanima Kan*, about 1 p.m., discharged a torpedo at the *Kowshing*, and, this not striking her, the *Nanima Kan* fired a broadside of five heavy guns at her, and continued firing both heavy and machine guns from deck and tops until she sank, about an hour later. That when the firing commenced numbers of the crew and Chinese troops jumped overboard, amongst them the Master, Thomas Ryder Galsworthy; the First Mate, Lewes Henry Tamplin; and a Quarter-master, Lineas Evangelista (a Manila man), who are the only members of the crew at present known to be saved.

The Court, having regard to the circumstances above stated, finds as follows:—

- 1.—That the ship was sufficiently seaworthy and well found in all necessary respects.
- 2.—That the conduct of the officers and crew before and up to the time of the sinking of the vessel was satisfactory and free from blame.
- 3.—That the cause of the sinking was due to her having been repeatedly struck by heavy cannon shots from the *Nanima Kan*, a Japanese man-of-war.
- 4.—That no efforts on the part of the master and crew would have availed to avert the catastrophe.
- 5.—That the Court attaches no blame whatever

to the master, Thomas Ryder Galsworthy, or any of the officers or crew.

6.—The expenses of the Court, fixed at £6.4.0. are hereby approved.

Dated at Nagasaki the 7th day of August, 1894.

JHON J. QUIN,
H.B.M. Consul, President.
JHON MITCHELL,
Master, ship "Cape York."
THOMAS E. COWELL,
Master, ship "Drumeltan."

LATEST TELEGRAMS.

REUTER "SPECIAL" TO "JAPAN MAIL."

London, August 18.

The Tariff Bill of the United States will be enforced forthwith.

Santo, the assassin of President Carnot, was executed in Lyons. He trembled with terror as he was led to the guillotine.

The Chinese Government is negotiating a loan in London and Berlin of one and a half million pounds sterling, at five per cent. interest, two-thirds of the loan to be payable in silver.

London, August 21.

The United States Senate has shelved the tariff bills for admitting coal, iron, and sugar duty free.

Sir William Harcourt has said that the question of the veto of the House of Lords on the House of Commons Bills was one of the gravest moment, but that he would be unable to make a definite statement thereon during the present session.

London, August 23.

Replying to a question in the House of Commons, as to whether China would respect the Treaty Ports of Japan, Sir Edward Grey said that he declined to make a statement until a case arose necessitating an answer.

The Emperor of Russia is suffering from a slight attack of influenza.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Nagasaki, August 23.

Dr. C. A. Arnold, United States Vice-Consul at this port, died suddenly last night.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.-C. DAILY NEWS."]

London, August 16.

The United States Senate has ratified the New Emigration Treaty with China.

A brilliant review has been held at Aldershot in honour of the German Emperor.

The agreement with France in regard to the Congo States has been signed in Paris.

[FROM THE "DAILY PRESS."]

London, August 9.

There is a remarkable rise in all the "gilt-edged" stocks due to the plethora of money and to banks reducing the interest on deposits by one-half per cent.

The prospects of the passing of the United States Tariff Bill also contributes to a revival of business.

London, August 20th.

Speaking in the House of Commons, Sir Edward Grey, Parliamentary Under-Secretary for Foreign Affairs, stated that the Government had hitherto been most careful not to create any irritation where British interests were not directly affected; but that if any new phase arose in the relations between France and Siam, the Government would be obliged to pursue a new course.

The Government has detained in the Tyne a torpedo-catcher, equipped contrary to British neutrality, which was about to start for China.

London, August 18.

The Marquis of Dufferin has returned to Paris to negotiate the settlement of various irritating African questions.

A fatal case of cholera has occurred at Bat-tersea.

[FROM MANILA PAPERS.]

Madrid, August 5.

The Sultan of Morocco, Abdul Aziz, is dead. It is reported that he was poisoned.

[Abdul Aziz, who was only fifteen years of age, succeeded his father, Muley Hassan, who was also reported to have been poisoned, only a few weeks ago.]

(FROM JAPANESE PAPERS.)

Nagasaki, August 23.

The Russian gunboat *Sevitch* put into this port from Vladivostok last night.

Fusan, August 23.

The Japanese military line between Fusan and Sôul was interrupted on the west of Chosen at 4 a.m. to-day.

Later.

The Sôul-Fusan line has been interrupted on the north of Dojin since this morning.

Tottori, August 23.

Heavy rains fell here last night, and the Hoshoji-gawa overflowed. Numerous houses were submerged; nearly three hundred persons are receiving relief. A man was drowned.

Fusan, August 23.

Rumour says that there was a battle in the neighbourhood of Ph्योंng-yang to-day.

Nagasaki, August 24.

The Russian ship *Sevitch* and H.M.S. *Archer* have both left for Chefoo. The British man-of-war *Redpole* has arrived here from Yokohama.

Osaka, August 24.

Some 111 arms captured by the Japanese troops from the Chinese during the battles of Sông-hwan and A-San, reached here yesterday in the *Otagawa Maru*. Among the articles captured are drums, flags, spears, etc.

Shimonoseki, August 24.

The *Hyogo Maru*, *Mikawa Maru*, and *Kokura Maru* have arrived here from Ujina. They immediately returned to Ujina.

Shimonoseki, August 24.

It is stated that over fifty Japanese residents engaged at Taiwan collecting sulphur, have been murdered by the Chinese inhabitants of that island.

Shanghai, August 22.

(A telegram received by Mitsui & Co., Tokyo.)

The Russian Consul of this port, rumour says, will withdraw from China at no distant date, and will place Russian residents under the protection of France.

(The message requires confirmation.)

PROBLEM No. 137.
By WALTER PULITZER.

White to play and mate in three moves.

Our clippings this week are from the London Times (weekly edition).

IN SUSPENSE.—I hardly know anything more tantalizing than the suspense that is undergone in the course of an important *partie*, while your adversary, yet undecided, is making up his mind respecting a move which you feel a dreadful conviction must exercise a disastrous influence over the remainder of your game. You have long ago gone through the position, and are awaiting the result with what stomach you may. The five minutes previous to the extraction of a molar tooth is a joke to what you are now forced to endure. You fidget on your seat, look out of the window with an air of pretended indifference, or address a careless observation to a bystander, throwing the while furtive looks upon the field of action. Your opponent's digits wander towards a certain piece, and your heart beats furiously with apprehension; they are withdrawn from it, the quickened pulse moderates, and you breathe again. His glance is directed to a different part of the board, and your lips involuntarily form themselves into the semblance of a whistle, as you lay the flattering unction to your soul that he is about to overlook that which you see only too well. Ah, confusion! his countenance suddenly lights; he ogles that Black Kt with the eye of a rattlesnake; his clutch is upon it; your fate is sealed; the midnight of despair falls upon your spirit, and the abomination of desolation is painted on your woe-begone visage.—Captain Kennedy.

We are glad to see that Mr. Blackburne keeps things going at his retreat in the South of England. The following *partie* was played by him against some strong members of the Hastings Club—consulting.

27—Q to B4	27—Q R to Q sq.
28—Kt to Q6 (i)	28—R to K3
29—Kt x B P	29—R to Q5
30—Q to B8 ch.	30—K x P
31—Q to K R8 ch.	31—K to Kt3
32—Q to Kt8 ch. and mates next move.	

(a) Threatens B x P ch. and with a view B P to K B4. We have usually found Kt to K B3 good in this ancient opening, at this point, both for defence and attack.

(b) Anticipating that Black will castle Q R, these pawns are advanced rapidly, to be afterwards destroyed by the enemy.

(c) P to K B5 here has much to commend it, shutting Black in *pro tem*.

(d) By this means Black obtains freedom and some Q side attack.

(e) This disagreeable move, with all its consequences, is not easily met. Clearly the pawn can neither be taken nor left with advantage, and Black ought, under ordinary circumstances, to have found here a winning continuation.

(f) White has cleverly taken over the attack.

(g) This takes the Q too far from home, and results in an exchange which brings White's R well into the game. But P x P seems little superior, seeing that the Q must ultimately retire to Kt3 or R4, leaving White in possession of the field.

(h) It appears promising now to play Q to K3, threatening Q to K Kt5. Supposing, however, (a) Q to K3, K R to K sq.; (a6), Q to Kt5, Q to Kt3 ch. and afterwards Q x P.

(i) Mr. Blackburne's finish is, as usual, elegant.

CRAMMING.—A great many people seem to think that in order to acquire a knowledge of chess they have only to obtain the latest books on the openings and gulp as much of the mass of analysis presented to them as their memories will momentarily contain. Cramming is no more effective in chess than in any other science. The player who crams may know many moves, but he knows little or nothing of the why and wherefore of the moves, and if his opponent gets out of the books, even by a weak move, he loses grip of the game at once.—Lasker.

Mr. F. G. Lee, a noted English player, has been touring in the States and Canada lately. We find

a game between him and the Montreal Chess-King, Babson, which is of interest.

GAME NO. 155.

EVANS GAMBIT.

WHITE. F. J. Lee.	BLACK. J. N. Babson.
1—P to K 4	1—P to K 4

35—Q x B	35—Q x Q ch.
36—K x Q	36—R to Q R 5

Black wins.

(a) Known as the compromised defence due to which authorities have, as in many other cases, disputed. We never attempt to settle such questions. The position is over well-known.

(b) Q—Kt 5 is usual. The text move presents suggestive features.

(c) This is a key move, followed, as in this case, by R—Kt sq. Q—K 5 is a much better move (Pollock).

(d) Black, it will be noticed, brings his K to the K side for attack with great effect.

(e) After these exchanges the two centre pawns of Black carefully managed must eventually march to victory. Black played this game well.

Further news of the Showalter-Hodges match reaches us via London. After the score stood Hodges 4, Showalter 1, the combatants changed the opening from the everlasting Ruy Lopez and tried a Ponziani (which we give below). This appeared to change the luck, for Showalter commenced winning again, our latest score is Hodges 4, Showalter 3, Drawn 2. As the match is five games up, it is probably all over ere this.

GAME NO. 156.

Played in the match Hodges v. Showalter:—

PONZIANI'S OPENING.

WHITE. J. W. Showalter.	BLACK. A. B. Hodges.
1—P to K 4	1—P to K 4
2—Kt to KB 3	2—Kt to QB 3
3—P to B 3	3—P to Q 4 (a)
4—Q to R 4	4—P x P
5—Kt x P	5—Q to Q 4

12—B to Q B 4	12—Kt to Q 4 (d)
13—Kt to Q 2	13—Q to B 4
14—Kt to B 3	14—B to B 4
15—P to Q R 4	15—P to K R 4
16—P to R 5	16—P to R 5
17—P to R 3 (e)	17—P to Kt 4
18—R to R 4 (f)	18—Q R to Kt sq.
19—B to K 2	19—Kt to B 5 (g)
20—B x Kt	20—P x B
21—P to R 6	21—B to R sq.
22—K to R sq.	22—Q to Kt 3
23—Kt to K sq.	23—R to K sq.
24—B to Kt 4 ch.	24—P to B 4
25—Q to B 2 (h)	25—K to Kt sq.
26—B x P	26—Q to R 3
27—Kt to Q 3	27—B to Kt 3
28—R x P	28—P to B 4
29—B to Kt 4 (i)	29—B to K 5
30—R x B	30—R x R
31—Kt x P (j)	31—R x B
32—Kt to Q 7 ch.	32—K to R sq. (k)
33—P x R	33—P to R 6
34—Q to K 4 ch.	34—P to B 3
35—P to K Kt 3	35—P to R 7

36—R to Q sq. 36—B x P
37—P to Kt 5 (l) 37—Resigns.

(a) Or Kt—K B 3 is recommended by many as superior.
(b) Or B—Q Kt 5, followed, if QxKt, by BxKt ch, or KtxB if B—Q 2.
(c) With the same idea as in preceding note, viz., QxP ch, if QxP 2.
(d) The only defence, as the B B was threatened, the loss of which would be fatal.
(e) There is hereabouts a race for the attack. We have tried other moves, but consider White played best here by at once preventing the terrible move P—R 6.
(f) Very nicely-timed play. Now if 18—, P—Kt 5; 19, PxP, QxP; 20, BxKt, with an attack on the Queen and a won game.
(g) Strong play also, forcing open the K Kt file.
(h) Very cleverly conceived, threatening at once BxP ch and winning at least one or two pawns. The play is obvious, but of interest.
(i) The game, which has presented exceptionally interesting points throughout, is now elegantly finished.
(j) The play may the more easily be followed with aid of the diagram. Position at move 29, Black to play.

BLACK—MR. HODGES.

WHITE—MR. SHOWALTER.

(j) All this is splendidly played and well deserves the success achieved.
(k) Clearly K to B sq. is answered by Kt x B ch.
(l) It was fitting that such a pretty game should be so neatly concluded. There is, it will be observed, no square to which the Queen can be played to save that piece or the mate.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong	per M. & O. Co.	Sunday, Aug. 26th.
From America	per F. M. Co.	Sunday, Sept. 2nd.
From Hongkong	per C. F. R. Co.	Saturday, Aug. 25th.
From Hongkong	per O. & O. Co.	Thursday, Aug. 30th.

ARRIVALS.

Finsen Maru, Japanese steamer, 1,411, T. Tibbals, 18th August,—Kobe 17th August, General.—Nippon Yusen Kaisha.

Henry Failing, American ship, 1,899, J. Merri-man, 19th August,—New York 24th March, Petroleum.—Jardine, Matheson & Co.

Satsuma Maru, Japanese steamer, 1,160, F. L. Sommer, 19th August,—Niigata 16th August, General.—Nippon Yusen Kaisha.

Tokio Maru, Japanese steamer, 1,350, Kenderdine, 19th August,—Vladivostok via ports, General.—Nippon Yusen Kaisha.

Empress of India, British steamer, 3,003, O. P. Marshall, 20th August,—Vancouver, B.C., 6th August, Mails and General.—Frazar & Co.

Anne Main, British bark, 471, A. Croal, 20th August,—Manila, passage 41 days, Sugar.—Dodwell, Carlill & Co.

H. C. Wahlberg, American schooner, 26, 20th August,—North Pacific, 200 Seal Skins.—T. M. Laffin.

Myrmidon, British steamer, 1,815, Brown, 20th August,—Liverpool via ports, General.—Butterfield & Swire.

Soyachi Maru, Japanese steamer, 1,108, Hayashi, 21st August,—Otaru, Coal.—Tanaka Shoten.

Tsuruga Maru, Japanese steamer, 742, 21st August,—Yokkaichi 20th August, General.—Nippon Yusen Kaisha.

Peru, American steamer, 2,540, D. E. Friele, 21st August,—Hongkong via ports, 11th August, Mails and General.—P. M. S.S. Co.

Kumamoto Maru, Japanese steamer, 1,240, E. W. Haswell, 22nd August,—Nagasaki via ports, 17th August, General.—Nippon Yusen Kaisha.

Senator, British ship, 1,695, Smith, 22nd August,—Cardiff, Coal.—Langfield & Co.

Himeji Maru, Japanese steamer, 2,340, McKenzie, 22nd August,—Hakodate, General.—Nippon Yusen Kaisha.

Denbighshire, British steamer, 1,662, Evans, 22nd August,—London via ports, General.—Dodwell, Carlill & Co.

Fuyo Maru, Japanese steamer, 875, Eden, 22nd August,—Moj, Coal.—Mitsu Bishi Sha.

Hertha, German steamer, 1,642, Hilderbrandt, 22nd August,—Hamburg via ports, General.—Simon, Evers & Co.

Nagato Maru, Japanese steamer, 1,160, E. S. Barstow, 22nd August,—Yokkaichi 21st August, General.—Nippon Yusen Kaisha.

Toyoshima Maru, Japanese steamer, 684, Tippet, 22nd August,—Hachinohe, General.—Nippon Yusen Kaisha.

Strathleven, British steamer, 1,588, Cormack, 23rd August,—Hakodate, General.—Nippon Yusen Kaisha.

Sikh, British steamer, 2,735, J. Rowley, 23rd August,—Hongkong via ports, Mails and General.—Dodwell, Carlill & Co.

Yokohama Maru, Japanese steamer, 1,298, Swain, 23rd August,—Kobe 22nd August, General.—Nippon Yusen Kaisha.

Gaelic, British steamer, 2,690, W. G. Pearne, 24th August,—San Francisco 7th August, Mails and General.—O. & O. S.S. Co.

Otaru Maru, Japanese steamer, 1,507, N. Trennit, 24th August,—Otaru, General.—Nippon Yusen Kaisha.

Glengarry, British steamer, 1,985, 24th August,—London via ports, General.—Jardine, Matheson & Co.

Chuyetsu Maru, Japanese steamer, 928, 24th August,—Otaru, General.—Nippon Yusen Kaisha.

Tsuruga Maru, Japanese steamer, 742, 24th August,—Yokkaichi 23rd August, General.—Nippon Yusen Kaisha.

DEPARTURES.

Harima Maru, Japanese steamer, 436, Kawamura, 18th August,—Yokkaichi, General.—Nippon Yusen Kaisha.

Ise Maru, Japanese steamer, 641, A. Umesono, 18th August,—Hakodate, General.—Nippon Yusen Kaisha.

Asagao Maru, Japanese steamer, 1,540, H. Walter, 19th August,—Kobe, General.—Nippon Yusen Kaisha.

Fusan Maru, Japanese steamer, 1,411, J. F. Allen, 19th August,—Kobe via Yokkaichi, General.—Nippon Yusen Kaisha.

Glenorch, British steamer, 1,822, Sommer, 19th August,—London via ports, General.—Jardine, Matheson & Co.

Hokushiu Maru, Japanese steamer, 735, S. Oka, 19th August,—Otaru, Ballast.—S. Oka.

Finsen Maru, Japanese steamer, 1,411, T. Tibbals, 20th August,—Kobe, General.—Nippon Yusen Kaisha.

Empress of India, British steamer, 3,003, O. P. Marshall, 20th August,—Hongkong via ports, Mails and General.—Frazar & Co.

Redpole (6), gunboat, Captain C. G. May, 20th August,—Nagasaki.

Satsuma Maru, Japanese steamer, 1,160, F. L. Sommer, 20th August,—Hakodate, General.—Nippon Yusen Kaisha.

Tokio Maru, Japanese steamer, 1,350, Kenderdine, 20th August,—Vladivostok via ports, General.—Nippon Yusen Kaisha.

Toyoi Maru, Japanese steamer, 1,696, Curnow, 21st August,—Otaru, Ballast.—Osaka Shosen Kaisha.

Tsuruga Maru, Japanese steamer, 742, 21st August,—Yokkaichi, General.—Nippon Yusen Kaisha.

Harima Maru, Japanese steamer, 436, Kawamura, 22nd August,—Yokkaichi, General.—Nippon Yusen Kaisha.

Macduff, British steamer, 1,882, E. Porter, 22nd August,—New York via ports, General.—Dodwell, Carlill & Co.

Ardencloth, British ship, 1,222, Robt. McCarlie, 23rd August,—Kobe, Pig Iron.—Sale & Co.

Myrmidon, British steamer, 1,815, Brown, 23rd August,—London via ports, General.—Butterfield & Swire.

Peru, American steamer, 2,540, D. E. Friele, 23rd August,—San Francisco, Mails and General.—P. M. S. S. Co.

William H. Macy, American ship, 2,092, J. A. Amsbury, 23rd August,—New York via Kobe, General.—Sinon, Evers & Co.

Himeji Maru, Japanese steamer, 2,340, McKenzie, 23rd August,—Kobe, General.—Nippon Yusen Kaisha.

Kumamoto Maru, Japanese steamer, 1,240, E. W. Haswell, 23rd August,—Hakodate via ports, General.—Nippon Yusen Kaisha.

Nagato Maru, Japanese steamer, 1,160, Barstow, 23rd August,—Hakodate, General.—Nippon Yusen Kaisha.

Toyoshima Maru, Japanese steamer, 684, Tipple, 23rd August,—Kobe, General.—Nippon Yusen Kaisha.

Sikh, British steamer, 2,735, J. Rowley, 24th August,—Tacoma, Wash., via Victoria, B.C., Mails and General.—Dodwell, Cartill & Co.

Fuyo Maru, Japanese steamer, 875, Edew, 24th August,—Moj, Ballast.—Mitsu Bishi Sha.

Strathleven, British steamer, 1,588, R. Cormack, 24th August,—Hakodate, General.—Nippon Yusen Kaisha.

Caroline (14), cruiser, Captain C. J. Norcock, 25th August,—Yokosuka.

Gaelic, British steamer, 2,690, W. G. Pearne, 25th August,—Hongkong via Nagasaki, Mails and General.—O. & O. S. S. Co.

Torresdale, British ship, 2,185, R. Buchanan, 25th August,—Portland, Oregon, Ballast.—Order.

Yavra, French steamer, 2,126, de Maubeuge, 25th August,—Shanghai via Kobe, Mails and General.—Messageries Maritimes Co.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of India*, from Vancouver, B.C.:—Mr. H. F. Anderson, Miss Bolton, Mr. and Mrs. E. D. Buffington, Mr. E. Buffington, Miss Buffington, Mr. O. Bergmann, Mr. S. A. Crozier, Jun., Rev. and Mrs. Howard Campbell, Rev. Mr. Chubb, Mr. and Mrs. Chas. H. Denman and infant, Mrs. L. J. Doolittle, Mrs. A. Dunbar and maid, Miss Dunbar, Dr. Geo. H. Duncan, Mrs. Evelyn Gibbs, Mr. A. J. Holt, Colonel Edward C. James, Miss James, Mr. E. Kellman, Miss Lambly, Mr. E. Livingstone, Mr. J. E. Macrae, Mr. J. McLellan, Hon. Francis McNutt, Miss Munroe, Mr. G. M. H. Playfair, Miss Rickards, Mr. E. Reiss, Mr. L. Reiss, Mr. G. Schoffer, Miss Strickland, Mr. O. Stuebel, Rev. Sidney Swann, the Hon. P. le Poer Trench, Mr. T. B. Ward, Miss Wilson, Mr. H. W. White, Mrs. L. G. White, Miss H. A. White, and Lieut. Colonel W. B. Williams in cabin.

Per American steamer *Peru*, from Hongkong via ports:—Mr. L. Kuhn, Mr. and Mrs. Whittier, Messrs. N. J. Van Patten, C. S. Van Patten, F. J. Bardens, H. Shiraki, de Windt, West, Heinemeyer, and Miss Brewin in cabin.

Per British steamer *Gaelic*, from San Francisco:—His Excellency Gozo Tateno, Mrs. Tateno, daughter, and nurse, Dr. J. Chassagnou, Admiral C. C. Carpenter, U.S.N., Lieut. W. F. Halsey, U.S.N., Mr. H. B. Turner, Mr. Nathan Bentz, Mrs. W. L. Chapman, Miss E. A. Preston, Mr. A. Unger, Mr. Sherill Babcock, Mr. Edward A. Murphy, and Miss E. Kellon in cabin. For Shanghai:—Miss Jennie Evans and Miss Hugo Grun in cabin.

DEPARTED.

Per British steamer *Empress of India*, for Hongkong via ports:—Mr. H. E. Keller, Captain and Mrs. McCarthy and infant, Mr. and Mrs. S. W. Graystone, Mr. and Mrs. Ford, Miss A. E. Thompson, Mrs. Burton, 2 children, and maid, Dr. Burton, Mrs. and the Misses Burnie (3), Miss Plummer, Captain Burnie, Mr. and Mrs. C. W. Richards and 3 children, Mr. and Miss Ho'Vell, Mrs. Moore Graham and 2 children, Mr. Loh Chat Tung, Captain Thomas, Mr. and Mrs. Stuart Smith and infant, Rev. and Mrs. C. H. Gardner, Mr. J. Gould, Mr. and Mrs. Julius Mannich, Major and Mrs. Wynn Eaton and infant, Mr. K. P. Carrey, Mr. Hip Ng Fal and 2 children, Miss Case, Mrs. Marchmont, Mr. Tung Tiong Ho, Mr. Crosse, Mrs. J. M. Scudder and child, Mrs. Rhein, Captain Grant, Dr. Tilden, Mr. Phylpott, Mr. King, Rev. Wm. Mussen, Mr. W. H. Krimm, Mr. and Mrs. David and 3 children, Mr. C. Johnson, Miss Wilson and child, Mr. E. L. Conan,

and Miss E. Young in cabin; Mr. and Mrs. P. Lee, Mr. Graystone's man, Mr. David's nurse, and Mr. King's man in second class, and Mr. D. E. Brown's Chinese boy, and 57 passengers in Asiatic steerage.

Per American steamer *Peru*, for San Francisco:—Messrs. Chas. Henney, G. H. Quirk, C. K. Hall, P. Heinemeyer, Geo. Peter, and A. B. Curjel in cabin.

Per British steamer *Gaelic*, for Hongkong via Nagasaki:—Admiral C. C. Carpenter, U.S.N., Lieut. W. F. Halsey, Mr. and Mrs. Chas. Grant, Mr. S. Brinkworth, and Mr. D. B. Tata in cabin.

Per French steamer *Yavra*, for Shanghai via Kobe:—Mr. G. Harris Purcell, Miss Purcell, Miss R. H. Purcell, Miss Jennie Evans, Miss L. R. Bourne, Mr. W. Kocher, Mrs. Fontaine, Mrs. Lowder and 4 children, Miss J. P. Campbell, Mr. John Northey, Miss C. de S. Argentié, Mr. G. Osawa, Mrs. Shirashi Oome, Miss Wakabayashi Yoshi, Mrs. Camfo, Mr. H. Spear, Mrs. Ah Ling, and Mr. N. Che Yu in cabin.

REPORTS.

The American ship *Henry Failing*, Captain J. Merriman, reports:—Left New York the 24th March; encountered several gales in the North Atlantic, crossed the line on the 19th day of April, fine weather until running down the easting, then had thick weather and head winds. Lat. 52.51 South, long. 6.17 East, also, lat. 43.21 South, long. 47.56 East, passed large icebergs; on July 28th passed by Anjer 97 days out, fine weather and light winds until July 31st in lat. 28.41 North, long. 126.17 East, encountered a typhoon which lasted sixty hours, wind from E.N.E. to N.E. Ship drifted 160 miles dead to leeward; on August 4th lat. 28.20 North, long. 123.30 East, passed four-masted iron barque with two after masts gone, the only sail set was on the fore; she was heading for Shanghai; on August 14th lat. 34.01 North, long. 137.31 East passed a junk's mast and spar with sail attached, it had been in the water but a few days, were sailing through wreckage for some five miles; passed what appeared to be a Japanese barque with all three masts gone, she had a heavy port list on the water, painted black with a stripe about 6 inches wide around her, there was a long boat across the stern. The steamer *City of Rio de Janeiro* went alongside of wreck while we were in sight, there was no people aboard.

The Japanese steamer *Satsuma Maru*, Captain Sommer, reports:—Left Niigata the 16th August at 10.10 p.m.; had light south to north-westerly winds and fine, clear weather to entrance of Tsu-

garn Straits; thence light northerly to east-south-easterly winds and fine weather to Cape Kawsu; thence moderate north to north-easterly winds and dull, cloudy weather, with frequent passing showers to port. Arrived at Yokohama the 19th August at 1.45 p.m.

The Japanese steamer *Kumamoto Maru*, Captain Haswell, reports:—Left Nagasaki the 17th August at 4.18 a.m. and arrived at Moji the same day at 5.23 p.m. Left Moji at 11.10 p.m. and arrived at Kobe the following day at 9.27 p.m. Left Kobe the 20th at 12.5 p.m. and arrived at Yokohama the 21st August at 9.30 p.m.; experienced fine weather and moderate breeze during the passage.

The British ship *Senator*, Captain Smith, reports yesterday:—From Cardiff with coal; ran ashore on the eastern side of the Bay on Saratoga Spit between the fort and the eastern shore. She is lying broadside on and probably will have to be lightened if she does not come off to-night. The *Yokosuka Maru* left this afternoon to see if she could assist in towing her off. The Sagami Pilots both being up in Yokohama on outgoing ships, the Captain of the *Senator* was unable to get a pilot last night.

The Japanese steamer *Nagato Maru*, Captain Barstow, reports:—Left Yokkaichi the 21st August at 10 p.m. Arrived at Yokohama the 22nd August at 4.15 p.m.; had light winds and fine but hazy weather throughout the passage.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Kobe the 22nd August at 12.40 p.m.; had light southerly and south-west winds, passing Oshima at 9.20 p.m.; thence to Rock Island, which was passed at 11 a.m. on the 23rd, continued light S.W. winds and fine weather; at 3.30 p.m. stopped at Kanon-saki to await pilot, and at 4.40 p.m. Naval steam tender headed ship with instruction to follow; thence proceeded slow up to arrival at Yokohama at 6.15 p.m.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 7th August at 4.07 p.m.; had strong to moderate westerly and south-west winds and head sea to August 21st; thence to port light easterly winds and fine weather. Arrived at Yokohama the 23rd August at 11.50 p.m. Passage, 15 days, 14 hours, 15 minutes.

LATEST COMMERCIAL.

IMPORTS.

Yarns and Manchester Goods generally are quite neglected. The situation has not changed, and there is positively nothing doing. Fancies and Woollens also are stagnant with all quotations nominal. The smart rise in exchange causes dealers to anticipate lower prices, but holders will not reduce their askings if they can help it. There seems no money in the trade anyway.

COTTON PIECE GOODS.

Jim Plates, per box	6.00 to 6.10
Pig Iron, No. 3	1.60

KEROSENE.

Some fresh arrivals of Chester from New York increase the stock, but we have not heard of any fresh sales. Prices are well maintained at former quotations with an upward tendency, although this rise in exchange prevents much improvement in values.

Chester	\$1.72 1/2 to 1.75
Comet	1.70 to 1.72 1/2
Devoe	—
Russian Anchor	1.70 to 1.72 1/2
Russian Moon	1.67 1/2 to 1.70

SUGAR.

Browns—No sales of Formosa sorts, stocks and prices remaining unchanged. Some business has been done in Manila kinds at late rates. White Refined—There is a steady demand at previous rates.

	PER PICUL.
Brown Takao	\$4.50 to 4.60
Brown Manila	5.10 to 5.20
Brown Daitong	3.30 to 3.40
Brown Canton	3.70 to 4.40
White Java and Penang	7.40 to 7.40
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 17th instant, since which date settlements on this market are 1,810 piculs, divided thus:—*Hanks*, 31 piculs; *Filatures*, 1,326 piculs; *Re-reels*, 426 piculs; *Kakeda*, 27 piculs. Direct shipments have been 176 bales, making the total export trade for the week 2,000 piculs.

After a short interval of comparative quiet, buying has recommenced on a large scale for both Europe and America, and our Japanese friends seem to be reaping the benefit of a good demand, although while writing there is much less doing and it looks as if prices must experience some rebound.

This week presents a remarkable contrast to the corresponding week last year. Then, we had a dull dragging market from day to day, with prices weak and irregular; now, sellers seem masters of the situation, at least for the moment.

There has been a smart rise in exchange following upon better prices obtained for silver in London.

There have been two shipping opportunities since we last wrote, the English mail steamer *Ancona*, 18th instant, taking 466 bales for Europe, and the *Peru*, which left port yesterday, had 778 bales for the United States market. These departures make the present export figures 7,161 piculs, against 3,285 piculs last year and 6,097 piculs at the same date in 1892.

Hanks.—Some purchases of *Chichibu* were reported at the beginning of the week, price mentioned being \$560. Nothing has since been done, but holders of course ask an advance.

Filatures.—Considerable business has been done for Europe in fine sizes, best quality touching \$750 and over. In full sizes plenty of business has been done at advancing rates until the climax has been reached in the following settlements: *Choshinsha*, \$750; *Gakosha*, \$750; *Naka-Inasha*, \$745; *Kaimisha*, \$740. It is but fair to say that these last purchases may eventually be open to some revision.

Re-reels.—These have advanced also until \$685 has been freely paid for *Five Girl* chop. Other high-class *Yoshu* are now held for \$700.

Kakeda.—Very small business; quotations more or less nominal.

In other sorts, nothing done.

<i>Stock, 24th Aug.</i>	18,450	12,150	14,030

WASTE SILK.

After a long period of inaction, a small business has been done amounting to 209 piculs, divided thus:—*Cocoons*, 50 piculs; *Noshi*, 97 piculs; *Kibiso*, 54 piculs; *Neri*, 8 piculs.

There has been no excitement whatever in this market, but one or two buyers, probably moved by the stir in Raw Silk, have made a few purchases. Quotations are not advanced, but remain steady at last rates; although of course the rise in exchange enhances the lay down cost.

There has only been one shipping opportunity since we last wrote, the English mail steamer *Ancona* taking a few bales for Europe, and the present export is 2,635 piculs against 740 piculs last year and 1,795 piculs at the same date in 1892.

Pierced Cocoons.—Nothing done as yet, although the stock now approaches 1,500 piculs. Buyers and sellers still seem too wide apart and the present outlook is that there will be no business done for some time to come. The sales mentioned above are old *Kusu-mai*, common quality, prices ranging from \$14 to \$18 per picul.

Noshi.—One small purchase of *Oshu* at \$120 and one fair line of *Yoshu* at \$65. This is all the business done in this department.

Kibiso.—A few odds and ends of *Filature* have been settled, prices ranging from \$85 to \$100.

Sundries.—One purchase of common *Neri* at \$6.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1894.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters, Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

YOKOHAMA: SATURDAY, SEPT. 1ST, 1894.

DEATHS.

At the German Hospital, on Sunday, the 26th ult., GEORGE CLARK, a native of America, of paralysis.

At Yamato, Broadhurst Gardens, London, N.W., on the 19th July, AGNES, the beloved wife of THOMAS J. LARKIN, Esq., formerly in the Japanese Government Service in Tokyo and Kobe.

SUMMARY OF NEWS.

THE total quantity of coal in store at Moji on the 24th ult. was 30,978 tons.

NINETY houses were destroyed by fire at Shinchi, Ezashi, Hokkaido, on the 24th ult.

MR. KUROBE YOHACHI has been chosen Chief Director of the Yokohama Rice Exchange.

THE Circus opens on a plot of ground opposite the General Post Office on Monday evening.

COUNT VON WEDDEL, military attaché in the German Legation, Tokyo, leaves the capital for home to-day.

TYPHOID fever and dysentery are causing sad havoc in Aichi, Gifu, Hiogo, Gumma, and Ishikawa Prefectures.

YOKOHAMA's contribution towards the War Fund totals yen 2,999,006, the number of contribu-

tors being 513. This does not include presents to the Army and Navy.

ONE of the Negishi murderers was executed in the Tobe Prison on Monday. The other is serving a life-sentence.

THE Chinese detected smuggling opium at the English hatoba recently has been sentenced to a month's imprisonment.

ALL the Chinese employés on board the N.Y.K. steamers were to be dismissed this week owing to the war between China and Japan.

MR. HOSHI TORU will very probably be the Radical candidate for the Presidency of the Lower House in the next session.

THE silk-manufacturers of a tiny village in Sowa District, Nagano Prefecture, have subscribed yen 10,000 towards the war expenses.

MR. CHOSHO, Governor of Tottori, having resigned, Mr. Nomura, Secretary of Kagoshima Prefecture, will be nominated his successor.

MEMBERS of the Y.A.R.C. indulged in some amusing water frolics on Wednesday afternoon. The sport was witnessed by a number of ladies.

RINDERPEST has broken out at Shimonoye, Asukigun, Oita Prefecture, among some cattle imported from Korea. The herd has been slaughtered.

LANDSLIPS involving loss of life have occurred in Hokkaido and in Shimane Prefecture. The heavy rains are the cause of the loosening of the soil.

THE new Anglo-Japanese Treaty was published by the press on Tuesday. It contains twenty-two articles and a protocol bearing reference to the tariff.

THE import trade of Ninsen, Korea, during June last shows a decrease of yen 107,187 in imports, and yen 189,726 in exports as compared with the previous month.

ADMIRAL CARPENTER, the newly appointed commander-in-Chief of the U.S. squadron on the Asiatic station, has reached Nagasaki and hoisted his flag on the *Monocacy*.

EXTENSIVE floods have taken place in Iwate and Akita provinces. Many lives have been lost, while the destruction of property, especially in Akita province, has been enormous.

THE Christians of the Japanese Empire are collecting money to aid the Government in the war, and arranging to send nurses to Korea to attend to the needs of the Japanese army.

THE Japan Edible Sea-weed Company—whose 35 yen fully paid-up shares are quoted at 28 sen—has lost yen 488,590.982. A committee has been appointed to see if there is any hope of restoring its fallen fortunes.

THE new Customs House and pier at Yokohama were throw open to public inspection on Monday and Tuesday. General satisfaction was expressed by the guests who availed themselves of Mr. Megata's invitation.

MR. MUTSU MUNEMITSU, Minister of Foreign Affairs, will henceforth be known as Viscount Mutsu, having been elevated to the ranks of the nobility in recognition of his services in connection with the new British Treaty.

THE *Toyo Maru*—formerly the P. & O. steamer *Zambesi*—one of the Government transports, has been in collision off the coast of Awaji with the *Fukuda Kan*, a Japanese training ship

which was formerly a British frigate. The latter has been beached. The *Toyo's* injuries are mainly in the bows.

REUTER telegraphs that Sir Francis Knollys, Equerry to H.R.H. the Prince of Wales, in a letter to a private enquirer, has written a letter declaring that the story of the Duke of York's previous marriage is a cruel and malignant falsehood. In consequence of an adverse non-party vote, the Miner's Eight Hours Bill has been withdrawn. The debate on the Indian Budget has been continued in the House of Commons. According to a statement in *The Times*, the agreement made with France in regard to the Congo State will not affect British rights, but it may compel Great Britain to take effective occupation of that territory on the Nile which the Congolese have occupied as Britain's tenants. The British Government has laid an embargo on the steamer *Islam*, which had been purchased by Japan in Glasgow and was about to start for that country to be converted into a cruiser. Sir Edward Gray, speaking in the House of Commons, said he believed that it was needless to increase the British Squadron on the China Station on account of the condition of affairs in Korea. The British Parliament has been prorogued. The Queen's Speech expresses regret at the war now being waged in the East, which it states the Government of Great Britain had tried to prevent in concert with Russia and other Powers. The banks of the lake of Ghona, in India, have burst causing immense damage between Ghona and Hardway, but there was no loss of life. A mass meeting has been held in Hyde Park to advocate the abolition of the House of Lords. Mr. Denby, U.S. Minister to the Court of China has left Washington on his return to Peking.

It is becoming apparent that consumers of textile fabrics are beginning to adopt economies on account of the war, as certain Manchester goods that are constantly in demand more or less throughout the year have now been entirely neglected for several weeks. But this is the natural outcome of the situation, and we predict that it will continue and be more or less acutely felt by importers until the close of the present strife—and possibly for some time after, as this war is bound to impoverish Japan. Holders of Yarns have reduced quotations as exchange advanced, but have met with no response on the part of buyers, and the same position is reported in regard to Shirtings and most other Piece-goods. In the Metal market rather more has been done in Tin Plates and Galvanised Iron, as buyers were current, though the stock of these is decidedly small. Pig and Plate Iron have also been moved to some extent, and enquiries have been fairly good. There is no business to report in Kerosene. There has been but little done in Sugar, and the market is weak. Manila kinds have been taken sparingly, and a few small parcels of White have been moved off, but the big stock of Formosa—not far off 100,000 piculs—remains untouched. The Silk trade has seen further heavy settlements—mostly for Europe, though the States have been in the market—and another good week's business has been done, buyers apparently being at length convinced that there is a large quantity of very good Silk on offer in this market at really cheap prices. The Waste Silk trade has improved when compared with its recent exceedingly dull state, and nearly 1,000 piculs have been taken at full figures. In the Tea trade, the activity noted last week has continued, and stock has been much reduced, full rates having been paid in the transactions put through, while the better sorts are getting scarce and leaf with any pretensions to quality now commands higher figures. Exchange is firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The war and the various topics connected with it have divided journalistic attention during the present week with a few other questions, such as Treaty Revision, the forthcoming Elections, the resignation of Mr. Inouye, the Minister of Education, and so forth. Concerning the war, several papers continue their protests against any premature conclusion of peace. Not that any tendency to such a conclusion has hitherto been manifested, but in view of the probability that if the war continues the Japanese expeditionary army may be compelled to go into winter quarters in China, some journals apprehend that the temporary cessation of military activity under such circumstances may lead to renewal of attempts at mediation on the part of some neutral Powers. No negotiations for peace, emanating from whatever source, are to be accepted by Japan until China shall have been so completely humbled and crushed that there will be no possibility of her taking up arms again against this country for many years to come. Otherwise the present war, instead of being a means of securing the general peace of the East, will prove the cause of a perpetual disturbance of tranquillity in this part of the world. So now that the challenge has been accepted, these papers urge Japan to reduce the enemy to a state of complete submission.

What would be the ultimate result of the advance of the Japanese army upon Peking? Would it lead to the downfall of the Manchu dynasty and to general anarchy throughout China? Those are questions which are beginning to be asked by Japanese journalists. They are of far reaching importance, not only to Japan but to the East in general. The gravity of the issues involved makes the Japanese journals extremely careful in ventilating their opinion on this phase of the question. In fact, the better sort among them altogether refrain from expressing their views. Certain papers, however, have indicated their opinions on this subject in an unmistakable manner. Such are the *Hochi Shimbun* and the *Chu-o Shimbun*. The disruption of the Chinese Empire will be, says the *Hochi*, a signal for the commencement of aggressive operations by Russia, England, and France. Such a spectacle must by all means be averted, and the only way in which it can be avoided will be, to quote our contemporary, "for His Majesty the Emperor of Japan to extend his sovereign authority over China and save her people from servitude to European Powers." The *Chu-o* writes in the same strain, and remarks that, should the Chinese show themselves incapable of beginning a new career of progress as a united nation, it would then be time for Japan to enter on her career of continental conquest. The open avowal of such aggressive views, as already noticed, is as yet confined only to a few of the second rate or third rate papers in Tokyo.

Apart from the question of the policy that Japan ought to pursue in case of the disruption of China, there seems to be an agreement of opinion among the Japanese that the present war will be likely to overthrow the Manchu dynasty. From this point of view the genuine Chinese, namely those not of Manchu origin, ought, say, the *Mainichi Shimbun*, to be thankful to Japan for her present war against their foreign conquerors and oppressors. It is not against the Chinese proper, but simply against their Manchu rulers, that Japan is now waging war. With the native Chinese, Japan has no quarrel; and they, on their side, should regard the Japanese as their best friends. Our contemporary then proceeds to illustrate its point by referring to the deep sympathy and even benevolence shown by the Japanese to the numerous Chinese refugees who sought protection in this country when their homes were ravaged by the invading hordes led by the ancestors of the present Manchu dynasty. The descendants of these refugees ought to know that Japan is now

fighting against their common enemy, and that this Empire's true object is to liberate them from the blighting sway of their barbarous rulers.

The complete harmony that prevails among Japanese of all sorts and conditions, irrespective of party or faction, with regard to the prosecution of the present war is very striking. Such has always been the case with this nation whenever the country was threatened with danger from outside. We may mention an instance that serves to throw light upon the probable temper of the next House of Representatives. The *Fumiuri Shimbun*, organ, be it remembered, of an extreme section of the Opposition, suggests that the first business in both Houses of the Diet in the coming session ought to be the voting of a resolution expressing the House's entire approval of the measures taken by the Government for the prosecution of the war, and its determination to give every support it can to those in power, so that the enterprise may be brought to a successful issue. Such a resolution, says the Progressionist organ, is to be adopted not because there is any tendency among the people to criticise or hamper the Government's action, but simply as a formal expression of the sentiments actuating the whole nation.

The barbarous conduct of the Chinese towards the Japanese residents in various parts of the Middle Kingdom has naturally excited keen indignation in this country. Hot-blooded youths are talking of being revenged by fitting out a volunteer fleet and harassing the coasts of the Chinese Empire, much in the fashion of the Japanese pirates who were the terror of those regions a few centuries ago. We are glad to note that no one has proposed retaliation upon the helpless Celestials living in Japan. Concerning the above mentioned scheme of forming a volunteer fleet, the *Fiji Shimpō*, though not positively opposed to it, is still disposed to think that the time has not yet arrived to necessitate such a line of action. The people are rather advised by our contemporary to organize volunteer corps for defensive purposes. At present there seems to be little fear of the Japanese coasts being visited by Chinese war-vessels, but it is wise to be prepared for any emergency. It is true that the Emperor by his recent Rescript advised his subjects to refrain from the present from organizing volunteer corps. But that Rescript was chiefly directed against the formation of volunteer corps for offensive purposes. There are sufficient regular troops in the country to drive out or to exterminate whatever Chinese forces that may effect a landing in any part of the country. But the thought of even a day's stay of Chinese braves on Japanese territory is horrible enough, when it is remembered what sort of troops they are. Consequently, the *Fiji* thinks it expedient for its countrymen to form a defensive volunteer corps and for the Government to permit such a step.

The consequences of the present war with China upon the economic world receive a considerable amount of journalistic attention. The money market is extremely dull, and there are signs that industrial activity is lessening. In the opinion of the vernacular papers, this state of things is due first to the excessive caution exercised by the bankers in advancing money, and secondly to the absorption of the people's minds in war almost to the exclusion of their peaceful avocations. As to the bankers, they have begun to loosen their purse strings a little, and are endeavouring within certain limits to facilitate the circulation of money. But they are urged by the papers to strive more earnestly to remedy the prevailing evil, for it is perfectly within their power to do so, the cause of the malady being not scarcity of money but the faulty policy pursued by the banks. The Bank of Japan is specially called upon to imitate the disinterested and patriotic conduct of the Bank of France at the time of the Franco-German war. As to private individuals slackening their industrial or commercial activity on account of war, they are reminded that although

their zeal for the success of the arms of Japan is highly praiseworthy, the best way in which they can serve the country at the present juncture is to pursue their ordinary occupations with redoubled energy so that the country may not lack the means to carry on the war. Speaking generally, the outlook for the future of the economic world, as the *Hochi Shimbun* justly observes, is far from gloomy. All accounts agree in predicting an unusually good harvest. Experts insist that this year's rice crop will exceed the average by at least 30 per cent. Now the average crop of rice is 38 million *koku* (195 million bushels), and putting this year's increase at 20 per cent. it will amount to 7,600,000 *koku*, which in value will not be less than 60 million *yen*. Such being the case, the purchasing power of the farming class will increase rather than diminish, and there is every prospect of at least a tolerably brisk business. It thus only remains, argues the *Hochi*, with the controllers of the machinery of credit to exercise a little extra amount of foresight and judgment to facilitate the circulation of money.

Justly or unjustly, a section of the Japanese public feels much umbrage at the alleged conduct of the British fleet in saluting the Japanese fleet engaged in the bombardment of Wei-hai-wei. The papers, for fear of suspension, cannot openly ventilate their opinion on this topic, but enough is let out in a vague and guarded manner to show the mood of the public mind. It is true that those which allude to the matter do not stand in the front rank of journalism, but the fact cannot be disguised that a great deal of ill-feeling has been created in Japan by the reported action of the British men-of-war. We will give a few specimens of the way in which the topic is discussed. The *Shin Choya Shimbun* observes that "a great Power ought to be manly and straightforward and free from duplicity both in time of peace and in time of war. Should it attempt secretly to impede the actions of one of the belligerent countries, while openly professing a strict neutrality, it would forfeit the rights of a neutral." Toward such a Power, our contemporary advises the Government to be on guard, for it is extremely dangerous to trust to its professions of friendship and goodwill. The *Chu-o Shimbun* writes in a similar strain. It does not pretend to know that any of the Powers which have declared neutrality has done anything inconsistent with that character; but should there be such a Power, our contemporary is confident that Japan would never forgive its duplicity. Lastly, the *Nippon* is a little more direct. After dwelling at some length upon the duties of a neutral State, our contemporary proceeds to mention instances of the violation of neutrality. "If, for instance," says it, "the war vessels of a neutral Power abuse their position so far as to hamper the motions of the fleet of one of the belligerent countries, it will not do to rely on the diplomatic process of remonstrance; a more decisive step will become necessary."

It is true that international disputes are settled according to the standard of might; but nothing could be more absurd and dangerous than to be only anxious how to preserve the friendship of a strong Power at all cost."

The resignation of Mr. Inouye Ki, Minister of Education, on account the progress of lung-disease, is sincerely regretted by the vernacular press. After the late Viscount Mori, Mr. Inouye has been considered the best Minister of Education. In fact, in the short space of about fifteen months, he has accomplished more than several of his predecessors ever carried out in five times that length of time. No one man has done more than he in bringing the legislative work of the Meiji Government to the present state of comparative perfection. The papers say that, if any meritorious servant deserves the honour of a peerage, it is certainly the retiring Minister of Education.

To-day, September 1st, elections are going on throughout the country. The various parties are eager to increase their

numerical strength in the new House of Representatives, and several seats are being hardly contested. But on the whole, competition is not so keen as it would otherwise have been had not the nation's attention been diverted to the Chinese war. The Opposition papers only advice to the electors has been to return such members as would use their influence for the prosecution of the present war to a decisive issue. A "strong foreign policy" is still a watch-word, but the sense in which that expression is now used is essentially different from that in which it has hitherto been employed. The non-party papers have not so much as discussed the question of the elections at all.

EDITORIAL NOTES.

OPINIONS OF THE PROGRESSIONISTS CONCERNING THE WAR.

DEEMING that the present war with China is an event of the most unparalleled gravity to Japan since the country was founded about thirty centuries ago, and deeming it essential for our party to set forth in detail the reasons of its importance, and to point out the ultimate objects to be aimed at in this connexion, the members of the party living in the capital have agreed to the following declarations, concerning which they seek the approbation of the members of the party in other parts of Japan:—

1.—The success of the present war with China being an affair of paramount importance to the well-being of the Empire, the ultimate objects of the war should be determined by the people themselves, who should freely give expression to their opinions.

2.—Though the details of the conduct of the War should be left to the decision of the competent authorities, the central aim of the war should be determined by the people of the Empire.

3.—Of the various Powers in the world capable of being the most dangerous enemies to Japan is China, after which come Great Britain, France, Russia, and Germany in the given order. As to the other Powers of Europe they are virtually impotent to exercise any serious military or naval power in the East.

4.—Even if Japan were conducting a war with a country of equal numerical strength, this country should devote its whole energies to the attainment of a successful issue; how much more should this be done in the case of a war with China, a country ten times the size of Japan. The nation must recognize that should Japan fail to destroy her antagonist then she herself will be utterly ruined, and the people should unite as one man to face this tremendous issue.

5.—In waging war with the huge country of China, whose population is counted by hundreds of millions, certain Japanese are easily rejoiced by trifling victories, such as the defeat of two or three war-ships, or the rout of two or three thousand soldiers. Such persons, it seems, must fail to recognize the gravity of the present affair and must hence be wanting in the resolution necessary to carry it to a successful issue.

6.—Even if in a hundred battles fought in Korea Japan prove victorious this alone would not be sufficient to ensure to Japan supremacy in the Orient.

7.—To settle the contest decisively, and to ensure the permanent peace of the Orient, it is necessary to strike a blow at the heart of the enemy, Peking.

8.—Should peace be concluded before the enemy had been utterly disabled by a blow in a vital part, it is needless to say that China, spurred by the shame of defeat, would be awakened from her lethargy, and would strive by every conceivable means to wreak vengeance on Japan.

9.—Such a peace, then, would be one in which, to guard against danger from China, Japan would have to devote all her resources to military and naval affairs, and there would be a chronic high tension in the East. Nothing would be more injurious to the nation than such a state of affairs.

10.—In three months more the mouth of the river on which Tientsin is situated will freeze, thus blocking up the passage till the next spring. Therefore it is essential that Peking should be attacked within the next three months.

11.—The Austro-Prussian war was concluded within six weeks after the declaration of war, with victory on the Prussian side, while in the Franco-German war Germany dictated terms of peace in Paris in less than six months. Wars in civilized countries are thus carried on with great

expedition, and this is on the whole advantageous to the combatants. It is not extravagant to believe that our carefully trained soldiers can within three months defeat the undisciplined levies of China, even though these are forty times their number, and that terms of peace can then be dictated at Peking; what is apprehended in this connexion is that there may be some who, failing to appreciate the true gravity of the situation, may lack that heroic decision which should lead to a bold dash for Peking.

12.—The first step to be taken in pushing on to Peking would be to destroy or cripple the Chinese Northern fleet and thus to obtain a free passage into the Gulf of Pechili. Such details, however, may safely be left to the competent authorities, and there is no necessity for us to dwell on them.

13.—Success in the Korean Peninsula is not only insufficient to settle the drift of the affair, but justice demands that Japan should as far as possible avoid making Korea the principal seat of war.

14.—Peking once taken, the Chinese army in Korea would surrender at discretion, and therefore, whenever possible, fighting in Korea should be avoided.

15.—A warlike spirit is an excellent thing, but if there be no fixed aim in the war, the warlike spirit is like an arrow fired at random.

16.—Though it need not be said that to contribute to the war fund is a worthy and patriotic act, still the expenses required in a great war on which the very existence of the nation depends should be delayed out of national loans or taxes. Contributions can do no more than supply a part. A few days ago the raising of a national loan was announced, and this step may be followed by the impositions of additional taxes; and the people should be prepared to meet any such demand made upon them with alacrity.

RESPONSIBILITY OF NEUTRAL WAR-VESSELS.

THE *Hochi Shimbun* publishes a significant note on the above subject. It is of no use, it says, to repeat the particulars of the Wei-hai-wei affair. The object of the Japanese fleet was to attack the Chinese fleet, and yet, owing to inexplicable circumstances, the principal war-vessels of China were not found, it is said, in that port. We cannot avoid the conclusion that they got wind of the Japanese attack, fled to Chefoo, and took shelter there. It was highly to be regretted that our fleet was obliged to withdraw after having fired at the forts. The first great naval engagement will be an object of interest to all the world. For, despite the facts that modern naval armaments have attained a remarkable development scientifically, there has been no opportunity to test whether these armaments are adapted for practical purposes; and as, just at this juncture, great naval engagements are likely to be fought in the neighbourhood of the Gulf of Pechili, the neutral Powers that have fleets in the Orient wish to avail themselves of this opportunity for observation. The Japanese need offer no objection to this, for they will be stimulated to display their valour before the civilized world. But it is essential that the onlookers should observe a rigid neutrality, even in apparently trivial details. For instance, when the Japanese fleet is about to invade a Chinese harbour, and a neutral war-vessel lying in the vicinity of that harbour fires a salute, then the Chinese war-ships that may happen to lie in that harbour will perceive at once the coming of the enemy. Or, again, if when the Japanese fleet is pursuing its enemy a neutral war-ship purposely comes from a distance and fires a salute, then the enemy may effect its escape.

Some further notes in the *Hochi* are not quite friendly to the English. One is about the movements of the British gunboat *Alacrity*, which called at Fusan at 5.30 a.m. on the 18th instant, on her way from Nagasaki to Chemulpho. The ship put out to sea after a short time. What business she had cannot be known, but her actions are said to have been very strange. The captain called on the Chief of the Custom House at Fusan and held a secret conference with him at his house. What is noteworthy, is that five or six Chinese who seemed of a higher class than that of servants, are said to have been on board that vessel. A similar paragraph appears also in the *Nichi-Nichi*. The conduct of the Chief of the

Custom House at Fusan is strange, continues the *Hochi* in the next note.

The Custom House officers of Fusan sent by China are four Europeans, one German *employé* of the Korean Government, the rest being either Koreans or Chinese. Mr. H. Hunt, the Chief of the Office, is strongly inclined toward China, and the Japanese merchants are said to have frequently encountered inconvenience in their transactions on account of his pro-Chinese partiality. It is now learned that he employs several spies and secretly informs the Chinese of the military movements of Japan. An *employé* of the office, a Chino-Japanese half-breed, is proficient both in the Chinese and the Japanese languages. The other day he resigned his post on the pretence of going home (China); but on his departure, he put on foreign clothes, and started for Nagasaki. It was afterward learnt that he was sent to Japan as a spy. A few days ago a Japanese *employé* of the same office asked his chief whether he intended to go to China, seeing that he had sent his baggage to that country. He replied that he did not, as he had been commissioned by the Chinese Government to undertake inquiries into important affairs. Now what inquiries he is carrying on cannot of course be guessed, but judging from the fact that he is sending three or four confidential letters to China on every opportunity, the nature of his inquiries may not be difficult to guess.

A WONDERFUL PRECIOUS STONE.

There is now deposited at the Nippon Ginko a wonderful precious stone, the ownership of which is in dispute. The stone has a strange history dating as far back as two centuries ago. It was originally owned by Kikuchi Saihei, a native of Mutsu Province, who became a monk at the early age of twenty. He undertook a pilgrimage throughout the country three times, and it was during his second pilgrimage that he brought back the stone. When he was about to undertake the third pilgrimage he had a presentiment that he would die on the journey, and so he selected a certain spot in his native place, buried there all his treasures, and bidding his relatives to inter his remains there, he set out for his last pilgrimage. This was in the year 1693. As he had predicted, he died during the pilgrimage at Dazaifu, Chikuzen, and, according to his request, his relatives brought back his remains and interred them at the appointed spot. The fourth lineal descendant of this Saihei, happening to read in the annals of the house an account of the treasures buried in the mound, opened it and dug out several rare articles. These he presented to the Lord of the district and, in return for this, his house was granted a fief of two men's rations of rice annually. In 1859 this mound was again opened by the son of the previous treasure-finder, once more several rare treasures were discovered, which, as before, were presented to the lord of the district, who increased the allowance of the house to three men's rations. At the Restoration the lord of Nambu espoused the cause of Tokugawa and his estate was forfeited. The house of Kikuchi Sasoji, the treasure-finder, was involved in the misfortunes of the lord of Nambu, and one misfortune following another, the whole estate of the family fell into the hands of others. Even the land on which stood the burial mound of the pilgrim ancestor of the family was to be transferred to another owner. It occurred to Sasoji that a further examination of the mound might lead to the discovery of yet more valuables, but he was so destitute by that time that he had no means of paying workmen. At last he borrowed the sum of yen 2.50 from a neighbour and began the last exploration. This was in December, 1871. When the earth was cleared away to the depth of 7 or 8 *shaku*, he found a great quantity of small stones upon each of which something was written with vermilion. When they had been removed, a large flat stone was found upon which a stone as large as a human head was laid. The stone was flanked by earthen saucers, one on each side, containing a quan-

tity of petrified rice. On the face of the stone something was written in vermilion, but the ideographs were mostly obliterated and could not be identified. Only the two characters signifying the Japanese era Genroku (1688-1703 A.D.) could be read. Sasoji was highly delighted and took it home to sell it at a good price. He was, however, disappointed, for though he showed it to many persons no one would offer to buy it, and at last he was obliged to give it to the creditor from whom he had borrowed the 2.50 yen, and whom he was unable to pay at the prescribed time. Sasoji died shortly afterwards, leaving a wife and a daughter. The stone has undergone many strange vicissitudes since then and has passed through the hands of so many persons that it would be tedious to tell the whole story. It was in the spring of 1876 that the stone, which by that time began to attract the attention of many men, was first brought to Yokohama to ascertain its value. One of the foreigners to whom the stone was shown declared it to be a diamond, and another offered 200,000 dollars for it. The men who brought the stone were perfectly amazed at this proposal, but their cupidity being aroused they decided not to sell it under half a million silver dollars. The matter reached the ears of the authorities, and an expert of the Home Department proceeded to Kanagawa Kencho and ordered the men to bring the stone. They were then forbidden to sell it until they had received permission from the authorities, but at the same time they were given a certain allowance from the Department, to pay for their lodging. After a short time they were given permission to sell it, but the stone has never been sold. It passed from one hand to another, was deposited at one pawnshop after another, that at last it is at the Bank of Japan. The report of Prof. R. Wittington, M.A., of the Aoyama Eiwa-Gakko, on the stone is said to be as follows, based on the examination he made at the Nippon Ginko in July 1887 in the presence of the Minister of the Imperial Household Department of the day. The stone weighs 750 me, and the superficial layer of 2 sun is first topaz, and then emerald. Under the outer layer diamond may perhaps be found, but this could not be ascertained with any certainty as there were no adequate means at his disposal to prove it. The opinion of a certain geologist, who was one of the commissioners of the Columbian Exposition, coincided with that of Professor Wittington. Even if there be no diamond inside, and the stone consist merely of topaz and emerald, it would be worth 21,028 yen, while a diamond of $\frac{1}{2}$ sun diameter has a value of above one and a half million yen. Every increase of $\frac{1}{10}$ sun increases the value by an additional half million, while in the case of a diamond above 1 sun in diameter the value increases by a million yen at every increase of $\frac{1}{10}$ sun. We take these particulars from the *Yomiuri*.

THE ELECTIONS.

THE attention of the nation being absorbed in the progress of the war, it is not surprising that comparatively little interest is exhibited in the elections, which are to come off on Saturday. The programme of the Opposition too, we have already pointed out, is distinguished for its mildness. The presence of a common foe has, for the moment at all events, reconciled the irreconcilable. It is Southey's story of Lord Nelson over again. Just before the battle of Trafalgar began, Admiral Collingwood, with some of the captains, went on board the *Victory* to receive instructions. Nelson inquired of him where his captain was, and was told in reply that they were not upon good terms with each other. "Terms!" said Nelson, "good terms with each other!" Immediately he sent a boat for Captain Rotherham, led him, as soon as he arrived, to Collingwood, and saying: "Look! youder are the enemy!" bade them shake hands like Englishmen. The manifesto of the Radical Party is couched in much the same spirit. The name and fame of the country are at stake, and so the Radicals recognize that this is no time for factious opposition. It is perhaps due to

this fact that so few seats, comparatively speaking, are to be contested. By far the majority have each but one aspirant for Parliamentary honours. Moreover, it is astutely hinted that a number of the Opposition have not only reached the lowest stratum of their purses but are also unable to obtain credit for the sums necessary to secure their success. Be this as it may, it is evident that there will not be much excitement at the polls this time, and it is more than probable that the next session will close without the necessity of another Imperial Rescript. In Tokyo things seem moving quite smoothly. In the case of Shitaya District, we find that Mr. Abe Kosuke, the former representative, will not stand this time. It was loudly urged by the Progressionists that this gentleman, a wealthy silk-mercer, owed his success in the last elections to a lavish use of money, twenty thousand yen being the lowest estimate of his expenses. At all events, Mr. Aoki, one of the pets of the Progressionists, was signally defeated by him. Now Mr. Abe refuses to come forward, and Mr. Hayashi Waichi is to take his place, the seat being otherwise uncontested. But it appears that a number of electors were so well pleased with their former representative that they will refrain from balloting this time. No less than twenty-four of the leading residents of Shitaya have announced in the chief metropolitan journals that they will cast no votes for any one but Mr. Abe, and as he refuses to stand, they will take no part in the coming election. Mr. Hayashi is a popular and respected man, of independent views, so that the steps taken by the recalcitrant twenty-four has been a surprise to everybody. It is, however, a conclusive proof that the accusations of the Progressionists were quite without foundation. Mr. Abe owed his success to his real popularity not to riches. With regard to the other urban districts, Mr. Tsunoda Shimpei will of course be returned for Kanda; Dr. Hatoyama in the Ninth Ward; Mr. Kusumoto, in the Fourth Ward; Mr. Ota, in the Seventh Ward. These are all familiar faces. The only urban district that will see anything like a battle is the Twelfth Ward, contested by Messrs. Takagi and Hirabayashi. The "Tochigi Contingent," our old friend Tanaka Shozo, is unopposed. There will, of course, be some new members in the next Parliament, but on the whole it is calculated that nearly three-fourths of the former representatives will resume their seats, sobered for the nonce, and, let us hope, wiser men.

THE "JIJI" ON THE FRIENDSHIP OF ENGLAND.

STARTING from the assumption that in the present war with China justice is on the side of Japan, the *Jiji* argues that Japan should not submit to intercession by any neutral Power but should strive steadfastly for victory. The paper then goes on to speak of the friendly attitude of England towards Japan in connexion with the present affair. Of the various neutral Powers, England manifests the greatest goodwill to Japan. This is proved by many facts. The Japanese must not be led by various rumours of the conduct of individual Englishmen or of a British warship hastily to conclude that the attitude of England is unfriendly. At an occasion such as the present when rumours of all kinds are rife, it is of course impossible to place any confidence in these hearsays. Even if it be true that certain Englishmen have behaved in the manner described, the fact is of very little importance. In the case of Englishmen that have lived for several decades in the East and are ignorant of the state of public feeling in their own country, it is not surprising that, finding their commercial interests gravely affected by the war, they should give vent to their dissatisfaction in various ways. Far different is the attitude of the English nation as a whole, as can be proved by a study of the opinions expressed by the leading English newspapers. Further, the frank and generous manner in which England has met Japan's demand for treaty revision must also be regarded as an undeniable proof of the kind feelings of the British nation towards Japan. The chief obstacle to treaty revision with England was, says the *Jiji*, the relations between England and China.

England fearing that should she consent to revise her treaty with Japan, China also would demand an equal treaty with England. It was natural that England should give considerable weight to this consideration, and that she might be disposed to consider the friendship of China more important than that of Japan. But we learn that in the accomplishment of treaty revision with Japan, England has been inclined to take the initiative, and further we see that she has not hesitated to ratify the revised treaty at the very time when Japan is engaged in deadly strife with China. These two facts indicate that England is convinced of the untrustworthiness of China and is eager to show her good feeling towards Japan.

PERSONAL ITEMS.

H.E. MR. MUTSU, Minister of State for Foreign Affairs, was yesterday summoned to the Palace and raised by the Emperor to the ranks of the nobility under the title of Viscount. The honour is well merited. The Sovereign, by conferring it at this particular time, plainly intends that it shall be connected by the public with the successful conclusion of a revised treaty with Great Britain. Japan can congratulate herself on being the first Oriental State that has obtained admission to the comity of Occidental nations on equal terms, and she may justly honour the man who carried the negotiations to such a happy ending.

The resignation of the Minister of State for Education seems to be a fact. It is now referred to by the *Nichi Nichi Shimbun*, and is stated by that journal to be due to ill-health. His Excellency Mr. Inouye has long suffered from weak lungs, and it is possible that his condition may have become such as to necessitate rest. Pending the appointment of his successor, it is believed that the duties of his portfolio will be discharged by Mr. Yoshikawa, Minister of State for Justice.

Since the above was written, an extra of the *Official Gazette* has been published announcing Mr. Inouye's resignation and the temporary assumption of his duties by Mr. Yoshikawa, Minister of State for Justice. The retiring Minister's resignation is accompanied by a certificate from Dr. Hashimoto to the effect that His Excellency is suffering from disease of the lungs which made its appearance in August 1888, and has of late developed symptoms dictating complete rest.

UNMISTAKABLY TOKYO.

ONE is accustomed to the slipshod writing of romancists and narrators of the marvellous. Jules Verne is a very popular writer among those who are fond of reading wholly incredible tales, his style is always fresh and amusing even when his theories are most startling. Still one could wish for a little more accuracy at times. In one of his books, "The Clipper of the Air," published some six or seven years ago, we read of an air-vessel sailing over Tokyo at night. The city is invisible in the profound darkness, yet Robur, the engineer, recognises it at once "on account of the barking of innumerable dogs and the strong, foetid odour of the decaying corpses of executed criminals." This is a little too bad, even for Jules Verne. As for the dogs, the writer evidently confounds Constantinople with the Japanese capital; the rest is sheer libellous ignorance. Yet seven out of every ten people in Europe will probably pass over the sentence without seeing anything unusual in it.

IMPORT OF JAPANESE MISCELLANEOUS COMMODITIES FORBIDDEN IN CHINA.

It appears according to the vernacular papers that China has now resolved to forbid the import of miscellaneous wares from Japan. A rumour to this effect has been circulated for some days past but it was regarded as untrustworthy. But it now appears to be quite authentic, according to telegrams received by several Chinese residents in Yokohama. These mes-

sages are to the effect that the import of Japanese miscellaneous wares will be forbidden in Canton in a few days. The Chinese were greatly alarmed at this news and shipped all their stock either by the *Gaelic* that sailed for Hongkong on the 25th, or on the French steamer *Yarra* that sailed for Shanghai on the same day. The warehouses of these merchants are now almost empty. Since the 25th inst., therefore, transactions between these Chinese and the Japanese merchants have been virtually suspended, to the great anxiety not only of the Japanese but also of the Chinese who have thus found their resolution to stay behind and to transact business under the protection of the Japanese Government and of the American Consulate productive of no good effect. This is indeed quite a serious affair for, according to the *Fiji* and other papers, transactions in Japanese marine products seemed likely to be brisk, and even the match industry which had been partially suspended for some months past had begun to revive; for the foreign merchants in Kobe with the view of export to China have given large orders to match manufacturers who have therefore resolved to renew the manufacture on the former scale from next month and to give increased wages to their workmen.

INTELLIGENT INTELLIGENCE.

The credulity and want of discrimination displayed by certain Shanghai journals and their copyists in Japan when publishing items of Korean intelligence, are monumental. Here is an illustration. Nearly all the Yokohama English journals contain the following:—

The *Hupao's* Tientsin correspondent, says the *N.-C. Daily News* of Aug. 22nd, telegraphs that a graduate of the Tientsin Military Academy, named Tung, who was one of the cadets chosen by General Nieh to go with him to Yashan last June, has telegraphed to his family at Tientsin stating that, after some desultory skirmishing along a mountainous route of nearly 2,000 li from Yashan, by way of the Chung-tsing province, General Nieh, second in command to General Yeh, has succeeded in bringing to Pingyang, 1,380 men all in good health and with arms and ammunition complete, as well as eight Krupp field-pieces. The gallant little army arrived at Pingyang on the night of the 14th instant.

Observe what this ingenuous youth says. The Chinese troops evacuated, or were driven from, Yashan on the 29th of July. Sixteen days later he makes 1,380 of them arrive at Pingyang, "after desultory skirmishing along a mountainous route of nearly 2,000 li." Now 2,000 li, Korean measurement, is 220 Japanese ri, or 590 miles English. So General Nieh and his "gallant little army" covered 590 miles on a mountainous road in 16 days—an average of 37 miles *per diem*—and varied the march by "desultory skirmishing" and dragging 8 Krupp guns. That graduate of the Tientsin Military Academy has admirable audacity. And he knew his audience, for, despite the clumsiness of his falsehood, it has found ready journalistic reproduction. The Tientsin correspondent of the *North-China Daily News* says that the Chinese have proved themselves better marchers than the Japanese. So they have if the testimony of this graduate of the Military Academy be accepted. According to him they are the biggest marchers in the world—*haud aquit aut secundi*. But it is said that fear lends wings. There will be some tall marching—to the rear—we expect, when the Japanese reach Pingyang. And, to be sure, the graduate's "gallant little army" was running away. That must not be forgotten.

THE SUMMER SCHOOL AT HAKONE.

Owing to a variety of causes, the chief being the fact that many students have been recalled to their native provinces in consequence of the mobilization of the army, the Summer School started this year at Hakone has not been as successful as it had been hoped. The total attendance at first was about one hundred, the majority being teachers of Higher Primary and Middle Schools and other educational establishments of high grade. Among the professors who gave their services, were a number of well-known names: Messrs. Saito and Sasano of the First Higher Middle School; Mr. Tanahashi, Principal of the Ikubun Kwan; Mr. Tanaka,

Principal of the Postal and Telegraphic School; Prof. Mano, the geometrician, etc., etc. The hours of instruction were from 8 to 12 in the forenoon and then another two hours in the afternoon. Great interest was exhibited in the instruction, and everything was done to make the students happy, fishing-parties, boating, long excursions over the hills and an amateur performance got up. The Sanseido book-firm, with whom the idea of the summer school originated, has nevertheless been a heavy loser on the whole, owing to the causes above set forth.

English and Mathematics were the two branches taught, the instruction in both being of a higher grade. Among the essays written by the students, the following, composed by a young man named H. Matsuno, was adjudged the best, as well on account of the excellent choice of words as the highly poetical ideas embodied. We quote the essay to show what very commendable advance has been made by Japanese students in the acquisition of the English tongue:—

HAKONE LAKE.

Who polished this hill-locked sea to be the spotless mirror of Mt. Fuji? Who made it the eternal parent of the River Haya? There are awful mountains rivaling each other in height, who strive to get a glance at this fair maid; their visages are solemn with verdant brows. Their shaggy robes are green, yet some are embroidered with nodding lilies and others with the briar-rose. One brings with him the sweet odour of woodland flowers; another flings the music of whispering pines "down the fitful breeze"—and all to win this fair maid's love. But she turns coldly from their gaze, and so her lovers stand lamenting about her. Winding from their outstretched arms, she eludes their grasp and comes softly to the gravelly beach to share the evening gossip of the village damsels. She sings a hymn as she approaches the Buddhist temple that peeps out from among a sea of cedars on an adjacent hill. The village boys are driven away by her light footsteps that they may not interrupt her song. Oh, for whom are you waiting, dear maid, with your fine blue fan (Fuji's reflection)? Whenever I walk to the flashy marge of the rushy beach she smiles sweetly upon me, so that my heart melts away with joy as my boat is borne unconsciously across her breast. The jealous fish splash about me, and hoary pines seek to hide our love with their dreary boughs. The precipitous mountains send forth shivering fogs to obscure my path. Alas, dear maid, must I bid thee farewell? Yet do not grieve, thy sister moon will rise up behind the backs of our mountain foes, to soothe and caress thee. Then will the helpless fogs be dispersed and thy fair and tender face grow bright with joy. The tears in thy eyes shall shine like purest gems. Never has it been my lot to see a form more fair, a face more sweet! Then for whom are you waiting? To be whose lovely spouse have you come? She taps my boat with her silver hand and modestly answers with a charming grace, "Yours! yours!"

THE PARTITION OF AFRICA.

In the July number of the *Nineteenth Century*, Mr. Silva White, the author of a well-known volume on "The Development of Africa," concludes an article on British policy in Africa in the following words:—"I have now completed my survey of some of the outstanding obligations and responsibilities which Great Britain has accepted by proclaiming a Protectorate over Uganda and by negotiating the recent treaties with the Congo State and Italy. They are sufficiently daunting, even to an Imperialist like myself. We thus see that by the Anglo-Congo Treaty, out of which Great Britain gets absolutely nothing but relinquishes much, France has been roused to a pitch of indignation which, if it does not upset the Treaty itself, at least may cause serious obstructions at a moment when unanimity between the Powers is of the utmost importance. The doubtful issues in Morocco may or may not be safely met by the European concert; but an equilibrium that can be easily disturbed by the fanaticism and unrest of a Mohammedan populace is not one to view with equanimity. Those who follow events in Africa are liable to be convinced that the British policy of making concessions to any Power capable of knowing its own mind, and of enforcing its decisions by the muttered threat of hostilities, must in the end lead to disastrous consequences. In the absence of any settled policy in Africa, Great Britain, by making these repeated concessions, will end by eventually

jeopardising her position for effective action. That position is either worth maintaining, at all reasonable cost, or it should be frankly abandoned; it is obvious folly to secure it up to a certain point, at great sacrifice, and then to relinquish it. I have shown, I think conclusively, that the position of Great Britain in Egypt, in Uganda, and in the Sudan, cannot be detached from her Imperial policy in the Mediterranean and elsewhere. What that policy costs we know; what it may ultimately cost we can vaguely guess from recent events in Africa. It is a policy of conquest and adventure, and can have no end but that which the arbitrament of war awards it. Indeed, I have no hesitation in stating that, to uphold that policy, Her Majesty's Government, if at all logical in their methods, and therefore deserving of the confidence of this country, must be prepared, not only to meet all the responsibilities of the Eastern Question, but also to keep France or any other European Power out of Egypt, Tripoli, Morocco, and the entire Nile Valley. Whether this can be done without Great Britain openly joining the Triple Alliance is a very questionable point, on which I have grave doubts. On the other hand, if she were to join the Triple Alliance, and thus involve herself irremediably in the rivalries on the continent of Europe, I fear there would be an end to all prospects of "Imperial Federation." The self-governing colonies of the British Empire would very naturally hesitate to accept these added responsibilities, in which they could not fail to become deeply involved. I have thus shown myself quite prepared to admit the reasons, as reasons, which support a comprehensive and adventurous policy in North and East Africa. But if I were asked, is it worth it? I should feel embarrassed to know what answer to return. The conviction is being forced upon me, as it is upon many others, though Imperialists, that the whole of our foreign policy may be impugned for the never-ceasing and ever-growing responsibilities which its maintenance engenders, whilst equally effective and much less costly and adventurous means might be found in a reversal or modification of the main maxims that hitherto have supported it."

THE TRIPLE MOON.

SUNDAY evening, the 26th ultimo, happened to be also the 26th of the 7th month of the lunar calendar. On this evening, just an hour before midnight, there is a popular belief in Tokyo that a triple moon can be seen, either from the top of Kudan-zaka or Atago-yama. Of course it is an impossibility that this phenomenon—by no means an infrequent one—should occur each year on the same date with unvarying regularity; yet that it has quite often been seen on the 26th night of the seventh lunar month, appears well proven. At all events, in case of the weather being fine, both Kudan and Atago are lined with curious crowds, eager to watch the strange sight. To the ignorant such a phenomenon must assuredly seem supernatural, though the learned may as easily explain it by the position of the moon at the time and a certain atmospheric humidity.

'COLLISION OFF AWAJI.

CONSIDERABLE attention, says the *Kobe Chronicle* of the 29th ult., was directed to the *Toyo Maru* yesterday, which on coming into port early in the morning was observed to be seriously damaged about the bow, apparently having been in collision with another vessel. Though our reporter at once went off to the vessel, the officers on board, who are all Japanese, declined to give any information, as the vessel was a Government transport. This morning Japanese papers also appear without any paragraph relating to the occurrence, the censor having apparently forbidden any news being published. Our reporter was able to learn, however, that the *Toyo-maru* (the old P. & O. steamer *Zambesi* which has had such a chequered experience since she was sold by her former owners) was proceeding to Kobe from Kure when about three o'clock yesterday morning, as she was emerging from the Straits between Awaji and Akashi, she came into collision

with the Japanese wooden training-ship *Tsukuba Kan*. The latter vessel was so much injured that she was run ashore on the island of Awaji, and the wreck, it is said, can be seen from Suma and Tarumi. The *Toyo Maru* also suffered serious damage, her stem being dented in to the extent of 4 feet from 2 feet below the hawse pipe downward, but so far as we can learn she is not making water. It seems extraordinary that a small wooden vessel like the *Tsukuba Kan*, of considerably less tonnage than the *Toyo Maru*, could have inflicted such serious injuries on an iron vessel, which it might have been thought would have gone right through any such obstruction, and it would be interesting to have a full account of the accident from those on board one or other of the colliding vessels.

INTERVIEW WITH MR. TATENO, LATE MINISTER TO THE UNITED STATES.

A REPRESENTATIVE of the Tokyo News Agency waited on Mr. Tateno, at Tonosawa, Hakone, on the 26th instant, and asked him for information concerning the general opinion of citizens of the United States with reference to the China-Japan war. While approving the project of Japan to infuse western civilization into Korea and China American statesmen cannot, he said, but regard with great apprehension the possible consequences of the war between Japan and China. Besides regretting the disturbance of the peace of the East they apprehend that it may give an opportunity to a certain great Power in Europe to interfere in the affairs of the Orient and to encroach upon Korea. Then the war in the East may lead to a breach of the peace in Europe. The result of the war might be predicted from a consideration of the superiority of Japan in equipments, in the bravery of her soldiers, and in the ease of her mobilization. If war is really declared (it was on the 31st ult. that Mr. Tateno left Washington) Japan should invade China with promptitude both with her army and her Navy, and success will certainly attend her forces. As to the sentiments in American military circles, Mr. Tateno made the following observations. Regarding the present hostility between Japan and China as a collision between civilization and progress on the one hand, and bigotry and conservatism on the other, American military men strongly desire that success may attend the arms of Japan. The ardour of the American officers in favour of Japan is quite extraordinary. To give an example or two, a certain retired general who played a conspicuous part in the American Civil War and rendered distinguished services to the Federal cause wrote to Mr. Tateno that he should like to be allowed to join the Japanese army at the head of several thousand soldiers whom he formerly commanded. Further several retired military and naval officers, some of whom were on the spot when the combined forces of England and France invaded China, asked Mr. Tateno by letter to request the Japanese Government to allow them to join the Japanese Army or Navy. Not a few of them were so enthusiastic that they called upon Mr. Tateno and pointed out to him on maps the routes which the Anglo-French Army took in China and discussed minutely the plans which the Japanese army and navy should adopt in invading China. One of them went so far as to follow him to San Francisco and there to repeat his request. All these applications he courteously declined, but they are good indications of the sentiment the United States military and naval officers entertain in connexion with the present affair. As to the telegraphic messages that have been received in America concerning the war, Mr. Tateno says that, coming mostly from China, via Europe, the most absurd reports were published even in newspapers of the first class. However, Mr. Tateno met in San Francisco an American newspaper reporter despatched by one of the most influential newspapers in San Francisco to report on the war. He was also commissioned by a leading paper in Washington. He came to Japan on the same steamer with Mr. Tateno and put up at the Grand Hotel in Yokohama. He had with him letters of in-

troduction from many distinguished Americans to important personages in Tokyo, and Mr. Tateno also promised to mention his objects to the Japanese Government. Mr. Tateno therefore thinks correct news of the war will soon be furnished to the American press.

THE KO LAO HWUI, A SECRET SOCIETY IN CHINA.

THE Metropolitan papers publish the following account of the Ko Lao Hwui, said to have been obtained from a certain Mr. Aizawa, a gentleman who has resided in Nankin since January last. There are three parties in the Ko Lao Hwui. One is a large organization composed of those who still uphold the cause of the fallen Ming dynasty, led by Lü Kia-siang, a celebrated scholar of Nankin; the second consists really of ambitious men who seek to promote their own interests under the pretence of reforming the administration of the country; and the third is simply a rabble of disbanded soldiers. The second and third parties have no particular designs to overthrow the present dynasty of China, but the first is determined to effect the restoration of the Ming dynasty. It is said that three Japanese named Shiyaku, Shibata, and Tani, and a former Japanese member named Uyeno died the year before last. The first party being a secret organization, its existence was undiscovered for a long while. At last, about September of the 18th year of Kwang-sü (1892) it reached the ears of the Government that Lü Kia-siang was the leader of a certain secret combination. Before the Government could arrest him the matter came to his ears and he fled to Chili under an assumed name. Messrs. Shibata and Tani are now said to be living in Annam. These two men were teachers of military arts to the adherents of the Lü party and are therefore believed to occupy influential positions in the Party. Mr. Shiyaku studied Chinese literature under Lü, and being a man rich in resources and tact, he is generally considered to be one of the principal counsellors of the Party. Some do not believe this, however, and say that he is in the habit of speaking of the society with contempt as an association of bigots. Mr. Shibata (Gentaro) was a swordsman of Kagoshima who fled to China after the Satsuma rebellion in which he had taken part. Messrs. Tani (Takeshige) and Uyeno (Tsunayoshi) were experts of *fujitsu* and cudgel-play in Aizu, and went over to Nankin as early as 1865. Mr. Shiyaku studied classical Chinese. He was a pupil of the chief priest of the Hoko Temple, Okuyama-mura, Hikisa-Gun, Totomi. In July of the 12th year of Kwang-sü (1886) he went to Nankin in the company of Lü, who had lived in Japan for some years. He studied literature under Lü, while he took lessons in swordsmanship from Shibata, and in *fujitsu* and cudgel-play from Tani and Uyeno. Being a man of uncommon ability he soon became proficient in those practices. In February of 1887 when a mob riot broke out in Nankin he threw down senseless forty-six of them, all of whom he afterwards restored to life by the art of *fujitsu*. Of these forty-six, one was the ringleader, and for this distinguished service he received a reward of 460 taels from the Local Office. With this sum he went to India where he prosecuted his studies at various places. From the Dutch East Indies he started for the Dutch capital in the company of a certain Dutch scholar with whom he had become intimate. He entered the University of the city and matriculated in the course of philosophy. Being well versed in the ancient laws of India he, through the introduction of his patron, became a professor of the College of Law of the State University of Illinois. He lectured on Ancient Indian law and its relation to ancient Roman law for three terms, and when he left the University he received the title of Doctor of Civil Law. In April last he returned to Nankin where he subsequently led a quiet life totally ignorant of the complication that involved Japan and China. He intended to return home this year. On the 3rd instant fifteen of the Chinese volunteers who had been enlisted in the neighbourhood suddenly burst into his lodgings. They drew their swords, and exclaiming

that a Wo-jen must not be suffered to live, rushed at him. Outnumbered as he was, Mr. Shiyaku was more than a match for them, and suddenly springing upon one of the intruders and snatching his sword, he defended himself with his back to the wall. He wounded four and threw eleven into a little pond just outside the house. He then bought Chinese clothes and covering his face with a large *kasa* went to a Buddhist temple not far away, there to shave his head. Assuming a priestly appearance he then started toward the northern part of China. He is said to have stated his intention of returning home after the war is over.

THE SITUATION IN KOREA.

THE *Yiji* publishes the following note on the situation in Korea. When the Chinese troops were at A-San they plundered the Koreans of the adjoining districts and committed all kinds of atrocities, so that the Korean Government was at last obliged to ask the Japanese army to drive them out from their stronghold. The result was the battle at Söng-hwan. Thus Korea practically stands in a hostile attitude to China, and in the battles that in future take place between the Japanese and Chinese troops on the soil of Korea, the forces of China will be directed against both Japan and Korea; thus Korea and Japan are now really leagued together in war with China. And yet so long as this point is not publicly announced neutral Powers may suffer some inconvenience. For they may be embarrassed to decide whether the Korean harbours are neutral ports or whether they should be regarded as the harbours of a belligerent power, a difference of great importance commercially and otherwise. Inconvenience will also be felt by the Japanese Government as long as this important point is left in its present unsettled state, for the Japanese army may be exposed to the charge of devastating a neutral country in carrying on war with the Chinese in the Peninsula. At any rate, to leave this point in its present indefinite state being improper, the Authorities of Japan and Korea are bound to make a definite declaration to the effect that Japan and Korea are waging war in combination against their common enemy, China.

THE "KOWSHING" AGAIN.

SOME writers seem to have *Kowshing* on the brain. Speaking of Great Britain's complacency in signing the new Treaty, the *Japan Gazette* says:—"The date of signing, the acquiescence in the sinking of the *Kowshing*, and the hurry for ratifications are all ominous portents. Does England court Japan's alliance even at the sacrifice of our protection." How has England "acquiesced in the sinking of the *Kowshing*?" That event occurred on the 25th of July. The *Japan Gazette* writes on the 28th of August. By what conceivable means of communication could the British Government have been placed in sufficient possession of the facts to deal internationally with the *Kowshing* affair within 34 days of her sinking? A little common sense and calm reflection might be exercised advantageously by critics of such events. The British Government must necessarily have awaited the receipt of detailed despatches before moving definitely in the *Kowshing* business. There is no means of knowing what steps it may have now taken. But we may be pretty sure that, despite the abuse heaped upon British statesmen by petty journalists in the Orient, the honour of that "bit of bunting" will be amply vindicated in due time.

TWO IMPERIAL ORDINANCES.

Two Imperial Ordinances one bearing upon the Railway Council Regulations and the other upon the Engineering Council Regulations have been issued. The chief points of difference between the old and the new Railway Council Regulations are that, whereas in the former the matters subject to deliberation in the Council were enumerated in six clauses, in the new Regulations it is provided that the Council shall deliberate only on those points specified in Art. XV. of the Railway Regulations and also on special Ordinances referred to the Council by the

Minister of Communications. In the new Regulations the distinction between ordinary and temporary members of the Council is made clear, while this point was rather obscure in the old. Again, the old Regulations provided that an annual allowance, not exceeding 500 yen, shall be given those members who are not at the same time salaried officials of the Government, but this distinction has been struck out in the new Regulations and all members are similarly remunerated, and the term of membership, stated at three years formerly, is now indefinite. As to the emolument of clerks, no distinct provision was made in the old Regulations, but the amended provisions explicitly state that they may be paid a sum not exceeding 200 yen a year.

The amendment of the Engineering Council Regulations is confined to two points, first, the organization of the Council, and secondly, the allowance to members. In the old Regulations the Council was organized with one president, twenty members, and several temporary members; but in the amended Regulations no mention is made of the temporary members, except the provision that the Council may appoint temporary members in case of necessity. The amendment concerning the emoluments of the president and the members of the Council is exactly the same as that effected in the Railway Council Regulations.

PHYŨNG YANG AND ITS VICINITY.

THE following brief description of Phŭng-yang and its vicinity, where the next battle between the Japanese and Chinese armies is likely to occur, may be of some interest. The details are published by the *Kokkai*. Phŭng-yang was the capital of Korea during one of the former dynasties. It is situated on a slope, with a steep declivity on the north, gradually sloping down, till at its southern end it terminates in the Tai-dong river. Beyond the river a vast plain lies. Phŭng-yang is one of the largest cities in Korea, containing more than ten thousand houses. Its inhabitants are said to be endowed with a chivalrous spirit and look up to the Japanese with great respect. This statement of the *Kokkai* is inconsistent with the rumours now circulated about the citizens of Phŭng-yang, who are said to be friendly towards China and hostile to Japan. The Tai-dong is the largest river in Korea, being 150 ri from source to mouth. The facility of transport afforded by this river is the principal cause of the commercial prosperity of these districts. From the mouth up to Chhŏl-do the distance is 23 nautical miles, and many are the inland ports on either bank of this lower part of the river, for it is here wide and deep and navigable by large ships. From Chhŏl-do to Phŭng-yang the distance by river is 42 miles, during the lower thirty miles of which up to port called Sok-no-chŏng, the river is still tolerably wide and deep. From Sok-no-chŏng to Phŭng-yang it is only 12 miles. Near Phŭng-yang there are found two shoals, but when the tide is full even vessels of considerable draught can go up as far as the front of that city. In fact, vessels of 500 to 600 *koku* capacity are always lying at anchor in front of Phŭng-yang. From this point upwards the river contracts and is not well adapted for navigation. Generally large steamers go up as far as Chhŏl-do.

NEW P. AND O. STEAMER.

On July 12th the P. & O. Company's steamer, *Maagon*, built by Messrs. Alex. Stephen & Sons, Linthouse, ran her trial trip in the Firth of Clyde, with highly satisfactory results. The vessel's dimensions are 400 ft. by 48 ft. by 31½ ft.; her register tonnage being 4,997 tons gross, and 3,280 tons net, while her dead weight carrying capacity amounts to 7,150 tons. The machinery, also constructed by Messrs. Stephen & Sons, consists of a set of triple-expansion engines, having cylinders 27 in., 45 in. and 72 in. by 48 in. stroke, and two large steel boilers 14 ft. diameter by 17 ft. 6 in. long, each having six furnaces. The heating surface and the grate surface are unusually large to permit of burning foreign coal. The engine-room is replete with all the latest appliances for the economical working of

the engines and for saving wear and tear, such as Morison's evaporator, feed-heater, etc. The deck-working gear consists of six powerful steam winches, and large donkey-boiler, with steam windlass and all the most approved and efficient appliances for the speedy handling of ship and cargo. The steam and after steering gear are by Messrs. John Hastie & Co., Greenock.

PLAGUE PREVENTION AT HONGKONG.

SHORTLY before leaving Hongkong, Dr. Kitasato expressed the following views on the measures to be taken to prevent the recurrence of the plague at Hongkong:—I am most emphatically of opinion that the insanitary parts of the city must be completely wiped out of existence, every house destroyed, and the infected surface soil and the deeper soil saturated by faulty drains must be cleared right away, removed from the spot entirely. The buildings must be reconstructed with careful attention to hygienic requirements, and overcrowding and filthy domestic practices must be rigorously prohibited. If this is done, there will be no chance for the bacillus to find a home here again. If, however, the filth is allowed to continue, or the impregnated buildings and soil are allowed to remain, the plague is certain to break out again quite as badly as ever; it might happen again this year—this summer. I am quite certain that it may be fully as bad as before. The disinfection that has taken place would, of course, make a difference, but not permanently; the work must be carried out, or else the Chinese returning from infected places on the mainland will start a fresh outbreak here. That is, if the filth is not totally destroyed, and prevented for the future.

A STRANGE ACCIDENT.

DURING the early part of the present month an accident of a somewhat remarkable nature occurred at Tonosawa. A Japanese and his wife had been staying for some days at the Fukushima, a well-known inn there, and had announced their intention to depart for Miyano-shita. There was a loaded pistol, strange to say, in their luggage, and when they were hastily packing upon to leave, this weapon, in some unexplained manner, exploded, the ball entering the mouth and passing out from the neck of the wife and then going through the *Karakami* of two adjoining rooms before its force was spent. The wounded woman was at once conveyed to the hospital in Odawara, in a desperate condition. She died a few days later. There are stringent regulations against the carrying of lethal weapons, and it appears that the owner of the pistol had no permit for its possession. Under the circumstances it is fortunate that no one else was injured.

FATAL ACCIDENT ON THE SHANGHAI RIVER.

AT about 8 o'clock on the evening of August 21st, as Mr. Thomas Alexander McAuliffe, chief steward of the steamer *Surat* was going on board his ship from the Associated Wharf he fell into the river and was drowned. The *Surat* is lying at the P. & O. Co.'s lower buoy and in order to reach his sampan deceased had to cross a small cargo boat which was lying alongside the wharf; in stepping from the cargo boat into the sampan he lost his balance and fell into the river and was never seen again. He was in company at the time with Mr. J. Williamson, who did all in his power to assist the unfortunate man, and subsequently reported the occurrence to the Police. Deceased is stated to have been quite sober at the time.—*China Gazette*.

QUOUSQUE TANDEM.

It is remarkable that not one of the Tokyo journals permits itself to indulge in calculations as to how long the war with China will probably continue. At the outset some few of the stouter-hearted proclaimed that the struggle would "soon be over"; but as the days go by without any very definite news from the seat of war, it is evident that people now think it may continue for a considerable length of time. The popular verdict now is that it will take "about a year" before Japan is mistress of the situation,

for, of course, no one has the faintest doubt that this country will be ultimately and wholly successful. In the absence of great news, it is whispered that some slight reverses may have already been sustained, which are carefully kept from the knowledge of the public. But even in this case no one would dream of feeling even for a moment disheartened. Every body knows that the war with China means the shedding of much blood.

THE HISTORY OF TRADE UNIONISM.

WRITING in the *Nineteenth Century*, Mr. Frederick Harrison thus concludes a review of *The History of Trade Unionism*, by Sidney and Beatrice Webb:—

The book is itself a literary curiosity, as the joint product of husband and wife. Effective literary partnerships are very rare; and though there are many examples of husband and wife being both authors, it is not easy to recall an instance of an elaborate work produced jointly by husband and wife with such perfect unity of method that their intimate friends cannot pretend to trace a separate hand in any part. Both are accomplished writers on economic subjects; both are indefatigable students; and each of them is known to be amply capable either of collecting the material or of fusing it into a work of art. They are both of them well fitted by convictions, training, and circumstances for the task they have undertaken. One of them has come from a family of capitalists, who have had the control of great industrial concerns; one of them has filled public offices and had experience of political and municipal life; both of them have personally studied every phase of industrial life, and have enjoyed the intimacy and confidence of almost every active worker in the industrial movement. Few persons living have seen the entire industrial field so exhaustively, from the offices of the great industrial magnate down to the sweaters' dens of White-chapel. And yet the result of this unique personal experience is not another *Marcella* or more *Wessex Tales*, but a very close and circumstantial history of complex events, founded on a mass of documents, and told with judicial lucidity and reserve. The value of the book as history gains much by the fact that neither of its authors ever has been a strenuous partisan of Unionism, but, having even greater sympathy with the cooperative and collectivist ideals, regards Unionism as merely one phase of a very large evolution. Such a book as this puts to shame the huge unsorted pile of pamphlets collected by the last Labour Commission, into which academic pedants and economic enthusiasts were invited to discharge their ideas. This is an authentic and real history of English labour, and deserves to become a classic monument of sympathetic industry.

A MISTAKEN VIEW.

THE *American Silk Journal* for July has the following:—"It is just possible that the little unpleasantness between China and Japan over the Korean question may develop into something large enough to affect seriously the production of both raw and manufactured silks in those countries. While we would not care to see our friends, the Japanese—who are by far the choice among all Oriental peoples, and are altogether pleasant as well as brightly progressive—embroiled in serious difficulty, it is beyond doubt that a restriction in the large and rapidly increasing output of manufactured goods in the Orient (the natural result of prolonged hostilities) would be a real boon to the American silk industry."

The view taken in the first sentence of the above paragraph is entirely erroneous, at least so far as Japan is concerned. What effect the war may have upon the production of raw silk in China cannot be predicted, but in Japan the production of silk, tea, and other exports will be stimulated to obtain money for the sinews of war. From all quarters of the country the Japanese Government has received petitions praying that volunteers be permitted to enrol themselves for service against China, but these offers have been declined and the Governors of provinces have been ordered to inform the people that their services are not required, the army with the colours and the reserves being quite equal to the vigorous prosecution of the war and the adequate protection of the country. Governors have further been instructed to impress upon the people the necessity for every man to pay particular attention to his own business in order that the commerce of the country may not be disturbed. In a patriotic country like Japan, this behest of the Government will carry great weight, and the *Silk Journal* will find when the statistics are published that no "restriction" has taken place in either raw or manufactured goods from Japan than can be traceable to the war. It may be pointed out that the present scene of the

conflict is Korea, with an early probability of the war being carried into the enemy's country—China. Japanese soil has not been invaded, nor will it be.

THE WAR AND THE COAL TRADE.

COAL merchants are, says the *Yiji*, in a very difficult position. As soon as the aspect of affairs in Korea became threatening, they met together and decided not to sell coal to any Chinese. Many of them had, however, entered into contracts to supply coal to foreigners before the present trouble began. In connection with the fulfilment of these contracts they are in a dilemma. If they sell coal to the foreigners according to their contracts they lay themselves open to the charge of betraying the interest of their country, while if they refuse to fulfil their contracts, they will not only suffer an immediate loss but will find difficulty in reopening transactions with foreigners after the war. At this juncture many of these coal merchants are said to have petitioned the Authorities that the export of coal during the war should be expressly forbidden. The merchants would thus be relieved from the obligation of fulfilling their contracts, without awakening distrust in the minds of the foreign merchants with whom they are accustomed to deal. The Authorities regard the coal merchants' request as quite reasonable, and it is believed that they will make the desired prohibition. A similar difficulty is experienced by the Hokkaido Colliery Railway Company and some other companies. The ships of these companies have been chartered to the Government, so that the companies are unable to supply coal to private merchants according to contract. The companies therefore request that should their ships be really needed by the Government they should not be chartered, for in that case the consent of the companies being voluntarily the companies can not be released from the obligation of fulfilling the contracts, but that the ships should be requisitioned to the Government service.

RAMPANT PATRIOTISM.

KAWAKAMI's troupe of *soshi* histrions are now giving a spirited and most popular performance at the Asakusa-za, Tokyo, the play being founded on a much coloured account of the naval engagement at Phung-do and the Sōng-hwan battle. Troops march and counter-march on the stage; there is plenty of thunder and bloodshed, and the Chinese ingloriously fly before their adversaries. The audience is requested to observe a respectful and decorous silence whenever the words *Tenno Heika*, "His Imperial Majesty," are used in the course of the melodrama, a request which is invariably complied with. The other day, as one of the vanguard "Chinese" was flying along the *hanamichi*, that curious prolongation of the stage peculiar to Japan, a man sprang from one of the boxes in the pit, seized the supposed Celestial and proceeded to administer a sound drubbing, crying that this was a real Chinaman and not a made-up actor. He was, however, soon undeceived, and, amid the uproarious merriment of the spectators, was compelled to make an apology for the unprovoked assault. The actor, on the other hand, says the *Yamato Shimbun*, was pleased rather than indignant with the manner in which he had been mauled, attributing the attack to his perfect made-up and thorough imitation of the *chanchan-bonu*.

MR. TAGUCHI ON THE CONDUCT OF THE WAR.

In his second article on this subject, the editor of the *Keisai Zasshi* argues that it is bad strategy to allow the Chinese soldiers to collect in large numbers at Phung-yang even if the Japanese army is likely to prove victorious. That during the expedition of Hideyoshi to Korea the Japanese army was liable to disasters when reinforcements came from China to the rescue of Korea, was not because the Japanese warriors were inferior in skill or courage, but because the Chinese far outnumbered the Japanese. The same may happen on the present occasion, and therefore the Chinese must be driven away from Phung-yang with the utmost

promptitude. As for the mode of effecting this, the best would be to cut off the Chinese army by causing the Japanese Navy to occupy the Korean coast southward from the Am-nok-gang (the river separating China from Korea) to the Taikong, and to land some detachments of troops. This was the way in which Saigo's Army was compelled to raise the siege of Kumamoto, and the same strategy should now be employed. Japan should pursue offensive tactics, for China has command of vast numbers, Japan of comparatively few. Therefore the Japanese Navy should constantly vary the place of attack, should invade Formosa, Foochow, the vicinity of the Yang-tze-Kiang, and the coasts of the Gulf of Pechili: the Chinese would thus be continually harassed and would not only have no leisure to invade Korea but would after a time be compelled to sue for peace.

A BOGUS BARON.

THE police of Oita Prefecture made a famous capture last month when they arrested a certain "Baron" Ikeda, who had since March of last year been living at the expense of other people and on the fat of the land. Ikeda, who is a manufacturer of fire-works by trade, made his appearance first in Kumamoto. He was accompanied by two or three "vassals," one having the dignified title of *Karo* or steward, and his eldest daughter, *O Hime-sama*, who was in reality nothing else than his mistress. Noblemen are rare in that part of Japan, particularly barons. Many people called on the distinguished gentleman, including most of the civic authorities, but he was found very difficult of access. The "baron" was invariably engaged or resting, so that it was not until after numerous gifts of cakes, etc., were made that any one was permitted to have the honour of a personal interview. But on becoming acquainted, friends learned that the "baron" had a number of Loan Bonds, of private issue, that bore six per cent. interest and would mature in 1895 or thereabouts. These bonds found eager purchasers. In the meantime, both the "baron" and the *O Hime-sama* were fêted to their heart's content. Unfortunately for the nobleman, the police got wind of the affair. He was arrested and subjected to a searching inquiry. Of course he proved to be a mere adventurer, though of the most adroit description, the bonds being all forged. He is said to have sold at least thirty thousand *yen* worth of these bonds during the course of the year.

THE SITUATION OF THE SPINNING INDUSTRY AT OSAKA.

THE spinners of Osaka appear to be placed in a very difficult situation, according to the *Yiji*. The development of the spinning industry in Japan during the last few years has been remarkable, the total number of spindles in operation reaching above half a million this year, or about double the number of last year. The bulk of the increase has been effected in Osaka, the centre of this industry of Japan. The development of various other industries also is quite striking in Osaka, so that the total amount of capital required for all of them is said to be about fifty per cent. more this year than in the previous year. Just at this juncture the war set in, which caused the Osaka Branch of the Nippon Ginko to diminish the amount of credit the bank has hitherto been prepared to give to producers and merchants. Added to this the sale of yarn is virtually suspended since the opening of the war, and hence the position of the cotton-spinners is doubly serious. Before the direct trade with Bombay was begun, while the raw material was still supplied only by foreign merchants in Kobe, the spinners were able to obtain the raw cotton as they required it. But the spinners now import their own raw cotton, they now have to disburse a large sum of money whenever a ship returns from Bombay. Thus several vessels left Bombay in May and arrived at Kobe in June last, and the total quantity of cotton carried by these amounted to above three million *yen* in value, while last month cotton to the value of two million *yen* was imported. Banks at Osaka

in the habit of doing business with the spinners were astonished at the amount of the advances for which the spinners applied, while the total which the Osaka Branch of the Bank of Japan advanced for the purchase of raw cotton exceeded 6 million *yen* on July 6th—more than double the amount advanced last year. The Branch office of the Nippon Ginko has therefore thought it prudent to exercise a little caution in making advances to spinners, and this course has been followed by the majority of the banks in Osaka. Placed under such difficulties, the Osaka spinners held a meeting the other day and considered how to cope with the situation: Some proposed to confine the running of the spindles to the day-time only, and thus to reduce the output. This was, however, rejected on the ground that to put such a check upon a business that has an undoubtedly bright future would be most unwise. It was then decided that a committee should be despatched to Tokyo to wait upon the Ministers of State who are officially concerned with industrial enterprises, and Messrs. Matano, Noda, and Okuda were charged with the task. They have waited upon the Premier, the Minister for Finance, and the Minister of Agriculture and Commerce, to state their views, and the latter assured the spinners that they should receive every assistance that the Government could give them. In short, this difficulty of the Osaka spinners is chiefly due to the backwardness of the Nippon Ginko to make advances to spinners. The spinners say that whereas the total of advances made to them by the Osaka Branch of the Bank of Japan was more than 10 million *yen* last year, the Bank wishes this year, notwithstanding the growth of the trade, to advance less than 10 million. The Bank says, on its part, that while the advances amounted to 7 million *yen* in the corresponding period of last year, this year they have already risen to 9,200,000 *yen*. Thus the accounts seem contradictory, but it appears indubitable that unless the cotton spinners can obtain more credit there will be a commercial panic in Osaka. It is to be noted that an additional hardship of which the spinners complain is the high rate of interest they are required to pay—4 *sen* per diem—while that for the spinners of Nagoya and Tokyo is only 2.7 *sen* or thereabouts.

SETTAI.

In the early years of the present period, and particularly prior to the construction of the railways, there used to be in most mountain-passes or by the road-side of steep and much-traversed paths, certain stations known as *settai*. Here tea and water were offered for the refreshment of wayworn pedestrians; fire supplied for their pipes; and benches provided to rest upon. The peculiar feature was that the owner or keeper of the *settai* positively refused to receive any payment or gratuity for the tea or whatever had been supplied; the money offered was firmly but definitely refused. One of these establishments still exists on the south-western slope of the Hakone mountains, not far from Yamanaka-mura. The history of its origin is instructive. Long ago—over a century, they say—a man in desperate straits who had come to the very end of his resources, met here with help and managed in consequence to retrieve his fortunes. He erected the *settai* thereafter in grateful memory of the timely aid, and his descendants were charged with its maintenance. This rest-station is now kept up by a company of no less than eighty people. Every three years three of those interested are chosen by lot. No matter what their occupation may be, they must thereupon at once repair to the station, an annual sum of nine *yen* being given by the remaining members towards the purchase of tea and fuel, water being of course obtainable for nothing in the mountains. These three men must separate from their families, and two of them become peasants, porters, or labourers in turn, while the third looks after the station. In this way they barely manage to earn enough to keep themselves. This voluntary sacrifice of self-will, they believe, results in the laying up

of a store of merits sufficient to secure them every happiness in the next stage of existence. They are acting therefore with a view to, future extramundane well-being; the "cup of cold water" given being the guerdon of felicity. When the Prince Imperial passed this station last year, he offered the sum of two yen to the momentary keeper. Coming from a member of the Imperial Family, it was impossible to refuse the gift, but it was accepted with the proviso of its being at once forwarded to the Orphan Asylum in Odawara. This curious and beautiful custom is now fast dying out: there are probably not more than twenty *seitai* the country over, one of the largest and best known being in Fukushima Prefecture. *Seigyo-suru* is the expression employed by those who thus give years of their lives to the comfort and refreshment of weary wayfarers.

"THE BOOK OF THE FAIR."

THE fifth and sixth volumes of "The Book of the Fair" have now been published: They are fully equal to their predecessors, as to text and illustrations alike; they show that the whole work, when completed, will constitute an admirable and striking record of the great exhibition. The sixth volume contains several paragraphs and pictures relating to the Japanese Fine Arts Exhibit. We quote a few sentences that will recall to our readers' recollection objects much talked of in Japan before their despatch to Chicago:—"There are two vases of cloisonné ware more than eight feet high and among the finest examples of Japanese art. * * * Upon these vases are elaborate designs representing the four seasons, and such pictorial events as the threatened annexation of Korea by Russia. * * * Mounted on a pedestal at the northern end of the section is a marvel of imitative workmanship in the form of an iron eagle, two feet in height and five between the tips of the wings, each feather, of which there are several thousands, being separately traced and containing as many as a thousand lines. Here was a five years' continuous task. * * * Among the carvings in bronze the most noticeable are those that show the native falcon in a dozen life-like forms. * * * In the line of decorative metal work there is a rich piece of chisel work in the form of a plaque, made of a mixture of gold, silver, iron, and copper, upon which figures are engraved representing a flock of herons, with effects of light and shade unknown to Western artists. * * * Many years ago, one of the most skilful weavers in Japan was so impressed with the beauties of the French Gobelin tapestries that he commenced to copy them for the benefit of his countrymen. Competent judges of his work, as seen at the Fair, now assert that the texture of these tapestries is finer and more durable than that of the true Gobelin, while there are depicted scenes from national life with an accuracy of detail beyond the best efforts of Western masters."

THE CHRYSANTHEMUMS AT DANGO ZAKA.

It is stated that the annual chrysanthemum show at Dango-zaka, Tokyo, will this year surpass all that has hitherto been exhibited. The whole of the Korean embroglio, from the landing of the marines at Incheon to the battle of Song-hwan, will be florally depicted. The faces of the figures are to be modelled after those of favourite actors, although their dress and accoutrements will as usual, be composed of growing chrysanthemums. Preparations are being made on a large scale to have the tableaux as perfect and life-like as possible, sketches taken in Korea being chosen as models for each scene. Li Hung-chang will also be depicted, life-size. It is expected that H.M. the Emperor will honour the show with a visit, and this has stimulated the adept florists of Dango-zaka to do their very best. It promises to be a sight worth seeing. The most attractive period should be about the beginning of October. The many petaled flowers are at their finest then.

THE DAI NIPHON CHUGAK'KWAI.

SOME time ago we referred briefly to the establishment and organisation of the *Dai Nihon Chu-*

gak'kwai, or Chatauquan Association of Japan. This praiseworthy institution has recently undergone several changes for the better, its headquarters being now established in Count Aoki's fine residence in Kami Nibanchō, Kojimachi District. To the great gratification of the Directors as well as the members, who now number over four thousand and are to be found in every part of Japan, H.I.H. Prince Kitashirakawa has consented to become the patron of the Association. This is a signal honour, and one which adds great weight to the already high name of the institution. The first three years' course of instruction will be completed in November 1895, when an examination will be held, probably in Osaka, of all those who have faithfully studied the lectures published during that time.

PROFESSOR AOYAMA'S RETURN.

PROFESSOR AOYAMA, who was dispatched to Hongkong with Dr. Kitazato to inquire into the causes of the pest, returned to the capital yesterday. The train reached Shimbashi at 6.30 p.m., where the Professor was received by a large number of friends and admirers, who gave three rousing cheers when the Professor was seen to alight at the platform. Among those assembled to welcome him were Professor Hamano and a few other scientists connected with the Imperial University, Prince Konoye, Mr. Makino, Vice-Minister of Education: Mr. Miura, Governor of Tokyo, and many other prominent persons.

GERMANY AND AUSTRIA.

TO-DAY'S *Official Gazette* says that the German Minister in Tokyo has informed the Japanese Government that Germany will maintain strict neutrality during the China-Japanese war.

A telegraphic message dated the 28th ult. dispatched by Mr. Oyama, Japanese Acting *Chargé d'Affaires* in Austria, announces that he has been informed by the Minister of Foreign Affairs in that Empire that although the Austrian Government only formally declares neutrality in accordance with precedent, it intends to maintain strict neutrality during the present war.

A TROUBLESOME ENGLISHMAN.

THE *Hochi Shimbun* brings a singular accusation against an Englishman. It designates him pretty clearly by saying that he lives in Minami-Odawara-cho, in the Kyobashi district of Tokyo; that he was originally a marine engineer and that he now follows the profession of a mining-engineer and surveyor. The charge against him is that he has been commissioned by a certain Chinaman to convey intelligence of Japan's doings to China, and that he has submitted to the Viceroy Li a scheme for the invasion of Japan. Unless the *Hochi* is very sure of all this, it has no excuse for saying it. Has our contemporary any trustworthy evidence? We greatly doubt whether it has.

LI HUNG-CHANG.

THE *Asahi* and *Miyako*, as well as several other journals of lesser note, have a strange paragraph relating to the supposititious indisposition of the Viceroy Li. The *Miyako* says that the report is that Li Hung-chang has become insane, "because of the manner in which he is being suspected by the Chinese people and persecuted by his superiors in office. Our contemporary is, however, careful to add that this is a mere rumour and should not be implicitly believed. It is further reported that two members of the Board of Censors have fled from Peking, possibly in consequence of their dissatisfaction with certain steps taken by the Government. This statement is about on a par with the first.

"TOTAL ECLIPSES OF THE SUN."

THE first number of the "Columbian Knowledge Series" is an admirable handbook on total eclipses of the sun, by Mrs. M. L. Todd. This work—which may be procured of Messrs. Kelly & Walsh—contains in a succinct and clear form all the information now possessed by the

scientific world about one of the most interesting and instructive of natural phenomena. It is profusely illustrated and attractively written, and ought to prove of great value not to students alone, but to every-day folk also.

THE OPIUM CAPTURE AT THE HATOKA.

THE *Tokyo Asahi* says that Ko Kei-do, the Chinese lately resident at No. 148, Yokohama Settlement, who attempted to pass secretly a quantity of opium through the Yokohama Custom House barriers and was detected by the Japanese Custom Authorities, was yesterday sentenced by the Yokohama District Court to major confinement for one month. The opium which was found on him has been confiscated by the Authorities.

A MYSTERIOUS PARCEL.

THE *Kaishin Shimbun* narrates that a large bundle was found floating near one of the stations of the water-police in Nihonbashi, Tokyo, early on the morning of the 18th instant. On being drawn out of the water, it was found to consist of a number of wraps enclosing the partially decomposed corpse of a Chinese male infant, not more than six months old. Foul play is suspected, and the parents are being actively sought for.

THE VICEROY LI HUNG-CHANG.

ACCORDING to the *Peking and Tientsin Times*, "The story that the Viceroy Li Hung-chang had been degraded is a Shanghai myth. The degradation of a high official who has been a faithful servant of the Empire for many years on the outbreak of hostilities and consequent on a supposed want of complete success at the beginning of the war, would be an act of base ingratitude of which we do not believe the Chinese Government capable."

SILK IMPORTS TO THE UNITED STATES.

FOLLOWING are the Imports of Raw Silk at the Ports of New York and the Pacific Coast for July, 1894:—

	Bales.	Lbs.	Value.
New York	392	86,154	\$273,583
Pacific Coast Ports...	1,606	203,676	529,001
	1,998	289,830	\$802,584

Import of Waste Silk, Noils, and Cocoons in the same period were:—

New York	207	63,850	\$21,762
----------------	-----	--------	----------

SMART TELEGRAPHY.

THE following, says the *N.-C. Daily News*, appears to be record time for a telegram by the Eastern Extension A. and C. T. Co., Ltd. A message for Liverpool was handed in at Shanghai at 4.42 p.m. on the 9th inst., and the reply was received at the office here at 8.51 the same evening, the actual time occupied to Liverpool and back being 4 hours and 9 minutes.

HARMSTON'S CIRCUS.

THE agent of Harmston's Circus has been fortunate in securing the best pitch ever obtained in Yokohama, namely, the piece of ground opposite the Post Office. The show will open next Monday night, and according to the advertisement in this issue the company has been considerably strengthened both in performers and horses since its last visit to this port.

EXECUTION OF THE NEGISHI MURDERER.

OKAZAWA JUNJI, one of the two murderers who killed three persons at the Kaishō Temple, Negishi, Yokohama, some time ago, and who was sentenced to death by the Yokohama Local Court, was executed in Tobe Prison on the 27th ult.

MR. DR. BUNSEN.

THE *Daily Press* says:—Mr. de Bunsen, the Secretary of Legation at Tokyo, who is now absent on leave, has been appointed *Chargé d'Affaires* at Bangkok, and on his arrival Mr. J. G. Scott will join the Siamese Boundary Commission.

THE REV. E. S. BOOTH will preach in the Union Church to-morrow morning. All are cordially

IMPERIAL RESCRIPT.

We, Mutsuhito, Emperor of Japan, by the Grace of Heaven seated on a Throne occupied by the same dynasty from time immemorial, do hereby make proclamation to all our subjects. We, moved by a desire to establish permanently on a friendly footing the relations between our Empire and Great Britain, have caused the Treaty of Commerce and Navigation signed and sealed by the fully authorized commissioners of the two High Contracting Parties at London on July 16th of the 27th year of *Meiji*, to be brought before us for examination and perusal. We find the Treaty drawn in accordance with Our wishes and free from all defects, and we hereby approve and ratify it.

Signed and sealed by Our hand at the Imperial Palace, Tokyo, on the 24th day of the eighth calendar month of the 27th year of *Meiji*, in the 2,554th year from the Coronation of the Emperor Jimmu.

[His Imperial Majesty's Sign Manual.]
[Great Seal.]

(Countersigned) MURSU MUNEMITSU,
Minister for Foreign Affairs.

FOREIGN OPINION IN CHINA.

The Chinese are pursuing precisely the tactics that we predicted. They keep their fleet hidden away so that its integrity remains a fact always in their favour, and they persistently spread false rumours about the military operations in Korea. In the latter manoeuvre they find the *North-China Daily News* a useful coadjutor. It receives and publishes with charming credulity every piece of news favourable to China. Thus in its issue of the 22nd instant, it writes editorially:—"Admiral Ting is in full possession of the Gulf of Pechili, and it seems to be acknowledged now that the Fabian policy he is pursuing is the right one under the circumstances. Every day's delay is a direct gain to the Chinese." In another part of the same issue it publishes a letter from its Tientsin correspondent, under date of August 13th, relating how the Japanese fleet has appeared off Wei-hai-wei and Port Arthur, and adding that a Japanese gunboat is off Taku. Is that what the Shanghai journal calls "full possession of the Gulf of Pechili?"

It is a most benevolent euphemism to apply the epithet "Fabian" to Admiral Ting's methods. The memory of the great Roman General is much insulted when his policy of alternate delay and dash is compared to the procedure of an Admiral whose sole aim is to hide his fleet beyond the ken of the enemy. In tonnage, armour, and armament the Chinese fleet is superior to the Japanese, yet the former never dares to show itself at sea. Did an English Admiral adopt such tactics there would be a world-resounding Anglo-Saxon shout of indignation at his cowardice. But when a Chinese Admiral runs away and hides, he is a shrewd modern incarnation of Fabius Cunctator. "The right policy under the circumstances." What circumstances? If the fleet that China has acquired at such cost, has studied so long to employ, and has paraded so proudly in times of peace, can not venture to strike a blow against Japan's fleet, what Power is it fitted to fight, we should like to know.

Another story editorially circulated by the same journal is that the Chinese out-manceuvred the Japanese at Yashan (A-san), and General Nieh, second in command to General Yeh, has succeeded in bringing to Ping-yang (Pyongyang) 1,380 men, all in good health and with arms and ammunition complete as well as 8 Krupp field-pieces. But elsewhere in the correspondence of the same issue we are told that, though General Yeh escaped from Yashan, he lost nearly all his troops (3,000 to 4,000) by famine and sickness. Even if we credit the former, or editorial account, it must be confessed that to run away from an important position, and escape with 1,380 men out of some 3,000 is not a brilliant feat of arms.

The most remarkable canard editorially published by the Shanghai journal is this:—"On the 17th instant the Chinese army attacked the Japanese at Ping-yang and drove them southwards with considerable slaughter to Chunggho, a prefectural city about eleven miles south-west of Ping-yang. The Japanese made another stand at Chunggho, but were again driven from that city in a south-westward direction the next day, with great slaughter. Chunggho is now in the hands of the Chinese troops." Ping-yang (Pyongyang) has hitherto been supposed to be the headquarters of the Chinese army. Indeed, in the very same issue, the Chemulpho correspondent of the *North-China Daily News*, writing under date of August 15th, says that the main body of the Chinese Army was then at Pyông-yang, and the editor himself, in the very same article, describes how the Chinese fugitives from Yashan succeeded in making their way to join the northern Chinese army at Ping-yang. Yet he gravely tells us, a few lines farther on, that the Japanese army held Ping-yang on the 17th of August, was driven thence by the Chinese and was subsequently expelled from Chunggho with great slaughter. Certainly this takes the cake "for intelligent editing." In one and the same issue of a newspaper, we have a body of 1,380 Chinese soldiers flying to join the main Chinese army at a certain place; we have the Chinese army occupying that place on the 15th instant; and we have the Japanese army driven from it on the 17th. The editor does not do himself justice. He should be writing legends to decorate a kite.

The van of the Japanese army left Sôul on the 7th instant. If it reached Pyông-yang and occupied it by the 16th instant it must have marched 135 miles in 10 days. Wonderful marching that! We recommend the *North-China Daily News* to exercise a little more discrimination.

THE WONDERFUL SALUTE.

We alluded recently to an incredible story that Admiral Fremantle had saluted the Japanese squadron in the vicinity of Weihaiwei, just prior to the attempt to surprise the Chinese fleet in that place. There were obvious reasons for regarding the story as a myth, but it exhibits a vitality not consistent with absolute untrustworthiness. The latest version of it is that the saluting took place when the Japanese squadron was in the act of bombarding the forts, and it is gravely alleged that the ships—the Japanese ships alone, we presume—desisted from the bombardment for the purpose of returning the salute. It is difficult to decide which act was the more extraordinary—that attributed to the British Admiral in saluting at such a time, or that attributed to the Japanese Admiral in arresting a bombardment in order to carry out such an unreasonable exchange of compliments. We should like to know, however, where the British ships—Admiral Fremantle is said to have been in the *Mercury*—were situated at the moment of the saluting. If they were within anything like saluting distance of the Japanese squadron, they must have been in a somewhat perilous position with regard to the forts which were firing at the Japanese vessels. Truly it is not easy to treat the tale seriously, whichever version of it we take. But it has made a great and very unpleasant impression on the minds of the Japanese, and we think that an authoritative contradiction would be useful in British interests. It is scarcely possible for us to conceive an English Admiral steaming to within two or three cables' length of a foreign Squadron engaged in the bombardment of a fortress, and saluting the squadron with cannon. He might as well have saluted the forts. Indeed, if courtesy required that the Japanese flag floated by the squadron should be thus acknowledged, we fail to see why the Chinese flag flying over the forts was not entitled to a similar acknowledgment. It is a wonderful story altogether.

THE NEW ANGLO-JAPANESE TREATY AND THE VERNACULAR PRESS.

The Japanese papers, with some exceptions, unite in heartily congratulating the country upon the conclusion of a new treaty with England. Non-party papers, like the *Fiji Shimpô*, the *Nichi Nichi Shimbun*, the *Niroku Shimpô* and so forth, are most unreserved in welcoming the good news, but the organs of the Radical Party show almost equal satisfaction. As to the Progressionist journals, however, they betray unmistakable reluctance to acknowledge the great advantages that have been secured to Japan. Their reserve seems particularly regrettable in view of the frank and magnanimous tone in which the distinguished leader of their Party alluded to the subject in a recent journalistic interview. On the whole, however, the tone of the metropolitan papers in discussing this topic is reasonable and free from petty jealousy or suspicion. Another circumstance worthy of notice is that not the faintest hint of disapproval of Mixed Residence is breathed by any of the papers hitherto considered to be, if not openly, at least secretly, in sympathy with the opponents of the immediate opening of the country. The fact is that the reactionary movement so much talked of a few months ago, has now almost entirely died out. It may also be observed that the journals betraying reserve in their welcome of the new Treaty, do so not so much because they really attach importance to the points in question, as because they are bound to say something, no matter what, in qualification of their approval. To sum up, all the parties, not excepting those bitterly opposed to the Government, are agreed in rejoicing over the removal of this embarrassing question from the arena of party politics. We reproduce below a few of the more important articles on the subject.

The *Fiji Shimpô* (Independent) refrains for the moment from entering into any minute examination of the Treaty, but has "no hesitation in expressing hearty approval of its stipulations on the whole." Some persons may be disposed to criticise the tariff question from constitutional grounds, but our contemporary reminds such critics that it having been the Emperor's pleasure in framing the Constitution to reserve to himself the power of concluding treaties of all descriptions with foreign countries, the Diet has no right to complain because its opinion was not consulted by the Government with reference to the rates of customs duties. The period of five years—continues the *Fiji*—which has to elapse before the new Treaty comes into operation, seems to have been principally provided to enable Japan to complete her work of codification. To superficial observers, such an arrangement may appear derogatory to Japan's national dignity, but our contemporary emphatically combats the notion. In its opinion, the task of codification is undertaken by Japan not for the sake of foreign residents but on behalf of the forty millions of her own people. It would have been degrading had the new Treaty contained stipulations empowering England to interfere in any way with Japan's right of legislation. But there is, in point of fact, no such provision, and the placing of an interval of five years between the conclusion of the Treaty and its carrying out is simply a matter of practical convenience. With reference to extending the period during which passports shall have effect, that is nothing more or less than putting on paper what is even now being done in practice, for under the existing system, there is no obstacle to the renewal of a passport any number of times. The question of the coasting trade—we are still quoting the *Fiji*—has been discussed over and over again. In our contemporary's opinion, the granting of this privilege between the ports of Nagasaki, Kobe, Yokohama, and Hakodate is a matter of small consequence to the growing mercantile marine of Japan, for the latter's position is already sufficiently established to dispel any serious apprehension of foreign competition in home waters. Taking all things into consideration, the new Treaty, says the *Fiji*, is essentially

a treaty on an equal footing. "We may, therefore sincerely congratulate the country on the accomplishment of its long-cherished ambition. And we entertain no doubt that the whole nation without any exception is contented with the revised treaty." Our contemporary then offers some frank advice to the Japanese statesmen principally concerned in the conclusion of the new Treaty. That the present negotiations have ended so satisfactorily is to be attributed, in the *Fiji's* opinion, not to the special skill or talent of those statesmen, but to the changed and favourable circumstances of the time. Had Count Inouye or Count Okuma been in office, either could have obtained results at least equally happy. Consequently the statesmen connected with negotiating the revised Treaty are advised to be moderate in appropriating praise and rewards for themselves. Otherwise they will one day or another find themselves the objects of strong animosity and jealousy.

The *Nichi Nichi Shimbun* (Independent supporter of the Cabinet) observes that the primary object aimed at in the new Treaty has been to secure for Japanese subjects the same treatment that foreigners receive in Japan. It is true that England has not, under existing arrangements, refused such treatment to Japanese subjects in her dominions. But her action has been simply a matter of courtesy and was not based on any treaty rights. The new Treaty has secured that treatment for Japanese in England as a right; and consequently, they can claim at all times whatever privileges and immunities may be granted to the French, the Germans, the Russians, and other nationals of the most-favoured standing. "That Japan has at last obtained a position which no other state between the Balkan mountains and the Pacific can lay claim to, is no unworthy reward for the unceasing efforts made by our Sovereign and people during the past three decades." While, on the one hand, gaining from England a definite recognition of her international status, on the other, Japan, instead of making concessions, has rescinded those she formerly made in favour of British residents. The consideration of these circumstances, continues the *Nichi Nichi*, will be sufficient to show the nation of the difficulties that had to be surmounted in the recent negotiations. In view of the fact that the English Government has been so willing to accede to the just demands of Japan as to courageously disregard the murmurs of its nationals in this country, our contemporary recommends its countrymen to appreciate with gratitude the friendly intentions of the Cabinet in London. The Tokyo journal regrets that an earlier date has not been arranged for the operation of the new Treaty; but this was unavoidable, for negotiations have to be undertaken with the rest of the Treaty Powers, and pending their completion, it would be manifestly unjust to subject British trade and British residents to regulations that would place them at a disadvantage. The *Nichi Nichi* hopes that the treaties that are hereafter to be concluded with the rest of the Powers will come into force not later than the date specified in the case of the Anglo-Japanese Treaty.

The *Jiyu Shimbun* (Radical) does not hesitate to approve of the new Treaty with England, for on the whole the Treaty embodies the principles on which the Radical party has steadfastly insisted during the past few years. Our contemporary then proceeds to dwell on the beneficial results which the solution of this problem is destined to have upon political life in Japan, for it deprives the motley group of parties advocating the so-called strong foreign policy of the only basis of its existence. The Radical organ's tone in this connexion is intemperate and personal, and therefore highly impolitic, being likely to re-excite feelings that were slowly being forgotten.

The *Hochi Shimbun* (Progressionist) writes in a guarded manner. It acknowledges that the Treaty just promulgated is better than any which had previously been proposed, but it refrains

from passing any criticism until after a careful study of its stipulations in all their bearings. But the Progressionist organ insists that the merits of the new Treaty should be judged not by comparison with the former programmes, but in the light of the present condition of the country. It broadly hints that it would have been a wiser policy to defer the settlement of the question until after the termination of the Chinese war. Our contemporary seems to think that, with China completely humbled and with Japan's prestige correspondingly enhanced, it will be easy enough to obtain perfectly satisfactory terms from the Treaty Powers.

The *Nippon* (Independent Conservative) has been surprised to find the new treaty far better than most people had expected. On minor points, our contemporary has much to say against it, notably with regard to the unconditional most favoured nation clause, the special arrangement about the land in the foreign settlements, and the exclusion of various important British colonies and dependencies from the operations of the present Treaty. But on the whole it frankly acknowledges the new Treaty to be satisfactory. In conclusion, our contemporary calls the attention of the authorities to the importance of rigidly enforcing the new Treaty, for unless its stipulations are so enforced, its conclusion will confer no benefit on Japan. It is significant that this paper does not make the slightest allusion to the subject of Mixed Residence.

A PARTIAL CORRESPONDENT.

The Korean correspondent of the *North China Daily News* is almost savagely hostile to Japan. No rumour is incredible in his eyes so long as it injures Japanese credit. His writing is flagrantly illiterate; altogether unworthy of the columns of the leading Shanghai journal, and his bias is so obvious that we are surprised at any respectable paper publishing his letters. But indeed it must be confessed that the *North China Daily News* has greatly lost credit in connection with this Korean affair. Its columns have been little better than hoardings upon which anyone might post up whatever canard reached his ears. No discrimination has been used to separate truth from falsehood—not the very beginning of discrimination. But probably our Shanghai contemporary will excuse itself by recourse to the same plea as that advanced by some of the Yokohama journals, namely, that it is a newspaper's duty to publish both sides of every question, and that, in the discharge of that duty, it must find space for every tale coming to its ears, however incredible, or however at variance with previously inserted versions of the same event. That is about the most delightful theory conceivable of journalistic functions. It amounts to saying that no trouble need be taken to scrutinise the truth of statements, nor any judgment exercised as to their relative trustworthiness. All that need be done is to insert everything and leave the bewildered public to draw its own conclusions, and do its own sifting. Fancy the reception that would be given to a London journal conducted on such helter-skelter lines!

It is scarcely worth while to allude in detail to the stories told by the *North-China Daily News'* correspondent. One illustration of his methods may serve, however, to portray the whole. Writing on August 2nd from Chemulpho, he says that 8,000 Japanese troops had been landed at Fusan and were marching overland to Yashan. Fancy the Japanese landing 8,000 men at a point on the south-east coast of Korea and marching them 230 miles across country to attack a position on the west coast that had been captured and its fortifications razed three days previously. That is the kind of news published by the leading Shanghai journal!

COUNT OKUMA ON THE SITUATION.

The *Kokumin Shimbun* of the 26th instant contains an interesting account of an interview with Count Okuma. Speaking of the new Anglo-Japanese Treaty, the Progressionist leader is sincerely glad to learn that negotiations for Treaty Revision have been successfully concluded with the Power which has hitherto proved itself the most difficult to deal with. Now that England has granted the Japanese demands, there will be no difficulty, says the distinguished statesman, in concluding new treaties with the United States, Russia, Germany, France, and other countries. Pending the publication of the new treaty, Count Okuma is of course unable to pass any judgment on its merits or demerits, but this much he thinks it safe to predict, that the new treaty will be better than the old. Even supposing that there are some blemishes in the new treaty, he observes that it does not matter much so long as it contains an express termination clause. At all events he congratulates the country on the final solution of a problem that has baffled Japan's efforts for so many years in the past. England's policy towards Japan, continues the Count, has undergone a complete change since 1890, when her statesmen first began to perceive that the policy they had pursued in this country during the previous twenty years was calculated to turn Japan into England's enemy, whereas Russia was always cultivating most assiduously the friendship of the Government and the people of this Empire. Since then, therefore, England has shown herself most willing to gratify Japan's aspirations in the matter of Treaty Revision. To this circumstance, is attributed by Count Okuma the speedy conclusion of a new treaty with England. Whatever may be the stipulations of the new treaty, the Count has no doubt that they include the abolition of Consular Jurisdiction. This is a great advance in the international status of Japan. The idea pleases him exceedingly that Japan should have been the first among non-Christian countries to throw off the fetters of extraterritoriality. Not only is Japan's real position unknown to the nations of the Occident, but it is not fully understood by the Japanese themselves. The word Europe in itself seems to convey to some persons an idea of superiority, but this baseless delusion will at once vanish as soon as Japan begins to associate with European countries on a footing of perfect equality. The awakening of the Japanese race to its vast latent power—remarks the Count—will be the signal for it to assume the important part it has to play in the world's drama. Believing as he does that the inauguration of such a hopeful epoch in Japan's history will be simultaneous with the enforcement of the revised treaty, he cannot but hope that the Government will see that its provisions are carried out at the earliest possible opportunity. There is another reason why he desires an early enforcement of the new treaty or treaties, namely that Japan must secure a new source of revenue to pay back the heavy debts which she has to contract for the prosecution of the present war with China. Count Okuma, like every other Japanese, is determined that this war must be fought until China shall have been completely humbled. The achievement of such an object necessitates a correspondingly large amount of money. A very convenient source of revenue for the purpose of redeeming, or at least of paying interest on, the debt to be contracted, is an increase of tariff rates in accordance with the powers obtained by revision of the treaties. On the supposition that the tariff will be raised to 12 per cent. on an average, it will mean an increase of revenue from this source by at least seven million yen annually, a sum sufficient to pay interest on the debts necessitated by the War. Count Okuma is rather too sanguine on this point, for he seems to think that if the Government knows its duty, it can easily revise treaties with the rest of the Powers and carry out the new tariff from the beginning of the next fiscal year, namely April 1, 1895. As to the method of raising money, the Progress-

zionist leader is strongly of opinion that it is a wiser policy to float a foreign loan than to raise the fund at home. A national loan means the diversion for war purposes of the capital that would otherwise be employed for productive purposes. It would, consequently, have been far better, in his opinion, to have borrowed money from abroad at the very beginning and on its security to have issued convertible notes. But such a policy, he states, is perhaps impossible for timid statesmen who had no idea of waging war on a large scale but have been simply forced to such a course by the irresistible tide of public opinion. Under such circumstances, Count Okuma fears that the expected rout of the Chinese army at Phyöng-yang may lead to negotiations for peace. He calls upon the nation to bring pressure to bear upon the Government against such a suicidal step. Those in power may think it a great achievement to have secured the independence of Korea and to have concluded new treaties with the European Powers. But the nation, says the Count, has the grander aim of laying a foundation for the dissemination of its influence throughout the world. He thinks that the European Powers are in a decline, and that in the course of the coming century a complete prostration will overtake them. Who are to take their place? "Their place," replies the Progressionist leader, "will be taken by our own descendants." He then goes on to refute the notion that the Japanese are inferior to the Europeans. What country in Europe, excepting of course Russia, Germany, France, Austria, and Italy can place in the field an army of two hundred thousand men in the space of a month? Where is there a country in Europe, the Count asks again, in which political parties are divided on the question how to use the surplus? With regard to intellectual powers, the Japanese are competent to understand whatever is understood by Europeans. The Japanese are even beginning to make discoveries and inventions where Europeans have been unsuccessful. In the matter of manual dexterity this nation stands unrivalled by any people in the world. The Japanese are small in body, but that is no sure sign of inferiority. To sum up, with treaties revised, and China completely humbled, says Count Okuma, Japan will have become a Power whose intentions and attitude must be carefully studied by all the countries of the world. The time will come, we are told, when the Japanese will contend against European races in the plains of Siberia and the plateaus of Central Asia. At all events, the revision of the treaties puts an end to an embarrassing political question, while the war with China will make short work of the no less annoying question about the disbursement of the surplus. All the questions which have hitherto divided the political world will soon be completely swept away, and a new chapter, states the Count in conclusion, will be opened in the political history of the country.

THE NEW CUSTOMS HOUSE.

After many years of patient waiting the Customs officials connected with this port are soon to exchange their bare, comfortless sheds at the end of the English hatoba for a spacious, well-appointed building erected at the termination of the new pier. The quarters assigned are fully worthy of the staff which they will house and also form a fitting monument to the increasing trade and traffic of the foremost treaty port of Japan. Built of red brick with white stone facings, the Customs House presents a plain though striking façade to the harbour. It commands from its upper storey fine views all over the harbour and town. As seen yesterday under the blazing white light of an August sun the Bund and Bluff bore a most pleasing aspect, and some surprise was manifested by the many visitors on Monday who paid a visit to the new buildings at the special invitation of Mr. Megata, Superintendent of Customs, at the charming prospect laying immediately in front of the upper windows. The new building is 81 *shaku* (*shaku*=11.9 English inches)

long by 40 *shaku* deep; its superficial area is 934 *tsubo* (*tsubo*=36 sq. ft.) or roughly 3,366 square feet; the building has seventeen rooms in all, eight on the upper floor and nine below. The upper floor will be used for clerks' offices, while one spacious apartment at the head of the staircase will be set apart as a waiting room for distinguished visitors on arrival. The lower rooms are intended for the reception and passing of passengers' baggage, outwards and inwards, and some for waiting rooms: all are high, airy apartments. The elevation of the whole building is 35.65 *shaku*. The area of the compound on which the main building, detached servants' quarters, and Customs' boat-house have been built is 504 *tsubo*, so no one need complain of want of room. All these new buildings have been erected at a cost of *yen* 25,198. Work was begun on the 21st August last year, and finished practically on August 13, 1894, but the buildings will not be put into practical use till the first of next month.

A matter of some surprise to many was the length and breadth of the new pier. It is 1,895 *shaku* long; 60 *shaku* broad at its widest and 30 *shaku* at its narrowest part. Four lines of rails run down half its length and then two continue on towards the hatoba, to be joined in the future with other rails from the railway goods' yard at Yokohama Station. Three ships aside could be easily worked, and four at a push we imagine, though the officials will be content if but two aside are worked to commence with. Ten arc lights of 15,000 candle-power will illumine the pier, while at the pier head a brilliant green light is shown. Plenty of space is left on the pier for a promenade should one's desires run that way, and more agreeable way of seeing the Bund and Bay could not be found.

Among those who visited the new pier and buildings on Monday afternoon were Governor and Mrs. Nakano. Mr. Mitsuhashi, Secretary to the Governor, Mr. and Mrs. Megata (who acted as host and hostess), Judge Wilkinson, Mr. J. Troup, H.B.M. Consul, Mr. J. Dodds, Marquis and Marchese Nembrini de Gonzaga, Mr. and Mrs. E. Whittall, Mr. de Flesche, Austro-Hungarian Consul, Mr. Mc-Ivor, U.S. Consul-General, and Mrs. McIvor, Mr. and Mrs. James Walter, Mr. W. F. Mitchell, the Mayor and City Council of Yokohama, the principal Japanese merchants of the port and many others.

KOREAN AFFAIRS.

The *Asahi* and other papers state that information was received from Söul under date of the 22nd ultimo as to the number of the Chinese troops at Phyöng-yang. The total number of Chinese soldiers at Phyöng-yang and its vicinity is about fifteen thousand. About two thousand Chinese troops have already reached Ka-san, whence they are about to proceed to Phyöng-yang.

The following news was received from Shanghai under date 12 p.m. of the 23rd ultimo. At the beginning of the month thirty-five hundred soldiers set out from Talien for Korea by land, and on the 14th four thousand men left Port Arthur. General Sung Ch'in is said to have sent three thousand miners to Korea by several small ships.

It is stated in many of the Metropolitan papers that above fifty Japanese labourers engaged in camphor making at Formosa were murdered by a mob, but the report is regarded by the *Nichi Nichi* as untrustworthy. The *Nichi Nichi* says that Wan-jung-wö and Li Hung-tsao are said to have impeached Li Hung-chang before the Court of Peking on the following three points, viz., that the Viceroy, without paying due attention to the proposal made by Japan, rejected it and thus provoked Japan; that the Viceroy has opened hostilities with a foreign country on the occasion of the birthday celebration of the Empress Dowager; and that the Viceroy has allowed China to suffer defeat both by land and sea. It is stated that Chang Chi-tung has been ordered to proceed to Tientsin, probably to inspect the preparations for the war. The situation of the Viceroy is thus becoming more and

more critical. Communication by the military telegraph between Söul and Fusan, lately interrupted, was restored shortly after noon on 23rd ultimo. It is said that newspaper correspondents and certain others will be allowed to make use of this wire for the conveyance of their messages free of charge. The *Fiji's* Bakan correspondent wires that at a place situated between Pong-san and Phyöng-san two hostile reconnoitring parties encountered each other on the 21st ultimo, and a skirmish ensued which lasted for about an hour. The two parties then retreated. This news corresponds to the statement given in the latest letter which the *Nichi Nichi's* war correspondent accompanying the van wrote to the office from Kim-ju, where he arrived on the 13th ultimo. He said that the vanguard of the enemy had already arrived at Pong-san and that it arrived at Phyöng-san, situated about 35 miles nearer to Söul, was expected on the 15th ultimo. His letter gives the particulars of the skirmish on the 10th ultimo at Chung-ma, between a Japanese scouting party of cavalry and a small body of Chinese troops. It happened at about 4 a.m. on that day. The Japanese party consisted of but nine men led by Ensign Takeuchi. As soon as an alarm whistle was blown by two soldiers on guard, their comrades instantly rushed forward and found about two hundred Chinese soldiers drawn up only a short distance off. While the party was slowly retreating, at the same time keeping close watch upon the enemy, they suddenly found on their flank another party of two hundred Chinese, who fired at them. One of the troopers was killed and the Ensign was wounded. He was seen to creep into a millet field close at hand. The rest dispersed. One of them reached the main body and gave the report; the fate of the others is unknown. The correspondent also says that another reconnoitring party of cavalry is still at Sö-heong, and that this party has some infantry to support it. This party may have taken part in the skirmish which the *Fiji's* Bakan correspondent reported. The News Agency informs us that the following message reached Tokyo from Söul under date of the 24th ultimo. The Chinese Army has stationed its headquarters at Phyöng-yang and has constructed forts at several places along the northern bank of the Tai-dong. It has moreover despatched detachments to Chang-nyöng, An-ak, Pong-san, and to the east of Hwan-ju. On the 19th ultimo another skirmish occurred between the two scouting parties at a place between Chung-hwa and Sang-wön, with no particular result. The vernacular papers state that a message reached Tokyo from Shanghai to the effect that the Chinese Government is constructing forts at the harbour of Chiang-chen in Shantung, and that soldiers to the number of five divisions (2,500) were despatched from Tsi-nan, of which two divisions were sent to Chiang-chen and three to Chefoo.

The Superintendent of the Japanese Commissariat has made the following communication to the Korean Court, according to the *Mainichi*. That the road from Söul to Im-jin-yang should be improved, that the Korean Government should enable the Japanese army to obtain provisions from Koreans in exchange for receipts given by the officers, and that the people along the road by which the Japanese army is to proceed should be instructed as to the true purpose of its march. It is said that the Korean Government approved of these suggestions, and that An Kei-ju was appointed to take charge of the affair.

According to the *Asahi's* Chemulpho correspondent the money market at Söul and at Chemulpho appears to be greatly disordered. Hitherto the difference between the silver *yen* and the paper *yen* has not exceeded 15 *yen* per 1,000, but at present the difference has risen to 400 *yen*, and appears likely to increase. The branch offices of the 1st, 18th, and 58th National Banks carrying on business at Chemulpho have endeavoured to maintain the value of the notes, but with no particular effect. The cause of the fall in value of the paper *yen* is said to be the scarcity of silver,

the Chinese who have returned home having taken large quantities of silver with them; and to the fact that the Koreans, seeing the Chinese change all the notes for silver have lost faith in the paper money.

It is said that Lieut-General Viscount Nozu reached Kai-pyŏng on the 23rd ultimo.

The forty-five representatives of the Kwanto Bankers' League met on the 25th ultimo at the Clearing Hall, Sakamoto, to discuss the raising of the War Loan. After some consideration, the following forthcoming contributions to the loan were announced:—15th (Peers) National Bank, 7,000,000 yen; Mitsui Bank, 3,500,000 yen; 119th (Mitsubishi) Bank, 3,500,000 yen; Specie Bank, 2,000,000 yen; 1st National Bank (Mr. Shibusawa) 1,000,000 yen; 3rd National Bank (Mr. Yasuda) 1,000,000; 2nd National Bank, 200,000; 27th National Bank (Mr. Watanabe Jiyemon) 200,000 yen, &c. The total of the contemplated subscription announced that day reached in all to 20,010,000 yen, but as there were seven banks whose representatives did not attend the meeting, it is confidently believed that the total sum which the banks of the Kwanto district intend to subscribe will amount to about 20,300,000 yen.

No important news has yet been received from Korea. The two armies, however, are already confronting each other in the neighbourhood of Phŏng-yang, which place has, it is said, been strongly fortified by the Chinese. The exact number of Chinese troops stationed there is not known. The Koreans in the vicinity insist that the Chinese army at Phŏng-yang is 50,000 strong; but all the information collected by Japanese scouts goes to show that it does not number more than 15,000 in all, besides a few thousand Korean auxiliaries. There are two opinions about the probable date of the first conflict between the armies, some believing that it will take place in a day or two, while others are inclined to think that no serious fighting can occur until the end of the first week in September.

Much impatience is manifested about the apparent inactivity of the Navy. The *Chiu-o Shimbun*, it is true, has reported a second attack on Wei-hai-wei on the 13th instant, but the intelligence remains unconfirmed and looks altogether unworthy of credence. The Japanese Navy, however, is far from inactive. A squadron is constantly cruising at the entrance of the Gulf of Pechili, thus securing, on the one hand, the constant despatch of Japanese troops to Korea free from any danger of molestation by the enemy's fleet, and on the other hand, cutting off the Chinese army at Phŏng-yang from the support and co-operation of their own war vessels. It is surmised that the entrance of the Japanese army into the territory of China will be simultaneous with decisive naval operations in the Gulf of Pechili. Numbers of troops are steadily moving westward from every part of the country, and it is evident that important movements are contemplated.

It is stated that General Count Yamagata has been appointed Commander-in-Chief of the expeditionary army, with Major-General Ogawa as the Chief of his Staff. The latter officer is accounted one of the best tacticians in the Japanese Army. He made his reputation at the time of the recent great manoeuvres in the vicinity of Nagoya, where he commanded a division of the northern army. The thorough-going and masterly manner in which he handled his division excited the admiration of all military judges, especially General Count Yamagata, who declared that Major-General Ogawa alone was fighting a real battle.

Mr. Kuroda, the daring correspondent of the *Nichi Nichi Shimbun*, whose letters are the most valuable that come from Korea, since they embody the observations of a professional soldier, is in the van of the army marching northward. He alludes in touching language to the inexhaustible patience and endurance manifested by the Japanese soldiers under the most trying circumstances. Besides their natural spirit is said to be further stimulated by the historical associations of the places they are passing

through in their march, places the names of which have been familiar to them from their boyhood in connection with the heroic deeds of Japanese warriors in the time of Hideyoshi's invasion. As the army marches northward, the inhabitants are found to be more and more hostile and are actively engaged in giving whatever aid they can to the Chinese. The Japanese army is accompanied by a special messenger from the King, but he is reported to have no influence with the local authorities.

Thus far not even a skirmish seems to have taken place between the advanced guards of the two armies, excepting a collision between a party of seven Japanese mounted scouts and about a hundred Chinese troops at Chung-hwa on the 10th ultimo. Four of the Japanese were shot down, but the rest made good their escape.

The following telegram from Fusan, published in the *Nichi Nichi*, is said to embody the substance of a report made by a Korean who had been despatched to Phŏng-yang to learn all about the Chinese army there about the middle of the present month:—"The Inspector General of Hwang-hai-do has raised 3,000 Korean troops and placed them under the command of Chinese officers. He is taking steps to raise a further detachment of 300. The Chinese headquarters are established at the old citadel of Phŏng-yang. The Chinese are strengthening the place by constructing forts. The Chinese army is supplied with information about the movements of Japanese troops by spies who, under Korean disguises, are staying in Sŏul, Inchhŏn, and Wŏn-san. The troops have a small quantity of wheat flour which constitutes all the provisions they have brought with them from their country. The Inspector General of Phŏng-an-do has instructed the local Korean authorities to supply the Chinese with rice in quantities varying from 500 *hoku* to 1,000, according to the size and population of each district."

Mr. Boku Eiko, who arrived at Sŏul on the 18th ultimo, had an audience with the King on the following day, when he received the appointment of adviser to the Cabinet.

The *Yŏji Shimpō* publishes short biographical sketches of the new Korean Ministers of State, from which we take the following extracts. Mr. Kim Koshu, Minister President of State, is about fifty-four years of age and is a man of great influence. Until the ill-fated revolution of 1884, he occupied a subordinate position, but was raised to the post of Minister of Foreign Affairs under the short-lived Government of that time. His influence was such that on the fall of the revolutionary Government he was promoted by the Ming party to the still higher office of Minister of the Left. But he resigned that office shortly afterwards, and remained in private life until his recent nomination as Premier of the new Cabinet. Mr. Kim Inshoku, Minister of Foreign Affairs, is about the same age as his chief, and enjoys the reputation of being an upright and trustworthy man. At the time of the revolution of 1884, he was invited to become Vice-Minister of Foreign Affairs, but did not accept the offer. Under the Ming Government he was for some time Minister of Foreign Affairs, but was sentenced to banishment on account of alleged misconduct. Mr. Ming Eitatsu, Minister of Home Affairs, is the only member of the fallen Ming family who retains a seat in the Cabinet. He is about forty years old, and is said to be a very clever man. He was not on good terms with the leaders of the Ming faction. Mr. Gyo Inchu, Minister of Finance, is about fifty, and is said to be a man of character. Mr. Li Kinyen, Minister of War, fifty-nine years of age, is a military officer, and was a local Governor when he was recently called to fill his present office. Mr. In Yokin, Minister of Justice, forty-five years old, is a very popular official. Mr. Boku Teiyo, Minister of Education, fifty-seven or eight years of age, was once Minister to the United States. He was Minister of Finance under the Ming Government. Mr. Gen Seiyei, Minister of Agriculture and Commerce, is the oldest member of the Cabinet, being sixty. He has served in various local offices. Mr. Go Seijun, Minister of Public Works, fifty-three or

four years of age, was for some time Governor of Ham-gyŏng-do. Lastly, Mr. Li Saiben, Minister of the Household, is an elder brother of the King. Among the Vice Ministers we may mention Mr. Kim Kachin, Vice Minister of Foreign Affairs, some time Minister at Tokyo; Mr. Li Shunyo, Vice Minister of Home Affairs, a grandson of the Tai Wŏn-kun; Mr. Kim Kaku-u, Vice Minister of Justice, a good Russian and Japanese scholar; and Mr. Chŏ Giyu, Vice-Minister of War. Among the younger officials attached to the Cabinet, Mr. Yu Kichi-ei, Special Secretary to the Premier, is believed to be the most talented and accomplished. He is said to be familiar with the English and the Japanese languages, having spent several years at Mr. Fukuzawa's school.

The report that fifty Japanese have been butchered by the Chinese soldiers in Formosa remains unconfirmed. According to the *Nichi Nichi's* Shanghai correspondent, the report is discredited in Shanghai.

One or two Japanese papers are foolish enough to attach importance to the report that the Viceroy Li has committed suicide, but the better journals do not even notice the absurd story.

It has hitherto been generally understood that Lieutenant-General Nozu, the Commander of the Japanese Army, had advanced as far as Kim-chhŏn. But, according to the latest advice from Sŏul, it is stated that he is directing the movements of the troops from the head-quarters at the Korean capital.

The *Nichi Nichi's* Fusan correspondent telegraphs, under date of August 27th, that active measures are being taken by the Japanese authorities in Korea to open postal communications between Sŏul and Fusan. At present all letters from the Korea capital are brought by mail steamers from In-chhŏn via Fusan. There is not much danger of this route being ever disturbed by Chinese fleets, but it is of course wise to be prepared for any emergency. Another letter, dated August 24th, states that 260 masons had arrived there by the transport *Toyo Maru*. These labourers are to be employed on the repair of roads between Fusan and the capital, and on the construction of station houses at the various postal stations between the two places.

The *Nichi Nichi* states that eighty-five or six express trains, each containing ten carriages, are to run between Tokyo and Hiroshima, in the course of ten days beginning midnight of the 28th ultimo.

A letter from Wŏn-san states that the Koreans in that region are very friendly to the Japanese, and that they are entirely different in disposition from their countrymen in Hwang-hai-do.

The report that Wŏn-san has been attacked by a party of Chinese troops is wholly unfounded. This rumour seems to have been derived from a letter received from that port, in which it was mentioned that, there being rumour of a Chinese occupation of Yang-dŏk, it would be prudent to despatch a detachment of Japanese troops to the northern port.

Telegrams have been received in Tokyo, not from Korea but from Moji and Shimonoseki, reporting a skirmish between scouting parties of the Japanese and Chinese armies at Sŏ-heung on the 23rd instant. After a short resistance the Chinese are said to have fallen back in the direction of the Tai-don-gang. Sŏ-heung is situated about midway between Sŏul and Phŏng-yang, a little nearer to the latter place. The place seems to have been first occupied by the advance-guard of the Japanese army at the date mentioned.

A Wŏn-san telegram received on Tokyo in the afternoon of the 29th instant announces, says the *Nichi Nichi Shimbun*, the arrival of over 1,000 Chinese troops at Yang-dŏk. Yang-dŏk is about midway between Phŏng-yang and Wŏn-san.

The *Yŏji Shimpō's* Sŏul correspondent, writing under date of the 22nd instant, reports a few changes in the personnel of the new Government there. The Home Minister, Mr. Ming Eitatsu, has resigned, his place being taken by

Mr. Ming Eisho. Mr. Kan Kito has been appointed Minister of Justice in lieu of Mr. In Yokin. Mr. An Keiju, Police Inspector-General, has now become Vice-Minister of Public Works, his successor in the former office being Mr. Li Inyo, a relative of the Tai Wōn-kun and a very influential personage. Great efforts, it is stated, are being made to reorganize the utterly demoralized police system of the country. Under the former system, police officials did not receive any salary and consequently devoted themselves to filling their pockets by means of extortion. A schedule of definite salaries has been drawn up, and a decree has been issued for the appointment of about 250 policemen. But the number of applicants is said to be small, because there is no longer any hope of illicit gains.

Concerning Mr. Boku Eiko, who was recently appointed Adviser to the Cabinet, the *Kokkai's* Sōul correspondent states that his appointment as Minister to either Japan or the United States is desired by most Koreans, because his presence in the Cabinet is feared to be prejudicial to harmony among its members. The reason assigned by the correspondent is that Mr. Boku belongs to a faction different from the one in ascendancy.

The transports being otherwise employed, much difficulty has been experienced in sending home disabled officers and men from Korea. The *Nichi-Nichi* tells us that the authorities have decided to transport them overland from Sōul to Fusan. More than one-half of the distance (about 300 miles), can be accomplished on water, first up the Han River and then down the Nak-dong River.

Last evening, General Count Yamagata was entertained by a number of his friends in the capital at a farewell party prior to his departure as the Commander-in-chief of the expeditionary force.

The Tokyo News Agency supplies us with the following telegram said to have been received in Tokyo from Shanghai on the 29th instant:—"There are indications that 20,000 Chinese troops collected in Hunan about the beginning of the present month are now gradually moving in the direction of Tientsin."

From the same source we learn that the Governor of Phyōng-an-do and Hwang-hai-do, who are giving every assistance to the Chinese army, will be punished by the Korean Government as soon as the Chinese have been driven out of those districts.

Of the Chinese troops stationed at Phyōng-yang, the principal part are said to be raw recruits and Manchu soldiers. The regular troops are only those designated by the characters *Sai*, *Ki*, and *Yin*. These latter at least look like soldiers, but the Manchurians and recruits are said to be almost worthless. The Manchu soldiers formerly enjoyed the reputation of being brave and daring, but they are now a set of ignorant and indolent ruffians. They are said to be indifferently equipped with lances, shields, and rusty match-locks.

The military telegraph-line between Sōul and Fusan has again been interrupted. It has probably been cut by Koreans.

Marquis Saionji, Mr. Suyematsu and suite left Fusan for In-chōn on the evening of the 26th ultimo. Among those bidding farewell to the party was the Governor of Tong-nai.

The roads between Sōul and Fusan are now undergoing thorough repair. A large number of Japanese workmen are engaged in the work upon different sections. The width of the roads is to be extended to 12ft., so as to permit the passage of waggons. More than two-thirds of the distance is said to have been finished.

The Japanese papers state that the Viceroy Li and Mr. Yuan have been appointed respectively the Commander-in-Chief and Assistant Commander of the Chinese army mobilized against the Japanese force, and that Yuan has already started for Korea. The report lacks confirmation.

The *Mainichi Shimbun's* Fusan correspondent reports that the Korean Government has decided to despatch Li Yoshun, the Tai Wōn-kun's grandson, as Ambassador to Japan, to express Korea's gratitude for the friendly assistance given her by this country. He will, it is

said, bring with him twenty promising youths to be educated in Tokyo.

The Chinese prisoners at Sasebo are said to be so pleased with the treatment they have received from the Japanese authorities that they are not only reluctant to go home, but they have volunteered to act as guides when Japanese war-vessels attack the forts of their own country.

MANUFACTURE OF PUBLIC OPINION.

A telegraphic incident of recent occurrence illustrates one of the methods employed in modern times to manufacture public opinion. Part of the story is told in the following extract from the *China Gazette* :—

A few days ago, *The Times* published a telegram from China, sent obviously to injure the reputation of Japan in the eyes of the British public. It stated that no reliance whatever was to be placed on news of the progress of the war reaching England from Japan, because all communications on that subject were submitted first to a rigorous censorship by the Japanese authorities. We have made inquiries at the offices of the Foreign Cable Companies in Shanghai and are officially informed that there is not one word of truth in this allegation. The Japanese Government has not, in the slightest degree, attempted to interfere with the messages in connection with the war, for the press to America or Europe, despite the fact that the Chinese have declined to transmit the slightest information on the subject except when they supply the matter themselves, and they even prohibit domestic and commercial telegrams from passing over their wires. The Chinese Telegraph Administration has since the outbreak of the war forfeited all its claims for support by the Foreign community, and messages are constantly received and never delivered though they have no bearing on the war.

Now the questions are, who despatched from Shanghai *The Times* telegram above alluded to, and under what circumstances did he despatch it? These are the points of the story, and we have been able to elucidate them by inquiry :—On the 24th of July a gentleman authorized to send telegraphic information to *The Times*, drafted a telegram to that journal announcing that Japan had declared war. The would-be sender of the message was then in Japan. Now at that date Japan had not declared war. Her Declaration was issued eight days later, namely, on the 1st August. Neither had a state of war been inaugurated. The first act of war took place on the 25th of July. Hence a telegram sent to London on the 24th of July saying that Japan had declared war was a deliberate falsehood. Of course the Japanese telegraphic authorities refused to pass such a message over the wires. Every country is entitled, nay bound, to protect its own interests in such matters. The publication in *The Times* columns of a telegram to the effect that Japan had declared war might have interfered with this country's purchase of supplies and might have otherwise entailed great inconvenience. At any rate it was a falsehood. What was the next step taken by this unsuccessful telegrapher of lies? He proceeded to Shanghai and despatched thence another telegram to *The Times* saying that no reliance whatever was to be placed on news of the progress of the war reaching England from Japan, because all communications on that subject were submitted to a rigorous censorship by the Japanese Authorities! That is how public opinion is sometimes manufactured. It is a striking process. A man fails to get a deliberate lie passed over the wires from Japan to London. Thereupon he goes to Shanghai and telegraphs to *The Times* that all information coming *via* Japan is untrustworthy!!

SHANGHAI NEWS.

The *China Gazette* reports that the Chinese Authorities are making strenuous but generally unsuccessful efforts to obtain the services of foreign steamers and of foreigners generally for the purpose of conveying troops to Formosa and elsewhere. Apparently the sums offered are

too small to tempt shipowners or shipmasters. In the same journal we find the following, from Newchwang :—

On the 10th instant, at a place called Liao-yaug, which is about 60 miles north of this port, the Rev. James Wylie, a member of the Scotch Presbyterian Mission, was brutally attacked by native soldiers on their way to Korea.

As far as we know, the facts are that the soldiers first attacked the mission chapel and the native Christians. They then met Mr. Wylie in the road, and, without any provocation, attacked him with knives and sticks, cutting and beating him about the face and head, and left him lying, apparently dead, on the street. His friends found him in that state and carried him to one of their houses, where he now lies in a critical condition, with a fractured jaw, which is a matter of small consequence compared with the injuries to his brain.

The last news we have is that he is still unconscious, but that Dr. Grey thinks there are some faint hopes of his life. Occurrences similar to this, or worse are what we must expect for some time to come.

Here is another item, also from the *China Gazette* :—

The Chinese seem still very much exercised on the subject of Japanese spies, and we learn that the Viceroy at Nankin has received a despatch from Peking—some say it is an Imperial Decree—asking him to produce the heads of the two Japanese recently arrested here on suspicion of collecting information for the enemy. The Viceroy thereupon instructed the Taotai to produce the men forthwith, and put them through the short but effective course of a judicial examination à la Chinois. The men, it will be remembered, were arrested on the merest suspicion, and according to all our preconceived ideas of justice, must be presumed innocent until they have been proved otherwise by a tribunal in whose modes of procedure we have confidence. But the Taotai simply wants to have the men into the City to take their heads off first and then try them. The ex-Municipal comprador, Zee Lan-char, who enjoys the important and lucrative post of Taotai's secretary, is very much troubled in his mind because there are certain legal formalities, which the U.S. Consul-General's absurdly sticking ideas of justice and fair-play demand should be gone through before men arrested on the merest suspicion should be handed over to the Torquemadas of the Taotai's yamen. The ordinary course in case of foreigners who have no proper consular representatives in Shanghai getting into trouble is to try them in the Mixed Court, before the Magistrate and Foreign Assessor, but the Chinese want to abolish this custom at one stroke, and take foreigners who they imagine have committed some offence in the Foreign Settlements into the City straightaway. We do not think the Foreign community will for a moment tolerate such a dangerous precedent being established, which would strike at the only safeguard many residents have against being subjected to all the nameless horrors of the Chinese criminal code.

The Viceroy at Nanking says he wants these two Japanese suspects' heads, but we do not think he is likely to get them until the men have had a fair trial. The case is a most difficult one to handle, and it is a most unfortunate thing that it has cropped up, but we believe it will not end in the surrender of one of our dearest privileges to the barbarous demands of this most enlightened Chinese official. His ideas are evidently on a par with those of the Viceroy Li Hung-chang's soldiers who dispoiled and robbed and stabbed with swords the Japanese women and children at Tongku, and the braves at Wei-hai-wei who fired upon the women and children of their Foreign drill instructors.

In view of what has happened in the case of these two Japanese, Mr. Jernigan, the U.S. Consul-General, has issued a notice to his Japanese protégés telling them to dress in their own national costume or to wear Foreign attire while in China.

It appears from the Shanghai journals that China's loan of 1½ millions sterling is being floated in London and Berlin. That sounds strange, though Reuter is responsible for it.

We observe that the *China Gazette* estimates Japan's force in Korea at 50,000 men. That is a great exaggeration. The number of fighting men is 20,000. Including commissariat, transport corps, ambulance, and other non-combatants, the total may aggregate 30,000. But the combatants do not exceed 20,000.

HONGKONG NEWS.

The death rate in Hongkong last month is given in the local Sanitary Board's returns as 41.89 for the British and Foreign community and 24.23 for the Chinese community. The plague is still claiming a few victims, but is almost stamped out both on the island and on the adjacent mainland.

It is notified in the *Hongkong Gazette* that the Harbour Master is to be the officer specially entrusted with the carrying out of the instructions of the Neutrality Proclamation.

A Government notification which recently provoked a good deal of ridicule—that which ordered the chair and *jinrikisha* coolies to carry their numbers on their coats in Roman numerals—has been annulled. It is now notified that these men are to have the number of their licences “legibly marked as the Captain-Superintendent of Police may direct” on the back of their coats. One wonders why this sensible course was not adopted in the first instance.

On the 10th inst., says the *Siam Observer*, the tug *Bangkok* towed up a lighter with 500 Chinese coolies, who were brought down from Swatow by the *Phra Chula Chom Klao*. The Customs authorities immediately boarded the lighter and took the live cargo up to the Custom House, where they had to pay the triennial tax, before landing, of four ticals and a salung per head.

The following, says the *Daily Press*, is an interesting specimen of “English as she is wrote” emanating from a French *caravanse* not 100 miles from Canton:—

The infringement of the by-laws of the above establishment has been hitherto widely indulged upon almost in every respects, to the extent that the prestige of its dignity and its good name is much affected thereby. To shake off future imputation of heedless management that might be impeached on the manager, it is urged upon that strict enforcement of its regulations be made to be hence forth rigidly observed, and the attention of the visitors and boarders be called upon specially to the following rules viz.:

- 1.—That no girls other than married women are allowed to be brought into the hotel.
- 2.—That dogs should be strictly prohibited in the premises, &c., &c.

The Artillery Volunteers of Hongkong are in future to wear white puggies instead of red.

SCIENCE AND MORALITY.

[COMMUNICATED.]

The *Spectator* comments in the following terms on an article recently published by Mr. A. J. Balfour:—

Mr. Balfour, in the paper on “Naturalism and Ethics,” which opens the July number of the *Philadelphia International Journal of Ethics*, devotes himself to contrasting the purely naturalistic view of the conscience considered as a mere product of Nature, with the view of it which all practical moralists, of whatever school,—the school of utilitarian expediency, no less than the school of religious mysticism,—insist upon inculcating. Moralists of all schools, he says, no matter whether they explain the rise of conscience as a beautiful provision for bridging the chasm between God and man, or as the ingenious device of a kind of automatic process for persuading men that it matters a vast deal more than it really does whether human society shall flourish for a few thousand years in an obscure corner of the universe, or shall never come into existence at all, are all virtually unanimous in declaring that the moral law “is worthy of all reverence; that in its main principles it is inscrutable and eternal; that it demands our ungrudging submission, and that we owe it not merely obedience but love.” He insists upon it that this view is a perfectly appropriate and consistent view in those who treat man as made in the image of God, and a perfectly inconsistent and incoherent view in those who treat man as the ultimate product of a number of physical forces, which somehow develop consciousness, and succeed in so happily exaggerating the importance of man's race, as to persuade him into subordinating all his own individual wishes to the end of prolonging for a few hundred or thousand years beyond the epoch at which the race would otherwise cease to exist, the insignificant and rather contemptible species which crowns the life of this obscure planet.

Surely the antithesis is somewhat antiquated. In these days to attack the crude Materialism

delineated in the above extract is like flogging a dead horse, and it is surprising to find a man with the philosophical acumen of Mr. Balfour engaged in so exhausting and unprofitable an occupation. “Those who treat man as the ultimate product of a number of physical forces, which somehow develop consciousness,” those, at any rate, who regard such an idea as more than a partial explanation of the mystery of existence, are now surely few and far between. The attitude of modern biologists and physicists towards the fundamental problems of philosophy is something very different from this, and was aptly described by Professor Huxley in his lecture on *The Physical Basis of Life* delivered more than a quarter of a century ago. His words are worth quoting at length. “We live in a world which is full of misery and of ignorance, and the plain duty of each and all of us is to try to make the little corner he can influence somewhat less miserable and somewhat less ignorant than it was before he entered it. To do this effectually it is necessary to be fully possessed of only two beliefs: the first, that the order of nature is ascertainable by our faculties to an extent which is practically unlimited; the second that our volition counts for something as a condition of the course of events. Each of these beliefs can be verified experimentally as often as we like to try. Each, therefore, stands upon the highest foundation upon which any belief can rest, and forms one of our highest truths. If we find that the ascertainment of the order of nature is facilitated by using one set of symbols, rather than another, it is our clear duty to use the former; and no harm can accrue so long as we bear in mind that we are dealing merely with terms and symbols. In itself it is of little moment whether we express the phenomena of matter in terms of spirit; or the phenomena of spirit in terms of matter: matter may be regarded as a form of thought, thought may be regarded as a property of matter—each statement has a certain relative truth. But with a view to the progress of science, the materialistic terminology is in every way to be preferred. For it connects thought with the other phenomena of the universe, and suggests inquiry into the nature of those physical condition or concomitants of thought, which are more or less accessible to us, and a knowledge of which may, in future, help us to exercise the same kind of control over the world of thought as we already possess in respect of the material world; whereas the alternative, or spiritualistic, terminology is utterly barren, and leads to nothing but obscurity and confusion of ideas. Thus there can be little doubt that the further science advances, the more extensively and consistently will the phenomena of nature be represented by materialistic symbols. But the man of science who, forgetting the limits of philosophical inquiry, slides from these formulæ and symbols into what is commonly understood by materialism, seems to me to place himself on a level with the mathematician who should mistake the *x's* and *y's* with which he works his problems for real entities—and with this further disadvantage, as compared with the mathematician, that the blunders and errors of the latter are of no practical consequence, while the errors of practical materialism may paralyse the energies and destroy the beauty of a life.”

It may be observed that theism is a far more deadly enemy to the idea of free-will than materialism itself. For whereas to the materialist who asserts that the idea of universal causation is absolutely destructive to the notion of human spontaneity, we have the crushing reply, that this is merely a deduction from one aspect of experience, a deduction rather than a necessary postulate precedent to all scientific investigation, and can in way override the sense of freedom of choice that is immediately given in experience; on the other hand, determinism is a necessary deduction from the dogmas of the omnipotence and the omniscience of the deity, and the theist is thus beaten on his own ground.

The article in the *Spectator* concluded as follows:—

The inference more than suggested is that this

view [that of the “naturalistic” origin of conscience] is an utterly false one, and that the moral ideal in man,—by no means a natural growth out of the dust of the earth,—is that which both attests his origin and indicates his goal. Which indeed is the more probable,—that an earthly nature should spontaneously generate a crop of delusions, the only apparently good effect of which is to prolong by a few hundred or even thousand years the existence of a race that is at best a temporary product of natural forces, and one of no real significance when measured carefully for what it is worth in the great procession of cosmic phenomena, or that a nature saturated with spiritual elements should have received those elements directly from a being whose spirit is all in all, and for whom earthly passions and pleasures are nothing but the discipline in the midst of which the conscience and the spirit have to strive; Of course, all our life is enveloped in mystery; but the mystery of spiritual growth assimilating and subduing earthly elements, is far less inexplicable than the mystery of earthly elements that generate for themselves a false sun of spiritual life, not for the sake of moulding us to any spiritual end, but only as an expedient for controlling the willfulness and diluting the dangerous energy of strictly selfish passions in a universe where true spirit has no existence at all. We can easily understand how spiritual life might be ignored amidst the conflict of material passions and earthly wants. But we cannot at all conceive how, in a world developed solely out of physical forces, the idea of moral law, of conscience, of spiritual devotion, could have been elaborated, if all the hope which these implied had been a pure chimera. Even such dreams as those of centaurs are compounded out of real elements, put together in an unreal way. But on the naturalistic hypothesis, spirit is nothing in the world but a name for the force exerted by human brains. How, on the naturalistic hypothesis, we ever came to suppose that will and conscience and love are supreme over the bodily organisation of which naturalisation of which naturalism regards them as the physical outcome, it is quite impossible to conceive. A provision implanted deep in the human organism for making believe that the cart drags the horse instead of the horse the cart, in order to increase the speed and insure the stability of the operation, is surely the most astonishing of all the paradoxes of modern philosophy. Mr. Balfour's article will do much to place that intolerable paradox in a light in which its hold on the mind of reasonable beings must wither away.

The answer to all this is: there is a contradiction, an “intolerable paradox” if you will, but it is not of our making. And the existence of this paradox does not justify speculations concerning what Professor Huxley amusingly calls “lunar politics,” and the manufacture of theistic mythology. It is sufficient to know on the one hand that by the method of science alone is it possible to attain a knowledge of nature, and that, proceeding on materialistic lines, “the order of nature is ascertainable to an extent which is practically unlimited”; and on the other, that there is an ideal realm—the sphere of the ethical impulse, of art, of poetry, and of love. Though to the concrete manifestations of these ideal activities the methods of science may be fruitfully applied, yet in their fundamental nature they are utterly incongruous with the materialistic symbolism by means of which alone we learn to know. For the purposes of science we must regard the universe as a great machine, in which the ideal in our own natures remains irreconcilable, but, if we will, supreme. It is better to learn to bear this “intolerable paradox” than on the one hand to deny the ideal, to proclaim mechanism triumphant, and to say that goodness, beauty, and love are mere delusions of that peculiarly constituted thinking machine called man; or, on the other hand, to thrust our heads into the sand and to say that to the eye of faith the paradox has no existence. Both plans are partial suicide: the former, ethical and æsthetic; the latter, intellectual. For a full and harmonious development of our natures it is necessary frankly to recognize and quietly to accept the contradiction between science and the ideal. The contradiction will no longer trouble us when we understand that by an increasing scientific knowledge of the universe we are aided in that supreme purpose of human existence, the transformation of the actual in pursuit of the ideal. Science is the lamp that illumines the path of duty.

JAPANESE JURISDICTION.

THE persistent vitality of error is undoubtedly characteristic of Yokohama whenever Japanese affairs are concerned. In the second half of the year 1894 we find a man, who styles himself "An Old Resident," ventilating, in the local press, grievances that have been again and again shown to be the veriest chimeras. Everyone is entitled to his own opinion, and so long as "Old Resident" confines himself to an expression of opinion, there would be no occasion to traverse his views, however prejudiced and partial they might appear. But his facts are so lamentably incorrect that we can not but marvel at the ignorance in which he has successfully hybernated for a number of years. "Foreigners," he says, "have seen enough of the working of Japanese Courts to know that, except in an extreme case, they had better suffer any wrong than bring a suit in them." Is that true? Is it not true, on the contrary, that when foreigners have brought suits in Japanese Courts, they have obtained a verdict in the majority of cases? Is it not true that Japanese Courts have almost invariably shown a plain disposition to do justice as between foreigners and natives, and that foreigners themselves have frequently borne witness to that disposition? Is it not true that the chief, we may almost say the only, cause of complaint formerly urged against Japanese Courts was that they had not power to enforce their verdicts at once, and that a grievously defective bankruptcy system aided by a too lax law of appeal, enabled Japanese litigants, in the interval between the rendering of a decision by a Court of First Instance and its confirmation by a higher tribunal, to dispose of their available property in such a manner that the foreign plaintiff ultimately recovered nothing at all? That was always the real ground of grievance, and that has now been completely removed since the new Code of Civil Procedure—put into operation from January 1st, 1890—enables a claimant to attach the property of a person against whom he brings suit. It seems to us that "Old Resident's" extremely harsh condemnation of Japanese Law Courts is nothing more than an expression of the vague but deeply rooted prejudice by which so many Occidentals are swayed with regard to Oriental institutions. It is a natural prejudice, and it has its roots in a sentiment with which we heartily sympathise. But truly critics who undertake to discuss the administration of justice should endeavour to be themselves a little just.

"Old Resident" then passes on to ask:—"Are we to be degraded to the level of this country in respect to their Marriage Laws, or rather customs?" What is the matter with the marriage laws of Japan? A man can have only one lawful wife; his union with her is an affair of

civil contract just as the union of an English man with an English woman may be if the parties please, and he can not divorce her against her will without appeal to a Court of Law. There are Western countries standing in the foremost rank of what we call Western civilization where divorce is an easier matter for the upper classes than it is in Japan. What is the terrible degradation from which "Old Resident" shrinks? Besides, if "Old Resident," before agitating himself and the public, would take the trouble to refer to easily accessible sources of information, and to read even a fraction of what has been already published, he would know that there is not the slightest fear of foreigners' being brought under Japanese jurisdiction prior to the promulgation of the new Civil Codes, which include marriage laws of a reasonably satisfactory character.

The next phantom conjured up by "old Resident" is this:—"Are the police to enter our houses at any or all times at their will, and meddle with our household or office affairs?" It is scarcely credible that such a question can be seriously propounded after all that has been said and written on this subject. Why on earth does not "Old Resident" take the trouble to read the Constitution and Laws of Japan before venturing to expound them? Did he resort to that very obvious precaution, he would know that the police in Japan have no more power to enter private houses and "meddle with household or office affairs" than they have in Europe or America. The laws are perfectly plain and explicit upon this point. "Old Resident" is disquieting himself in vain.

He further inquires:—"Are the police to dog us as we walk or ride because perchance we do not carry a lantern?" Now it is true that vehicles are not suffered to pass along a public thoroughfare after sunset in Japan unless they carry a lantern, or a light of some kind. But that is true also of Europe and America, as well as of all countries where proper regulations exist for the protection of life and limb. Does "Old Resident" complain of it? Would he rescind the interdict and allow carriages, *jinrikisha*, and other vehicles to be driven rapidly through the streets after dark without being provided with a light? If that be his idea, he had better begin by ventilating his extraordinary creed in London and Paris, where the police would make short work of him did he attempt to drive a lampless carriage through the streets at night. And if that is not his idea, what does he mean by crying out against a regulation in Japan that is enforced with strictness in his own country? As to his allegation that the police may dog a man "walking" if he be not provided with a lantern, it is absurd. In Japan no pedestrian is required to carry

a lantern, and the police's "dogging" exists in "Old Resident's" imagination only.

The exquisitely comical part of the matter is that this same "Old Resident" grows quite sad about "the paid and captured partisans of the Japanese who have sedulously put forward false representations of the state of things in Japan," and about the fact that "there is many a falsehood told on matters both trivial and serious." So there is indeed. Were we asked to adduce a conspicuous example of a person that "puts forward false representations of the state of things in Japan," and "tells many falsehoods on matters both trivial and serious," we should be compelled to indicate "Old Resident," as *primus inter primos*.

"WO-JEN."

WHETHER the term "*Wo-jen*," used by the Emperor of CHINA in his Declaration of War to designate the Japanese, was intended to convey an opprobrious signification, is a question that has caused, and is causing, some discussion. It will be remembered that the foreign public's first impression as to the meaning of the word was gathered, not from Japanese sources, but from Chinese. The Chinese translators who rendered the Declaration into English added, of their own accord, to the word "*Wo-jen*" a note explaining that it was employed in an opprobrious sense, and their comment was supported by the context, where we find the EMPEROR ordering his military and naval forces to "root" these *Wo-jen* "out of their lairs." In WILLIAMS' Dictionary the ideograph "*Wo*" is said to possess the meaning "pigmies," but it would appear that although this particular ideograph is not commonly used by the Japanese themselves to write "*Wa*" or "*Yamato*," it is sometimes so used without any derogatory significance whatever. Hence many people have been disposed to doubt whether the Emperor of CHINA intended to insult the Japanese when he called them "*Wo-jen*," and a belief has grown up that his MAJESTY intended simply to designate the people of Yamato. Correspondence upon this subject has already appeared in our columns, and we have now received the following letter from a Japanese writer of considerable erudition:—

There is in the *Japan Weekly Mail* of the 18th a leader on China's declaration of War. The Chinese Government is there made out to have given the name of 'pigmies' to the Japanese, and also to have ordered that armies be sent to "root the pigmies out of their lairs." I think it is only fair to point out that the Chinese never purposely used such language against us. As far as I know, the word "*Wo*" 倭 has been used by the Chinese to designate Japan for thousands of years. The oldest meaning attached to it was that of an island country lying in the eastern ocean. There does not seem to have attached to the word any signification as to the stature of the people living in the island. All Chinese dictionaries, including the most complete *Kang-hsi* Encyclopædia, compiled under the direction of the celebrated Emperor Kang-hsi (Koki-tei in Japanese) of the present Manchurian Dynasty, say nothing about

the shortness or tallness of the people. No Japanese scholar, and I may probably say Chinese, knows how it came about that the Chinese gave this name to our island. There is no known meaning attached to the word "Wo." To us, being called "Wo" by Chinese is much like being called Japanese by Europeans. Comparatively less ancient Chinese sometimes used a combination of "Wo" 倭 with "nu" 奴 to express either Japan itself or some portion of the island. Modern Japanese scholars have often speculated on the origin of this compound-name and have been disposed to regard it as a modified Chinese pronunciation of the Japanese name of a certain locality in Kiushu. But this does not concern us now. It will be very interesting if Williams, whom the *Japan Mail* makes say that Chinese define "Wo" to mean "the country of dwarfs" (*Japan Weekly Mail* vol. XXII. 205*), and the Chinese translator of the Imperial (Chinese) Declaration, who also is made responsible by the *Mail* for the "pigmies," can give some satisfactory authority for their statements.

As regards the words "root out of their lairs" (驅), there is no doubt that etymologically they mean to destroy a nest, to cut down a lair. But the sense has been extended, so that it simply means "to root out," to cut down, to exterminate. It does not involve the conclusion that the object to be cut down is necessarily a low creature, as a bird or a beast. In the simple sense it occurs in Chinese literature frequently.

No doubt better and less severe terms could have been used, but to eliminate the figurative words would probably have involved some sacrifice in the matter of strength of the expression. On these points I cannot but think that the *Japan Mail* has been a little hypercritical.

The writer of the above seems disposed to fix upon us the responsibility of attaching an insulting significance to the term in question, but we must recall his attention to the fact that we explicitly followed the Chinese translators of the Declaration with regard to the ideograph's opprobrious significance, and WILLIAMS' Dictionary with regard to the exact meaning. The inquiries of another correspondent, whose letter we published on Saturday, have led him to conclude that "*Wo-jén*" means something worse than "pigmies," and that its true significance is "vermin." For ourselves we have only three considerations to offer. The first is that the Chinese themselves must be supposed to know better than any one else in what sense they use a particular word. They have alleged, in their translation of the Declaration, that the ideographs convey an opprobrious meaning, and we do not think that any one in Japan is entitled to question the allegation. The second is that, so far as we have been able to ascertain, the official class in Japan consider the term insulting, and are persuaded that it was employed in a derogatory sense. The third is that the Chinese Government would certainly never have applied such a term to Japan or the Japanese in a despatch drafted according to the ordinary rules of diplomatic courtesy. Japan is not *Wo-kwo*, nor are the Japanese *Wo-jén*, in every-day official language. The former is *Zhih-pan* (*Nippon*) and the latter are *Zhih-pan-jén*. Why, then, did the Emperor of CHINA go out of his way to employ the term "*Wo-jén*?" Why did he not employ the official epithet applied by the Japanese to themselves and stereotyped by diplomatic usage? If these questions can be answered satis-

factorily, we shall be very willing to admit that no opprobrious intention existed.

THE REVISED TREATY BETWEEN JAPAN AND GREAT BRITAIN.

WE publish elsewhere the Revised Treaty between Japan and Great Britain. It was signed in London on the 16th of July, and having been subsequently ratified by Her Majesty the QUEEN, was forwarded to Japan by the Canadian mail that reached Yokohama on the 20th instant. Ratification by the Emperor of JAPAN took place on the 25th instant, and the Ratifications were exchanged on the 25th, his Excellency the Hon. P. Le POER TRENCH acting as HER MAJESTY'S Representative. We may explain that although the negotiations, which were conducted in London, remained from first to last under telegraphic direction from Tokyo, so far as Japan was concerned, no verbatim copy of the document existed in this country until the receipt of the original on the 20th instant. Copies and translations had then to be made, after which a certain official routine had to be observed; namely, first the examination of the Treaty by the Cabinet; then its submission to the EMPEROR; then its transmission by the SOVEREIGN to the Privy Council; then its consideration by the latter, and its return to the EMPEROR together with the Council's views; and finally HIS MAJESTY'S ratification. All these operations were effected between the 20th and the 24th, being, in truth, mere matters of form, since the contents of the Treaty were already known and approved. We believe that instructions to exchange the Ratifications as soon as might be, were telegraphically conveyed to HER MAJESTY'S Minister in Tokyo shortly after his arrival there, so that the whole business may be said to have been directed from London.

THE JAPANESE DIET MALIGNED.

WHAT can Mr. F. H. BALFOUR mean when he says—as he does in his paper recently read before the Japan Society—that "the Diet is a constant scene of violent quarrels, the pettiest jealousy, the most ill-considered and self-stultifying vacillations? Even personal violence is not unknown among the members!" Where on earth did Mr. BALFOUR get that idea? We suspect that he has been consulting some of the Yokohama local prints, which, out of sheer lust for slandering the Japanese, have not hesitated to describe the Diet as a "bear garden," though their knowledge of it is virtually nil. The Diet is not "a constant scene of violent quarrels." No account of its proceedings could be more incorrect. Quarrels are altogether the exception. We think that we can speak of the Diet with at least as much authority as any foreign observer, and we have not the smallest hesitation in

declaring emphatically that its proceedings will compare, not unfavorably, in respect of general decorum and tranquility with the proceedings of any parliamentary body in the world. To cite other chambers by name were an invidious task, but any of our readers that take the trouble to make an unbiassed examination of the printed stenographic records, above all, any that have opportunity to visit the Japanese House of Representatives and sufficient knowledge of the language to follow the speeches, will at once bear us out. The circumstances of the Diet were especially untoward from the outset. Several of the members elected were men who for years had been engaged in a bitter crusade against the Government; a crusade not of principles but of personalities. These men had long looked forward to the opening of the Diet as destined to afford them a much desired opportunity of ventilating their supposed grievances with impunity such as they had never previously enjoyed in the press or on the platform. That they did not become so intoxicated with unaccustomed freedom as to pervert it into disgraceful license does them great credit, seeing that they had the suffering of imprisonment, fine, and other criminal pains to avenge. Moreover, they found themselves plunged from the very commencement of their parliamentary career, into a fight calculated to evoke the strongest political passions—a fight for party government. Yet they behaved with self-constraint and even dignity. There is no gainsaying these facts: they stand on clear record. Of course the proceedings of the Japanese Diet have not been uniformly decorous and dignified. But, on the whole, and above all in view of the circumstances, they have been remarkably deserving of those epithets. The charge of "ill-considered and self-stultifying vacillations" is another affair. We let it pass unchallenged, because it certainly embodies a great deal of truth. But what is the sense of saying that "even personal violence is not unknown among the members!" Can Mr. BALFOUR cite any parliamentary assembly whatever where personal violence is unknown among the members. During the six sessions of the Japanese Diet's existence, there has been one instance, and one only, of actual resort to personal violence on the part of two members, and that did not occur in connection with a debate, but resulted from an accidental collision in a doorway; and there has been one, and only one, instance—so far as we can recall—of a gesture menacing personal violence. Is that a bad record? Consult the annals of any other House and see. Mr. BALFOUR is unjust. With the best possible intentions, his desire to paint a picture in strong and bold outlines has betrayed him into serious exaggeration.

* Addendum by the Editor to a letter by "Inquirer" on the subject of "*Wo-jén*" among the correspondence.

THE NEW TREATY BETWEEN ENGLAND AND JAPAN.

IT is a matter for mutual congratulation that a happy ending has at length crowned the long years devoted to negotiating such a revision of Japan's Treaty with Great Britain as should place the former country in an international position consistent with her modern progress. England, owing to the caution naturally dictated by her large interests, has always occupied in Japanese eyes the position of an obstructor. Unless England could be won, the consent of other Powers must prove of little practical value, since she had so much at stake that to ignore her in any arrangement was out of the question. We need not now pause to consider how much of the complaisance shown by certain Western States towards Japan after the dissolution of the old-time union of Treaty Powers, may be connected with their consciousness that no action taken independently of Great Britain could be practically significant, and with their conviction that Great Britain would never move until she saw her way to do so safely. Many invidious things have been said and written about the cheap magnanimity displayed by such States, but for our own part, even granting the truth of the motives attributed to them, we find nothing to condemn in their conduct. They did not derive from the situation any advantage inconsistent with the ordinary canons of diplomacy. Be that as it may, however, there can be no doubt that Great Britain's apparent want of sympathy with Japan's just aspirations involved great unpopularity in the past, and we may reasonably hope that the action she has now taken will not only dispel that feeling but also add considerably to her prestige. She has performed an act of justice for the sake of justice, and such international procedure is as rare as it is praiseworthy.

The main feature of the new Treaty is that it restores Japan's judicial and tariff autonomy, the restoration of the former to take place in five years and that of the latter in seventeen. These terms, however, are not absolute. The five-year period is to be fixed by the Japanese Government. That is to say, five years at least must separate the date of the Treaty's signature from the date of its operation. During that interval Japan will complete her preparations for assuming jurisdiction over foreigners, and when those preparations are complete, she will give twelve months' notice of her wish to make the Treaty effective. It is possible, therefore, that should any unforeseen delay occur in revising and enforcing the new Civil Code, the operation of the Treaty may be deferred. Similar latitude applies to the case of Tariff autonomy. Eleven years after the Treaty goes into effect either of the High Contracting Parties is to have the right of notifying its intention to terminate it on the expiration of twelve months, and such termination would of course leave Japan free to exercise complete autonomy in respect of customs duties. Thus whatever delay—if any—occurs with regard to the operation of the Treaty, must equally influence Japan's acquisition of the right to terminate it.

On recovering her judicial autonomy Japan throws her whole territory open to British trade, travel, and residence. She guarantees to British subjects all the privileges, immunities, liberties, and rights enjoyed by her own subjects, with certain exceptions; as well as entire liberty of conscience, the right of private or public exercise of worship; the right of burial according to their religious customs; freedom from all charges or taxes other than those paid by Japanese subjects; and exemption from compulsory military service, from all contributions imposed in lieu of it and from all forced loans or military exactions. Great Britain, on her side, guarantees to Japanese subjects the same privileges, liberties, and immunities within her dominions. The reciprocity thus secured is a novel feature, for hitherto in Japan's treaties with Western Powers she has been required to promise everything without receiving any pledges in return.

With regard to trade privileges, they are full and complete with two exceptions. The first exception is that British subjects may not own land. They may own houses, manufactories, warehouses, shops, and premises such as are needed for conducting business, but land for residential and commercial purposes can be acquired by lease only. With regard to the duration of such leases nothing definite is set down in the Treaty, but we read that their provisions must conform with the laws of the country. The Civil Code, therefore, will determine the question. Probably the term will be 30 years in the case of ordinary land and 50 in the case of unreclaimed land. The second exception refers to the coasting trade. It is excluded from the provisions of the Treaty and made subject to the law of the land. British vessels, however, will be permitted to continue, as heretofore, for the period of the Treaty's duration, to carry cargo between the existing open ports of the empire.

It will be observed that care has been taken to deal satisfactorily with matters constituting chief causes of uneasiness to foreigners. The Constitution of Japan already declares inviolability of private residence, but the 4th Article of the Treaty re-states the guarantee, and repeats the principle already embodied in the Japanese Code of Penal Procedure, namely, that no dwelling, manufactory, warehouse, or shop shall be liable to domiciliary visit except under duly prescribed legal provisions. Further, when, on the Treaty's coming into operation, the present Foreign Settlements are incorporated with the respective

Japanese communes, it is provided that "leases in perpetuity under which property is now held in the Settlements shall be confirmed, and no conditions whatever other than those contained in such existing leases shall be imposed in respect of such property." This effectually disposes of the apprehension so often ventilated that the privileges now possessed by foreign land-renters would be disturbed by Treaty Revision.

Another point worthy of notice is that protection for foreign patents, trade-marks, and designs will be secured within Japanese territory, and that Japan pledges herself to join the International Conventions for the Protection of Industrial Property and Copyright, prior to the cessation of Consular Jurisdiction. This conclusively confirms what we have frequently stated, namely, that Japan has always been willing to extend protection to foreign patents and trade-marks and to recognise foreign copyright if only the abolition of Consular Jurisdiction rendered such a step possible.

Pending the complete opening of the country and immediately on exchange of ratifications of the Treaty, British subjects become entitled, on producing a certificate of recommendation from their Representative in Tokyo or from a British Consul at an open port, to obtain a general passport for any period not exceeding twelve months. This privilege will be greatly appreciated. Its extension to the subjects or citizens of other Powers, pending the conclusion of similar treaties with them, is within the discretion of the Japanese Government. We think that little doubt can exist as to the wisest and most liberal policy under the circumstances.

As to the Tariff, it is divided into two sections. The first is Conventional: it includes 39 staples of import upon which duties varying from 5 to 15 per cent. are to be levied, the average being 6 per cent. These are *ad valorem* duties. It is agreed that they are to be converted into specific duties by a supplementary convention, the basis of conversion being the medium prices shown by the Japanese Customs Returns during the six calendar months prior to the date of the Treaty. In addition to the increase of duties thus provided for, as compared with present rates, we have to note that the dutiable value of imports will henceforth include freight, insurance, and commission, items hitherto excluded from the arithmetic of the Customs. The second section of the Tariff is Statutory. Its rates will be determined by the Diet. The principal articles falling under this category are machinery, drugs and medicines, tobacco, wines and liquors. Refined sugar, contrary to expectation, has been admitted at 10 per cent., doubtless in deference to Hongkong interests.

The new Tariff might be put into operation a month after the exchange of ratifications were not the intervention of the most-favoured-nation clause invoked.

By that clause British subjects can not be required to pay duties higher than those levied from the citizens or subjects of any other Power. Hence it follows that until the Treaties with other Occidental States shall have been revised, the existing Tariff must remain in force.

Summing up this new Treaty, we conclude that the Japanese Government were guided by two principles in framing it. First, they were determined not to withhold from foreigners visiting Japan any privilege or liberty consistent with the exercise of the empire's autonomic rights. It could not have been reasonably expected that they would display greater liberality. Secondly, they were resolved to obtain by convention for Japanese subjects in foreign lands the same privileges as those enjoyed by foreign subjects or citizens in Japan. Hitherto the Treaties have been unilateral in that respect: they provided merely for privileges to be secured to foreign subjects or citizens in Japan, and said nothing whatever about the reciprocal guarantee of similar privileges to Japanese subjects in foreign countries, though the Japanese living or travelling abroad out-number foreigners in Japan. Thus whatever privileges the Japanese enjoyed in Europe or America were simply matters of courtesy. That very glaring defect is now remedied.

We have here touched upon the main features only of the new Treaty. Read carefully it will be found to bear the impress of various experiences derived from the history of the past twenty-five years, but to these we need not refer in detail. The drafting, based upon that of the Anglo-Italian Treaty of 1883, is in happy contrast with the slipshod, infelicitous phraseology of the old Treaty. Regret will of course be felt that further guarantees were not obtainable. But the time for procuring guarantees calculated not only to remove foreign distrust but also to confer benefit on Japan herself; the time when the expediency of seizing the unique opportunity was persistently urged in these columns—that time has long passed. On the other hand, the Treaties had to be revised, and every day's delay meant an increase to the strength of Japanese public opinion and an addition to the nation's feeling of umbrage. Great Britain has been guided in this matter by the dictates of true statesmanship, and we are persuaded that her prestige and popularity in Japan will be materially augmented by her action.

H.E. the Japanese Minister, Viscount Aoki, entertained a number of gentlemen at dinner at the Westminster Palace Hotel on 14th inst. The company present were:—The Lord Mayor, Baron Campbell, Baron von Siebold, Professor W. Anderson, Alderman Treloar, Mr. Uchida, Mr. Tayui, Mr. Hayashi, Mr. Akiyama, Professor Elgar, Mr. Frank Dillon, Mr. A. G. Angier, Mr. Alfred East, Captain Shiba, Mr. A. Diósy, Mr. Chas. Holme, Mr. Paul Bevan, Mr. John Mogford, Mr. Huish, Mr. W. S. Hall, Mr. T. B. Harbottle.

THE NEW TREATY.

NOW that the Revised Treaty has been concluded and ratified by Japan and Great Britain, every level-headed Britisher will accept the situation and make the best of it. Englishmen are not in the habit of crying over the inevitable. Their disposition, rather, is to look things in the face, and endure what can not be cured. Journalists, for their part, might do useful service by throwing light on the position, explaining the true nature of Japanese laws and setting forth the real perils, if there be any, against which our Diplomats and Consuls should seek to guard us. The violent and recriminatory writing so often evoked in the course of controversies on this vexed subject, may now surely be dropped. We have had soreness enough and bickering enough to last for a long time, and since nothing can possibly be gained by that kind of thing (the die having been irrevocably cast), we may at least hope for an era of peace and tranquillity. Regrettable above all would be the publication of statements calculated to mislead the public as to the nature of Japanese Jurisdiction and the character of the new Treaty. Unfortunately such statements seem to have become a habit difficult to shake off. We find several of them in the *Japan Gazette*, and for the sake of a better understanding it may be well to notice them in detail.

As a matter of fact a Britisher must not hold land.

It is true that a British subject may not own land—apart from that already acquired in the Settlements—but he may hold land on lease, and the lease will be regulated by precisely the same conditions that govern leases between Japanese subjects. That is the system followed in many Western countries, and its adoption by Japan does not constitute a legitimate ground of complaint. For all practical purposes of trade, manufacturing, or residence, the privilege of holding land on a long lease is sufficient.

Whereas Japanese ships may call at every port in Great Britain, British ships must only call at Japanese open ports or ports to be hereafter opened.

This is misleading. Japanese ships may, indeed, call at every port in Great Britain, but they can not discharge goods at every port. That can be done at ports of entry only. Precisely the same system is adopted in Japan. In no country where import duties are levied is it permissible for vessels to enter and unload in ports where a custom house does not exist.

There is no stipulation as to a Commercial Code.

The most important sections of the Commercial Code have already been in operation for a year and are working satisfactorily. Moreover, it is absolutely certain that the Treaty will never take effect until the whole remaining body of civil law, now undergoing revision, shall have been promulgated and put into force.

Upon that point there need to no uneasiness whatever.

There is no such thing as inviolability of contract or of domicile.

In what faith this singular statement is advanced we can not conceive. We need not be at the pains to contradict the portion relating to inviolability of contract: it is obviously untrue. And indeed the falseness of the assertion that inviolability of domicile does not exist has been exposed again and again. The matter is perfectly plain. It is provided in the Constitution that "except in the cases provided for in the law, the house of no Japanese subject shall be entered or searched without his consent." It is provided in the Code of Criminal Procedure that arrests cannot be made without a warrant except when an individual is discovered at the moment of committing a crime or a delict that involves imprisonment (Art. 58). But what occasion is there to analyse in these columns the provisions of Japanese law? That has already been done by the jurists of the British Government, and since they have decided that domiciliary visits under the conditions prescribed by Japanese law are no more to be apprehended than they are in Europe, and since they have recorded their conviction by embodying it in the 4th article of the Treaty, the *Japan Gazette* ought to be satisfied. In truth the statement that inviolability of domicile does not exist in Japan can not be supported by reference either to the text of the law or to the experience of the people. No Japanese householder can be found to echo the *Japan Gazette's* hallucination.

Women are mere chattels. . . . They may be divorced for ill-temper, talkativeness, and other cardinal crimes.

It has been already demonstrated that, even under the present marriage laws of Japan, no woman can be divorced against her own will without the intervention of a Law Court. Some Japanese women may be disposed to refrain from appeal to the law, but English women have a stouter idea of their rights. Be that as it may, however, what we have to note is that, before British subjects come under Japanese Jurisdiction, the new marriage law, forming apart of the Civil Code, will be in operation. What is the use of denouncing Japanese Jurisdiction on account of laws that will have ceased to have any binding force long before we are required to submit to that Jurisdiction?

But the Journalist most of all will suffer conviction. On trumpety allegations his newspaper may be suspended and himself imprisoned.

No journalist can be imprisoned in Japan except by sentence of a Court of Law. He may, of course, be arrested and held pending trial, like any other wrongdoer in any country. But he can not be condemned to imprisonment except after due trial by a Court of Law. While noting the above erroneous statement, however, we do not wish to be understood

as defending the Japanese Press Law in its present form. We deem its restrictions unfortunately necessary, considering the state of journalistic development in Japan, but we should be very sorry to see them extended to the foreign local press. There is, however, one comforting reflection of which no writer on this subject seems to take note. It is that, in view of the rapid growth of public opinion in Japan and the strong tendency of the Diet to introduce liberal systems, we may be virtually certain of seeing the Press Law denuded of all its objectionable features long before the new Treaty goes into operation. Let us not cry out before we are hurt.

We write, not for the sake of controversy, but because it seems a pity to leave any false impressions uncorrected when a subject so important is under discussion.

"HOW SAY SOME AMONG YOU THAT THERE IS NO RESURRECTION OF THE DEAD?"

(COMMUNICATED).

IN the controversies upon religious topics that have from time to time taken place in the correspondence columns of this newspaper, we have repeatedly noticed that the combatants of the respective sides seemed to be firing, not at their opponents, but at phantoms of their own imaginations. Neither side was able to see the other with sufficient distinctness to take aim. What can have been the cause of this singular lack of mutual understanding? We suppose it to have lain in this, that the writers on both sides alike were ignorant and inflated dogmatists that had never moved out of the narrow circles of ideas in which they were respectively brought up; and that the educated members of both parties had carefully kept out of the controversy.

How indeed could it be otherwise. The cultured Christian and the cultured Freethinker agree at least in this, that religious controversy in the public prints is undignified and unprofitable. The Freethinker has for many years given careful consideration to the arguments advanced on behalf of Christianity by her leading adherents, from the time of the fathers of the Church, such as AUGUSTIN, down to the present day. The Christian has given an equally careful consideration to the writings of such men as HUME, GIBBON, and HUXLEY. Each has found the arguments of his own side conclusive; but is it likely that either will hope to convince the other?

If in this respect the Christian and the Freethinker can without difficulty grasp one another's position, we must not therefore assume that in all points they can easily understand and sympathise with each other. One of the most fundamental differences between them is this. To the Christian such questions as the existence of a personal creator and the continuance of personal consciousness after death are of tremendous importance, and compared with

them all other issues seem vain and trivial. Though to the Freethinker, on the other hand, these questions are of considerable theoretical interest, yet he places them among the minor problems of philosophy, among those that have the least bearing on practical life. Between these two views the antithesis is so vital, that a mutual understanding is almost impossible.

The Christian, again, is apt to lay much stress on the joys of being a Christian and on the goodness of the Christian life. Careful observation of Christians fails entirely to convince the Freethinker that, speaking generally, Christians are either better, wiser, or happier men than unbelievers—they often say they are, but assertion is not proof. The Christian, however, is apt to advance these joys and this goodness as a witness to the truth of Christianity; a plea that to the Freethinker seems a curious misconception of the question. If the unbeliever knew more assuredly than he knows anything else that his not being a Christian must make him the blackest and most miserable of sinners here and entail eternal damnation hereafter, how could that make him a Christian as long as the logic of the situation appeared to him unchanged? Did all the tortures of the Inquisition ever make one true convert? If the GOD and the Hell of mediaeval superstition should after all prove to be realities, and if the unbeliever should burn in hell-fire for ever, would that convince him of the justice of his maker? Far from it—the unbeliever would merely regard him as the devil enthroned in heaven, and would prefer hell to his company.

It is in connection with the question of the existence of a personal ruler of the universe and with that of the immortality of the soul, that even well-educated Christians most completely fail to grasp the attitude of scientific Freethought. The frequent occurrence in the writings of Christians of statements that it is impossible to believe that there can really be such a creature as an atheist, references to Psalm LIII. 1, expressions of pity for those that are without hope of a hereafter—these and many similar sayings show their utter want of comprehension of their opponents' position. Like the chorus in "Samson Agonistes," they say:

Just are the ways of God,
And justifiable to men;
Unless there be who think not God at all:
If any be, they walk obscure;
For of such doctrine never was there school,
But the heart of the fool,
And no man therein doctor but himself."

Such an opinion, while fitly attributed to the members of an obscure Semitic tribe living at the dawn of history, can now be held by those alone that have turned their backs on the culture of thirty centuries. It may not be amiss, therefore, to set forth briefly the attitude of the Freethinker in relation to these questions. We shall merely endeavour to explain his

"creed;" we shall not try to justify it. Our tone and method would be very different were we playing the part of a logician wishing to defend his own position and to expose the weakness of that occupied by opponents.

To the Freethinker it does not appear that there is any necessary connection between the idea of a divine governor and that of personal immortality. An omnipotent creator might, in his inscrutable wisdom, create man for this terrestrial existence only. As a matter of fact there appear to be not a few Christians who interpret literally the words "eternal life" and "eternal death" in the Scriptures, and who believe that for the vast majority of the human race, for all except the small number of the elect, death is the absolute end of life. On the other hand the idea of a personal creator is by no means necessary to support aspirations for a continued individual consciousness after death. Those who believe that this mundane life of the inner nature of which we are so profoundly ignorant, is probably in no way connected with the will of a personal creator, may well imagine that the individual consciousness may be continued, by equally incomprehensible causes, after the death of the body. The Freethinker then asserts that the idea of a divine governor and the idea of a personal immortality, as mere metaphysical possibilities, are in no way necessarily connected one with the other.

Let us turn to the question of a personal creator. The Freethinker has no "spiritual conviction," independent of evidence, that such a being exists. Did he, indeed, find in his mind any conviction that appeared to have arrived by other channels than by the usual ones of observation and inference, the teachings of morbid psychology would lead him to listen to the inward voice with distrust, and he would probably forthwith consult an alienist about his mental health. (We exclude, of course from consideration the Kantian *a priori* forms of thought, which have no connection with the present discussion.) The mere fact that another individual claims to possess such a "spiritual insight" means nothing to the Freethinker. The seer can produce no physical evidence of his possession; he has no sense-organ that is not represented in the Freethinker's animal economy. To the Freethinker, Theism, like all other hypotheses, is a question of evidence. Now when he examines the data of observation and the methods of inference that are employed to prove the existence of a personal ruler of the universe, they do not appear to him to justify belief. Therefore the Freethinker is not a theist.

The only form of theism that does not appear to involve insuperable logical difficulties, is that Persian theory which, by its influence on early Christianity, gave rise to the Manichaean heresy, and to some of the peculiar tenets of Gnosticism. This

doctrine, though condemned as a heresy, had in truth considerable influence on Christianity; it gave rise to the mediaeval conception of the devil; it even permeates the writings of so acute a thinker as MILTON. What are MILTON'S GOD and SATAN but a slightly exalted and a slightly depressed form respectively of the Persian ORMUZD, the Prince of Light, and AHRI-MAN, the Prince of Darkness? But in these days few thinkers wish to uphold Manichaeism; for even though GOD with Devil as strong as himself be more logically tenable than GOD alone and supreme, yet Manichaeism is opposed to the unifying tendencies of the age, and is at best but a rather wild hypothesis incapable of verification.

To the Freethinker, then, GOD is a word to which various concepts have been attached; but not one of those concepts that he has examined appears to him to correspond to any real existence outside the consciousness of man.

Can the Freethinker believe in the immortality of the soul? Let us put the question in a more precise and scientific way. He would state it to himself as follows: "My personal consciousness is at present, and in my experience has always been, intimately bound up with a certain portion of matter that I call my body. I am acquainted with many similar portions of matter, which are capable of spontaneous movement. These portions of matter impress my senses in such a manner as to lead me to believe that connected with each one of them is a personal consciousness similar to my own. Occasionally I observe that one of these portions of matter undergoes a peculiar change; it ceases to exhibit spontaneous movements; it no longer gives any manifestations of the possession of a personal consciousness. I say, 'The person has died.' On the basis of a very strong analogy I infer that my own body will sooner or later undergo a similar change, that I also shall 'die.' I cannot but ask myself the question, the interesting question, 'What will happen then—shall I continue to think, to be?' 'What happened in the case of those other consciousnesses,' I ask myself. 'Is there any evidence that any one of them has ever given any sign of continued existence after the death of the body with which it appeared to be connected?' 'The answer is, *Not one: there is no such evidence.* The Christian bases his faith in a future life on the alleged death on the cross and the alleged subsequent resurrection of JESUS CHRIST; but I interpret the evidence relating to those occurrences in a different fashion. In my search for a solution I am thus thrust back on my own consciousness. My study of the material universe leads me to suppose that the working of my consciousness is dependent on the play of certain physical forces acting on certain physical bodies. Since the mysterious phenomena of death are admittedly caused

by the cessation of these peculiar activities I am led to infer that my consciousness is likely to cease at death. But all this is purely speculative. The words *mind* and *matter* are the two terms of a relation; it is taking a partial view to dwell on one term to the exclusion of the other. But when I endeavour to grasp the inner nature of the relation between that which I call mind and that which I call matter, all is dim: the uncertain ground gives me no sure basis for inference: from this obscurity my mind returns with relief to the observation of the facts of daily life. The noumenal eludes my grasp: I must live contentedly in the phenomenal."

"To the question, 'Do you believe in personal immortality,' I answer, *I know nothing about it. There are no grounds for inference.* When we regard only the material aspect of the universe, personal immortality seems a ridiculous chimera. But when we return from the material to the mental we see—Immortality? Nay, but we see that from the material alone we cannot obtain a warrant to deny the existence of immortality."

The Freethinker, therefore, does not think that those who long for immortality are cherishing an utterly vain hope; he cannot affirm that personal existence after death is impossible. But we believe that in this matter the sympathies of most Freethinkers are with the doctrine of Buddhism rather than with that of Christianity. The craving for immortality that so many persons say they possess seems to most Freethinkers somewhat incomprehensible. Many cannot but regard it as a subtle manifestation of selfishness. As such they think it is not likely to be productive of good in such a world as ours, the salvation of which lies in the individual's learning to lose his own selfish desires and aims, and to seek for the wider good of his fellows.

But let us not dwell any longer on these differences of opinion. It is pleasanter to remember that the days when men were willing for such differences to burn their fellows at the stake have passed away—we hope never to return. We live in times when it is possible for a man sincerely to respect and to admire his opponent; in an age in which it is possible for the Christian and the Freethinker to recognize that though they are in different camps, though they fight under different banners, yet in many important respects their aims are, after all, the same.

Rev. J. R. Harbord, Chaplain of the Fleet (Retired), writes:—At the present time, some of your readers may be glad to know of the charitable work some officers and men of the Royal Navy undertook upwards of four years ago in connection with the Church of England Mission in Korea. They have been building and supporting dispensaries and hospitals in Seoul and Chemulpo, which have already proved a great blessing to the people, and which are preparing the way for the spread of Christianity among them. I shall be happy to send a report to any who desire to help the "Hospital Fund" for Korea.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND GREAT BRITAIN.

SIGNED AT LONDON, 16TH DAY OF THE 7TH MONTH, 27TH YEAR OF "MEIJI," RATIFICATIONS EXCHANGED AT TOKYO, 25TH DAY OF THE 8TH MONTH, 27TH YEAR OF "MEIJI."

His Majesty the Emperor of Japan, and Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the Treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan, Viscount Aoki Sinzo, Junii, first class of the Imperial Order of the Sacred Treasure, His Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of St. James';

And Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honourable John, Earl of Kimberley, Knight of the Most Noble Order of the Garter, &c., &c., Her Britannic Majesty's Secretary of State for Foreign Affairs;

Who, after having communicated to each other their Full Powers, found to be in good and due form, have agreed upon and concluded the following Articles:—

Article I.—The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel, or reside in any part of the dominions and possessions of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort in any manner whatsoever which they may lawfully acquire, the subjects of each Contracting Party shall enjoy in the dominions and possessions of the other the same privileges, liberties, and rights, and shall be subject to no higher imposts or charges in these respects than native subjects, or subjects or citizens of the most favoured nation. The subjects of each of the Contracting Parties shall enjoy in the dominions and possessions of the other entire liberty of conscience, and, subject to the Law, Ordinances, and Regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen, according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be, paid by native subjects, or subjects or citizens of the most favoured nation.

Article II.—The subjects of either of the Contracting Parties residing in the dominions and possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, National Guards, or militia: from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Article III.—There shall be reciprocal freedom of commerce and navigation between the dominions and possessions of the two High Contracting Parties.

The subjects of each of the High Contracting Parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandize of lawful commerce, either in person or by agents, singly, or in partnerships with foreigners or native subjects: and they may there own or hire and occupy the houses, manufactories, warehouses, shops, and premises which may be necessary for them, and lease land for residential and commercial purposes, and engage themselves to

the Laws, Police, and Customs Regulations of the country like native subjects.

They shall have liberty to come with their ships and cargoes to all places, ports, and rivers in the dominions and possessions of the other which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations, or establishments of any kind, other or greater than those paid by native subjects, or subjects or citizens of the most favoured nation, subject always to the Laws, Ordinances, and Regulations of each country.

Article IV.—The dwellings, manufactories, warehouses, and shops of the subjects of each of the High Contracting Parties in the dominions and possessions of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to, such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the Laws, Ordinances, and Regulations for subjects of the country.

Article V.—No other or higher duties shall be imposed on the importation into the dominions and possessions of Her Britannic Majesty of any article, the produce or manufacture of the dominions and possessions of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of Japan of any article, the produce or manufacture of the dominions and possessions of Her Britannic Majesty, from whatever place arriving than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any articles, the produce or manufacture of the dominions and possessions of either of the High Contracting Parties, into the dominions and possessions of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

Article VI.—No other or higher duties or charges shall be imposed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article to the dominions and possessions of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two Contracting Parties to the dominions and possessions of the other which shall not equally extend to the exportation of the like article to any other country.

Article VII.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities, and drawbacks.

Article VIII.—All articles which are or may be legally imported into the ports of the dominions and possessions of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in British vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and reciprocally, all articles which are or may be legally imported into the ports of the dominions and possessions of Her Britannic Majesty in British vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in British vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid and the same bounties and drawbacks allowed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in British vessels, and whatever may be the place of destination, whether a port of either of the Contracting Parties or of any third Power.

Article IX.—No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations, or establishments of any kind, shall be imposed in the ports of the dominions and possessions of either country upon the vessels of the other country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

Article X.—In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the dominions and possessions of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

Article XI.—The coasting trade of both (the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the Laws, Ordinances, and Regulations of Japan and of Great Britain respectively. It is, however, understood that Japanese subjects in the dominions and possessions of Her Britannic Majesty, and British subjects in the dominions and possessions of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are or may be granted under such Laws, Ordinances, and Regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of Her Britannic Majesty, and a British vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the Laws and Custom House Regulations of the two countries.

The Japanese Government, however, agrees to allow British vessels to continue, as heretofore, for the period of the duration of the present Treaty to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata, and Ebusu-minato.

Article XII.—Any ship of war or merchant-vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the Regulations and Tariffs of the place to which he may have come.

If any ship of war or merchant-vessel of one of the Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the district of the occurrence, or if there be no such Consular officer, they shall inform the Consul-General, Consul, Vice-Consul or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of Her Britannic Majesty shall take place in accordance with the Laws, Ordinances, and Regulations of Great Britain, and reciprocally, all measures of salvage relative to British vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan shall take place in accordance with the Laws, Ordinances, and Regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereto and all goods and merchandise saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls, or Consular Agents upon being claimed by them

within the period fixed by the laws of the country, and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandize saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects of one of the Contracting Parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorized, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

Article XIII.—All vessels which, according to Japanese law, are to be deemed Japanese vessels, and all vessels which, according to British law, are to be deemed British vessels, shall, for the purposes of this Treaty, be deemed Japanese and British vessels respectively.

Article XIV.—The Consuls-General, Consuls, Vice-Consuls, and Consular Agents of each of the Contracting Parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

Article XV.—The High Contracting Parties agree that, in all that concerns commerce and navigation, any privilege, favour, or immunity which either Contracting Party has actually granted, or may hereafter grant, to the Government, ships, subjects, or citizens of any other State, shall be extended immediately and unconditionally to the Government, ships, subject, or citizens of the other Contracting Party, it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

Article XVI.—Each of the High Contracting Parties may appoint Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents in all the ports, cities, and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions, and immunities which are, or may hereafter be granted to Consular officers of the most favoured nation.

Article XVII.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other the same protection as native subjects in regard to patents, trade marks, and designs, upon fulfilment of the formalities prescribed by law.

Article XVIII.—Her Britannic Majesty's Government, so far as they are concerned, give their consent to the following arrangement:—

The several foreign Settlements in Japan shall be incorporated with the respective Japanese Communes, and shall thenceforth form part of the general municipal system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such Settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place existing leases in perpetuity under which property is now held in the said Settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by the Japanese authorities.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said Settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

Article XIX.—The stipulations of the present Treaty shall be applicable, so far as the laws permit, to all the Colonies and foreign possessions of

Her Britannic Majesty, excepting to those herein-after named, that is to say, except to—

India.	The Dominion of Canada.
Newfoundland.	The Cape.
Natal.	New South Wales.
Victoria.	Queensland.
Tasmania.	South Australia.
Western Australia.	New Zealand.

Provided always that the stipulations of the present Treaty shall be made applicable to any of the above-named Colonies or foreign possessions on whose behalf notice to that effect shall have been given to the Japanese Government by Her Britannic Majesty's Representative at Tokyo within two years from the date of the exchange of ratifications of the present Treaty.

Article XX.—The present Treaty shall, from the date it comes into force, be substituted in place of the Conventions respectively of the 23rd day of the 8th month of the 7th year of Kayai, corresponding to the 14th day of October, 1854, and of the 13th day of the 5th month of the 2nd year of Keion, corresponding to the 25th day of June 1866, the Treaty of the 18th day of the 7th month of the 5th year of Ansei, corresponding to the 26th day of August, 1858, and all Arrangements and Agreements subsidiary thereto concluded or existing between the High Contracting Parties; and from the same date such Conventions, Treaty, Arrangements, and Agreements shall cease to be binding, and, in consequence, the jurisdiction then exercised by British Courts in Japan, and all the exceptional privileges, exemptions, and immunities then enjoyed by British subjects, as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

Article XXI.—The present Treaty shall not take effect until at least five years after its signature. It shall come into force one year after His Imperial Japanese Majesty's Government shall have given notice to Her Britannic Majesty's Government of its wish to have the same brought into operation. Such notice may be given at any time after the expiration of four years from the date hereof. The Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

Article XXII.—The present Treaty shall be ratified, and the ratifications thereof shall be exchanged at Tokyo as soon as possible, and not later than six months from the present date.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms.

Done at London, in duplicate, this sixteenth day of the seventh month of the twenty-seventh year of Meiji.

(L.S.) KIMBERLEY.

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of Her Majesty the Queen of Great Britain and Ireland and Empress of India, deeming it advisable in the interests of both countries to regulate certain special matters of mutual concern, apart from the Treaty of Commerce and Navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1.—It is agreed by the Contracting Parties that one month after the exchange of the ratifications of the Treaty of Commerce and Navigation signed this day, the Import Tariff hereunto annexed shall, subject to the provisions of Article XXIII. of the Treaty of 1858 at present subsisting between the Contracting Parties, as long as the said Treaty remains in force and thereafter, subject to the provisions of Articles V. and XV. of the Treaty signed this day, be applicable to the articles therein enumerated, being the growth, produce, or manufacture of the dominions and possessions of Her Britannic Majesty, upon importation into Japan. But nothing contained in this Protocol, or the Tariff hereunto annexed, shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food, or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs, or any other indecent or obscene articles; articles in violation of patent, trade-mark, or copyright laws of Japan; or any other article which for sanitary

reasons, or in view of public security or morals, might offer any danger.

The *ad valorem* duties established by the said Tariff shall, so far as may be deemed practicable, be converted into specific duties by a Supplementary Convention, which shall be concluded between the two Governments within six months from the date of this Protocol; the medium prices, as shown by the Japanese Customs Returns during the six calendar months preceding the date of the present Protocol, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any, shall be taken as the basis for such conversion. In the event of the Supplementary Convention not having come into force before the expiration of the period fixed for the said Tariff to take effect, *ad valorem* duties in conformity with the rule recited at the end of the said Tariff shall, in the meantime, be levied.

In respect of articles not enumerated in the said Tariff, the General Statutory Tariff of Japan for the time being in force shall, from the same time, apply, subject, as aforesaid, to the provisions of Article XXIII. of the Treaty of 1858 and Articles V. and XV. of the Treaty signed this day respectively.

From the date the Tariffs aforesaid take effect, the Import tariff now in operation in Japan in respect of goods and merchandise imported into Japan by British subjects shall cease to be binding.

In all other respects the stipulations of the existing Treaties and Conventions shall be maintained unconditionally until the time when the Treaty of Commerce and Navigation signed this day comes into force.

2.—The Japanese Government, pending the opening of the country to British subjects, agrees to extend the existing passport system in such a manner as to allow British subjects, on the production of a certificate of recommendation from the British Representative in Tokyo, or from any of Her Majesty's Consuls at the open ports in Japan, to obtain upon application passports available for any part of the country, and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokyo, or from the chief authorities in the Prefecture in which an open port is situated; it being understood that the existing Rules and Regulations governing British subjects who visit the interior of the Empire are to be maintained.

3.—The Japanese Government undertakes, before the cessation of British Consular jurisdiction in Japan, to join the International Conventions for the Protection of Industrial Property and Copyright.

4.—It is understood between the two High Contracting Parties that, if Japan think it necessary at any time to levy an additional duty on the production or manufacture of refined sugar in Japan, an increased customs duty equivalent in amount may be levied on British refined sugar when imported into Japan, so long as such additional excise tax or inland duty continues to be raised.

Provided always that British refined sugar shall in this respect be entitled to the treatment accorded to refined sugar being the produce or manufacture of the most favoured nation.

5.—The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Commerce and Navigation signed this day, and that when the said Treaty is ratified the agreements contained in the Protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at London, in duplicate, this sixteenth day of the seventh month of the twenty-seventh year of Meiji.

Sheet	7½

RULE FOR CALCULATING AD VALOREM DUTIES.

Import duties payable *ad valorem* under this Tariff shall be calculated on the actual cost of the articles at the place of purchase, production, or fabrication, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any exists.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

IS IT CORRECT?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A few days ago an evening paper of your city stated in its editorial columns that some foreigners ascended Nantai-san, on the summit of which is a shrine with a mirror. "This was maliciously taken out and thrown away by them." This "rich morsel" the editor purports to have from a correspondent, and the latter claims to have it from an "intelligent Japanese." Such derogatory statements from "intelligent Japanese," which in other words means, from an irresponsible source, usually appear in the *Nippon*.

The next bit of "intelligence" from the same source is, that in consequence of the above outrage the priest at Nikko petitioned the Central Government to re-inforce the ancient law which prohibits women from ascending the mountain, and that "the authorities have granted the request and thereby have consented to the resurrection of an old heathenish superstition." Now, Mr. Editor, what are we to believe? That the enlightened Central Government of Japan has fallen into "heathenish superstition?" or that it has forbidden foreign ladies from ascending the mountain because some foreigners misbehaved. Mount Fuji has always been regarded as the most sacred mountain of Japan, and yet, only several days ago, a number of foreign ladies and gentlemen ascended this mountain and spent a night on the summit without the least interference on the part of the officials or the priests. Can it be true that the Central Government would forbid at Nantai what they allow at Fuji?

But the most exquisite part of this very bungling news from Nikko, comes at the end, when the writer informs us that a "young and influential Japanese gentleman" offered to "see to it," for the writer's lady friends, who by implication are pretty, "that the gatekeeper offers the usual prayer and admits them," because the "gentleman" reported the priest that they are his

friends and are *kirei*." Is a scamp who offers to violate the laws of the land a gentleman? There are some people in Tokyo who had intended to visit Chuzenji and ascend Nantai-san, but if the above account were true they would of course not undertake the trip, for they might not be so fortunate (?) as to meet with that "influential Japanese gentleman" who would undertake to introduce *kirei* ladies to the priest. Who can tell us the truth in the matter?

Yours truly,
Chiba, August 22nd, 1894.

KOMARIMAS.

[Of course no such interdict has been issued.—Ed. J.M.]

"WO-JEN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With regard to the term *Wo-jen*, I think I can throw a little light on the subject, having resided for ten years in various parts of China and spent much time in acquiring a moderate acquaintance with that heart-breaking tongue. The character 倭 originally meant "to be servile," "to bow humbly," and is hence quoted in old Sino-Japanese dictionaries in the sense of "to obey." The story goes that it was applied by the Chinese Government to the Japanese over a dozen centuries ago, at the time when, as Chinese historians allege and not a few Japanese historiographers unwillingly acknowledge, tribute was actually paid by this country to China. The name *Wo-jen* thus primarily meant "servile people," not "pigmies." The character 倭 was, in the course of less than two centuries, discarded by the Japanese themselves, who preferred the infinitely better 和, meaning "harmonious," "concordant." But in China the old name has still been kept up, gradually assuming a still more obnoxious force, something like the English "lickspittle." Its appearance in the Rescript of the Chinese Emperor was thus a gratuitous and most undignified insult.

Yours, etc.,

W.

Tokyo, August 26th, 1894.

WAR BONDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly inform me through the medium of the *Japan Mail* in regard to the floating of the "War Bonds" authorised by recent ordinance. Is the interest and principal payable in silver or such currency as there may be at the yearly disbursement of the interest as well as at maturity of the bonds, or upon their redemption? Can a foreigner be a holder of these bonds? Further, is it a legitimate transaction for Englishmen to float a War Loan for China after the declaration of neutrality issued by the British Government? Is not money one of the sinews of war?

Thanking you in advance for your response, I am, Sir, yours truly,

ENQUIRER.

Yokohama, August 24th, 1894.

[A foreigner can not hold the bonds. We do not know that any loan has been floated by an Englishman.—Ed. J.M.]

LETTER FROM PHILADELPHIA.

(FROM OUR OWN CORRESPONDENT.)

Philadelphia, Pa., July 27th.

This is a terribly hot summer. The thermometer may not range higher than the average, but the humidity is excessive. Notwithstanding, owing to the business depression, not so many people are leaving town as is usual. The trains are not so full, nor the boats. At the seaside resorts there is complaint of a scarcity of visitors, and the men who keep carriages to hire and the like declare that it is the dull season for many a year. I was at Niagara Falls this week and last, on my way to and from Toronto, and the keepers of the great hotels called my attention to the vacant condition of their halls, corridors, and rooms.

Ocean Grove, New Jersey, is probably the most popular summer resort anywhere in the Eastern United States. Thousands of people board there in the hotels and cottages, and thousands more dwell in their own little cottages, or else rent them for the season. Furnished cottages rent for the season from \$150 to \$500, and this is by long odds the most economical way for larger families as well as assuring the greatest comfort. Ocean Grove is a religious place. It is under the control of men of the Methodist denomination. It is ruled very strictly. Scanty bathing costumes are prohibited. No liquor selling is allowed within a mile of the place. The railroad trains may not stop at its station on Sundays. On Sundays the gates are absolutely shut to all vehicles. No milk can be peddled on that day, or other commodities. An

immense auditorium has just been dedicated. It will seat 9,740 people. It is so well arranged that every person can easily see the platform and can readily hear the speaker if he but enunciate distinctly. Great gatherings are held here daily all through the months of July and August. Already on several occasions the great building has proven too small. Besides this there is a Young People's Temple, wherein every morning from 9 until 10 o'clock the young people hold a service under the lead of Rev. C. H. Yatman. Some 2,500 or 3,000 people attend this service daily. Asbury Park, immediately adjoining, is not quite so strict in its rules, and has a far larger number of great hotels. I have but just returned to my summer home at Ocean Grove from a visit to Cleveland, Ohio, and to Toronto, Canada. The great convention of the Young People's Society of Christian Endeavour of the United States and Canada and all the world was held here from July 11th to the 15th. It was the thirtieth. Just as the Convention was ready to gather came the great strike. The Debs people promised to let the Endeavourers' trains go through, but notwithstanding thousands were afraid of being hurt, of being stranded in or about Cleveland for a while, and so did not venture. Still thousands more did go. There were 40,000 who registered and obtained and wore the badges, of whom 19,000 were from outside Ohio. The great Sangerfest Hall seating 10,000, a mammoth tent, seating 15,000, and a number of large churches were used to hold the great assembly. There was a tremendous enthusiasm. The young people fairly took possession of the city. It was a songful crowd. They seemed to be always singing. On the street cars, on the trains, in parties along the streets, while waiting, in perfect good nature, the opening of the doors of the Hall or Tent, everywhere they went singing Christian hymns. I interrogated policemen, street-car conductors, hotel men, and others, and found everybody impressed with the patience, the good temper, the happy disposition, the real Christliness of the young people. The captain of a Lake steamer assured me that he would rather have the four or five thousand of these young people, which his boat had carried, than a hundredth part of the number of ordinary travellers, they were so pleasant to get along with.

Three things were emphasized at the Convention, and they are, every one of especial interest in Japan. Interdenominational fellowship, good citizenship, and missions. Speeches, sermons, general conferences, denominational rallies, all abounded with the most vigorous utterances on all three subjects. It is proposed next year that the Y.P.S.C.E. of the United States and Canada shall raise one million dollars for missions.

I was also in attendance at the great Convention of the Baptist Young People's Union of America, held in Toronto, July 19th to 23rd. Some 6,000 young Baptists were registered at this Convention, besides several thousands who did not register. This also was a very great gathering and the enthusiasm was something wonderful. Of course this is a denominational society, just as the Epworth League is the Methodist Young People's Society. But scarcely anything was said against denominational fellowship. Toronto people were impressed with the excellent character of these young people who swarmed in the hotels, filled the street cars, and who were in evidence all through the streets. The great feature of this Convention, the one emphatic feature, was the emphasizing of a popular course of study in Missions, in the Bible, and in Church History, called the Christian Culture Course. It is being widely adopted by the Baptist young people and will bring about the uplifting of the whole denomination in a remarkable degree. Dr. and Mrs. Ashmore, of Swatow, China, were at both the C.E. and the B.Y.P.U. Conventions. At the great Baptist gathering the immense crowd gave them the salute of waving handkerchiefs.

The great strike has not bothered us in the Eastern States at all. Our folks, all along, have had nothing to do with it. Now that the inquest is being held by the leaders of the strike on the late strike (late but not lamented in its death), there is a disposition all over the country to feel that Debs has made the railway labourers make fools of themselves. Congress is still bothering us over its tariff legislation. We almost wish there was some power that could prorogue it. Business is still as flat as ever and there are, as yet, no signs of a revival in the Fall.

Mr. George Cuzon, M.P., whose knowledge of Eastern countries is extensive and peculiar, means to extend it during the recess by a visit to Afghanistan. He leaves town for India at the end of the month.

IKAO.

Ikao has been fairly full of visitors, both foreign and Japanese, these last few weeks, the laxity of business during the early summer months giving place to an agreeable overflowing of hotels and guests' houses. This pretty little village nestling so snugly on one of Mount Haruna's mighty flanks well deserves its popularity. A more enjoyable place of sojourn during the hot weather could scarcely be wished for. To the invalid as well as to the healthy it offers attractions which leave its rivals well behind. Just at present too, the mountain streams and torrents are pressed to their utmost extent—a most happy state of affairs so far as water-falls are concerned, Benten-no-taki being now at its finest. This double fall, situate in a most romantic ravine, is within an hour's walk of Ikao. After passing down the village street—a succession of stone stairways—one turns almost immediately into overshadowing woods, silent alas as to birds, but carpeted with a rich mosaic of ferns, mosses, and wild-flowers. The path is easily negotiated by the weakest, and the fall well repays the slight exertion. Should a heavy rain have fallen during the preceding twenty-four hours the pleasure is considerably enhanced. There are other easy walks for those disinclined for much exertion, while for persons whose indisposition may compel a long rest and lie-back the verandahs of the various hotels afford unrivalled views of cloud effects and restful upland scenery of the most dignified and satisfying kind. To those ambitious of climbing, Ikao offers a diversity of peaks all well within a half day's journey and some just at hand. Perhaps the best of them all is Somayama, which is passed on the way up to Haruna lake. The road diverges at the second rest-house at the top of the first ascent from Ikao, and skirts the *hara* (moorland) for a short distance till an ancient *torii* is reached. Then the climb commences in real earnest. Here and there chains are hung to assist the mountaineer over the steepest or more dangerous places. Trees also grow nearly to the top and offer a welcome shade. After rounding the last corner a well-worn path leads up a slight incline to the temple near which are some quaint stone monuments, perched at the very summit. The view from the temple platform is magnificent on a fine day. "Murray," the ubiquitous, should be carried in one's satchel, for peaks and mountain ranges rise on every side. From his learned pages one gathers that we are 4,850 feet above the sea and 2,150 feet above Ikao, which we left but an hour before. Far away to the south, nearly 100 miles as the crow flies, appears the cone of regal Fuji-san. It is only his summit that can be seen, the Chichibu mountain range hiding the rest from view. The day we chose for the ascent was exceptionally clear, and we were more than fortunate in being able to see so far as this. One person of our party, who has made this particular ascent over thirty times, has only been favoured so richly on four occasions. To the westward of Fuji we saw that day the Koshu Shirane, the Koma-ga-take of Koshu, and the mountain of the same name in Shinshu, both peaks seemingly very close together. Then we continued our bird's eye sweep and encountered Yatsu-ga-take, Ontake, Asama-yama, with its wreath of smoke, Yabazu-yama, then another Shirane-san, the one near Kusatsu, with its sulphur strewn cap, and a part of the Hida Shinshu range. Clouds had gathered in the East by this time, but after waiting patiently for a while glimpses of the Shirane of Nikko and some other adjacent peaks were caught as the breeze broke for itself rifts in the rolling mist. Maebashi was completely shrouded from view, but the valley of the Tonegawa could be traced for some distance. Looking down from the breezy height, round which the swifts were darting in ever varying circles, the wide landscape stretched below resembled a vast model map, so crumbled and creased were its outlines. The little temple in front of which we rested while we took in this mighty view, also possesses interest. Herein, in the olden days, were deposited the swords of murderers, as evidence of their blood-guiltiness. The swords have been removed now, but wooden replicas are still to be seen suspended on the walls or lying on the ground before the place where the Shinto mirror should have been. We would fain have stayed an hour on this fair mountain top, but time forbade. A scramble down of some eleven hundred and fifty feet brings one to the level moor again and a steady trudge to the borders of Lake Haruna followed. Leaving the lake and ascending the Tenjin-toge another fine view was obtained, but we soon turned our backs on this for our feet were set towards the temple of Ho-musubi and Hani-yasu-hime (the God of Fire and the Goddess of Earth). Very hot and oppressive after the breezy hill and moorland was the ~~neglected~~ wooded glen wherein these shrines

are built. Hardly a breath of air moved either above or between the dense undergrowth, even the cicada droned drowsily, and the little steamlet stole among its stones and tree-roots with a softened murmur as of sleepy content. A more imposing site for a house of worship would be difficult to find than the nook in the glen which the priests of Japan's ancient cult chose for the temple we were about to inspect. The brushwood stops abruptly; gigantic cryptomeria rise solemnly skywards alongside precipitous and overhanging piles of volcanic rocks, monoliths which Dame Nature in one of her wild caprices allowed to stand isolated each from his fellow when she tore wide asunder the lips of the tiny ravine. Fantastic too are the shapes which some assume, and weird is the effect produced, when, standing in the temple court-yard one looks up and sees a huge rock hanging immediately above, seemingly ready to fall at the first earth tremor and bring down complete destruction to the temple along with it. The temple and shrines are nicely and neatly kept. They have recently been redecorated, and that in the best of taste. Seldom can one see finer and bolder wood-carvings than those which adorn the gateways, pillars, cornices, and panels of these shrines. The hour of high noon had long since passed by the time we had finished our tour of the sacred precincts, and we felt hungry and thirsty. Fortunately at the foot of the stairway bubbles up merrily the Spring of Ten Thousand Years—grateful and comforting were its limpid waters on that hot August day.

Life flows along very smoothly—upon the surface—at Ikao. Yet a trifle will disclose to the observant the deep cross under-currents which agitate the lives of many gathered within its borders. On Thursday evening last week an alarm of fire was raised, the bell clanged clamorously, and within the twinkling of an eye crowds of excited folk were thronging the stairways and thoroughfares of the village. Happily the incipient flames were smothered ere they had spread beyond the *tatami* of a guest's room—a fallen lamp was their cause—and things resumed their normal quietness. Naturally after this the only topic of conversation for the rest of the waking night was the great fire of a dozen years ago, when the whole hamlet was wiped out from top to bottom. Good cause have the people of Ikao to remember that dire disaster. Although many of the hotels have been in the same families for generations longer than the memory of man runneth back, their proprietors have always lived up to their incomes. Consequently they had to borrow money to rebuild their ruined houses. In the great majority of cases this debt still hangs upon them, the whole establishment being as often as not mortgaged to the hilt. Improvidence must not rashly be assumed as the cause of this. It must be remembered that Ikao is only open during a part of the year. When the cold weather comes the hotels are closed and the villagers retreat to the plains, leaving the *momban* in possession till the atmosphere warms again. Consequently the hotel-keepers are only earning money for a short period of the year, and the burden of a big debt, as a larger world's history proves, grows heavier if the open season is meagre in returns. Still Hope reigns eternal here as elsewhere, and plucky is the fight waged by some, and those principally of the softer sex, against the over-pressure of well-nigh crushing circumstance.

Several members of the Yokohama Ama Guild take up their quarters at Ikao for the summer, agreeably combining pleasure with business. In passing through the streets lately one recognised many a familiar face and figure, principally men, belonging to that sad fraternity who make night hideous in Yokohama with their piercing shrill reed pipes and monotonous cry. They appear to do a good business in the mountain village and were in no hurry to return to the Treaty Port, the scene of their late autumn, winter, and early spring labours.

Travellers to Ikao via Maebashi, have for the present to cross the Tonegawa in a ferry-boat, the heavy rains having mischievously helped that—at times—turbulently inclined stream to sweep away the bridge. The passage is safe, the boat being hauled across by means of a stout Manila rope stretched from bank to bank. Still the interruption is not pleasant, and the Takasaki route though full of vexations to those travelling by tram, is to be preferred for the present.—B.

Mr. George Curzon recently met with an accident through tripping down the stairs of the House of Commons on his way to the Terrace. The stairs were crowded with ladies at the time, and the lion, gentleman tripped over a skirt, dislocating one of his ankles. On the 9th inst. he walked into the Lobby of the House on crutches.

WATER FROLICS AT YOKOHAMA.

On Wednesday afternoon the members of the Yokohama Amateur Rowing Club indulged in a series of aquatic sports which provided immense amusement both for themselves and their many lady friends who viewed the frolics from the Boat-house verandah. Through the kindness of the commander and officers of H.M.S. *Caroline*, a plentiful supply of bunting was displayed on and about the boathouse and flagstaff, the verandah and club-room being also decked with bamboo and other foliage. The afternoon was perfectly suited to the occasion, the sun being at times hidden by some kindly clouds, while the tide was at the full, with little or no breeze. The events on the programme comprised a Bath Tub Race, Punting Tournament, Water Polo, a Sampan Race, and the Greasy Pole. Three men only turned out for the Bath Tub Race which was devoid of interest. The Tournament was rather tame, notwithstanding the constant duckings of the competitors, the last bout alone producing a good struggle. The Water Polo match, the first we believe played out in these waters, proved an easy win for the Red Caps, though their competitors, the White Caps, struggled gamely all through. The match was conducted according to Association Football rules, and lasted for a period of seven minutes each end. Mair and Libeaud, two of the best of our younger football players, came out strongly in this event, especially in passing and working the ball down the side. No. 4 on the programme, the Sampan Race, was productive of some good fun, several of the competitors displaying masterly skill in manipulating the difficult Japanese yuloe. It was a pity the Greasy Pole could not have been rigged-up closer to the shore—this event as well as the Polo match, took place at the Bathing Barge, and few of the spectators on the shore or verandah could very clearly see what was going on. No doubt the Committee will remedy this on another occasion, for more amusing water frolicking would be difficult to invent. Arthur was declared the winner of the Greasy Pole competition, although he did not reach the duck—he got out along the pole the furthest of any. After the event had finished one of the Goddard brothers staggered out to the end of the pole and liberated the bewildered bird enclosed in the suspended basket. The poor thing was pathetically tame and when brought on shore displayed no inclination to escape from its captors, or even to emit a protesting quack. At the close of the programme the company and competitors adjourned to the Club-room upstairs. In a few graceful words Mr. F. J. Hall, the hon. sec., introduced Mrs. N. G. Hannen, who, he said, had kindly consented to present the prizes to the victors. The announcement was received with demonstrations of pleasure, and when quiet was restored the honorary secretary further explained that "the prizes had been cabled for from San Francisco that morning and had only just turned up." These few remarks were the prelude to some uproarious merriment, for the nature of the prizes was speedily revealed. From the depths of a well-screened package Mrs. Hannen produced a tiny wooden Japanese water dipper containing a "nice piece of soap," which she handed to the lucky winner of the Bath Tub race. To the victorious punter in the Tournament fell a miniature how and arrows, modelled after the most approved nursery pattern. Then the Red Caps in the Water Polo match presented themselves and were rewarded with various Japanese toys bearing faint resemblances to cats, dogs, snakes, etc. A miniature sampan in full sail and a "dear little Japanese dolly" were the trophies bestowed upon the winners of the Sampan race. The gentleman to whom fell the honour of coming out best in the Greasy Pole competition, received a marvellous stuffed animal of a mythological description, run on wheels, for his trophy. Three hearty cheers for Mrs. Hannen, three for the lady visitors, and the inevitable "tiger" were given at the close of the prize-giving, after which the company dispersed, evening being well advanced. We must not forget to mention that the enjoyment of the afternoon was much enhanced by the performance of the Town Band. Details:—

BATH TUB RACE.

G. Hood 1; W. W. Campbell 2; K. Wilson 3. Hood had an easy win in his tub, which he propelled with a carpet broom, managing his queer craft to greater advantage than did the others.

TOURNAMENT.

FIRST HEAT.

W. W. Campbell beat J. G. Wilson,
H. Goddard beat K. Wilson.
G. C. Allcock (a bye).
P. E. Webb (a bye).
H. Goldman beat G. Hood.

W. Goddard beat E. J. Libeaud.
A. L. Mottu beat H. F. Arthur.
L. Salabelle (a bye).

SECOND HEAT.

H. Goddard beat W. W. Campbell.
G. C. Allcock beat P. E. Webb.
H. Goldman beat W. Goddard.
A. L. Mottu (a bye).
L. Salabelle (scratched).

SEMI-FINAL HEAT.

G. C. Allcock beat H. Goddard.
H. Goldman beat A. L. Mottu.

FINAL HEAT.

H. Goldman beat G. C. Allcock.

None of the bouts lasted longer than a few seconds and nothing out of the ordinary happened till the last round, when, Allcock upsetting Goldman, the latter fell half-way into his opponents' boat. The pressure of his heavy weight caused the boat to heel and it soon filled, gradually sinking with all on board. Being quickly righted the bout continued, and Goldman, whose weight had stood him in good stead all through, proved the winner.

WATER POLO.

RED CAPS.

H. K. Mair (Capt.).
K. Wilson.
H. E. Campbell.
G. Hood.
H. S. Goddard.
H. Goldman.
E. J. Libeaud.
R. C. Ross.

WHITE CAPS.

A. L. Mottu (Capt.).
J. G. Wilson.
W. Goddard.
H. F. Arthur.
P. E. Webb.
G. C. Allcock.
H. A. Poole.
H. Goddard.

Soon after the start White obtained a free throw in, but the advantage was not long maintained, and Red quickly worked the ball down to the opposite end. A corner throw then fell to them and after some tossing and ducking work in front of goal Mair put the ball cleanly through the posts—for Red. Restarting, the Reds again showed better combination and Mair neatly worked the ball down on the Bund side. He passed to the centre, and K. Wilson securing, notched the next goal—2 for Red. A change of ends next took place and some good play followed. White had their opponents' goal almost at their mercy once or twice, but the goal-keeper cleared his lines smartly, and eventually Red secured a third goal, H. S. Goddard throwing the leather through. These continued reverses naturally spurred White to desperate action, as only a few minutes remained. Just on the call of time Allcock scored one point for the White Caps, the game ending, Red 3 goals, White 1.

SAMPAN RACE.

A. L. Mottu	1	L. Salabelle	2
W. Goddard	1	W. W. Campbell ...	2
P. E. Webb	0	H. Goldman	0
M. Schellenberg ...	0	H. F. Arthur	0
H. S. Goddard	0	G. Hood	0
A. L. Bouffier	0	G. C. Allcock	0
E. J. Libeaud	0	R. C. Ross	0
K. Wilson	0	H. R. Mair	0

Salabelle and W. W. Campbell opened out at the start, but Mottu and Goddard pressed them hard, and nearing the stake-boat cut in. This forced the leaders out and they never recovered the lost position. The other sampans were hopelessly out of the race from the beginning.

GREASY POLE.

H. F. Arthur 1.

The other competitors were G. C. Allcock, A. L. Bouffier, H. Goddard, H. S. Goddard, W. Goddard, G. Hood, E. J. Libeaud, H. R. Mair, H. E. Poole, M. Schellenberg, P. E. Webb and J. G. Wilson. Three tries each were allowed, but few got out so far as Arthur and H. Goddard.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The ordinary half-yearly general meeting of shareholders in the Hongkong and Shanghai Banking Corporation was held in the City Hall, Hongkong, on Saturday, August 18th. Mr. C. J. Holliday, Chairman, presided, and among those also present were—Messrs. J. S. Moses, R. M. Gray, H. Hoppius, H. H. Joseph, J. Kramer, S. U. Michelson, Hon. A. McConachie, D. R. Sassoon (Directors), T. Jackson (Chief Manager), R. A. Chinoy, J. A. Chinoy, Hon. E. R. Bellios, D. D. Gazdar, J. C. Peter, J. H. Cox, A. G. Wood, S. G. Bird, Fullarton Henderson, Paul Jordan, J. B. Coughtrie, S. S. Benjamin, Hon. C. P. Clater, E. F. Alford, R. Shewan, Douglas Jones, G. Murray Bain, S. Hancock, G. H. Poits, S. L. Darby, G. de Champeaux, A. Hancock and others. The Manager read the notice convening the meeting.

The CHAIRMAN first read the Directors' report and then said—Gentlemen, the Directors have much pleasure in laying before you the report just read, feeling, as they do, that it is one that cannot but give satisfaction to the shareholders. The accounts for the half-year ending 31st of December last, as you will remember, were adjusted at the exchange of 2s. 3d. to the dollar, and those now presented, owing to the further fall in the price of silver, have had to be taken over at 2s. 1½d., and I may remind you that at one time during the past half-year telegraphic transfers on London actually touched 1s. 11½d., so that you will see that the six months now under review again cover a period of considerable fluctuations in Eastern exchanges; however, pursuing the policy of never being heavily committed either in silver or gold, the Bank has been able to make steady profits all through and consequently, whether exchange has risen or fallen, it has been all the same to us. Indeed, I may go so far as to say that our experience has been, that there is quite as much if not more money to be made on a low level of exchange as on a high one. On the last occasion of our meeting here, the Chairman drew attention to the considerable withdrawals of sterling deposits at our London Agency. In the report then submitted to you, which embraced as far as that branch was concerned a period ending on 31st October, 1893, they stood at £3,415,992 2s. 5d. You will doubtless have noticed from the statement now before you that on the 30th April (when the London accounts were made up) covering a full period of 6 months, they are returned at £2,942,938 16s. 5d., showing a further decrease of £473,053 6s. 0d., and we have heard by letter that gradual withdrawals have since been going on. Against this falling off in sterling deposits, however, we have to record a material increase in our silver deposits during the half-year just concluded, of as much as \$4,897,200.84, which, as you will see, more than compensates for the amount withdrawn in sterling. It is only necessary to add that we are working very comfortably at all our branches and that we have ample funds for all the legitimate business we may be called upon or care to undertake.—(Applause.) You will in all probability have not failed also to observe from the items "Cash, bullion on hand in transit, and bills receivable," that the Bank is in an unusually strong position. Indeed, I question if its financial standing has really ever been sounder than it is at the present time, and considering the way Eastern business generally has been seriously upset by the great depreciation of silver, I think you will agree with me that this is a highly satisfactory statement to be able to make.—(Applause.) With reference to our securities, in the case of the special London reserve with the Bank of England, we may mention that, seeing the great uncertainty in the outlook as regards Indian affairs generally, we thought it advisable to sell the £150,000 we held of the Indian sterling three per cent. loan, and replace the amount by the purchase of two and three-quarters per cent. Consols. Gilt-edged stocks, of all kinds, as probably most of you are aware, have recently risen very materially in value, caused by the extremely low rate ruling for money in the London market, and all our sterling securities show a very considerable profit on the cost at which they stand in our books.—(Applause.) Concerning our dividend, although our earnings might perhaps warrant a larger distribution than we have now decided upon, and we know many of our shareholders strongly wish this, and we heartily sympathize with them upon this point, still we must recognize that credit is the first consideration, and we are convinced that for the present at any rate the course we are now pursuing is the right one for the true interests of all concerned, so we adhere to £1, as before, and also as on the last occasion we add to the Reserve Fund a further sum of three lakhs besides providing \$60,000, the cost of reclaiming the fine stretch of land between our Bank buildings and the harbour here. As to the general position of commercial affairs there is little calling for any special comment at the moment. Now that we have actually been working for a considerable time with a low level of exchange we can see plainly, as we have anticipated and have not hesitated to predict would be the case, that its effect is to stimulate exports from all silver-using countries and grievously depress imports from the gold-using ones; the balance of trade will be adjusted by an increased import of silver. Another item worthy of consideration is the large export of gold to Europe since the heavy fall in the price of silver, and it is a question whether the home authorities appreciate and realize fully the effect of this flow of the yellow metal from east to west, it unquestionably accounts in some measure for the large balances now in the Bank of England and the continental Banks, and that probably in

the near future will play an important part in the great gold and silver controversy. Of course, it is only natural that we should all deeply deplore the outbreak of war between the two countries we are so intimately connected with, namely, China and Japan; it cannot help having a disturbing influence on business of every description, especially at the outset, but on the whole I think the effects upon trade will be less than is generally anticipated. In conclusion, I have to state that the Bank is doing well at all points. Our Inspector, Mr. Walter, is now going his rounds, and has reported most favourably upon all branches he has been able to inspect up to the present time. I hope I am not taking too rosy a view of our position when I say we look forward confidently to the old point of prosperity of the Bank being attained again in the very near future.—(Applause.) Before moving the adoption of the report and accounts I shall be happy to answer any questions shareholders may wish to put.

There being no questions asked, the CHAIRMAN moved the adoption of the report and accounts.

Mr. R. SHAWAN—Mr. Chairman and gentlemen, it is an old saying that "good wine needs no bush," and such a report as that which the Chairman has just read to us requires no commendation at my hands, for the most inveterate grumbler, even the man at the club who complains that the soup plates are hot for him will find nothing to grumble at in this report, nor I think do Mr. Wilson, the critical editor of the *Investors' Review*, who is always in his element when heckling the Bank of England and tearing its accounts to pieces, could do anything but smile approvingly at such accounts, adjusted at what the immortal Montague Tigg would call the ridiculously small sum of 2s. 1½d. It is reassuring to know that our gold assets are increasing in value while our silver deposits are increasing as the gold deposits decrease, for under such conditions we shall arrive at a much stronger position than ever we were in before. As to the smallness of the dividend, I heartily agree with the Chairman's remark that credit must be the chief consideration. What is put away into the reserve fund is not lost; it is "gone before," you may say, and will "return after many days" in the shape of an increase in the value of your holdings of stock. But still, of course, we would like a little more. In that respect I am afraid that shareholders are rather apt to be very much like Oliver Twist, who was, I believe, always asking for "more," or like the horseleech which the Bible says is for ever crying "Give, give!" In these hard times shareholders are apt to be rather ravenous. Nevertheless, gentlemen, the fact that year after year we have every six months, with unfailing regularity, such accounts as these presented to us, showing continued improvement in the condition of the Bank, increased strength and soundness in its finances—this fact, I think, speaks volumes for the wisdom, care, and forethought evinced in its management.—(Applause.) It seems to me that this Bank is a beautiful example of the law of the survival of the fittest, for in times when the oldest institutions not only in this colony but in England went down, and when time-honoured names disappeared for ever, going as the weakest must to the wall, this Bank stood firm amidst the ruins and proved to be the fittest to survive; and you all know, gentlemen, whom we have to thank for that—we have to thank and attribute it to the ability of our popular and large-hearted manager, Mr. Thomas Jackson—(applause)—and of course to the directors who were wise enough to entrust themselves and the Bank to his hands again. I will not trouble you with any remarks of mine or opinions of my own on the silver question; that is an opening into which certain people rush where angels like Mr. Jackson do not tread very heavily. I am afraid I am heretic enough not to believe that dear silver would be an unmixed blessing. Cheap silver means cheap teas and cheap silks for the old folks at home, and I would gently remind the Bimetallic Leaguers—not Land Leaguers—of Shanghai, that there are two sides to the question; when that early bird which catches the matutinal worm, the broker, turns up at their offices first thing in the morning and announces that exchange is down an eighth, the importer may pull a very long face, but the exporter has nothing but quiet smiles. However this may be, we shareholders of the Bank have to thank our stars and congratulate ourselves that we have a man who can make money for us in the worst of times, and enable us to say, as the Chairman said just now, that it does not matter to us whether exchange is high or low. We have a man at our head who when silver was at its very worst, when even the best doctors disagreed as to the remedy, and when as at the present time war and pestilence are disorganising trade and upsetting the best laid plans and calculations, has steered us well through the difficulties and

can still present a report like this—(applause)—and I think we must congratulate ourselves on such a report as the one which is presented to us to-day, and feel quite sure a similar one will be presented to us at the end of the next six months. With these very inadequate remarks, gentlemen, I beg to second the adoption of the report and accounts as presented.

The motion was then put and carried unanimously.

The CHAIRMAN—I have to thank you, gentlemen, for your attendance here to-day. Dividend warrants will be ready for distribution at the Bank on Monday.

Mr. DOUGLAS JONES said—Gentlemen, I have before me the pleasant task of proposing a very hearty vote of thanks to the Directors, London Committee, Chief Manager, managers, and general staff of the Bank for the capital report their efforts have resulted in placing before us. In doing so I trust it may not be considered out of place to express a hope that the policy of the Bank will be continued in the direction of a steady increase to its reserves, an encouragement of local enterprises, and a discouragement of all new undertakings outside the sphere of the Bank's connection. I think, gentlemen, if this policy is pursued, not only will the Bank continue to prosper, but its large constituency in the East, who form a very considerable portion of its backbone, may look forward hopefully to a return of that prosperity which has been denied them for the last five or six years.—(Applause.)

The CHAIRMAN—On behalf of the directors, Mr. Jackson, and the staff of the Bank, I thank you cordially.

This concluded the meeting.—*Daily Press.*

SUZERAINTY IN KOREA.

A version of the old fable in which a wolf and a jackal quarrel over the prostrate form of a lamb, while an eagle hovers overhead prepared to pounce down so soon as the combatants have reduced themselves to a state of helplessness, is just now being reproduced in North-Eastern Asia. China and Japan are contending for supremacy in Korea, while, in obedience to an ill-judged invitation received from Peking, the Russians on the northern frontier are prepared to take part in the fray with the avowed object of re-establishing peaceful relations between China and Japan, but possibly with a half-concealed hope that their intervention may end in their exchanging the winter-bound port of Vladivostok for some sunny harbour in the south of the peninsula.

Both China and Japan claim suzerain rights over Korea, and both can show some justification for their pretensions. As a matter of fact suzerainty in the East is a very uncertain quantity, and exists for the advantages it brings, quite apart from the obligations which it should entail. The profession of fealty secures to a weak nation protection in time of pressing danger, convenient commercial privileges, and internal peace; while to the suzerain State honour and prestige attach in proportion to the number of principalities over which it can throw its ægis. After all, however, these conditions form only fine weather relations. So soon as a really powerful enemy threatens the existence of a dependent State the suzerain too often seeks for some excuse to leave its subordinate to its fate; while an accession of strength is apt to tempt an ambitious feudatory to throw off the very loose chains which bind it to its lord. With relations so changeable, it frequently happens that a small State finds it to its interest to own fealty to more than one Sovereign. Such has been the case with Korea. At different times in its history it has paid homage to the Court of Yedo as well as to the Emperor at Peking, and, though the overlordship of Japan has always been of the most shadowy description, it has yet been at all times held by the Japanese to justify their interference in political crises.

On several occasions Japanese soldiers have been landed in the peninsula, and previous to the outbreak of 1884 the Japanese Minister was protected by a strong body-guard of his country's troops. It will be remembered that on the occasion of a banquet which was held at Seoul in December, 1884, to inaugurate a new postal system established on the European model, a riot broke out, in course of which the King was seized by the Korea-Japanese party, who invited the Japanese Minister to enter and protect the Palace. For four days anarchy prevailed, and eventually the intruders were driven out of the Palace and their Legation was looted. By a convention which was concluded in the following year it was agreed, quite after the manner of our several conventions with China, that

Korea should send an apologetic mission to Yedo, should pay \$110,000 to the relatives of the Japanese who had been killed and wounded, should punish the rioters, restore the Legation, and should build barracks for the Japanese guard.

The fact of permanent barracks being erected was highly suggestive of a permanent military occupation. At least this was the view taken of the convention at Peking, where much flutter and alarm were created by the activity of the Japanese. In every political difficulty the one resource of the Tsung-li Yamén is to open and continue long drawn out negotiations, and on this occasion they proposed, after many *pour parlers*, the conclusion of a treaty which should regulate the conditions under which either State might land and keep troops in Korea. This instrument was signed at Tientsin in April, 1885, and contained the following stipulation:—

That China should withdraw her troops now stationed in Korea, and that Japan should withdraw hers stationed therein for the protection of her Legation. . . . That the said respective Powers mutually agree to invite the King of Korea to instruct and drill a sufficient armed force, that she may herself assure her public security, and to invite him to engage into his service an officer or officers from amongst those of a third Power who shall be intrusted with the instruction of the said force. The respective Powers also bind themselves, each to the other, henceforth not to send any of their own officers to Korea for the purpose of giving said instruction.

In case of any disturbance of a grave nature occurring in Korea which necessitates the respective countries or either of them to send troops to Korea, it is hereby understood that they shall give, each to the other, previous notice in writing of their intention so to do, and that after the matter is settled they shall withdraw their troops and not further station them there.

This treaty is a curious instance of the inability of the Chinese to carry out a constant policy. It virtually acknowledged that China and Japan stood in precisely the same relationship to Korea. Nor is this the only instance in which China has given herself away with regard to Korea. By consenting to the King despatching Ministers to foreign Courts she virtually recognized him as an independent Sovereign and *ipso facto* resigned her pretensions to suzerainty. On the other hand, the establishment of late years of a branch of the Imperial Maritime Customs in Korea must be taken as evidence of China's claim to over-lordship, and the missions which have been periodically sent from Sôul to Peking seem to imply that Korea is well content to occupy the position of a feudatory State. Of late China has been more than ever punctilious in its claim to these acknowledgments of suzerainty. For centuries the Kings of Korea have received investiture at the hands of the Sovereign at Peking, and all great political events, including the decease of Royal personages, have been duly and ceremoniously reported to him. To these forms Chinese statesmen cling with increased pertinacity as the fear dawns upon them that the real power is slipping from their hands.

This phase of the Celestial mind was curiously illustrated on the occasion of the death of the Queen Dowager of Korea in 1890. As in duty bound the King despatched a mission to Peking to announce the sad event, and presented a memorial to the Throne, in which he declared himself to be kneeling "before his Majesty in great perturbation and awe." In a petition presented at the same time by the Korean Envoy that officer spoke of Korea as a "vassal State of China," and went on to plead that in the then impoverished condition of the Royal Exchequer it would be an act of infinite grace on the part of the Emperor if he would not impose on the King the expense of entertaining the mission of condolence which in other and happier circumstances it would be customary for the Emperor to send. This request was preferred at an unfortunate time. The Emperor's advisers were more than ever determined to keep up this well-recognized evidence of suzerainty, and they therefore refused the King's petition, though they softened the refusal by admitting some modifications in the usual programme. Instead of travelling overland, the mission was to be sent by sea, and the usual presents to the members of the mission were to be omitted. In all other matters the ceremonies were to be carried out "in accordance with established usage, and these should not in the least be curtailed." In obedience to these instructions, every preparation was made for receiving the mission at the port of Chemulpho and of conducting it to Sôul, 80 Korean miles distant. The roadway between the port and the capital was repaired, levelled, and widened, and gravel of a yellow tinge was sprinkled over it in compliment to the Imperial colour. On arriving at Chemulpho the members of the mission landed surrounded with all pomp and circumstance of state. After having been received by the King's representative "with the lowest of bows," the Chinese commissioners started toward the capital. First in the procession came the mission re-

ceiver and the Korean officials in columns, one on each side of the road. . . . Next came the Korean escorts, the flags, symbols of authority, &c., yellow umbrellas, drums, gongs, and bands of music. Then came the incense, palanquins, and the shrine (on which was placed the Emperor's letter), followed by the Chinese attendants, all of whom were mounted. The commissioners followed in the chairs side by side, and behind them marched the high and low deputies with the supervisors and their attendants. At the first halting place the Royal deputies were introduced to the Imperial envoys and kowtowed twice before them. The same act of homage was performed by the other Korean officials, including the "Health Inquirer," who had been deputed by the King to ask after the well-being of his visitors. At the capital the envoys were met by the King outside the south gate of the city and were conducted to the hall of audience. As the letter of condolence was carried into this building, the King, at the request of the senior usher, assumed "a bent attitude," and throughout all the ceremonies connected with the mission the King adopted the humble attitude of a worshipper, even going the length of prostrating himself four times before the Imperial shrine, as though in the presence of the Emperor. At a funeral service conducted in memory of the deceased the King acted the part of chief mourner and "wailed" at the bidding of the Master of Ceremonies until the time came for presenting the Emperor's letter and presents to the departed Queen. Then, in the midst of profound silence, these Imperial testimonies of regard were committed to the flames and ascended in the smoke to the blissful regions of the gods. During these proceedings the envoys acted the part of Imperial representatives and solemnly accepted the lavish homage of the King and his Ministers.

As if further to emphasize the authority of the Mandarins the keys of the city gates were placed in their charge at night during their residence in the capital, and the most scrupulous care was taken on all occasions to show them full and faithful service. In accordance with the Imperial commands, they refused the presents offered them by the King and declined his invitations to banquets and the temptation of musical and juggling entertainments. On the completion of the endless ceremonies connected with the mission the envoys took their leave and left the capital surrounded with every token of Imperial power. By order of the King the Ministers furnished each envoy with "four saddled horses and four grooms, three drivers, one umbrella bearer, two pathfinders, four attendants, four litter ponies, four litter pony grooms, four litter attendants, one chief chair bearer, and one sedan chair with eight sedan chair bearers, one pony for carrying rain coverings, two servants, four conch blowers, four pipers, and four horn blowers, four supervisors of flag signals, six gong beaters, and six first-class lictors, and two military officers in command of two detachments of escorts, 22 silk-embroidered flags, one petty official interpreter, one waiter, one cook, and seven interpreters of the third order." Encumbered with these and countless other followers, the envoys made their way to the coast subject only to interruptions at intervals from the obsequiousness of the officials and by the inevitable Health Inquirer, who constantly appeared on his knees to ask after the welfare of the Royal guests. The Imperial chronicler adds:—

After the departure of the mission the King sent a despatch to the Imperial commissioners, giving expression to his gratitude and, moreover, he prepared to be sent, this year's tribute mission to China, a memorial to the Throne expressing his thankfulness for the coming of the mission. The sentiments of the memorial—in their sincerity and importance—are beyond expression in words, demonstrating that China's manifold graciousness towards her dependencies is increasing with the times. The Emperor's consideration for his vassal States, as evinced by his thoughtfulness in matters pertaining to the mission, is fathomless. How admirable and satisfactory! And how glorious!

So far as words are concerned the Emperor's graciousness is doubtless admirable and satisfactory. But deeds and not words are required now if China is to continue to hold her supremacy in Korea. How little inclined she is to take action is shown by her invitation to Russia to mediate in the matter at present in dispute. She is well aware that her strength lies in the prestige which attaches to her name, and when, as has sometimes happened, one finds that this is failing her, she is apt to appeal greedily for help to any quarter where she thinks it may be obtained, regardless of ultimate consequences and forgetful of the fate which overtakes those who fail to help themselves. In Korea her policy is at present grievously at fault, and, unfortunately for her, there are those on the spot who are watching her floundering much in the same spirit in which a box constrictor regards the struggles of a rabbit to get beyond the influence of its gaze.—*Times*.

CHINESE TRADE WITH JAPAN.

The following, published as a supplement to Mr. Alex. Belfield's Weekly Report, is dated at Shanghai on the 24th August:—

Although it is said that most of the leading Chinese merchants have returned from Japan, and business with China was expected to suffer largely in consequence, trade with that country, according to the I.M. Customs Daily Returns from the 1st to the 20th instant, has been going on almost undisturbed, with the exception of coal, which has come in rather scantily of late, and perhaps a few other items. Exports were, during this period (20 days): piculs 1,400 beancake; piculs 2,260 beans; piculs 9,769 raw cotton; piculs 542 tea; piculs 1,574 alum; piculs 600 gypsum; piculs 768 seedcake; piculs 2,019 cotton seed; 22 rolls bunting; piculs 51 cotton lastings; piculs 45 indian yarn; 1,440 pieces paper umbrellas piculs 476 hemp; piculs 39.70 rhubarb; 13,800 rush hats and small lots of sundry articles. Imports from Japan, which have developed enormously during the last few years, during the same period were:—

RUY LOPEZ.—Please forward your name and address. We do not insert, or answer, anonymous letters.

PROBLEM No. 138.

By JAS. RAYNER.

White to play and mate in two moves.

Mr. James Mason, the author of "Principles of Chess," reviewed in these columns last April, informs us that he is now engaged on a new work to be called "Art of Chess," which is expected to be ready in October. It will be after the style of "Combination" in "Principles," not at all on the Openings. "These," Mr. Mason characteristically adds, "are made as we go along, and I never knew a book on the Openings to help anybody yet—in Chess. And there are many far more capable for that sort of work. The book I mean will be like 'combination' with a selection of artificial Endings in addition." Doubtless something novel in Chess literature may be looked for.

Mr. W. D. Cox has consented to act as Secretary of the Tokyo Chess Club until the general meeting in October.

Problems are after all only a small branch of chess. "The Play's the Thing," and we would once more direct attention to the importance of a study of the Games. In these, whilst they include a faithful reflex of current events in all quarters of the globe, is also embodied the results of the researches of many great minds extending over a long period. How much is here implied only chess players know. In them the opening, the middle game, and the ending each receive continually fresh and pointed illustration by present masters of the art; so that, in whatsoever remote corner of the globe a chess reader's lot may be cast he may still enter into the full enjoyment of a game of Chess.

TWO CLASSICAL GAMES.—The play of Messrs. Neumann and Rosenthal is little known to the present generation. The former, some years deceased, was one of Steinitz's earlier opponents, and a player of a superior order. The latter still reigns supreme in France. The following are splendid specimens of their play, and of quite exceptional interest:—

GAME No. 157.

29—P to Kt 4 ch. 29—K to R 5

White mates in four. (a)

(a) 1—R to Q 5, B x R; 2—B x B, R to B 3; 3—R x R, any; B mates. A game of exceptional brilliancy and ingenuity.

To "somebody who has a clear sense of the fitness of things," the *New York Clipper* credits the remark that "chess tournaments built up on bets and forfeits discredit the noble game. Steinitz, Lasker, and other champions whose financial resources may not be commensurate with their skill should be pensioned by patrons and admirers, and thus enabled to work out the intricacies of mental triumph apart from the feverish eagerness and even animosities that play for heavy stakes incites."

END-GAME No. 11.

SCARBOROUGH.—The players at this celebrated watering-place are enthusiasts and chess appears to prosper at all seasons. Here is a good ending, recently played at the club by Mr. E. Wallis:—

BLACK—MR. E. WALLIS.

WHITE—MR. C. SIMPSON.

Continued in this elegant manner:—

10—K to B sq. 10—Q to B 6 ch.
11—K to K sq. 11—Kt to Q sq. ch.

& win Original

A CAPRICE IN PROSE.

(FROM THE "USIGLI MISCELLANEA.")

Cherished chess! The charms of thy chequered chambers chain me changelessly. Chaplains have charmed thy charming choiceness; chieftains have changed the chariot and the chase for the chaster chivalry of the chess-board and the cheerier charge of the Knights. Chaste-eyed Caissa! For thee are chaplets of chainless charity, and the chalice of child-like cheerfulness. No chilling churl, no cheating chaffereur, no chattering changeling, no chanting charlatan can be thy champion; the chivalrous, the charitable, and the cheerful are the chosen ones thou cherishest. Chance cannot change thee; from childhood to the charnel-house, from our first childish chirpings to the chills of the churchyard, thou art our cheery, changeless, chieftainess. Chastener of the churlish, chider of the changeable, cherisher of the chagrined, the chapter of thy chivalry of charms should be chanted by cherubic chimes and chiselled on chalcedon in cherubic chirography.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Nagasaki, August 31.

Mr. R. Philipps, of this port, died last night after a short illness.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS."]

Chefoo, August 21.

Two German Fathers belonging to the Catholic Mission at Kining-chow in Southern Shantung have been seized and held to ransom by banditti whom the authorities are unable to capture.

It is reported that the Rev. James Wylie, a Presbyterian Missionary, while preaching to a crowd at Liao-yang, was so severely hustled by some soldiers on the march for Korea, that he has since died of the injuries inflicted.

London, August 17.

Sir Francis Knollys, Equerry to H.R.H. the Prince of Wales, in reply to a private enquirer, has written a letter declaring that the story of the Duke of York's previous marriage is a cruel and malignant falsehood.

In consequence of an adverse non-party vote, the Miners' Eight Hours Bill has been withdrawn.

The debate on the Indian Budget has been continued in the House of Commons.

According to a statement in *The Times*, the

agreement made with France in regard to the Congo State will not affect British rights, but it may compel Great Britain to take effective occupation of that territory on the Nile which the Congolese have occupied as Britain's tenants.

London, August 22.

The British Government has laid an embargo on the steamer *Islam*, which had been purchased by Japan in Glasgow and was about to start for that country to be converted into a cruiser.

London, August 22.

The Straits Military Contribution has been fixed at £80,000 for next year. It will then be subject to alteration.

London, August 24.

In reply to a question in the House of Commons regarding the right to search and seize British vessels, Sir Edward Grey, Parliamentary Under-Secretary for Foreign Affairs, stated that it was impossible to determine any rules beforehand, and that shippers must act in time of war on their own responsibility.

Numerous errors and omissions have been discovered in the American Tariff Bill, which are likely to lead to much litigation.

(FROM JAPANESE PAPERS.)

Shanghai, August 27.

The foreign captains and engineers employed on board the ships of the China Merchants Steamship Navigation Co. have left their ships owing to the proclamations of neutrality by their own Governments. Great trouble has been caused by this movement, and the Company's ships are now lying-up in various ports.

Hongkong, August 27.

Between the 18th and noon of the 25th inst. eleven new cases and eight deaths were reported here; twenty-eight patients are now receiving medical treatment. The Chinese Hospital was closed on the 18th, and the patients hitherto treated at that Hospital have been removed to Canton.

Fusan, August 28.

A foreign missionary, who lately returned from Wi-ju, states that the Chinese troops in that district have been erecting very strong fortifications. Five or six corpses, dressed in Japanese costume, says the foreigner, were lying in the front of the gate of the fortification.

Nagasaki, August 28.

The reception given to Professor Aoyama passed off very successfully. The Professor leaves here to-night for Tokyo. The new Commander-in-Chief of the U.S. Squadron on the Asiatic Station arrived here last night by the *Gaelic*, and at once went on board the *Monocacy*.

Oita, August 28.

Twenty-three oxen recently arrived at Shimono-yemura, Umibe District. Of the above three were attacked by rinderpest, and the remaining animals have now been destroyed.

Shimonoseki, August 29.

From yesterday up to 5 a.m. to-day eight transports passed here, bound west.

Osaka, August 29.

A Shimonoseki correspondent states that with a view to conducting a military telegraph wire between Phyong-yang and Wiju, the Chinese troops have already completed the work between Wiju and Kwak-san, on the north, and Phyong-yang and An-chhon.

Gensan, August 29.

More than one thousand Chinese soldiers have arrived at Yang-dok.

Shimonoseki, August 29.

A report has reached here to the effect that a skirmish occurred between the two armies at So-heung on the 23rd inst., and shortly afterward the Chinese soldiers retreated to the southern bank of the Dai-dong.

Iwate, August 29.

The Kitakami and Toyoza rivers have overflowed and 21 people have been drowned. About 1,600 houses have been submerged, and many bridges destroyed.

Shimonoseki, August 29.

A Ninsen correspondent, under date the 25th instant, states that 3,000 Chinese and 1,500 Korean soldiers are encamped at Phyong-yang. The Chinese troops are to march south, leaving

the Korean soldiers to guard Phyong-yang. No fresh arrivals of troops from China are expected.

Utsunomiya, August 30.

Up to the present no scenes of disorder have taken place in the Election district in which Mr. Hoshi Toru is fighting Mr. Yokobori Sansei, but the latter candidate sent over one hundred *soshi* and gamblers to Kawachi District this morning. Mr. Hoshi also despatched many men of the same class, but as the police are maintaining strict order no serious breach of the peace has occurred.

Fusan, August 30.

The military telegraph wire was interrupted between Pong-wo and Chin-an from 5.30 p.m. yesterday.

Kobe, August 30.

Professor Aoyama arrived here this morning. A warm reception was given him. He leaves for Tokyo to-night by train.

Fusan, August 30.

It is gathered from a trustworthy source that Generals Yeh and Seb, accompanied by about two thousand of the Chinese soldiers defeated in the battle of Song-hwan, have joined other Chinese troops at Phyong-yang.

Shanghai, August 30.

The Chinese Government has approved the action of General Yeh in retreating from A-San and joining the Chinese forces at Phyong-yang. He has been appointed Commander-in-Chief of the Chinese troops in the latter district.

Fukushima, August 31.

The Radical *soshi* and Mr. Abe's *soshi* created disturbances at Ohira and Tatehita, Adachi District, yesterday afternoon. Order was soon restored by police constables, and four lads were arrested.

Fusan, August 31st.

A Ninsen correspondent states that Marquis Saionji, the Imperial Messenger to the Korean Court, arrived there on the 28th. He left for Seoul the same evening by steamer. The King dispatched Kim Ka-chin to Ninsen to welcome the Marquis.

Sendai, August 31st.

Disturbances are likely to occur in the Second Election District of Fukushima Prefecture, and fifty-two armed police constables were ordered to the locality last night to preserve peace.

Utsunomiya, August 31.

A fight broke out between the *soshi* of Mr. Hoshi and those engaged on Mr. Yokobori's behalf at Kiyoura, Yoshiga-gun. One of the Radical lads has been injured. The assailants were at once arrested.

Hauselman, Miss Tanisawa, Miss Nakamura and 2 children, Mr. and Mrs. Schultz, Mr. and Mrs. Trotzing, Mr. Fichzier, and Mr. Remfryshunt in cabin.

Per British steamer *Oceanic*, from Hongkong via ports:—Mr. and Mrs. Nunes, Mrs. J. de Souza, Mr. Chang Quong Chong, Mr. and Mrs. Beattie and child, Dr. Takagi, Dr. Takata, Mr. J. H. Pyke, Mr. J. F. Scott, Mr. N. J. Schroth, Mr. Geo. Braess, Mr. H. A. Pattman, Mr. and Mrs. Pors, Miss Young, Miss Bourne, Mr. Burrows, Mr. Stark, Mr. Broomhall, and Dr. Geo. H. Tilden in cabin.

DEPARTED.

Per British steamer *Empress of China*, for Vancouver, B.C.:—Mr. D. G. Beebe, Mr. Beumann, Lieutenant Alex. Botkin, Dr. Botkin, Mr. Hugo Breiner, Mr. R. Brough, Miss Burgess, Mr. S. Davis, Miss Grace Douglas, Miss M. Douglas, Captain H. H. Ellis, Miss L. Ellis, Mr. Ch. W. Gelderman, Baron Von Grutschreiber, Dr. Hartshorne, Miss Hartshorne, Mr. Hunt, Mr. H. R. Hunt, Mr. J. H. James, Mr. P. S. Lloyd, Mr. D. Mackenzie, Mr. J. McKeown, Mr. J. W. Murray, Mr. E. W. Oakes, Miss B. L. Paulette, Mr. and Mrs. Reding and 2 children, Mr. C. A. Richardson, Captain Ripley, Mr. J. F. Rodewald, Dr. E. W. Rooke, Mr. N. Sato, Mr. C. B. Stedman, Miss Stedman, Mrs. Stevens, Miss Stevens (2), Miss Strong, Mr. Percy Sturdee, Mr. D. T. Timings, Mr. C. S. Van Patten, Mr. W. J. Van Patten, Mr. and Mrs. A. R. Whittier, and Mr. R. H. Wood in cabin.

REPORTS.

The Japanese steamer *Fushiki Maru*, Captain J. Wilson, reports:—Left Tsuchisaki the 23rd August at 7 p.m.; had light N.E. winds and fine weather, until evening of 24th experienced fresh head wind and moderate sea as far as Kinkasan; thence to port light variable winds and hazy weather. Arrived at Yokohama the 26th August at 4 p.m.

The Japanese steamer *Miike Maru*, Captain W. Thompson, reports:—Left Otaru the 24th August at 2.20 p.m.; Hakodate the 27th at 8.17 a.m., and Oginohama the 28th at 12.45 p.m.; passed Inuoye at 3.7 a.m. and Noshima at 10.9 a.m. on the 29th. Arrived at Yokohama at 1.50 p.m.; experienced strong easterly and north-easterly winds from Otaru to Hakodate, increasing to moderate gale after rounding Shirakami; light variable winds and fine, clear weather from Hakodate to port.

The Japanese steamer *Nagato Maru*, Captain Barstow, reports:—Left Otaru the 28th August at noon. Arrived at Yokohama the 31st August at 7 a.m. Had gentle to moderate breezes and fine weather throughout the passage.

The British steamer *Strathleven*, Captain R. Cormack, reports:—Left Hakodate the 29th August at 5 a.m.; had light northerly and north-east winds and fine, clear weather; passed Kinkasan the 30th at 1.20 a.m., Inuoye-saki at 2.50 p.m., and Noshima at 10 p.m., after which used engines to slow in order to await daylight in compliance with Naval instruction; passed Kanton-saki the 31st at 6 a.m. and proceeded slow up to arrival at Yokohama the 31st August at 7.30 a.m.

The British steamer *Oceanic*, Captain W. M. Smith, reports:—Left Hongkong the 21st August, arrived at Amoy the 22nd and left the 23rd. Arrived at Nagasaki the 25th and left the 28th. Arrived at Kobe the 30th and left the same day. Arrived at Yokohama the 31st August at 4.21 p.m. Passage from Kobe, 1 day, 3 hours, 19 minutes. Had fine weather throughout the passage.

METALS.

Rather more doing, especially in Tin Plates and Galvanized Iron; both of which are in short supply. Prices for these are consequently the turn dearer. Pig and Plate Iron have also shown a disposition to move, and the market generally looks a little brighter than for a long time past.

	PER POUND.
Flat Iron, 4 inch	\$3.35 to 3.40
Flat Iron, 4 inch	3.45 to 3.50
Round and square up to 4 inch	3.45 to 3.50
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.60 to 4.75
Galvanized iron sheets	9.20 to 9.40
Wire Nails, assorted	5.80 to 6.20
Tin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

No fresh arrivals and no sales. Market quiet with quotations unchanged.

Chester	\$1.72½ to 1.75
Comet	1.70 to 1.72½
Devoe	—
Russian Anchor	1.70 to 1.72½
Russian Moor	1.67½ to 1.70

SUGAR.

Browns—Again no sales of Formosa kinds. (Can it be possible that Japanese patriotic feeling militates against the market for China sugar?) In Manila kinds there has been a little done at quotations. Stocks: Formosa 80,000 piculs, Manila 25,000 piculs. Market quiet and weak at quotations. White—A fair demand at previous rates. Market steady and unchanged.

	PER POUND.
Brown Takao	\$4.50 to 4.60
Brown Manila	5.10 to 5.20
Brown Daitong	3.30 to 3.40
Brown Canton	3.70 to 4.40
White Java and Penang	7.10 to 7.20
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 24th instant, since which date settlements on this market are 2,168 piculs, divided thus:—Hanks, 27 piculs; Filatures, 1,627 piculs; Re-reels, 420 piculs; Kakeda, 70 piculs; Oshu, 24 piculs. Direct shipments have been 177 bales, making the total export business for the week 2,350 piculs.

The demand reported in our last continued for some days and prices have been pushed up yet

further. Holders are now spoiling the market by asking too much and buyers are holding off, with the result that the last two days there have been no settlements.

Exchange has kept high and this prevents shippers from giving everything which holders choose to ask.

There have been three shipping opportunities since we last wrote. The *Sikk*, 24th instant, took 503 bales for New York trade; the French mail *Yarra*, 25th instant, had 1,349 bales for Europe and the Canadian steamer *Empress of China*, 26th instant, took 639 bales for the United States. These departures make the present export figures 9,685 piculs against 4,177 piculs last year and 8,949 piculs at the same date in 1892.

Hanks.—There is very little doing in these and prices nominal. Stock is very small and of no account and it seems probable that this class of silk will soon vanish from the market.

Filatures.—The great business has been in this class, buyers for Europe and America being well to the fore. Prices have bounded upwards until the following figures are said to have been paid: *Rokkoshu*, \$830; *Tenryushu*, \$820; *Katmetsha*, \$810, with others in proportion. In fine sizes there has been a fair amount of business in the medium grades, prices ranging from \$700 to \$800, according to quality.

Re-reels.—These have sympathized with *Filatures* to a small extent, the last price reported for *Joshu Tengensha* being \$740. The principal business, however, seems to have been in low grades running from \$660 to \$700.

Kakeda.—Not very much business done. One parcel of *Horsehead* was taken into godown at \$720, but we understand the purchase has been cancelled, the highest price actually paid for this chop being \$680.

Oshu.—Nothing done beyond one parcel of *Sendai*, which is said to be booked for Europe.

QUOTATIONS.—(NEW SILK.)

Stock, 31st Aug.....	14,100	15,000	14,900

WASTE SILK.

There has been a little more life in this market, settlements amounting to 850 piculs, divided thus: *Noshi*, 420 piculs; *Kibiso*, 400 piculs; *Neri*, 30 piculs. No direct shipments this week.

The large business in the sister market has apparently influenced buyers here to some extent, although there does not seem very much enthusiasm in the trade. Prices hold their own fairly well, but without any marked rise. Of course the higher exchange has its effect here as well as in Raw Silk, but there does not seem to be the same speculative feeling in the Waste market.

There has only been one shipping opportunity since we last wrote, the French mail *Yarra*, 25th instant taking 93 bales various Wastes for China and Europe. This departure makes the present

export figures 2,852 piculs, against 803 piculs last year and 2,083 piculs at the same date in 1892.

Pierced Cocoons.—Still no business. The stock mounts day by day, but sellers and buyers seem as wide apart as before.

Noshi.—The feature of the week has been the settlement of a large parcel of *Oshu*, price ranging from \$130 to \$100, according to grade. Medium *Filature* has been done at \$100, with better kinds at \$130. Good *Bushu*, \$115; common *Foshu*, \$50.

Kibiso.—A fair amount of business has been done in *Filature*, prices ranging from \$85 to \$105, according to quality. In *Hira* sorts, a fairly long line of *Foshu* has been done at \$20.

Mawata.—No business and very little new fibre in stock.

Sundries.—The only purchase during the week has been some common *Neri* at \$6 1/2.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coura, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
 May 1st, 1890.

YOKOHAMA: SATURDAY, SEPT. 8TH, 1894.

BIRTH.

On the 8th September, 1894, at No. 90, Bluff, Yokohama, the wife of EDUARDO PEREIRA of a Son.

DEATH.

At 133, Bluff, Yokohama, on September 5th, of aneurism, RICHARD INGLIS, Superintending Engineer, Nippon Yusen Kaisha, aged 44.

SUMMARY OF NEWS.

HONGKONG has been officially declared free of plague.

THE weather during the past week has been very rainy, with a decided drop in the temperature.

A RADICAL *soshi* has been killed by *Kai-shin-to* partisans at Matsuoka-mura, Chiba Prefecture.

COLONEL MATSUMURA MUHON has been appointed Chief of the Staff in the Sixth Army Division.

THE Marine Training School at Shikokucho, Shiba, Tokyo, was completely destroyed by fire on the 31st ult.

YOSHIDA CREEK, Yokohama, is to be widened and deepened. Mr. Fusejima Kinzo is undertaking the work.

FIRE broke out in the town of Chiba on the 2nd inst. about 2 a.m., destroying 36 dwellings and 2 telegraph posts.

MR. MIYAOKA TSUNEJIRO, Secretary in the Japanese Legation at Washington, has been removed to Germany.

COUNT YANAGIWARA, who played a conspicuous part in the Restoration, died in Tokyo on Monday, in the 44th year of his age.

MR. RICHARD INGLIS, Superintending Engineer of the Nippon Yusen Kaisha, died on

Wednesday morning from aneurism. His remains were followed to the grave by a large number of the Masonic fraternity.

HARMSTON'S Circus opened on Tuesday evening in Yokohama, having been postponed one night in consequence of inclement weather.

AN application for the construction of an electric railway between Kodzu and Yumoto will shortly be sanctioned by the Government.

THE amount of public subscriptions towards war expenses received at the Naval Department reached *yen* 178,978.418 on the 2nd inst.

COUNT OKUMA's residence at Waseda was broken into by some fifteen or sixteen *soshi* on the 30th ult. It is said that the lads intended to assault the Count.

THE news from the seat of war is very scanty. A big engagement on land is expected in a day or two. General Viscount Yamagata has left for Korea.

MR. PH. VON HEMERT, an old resident of Yokohama, died at Miyanoshta on Monday forenoon. The funeral took place in Yokohama on Wednesday morning.

THE chrysanthemum displays at Daigo-zaka will probably be very fine this year. The flowers are expected to be at their best about the first week in October.

IN very squally weather on Saturday afternoon *Spray* won the "Advertiser Cup." The "Daisy Cup," for boats of the B division, was won the same day by *Vixen*.

FROM the 1st of October till the 31st December the rate of exchange ruling at the Custom House will be 9.587 per £ sterling, and 1.968 per U.S. gold dollar.

THE fresh batch of Hokkaido Griffins for the N.R.C. were sold by auction on Wednesday afternoon. They cost \$800 to lay down, but the auction only realized \$750.

THE remains of the late Mr. Mogi Yasubei, head of the Nozawayama silk-firm, were accorded a handsome funeral in Yokohama on Sunday. The presents to the poor of the town were very lavish.

RUMOURS are current that Viscount Mutsu, who is in feeble health, desires to resign the portfolio of Foreign Affairs. Viscount Aoki, the Minister at the Court of St. James's, is spoken of as his probable successor.

THE general elections have passed off very quietly, only a few disturbances in Kochi, Tochi, and Tokyo being recorded. Over ninety of the elected candidates will take their seats in the Diet for the first time.

MARQUIS SATONJI, the Imperial Ambassador, had an audience with the King of Korea on the 1st inst., and communicated to him the message of the Emperor of Japan. He also presented the various gifts sent by the latter Sovereign. The Marquis afterward had audience with the Queen, the Prince Imperial, and the Tai Wön-kun.

SOME residents of Tonosawa, the pretty little village on the way up to Miyanoshta, have applied for official permission to establish the Tonosawa Electric Light Co. The object of the company is to afford to residents of the locality the convenience of the electric light, using the water-power of the district as a generator.

THE following is a return of the rates of interest and discount in various parts of the country for April, May and June last, as com-

pared with the previous year:—Rate of interest on money lent: average highest interest, 12.52 per cent. in April, 1894, and 12.53 per cent. in April, 1893, a decrease of .01 per cent.; 12.66 in May, 1894, and 12.19 per cent. in May, 1893, an increase of .47 per cent.; 13 per cent. in June, 1894, and 12.08 in June, 1893, an increase of .92 per cent.; average lowest interest, 9 per cent. in April, 1894, and 8.07 per cent. in April, 1893, an increase of .93 per cent.; 8.83 per cent. in May, 1894, and 7.81 in May, 1893, an increase of 1.02 per cent.; 9.17 per cent. in June, 1894, and 7.60 per cent. in June, 1893, an increase of 1.57 per cent. Rate of interest on money deposited: average highest interest, 5.08 per cent. in April, 1894, and 5.23 per cent. in April, 1893, a decrease of .15 per cent.; 5.14 per cent. in May, 1894, and 5.12 per cent. in May, 1893, an increase of .02 per cent.; 5.21 per cent. in June, 1894, and 5.04 per cent. in June, 1893, an increase of .17 per cent.; the average lowest interest, 3.52 per cent. in April, 1894, and 2.97 per cent. in April, 1893, an increase of .55 per cent.; 3.48 per cent. in May, 1894, and 2.88 per cent. in May, 1893, an increase of .60 per cent.; 3.54 per cent. in June, 1894, and 2.76 per cent. in June, 1893, an increase of .78 per cent. Rate of discount per hundred *yen*: the average highest rate, *sen* 3.54 in April, 1894, and *sen* 3.43 in April, 1893, an increase of *sen* 11; *sen* 3.51 in May, 1894, and *sen* 3.35 in May, 1893, an increase of *sen* 16; *sen* 3.61 in June, 1894, and *sen* 3.27 in June, 1893, an increase of *sen* 35; the average lowest rate, *sen* 2.77 in April, 1894, and *sen* 2.45 in April, 1893, an increase of *sen* 32; *sen* 2.77 in May, 1894, and *sen* 2.39 in May, 1893, an increase of *sen* 38; *sen* 2.82 in June, 1894, and *sen* 2.33 in June, 1893, an increase of *sen* 49.

OWING to the illness of H.I.M. the Czar, the military manoeuvres at Smolensk, in which 150,000 men were to take part, have been cancelled. The Comte de Paris is dying. He is sinking gradually, and has received the sacrament in the presence of his family. Detachments of the Colonial Reserves of Holland are under orders to embark on the 8th and 28th inst., to reinforce the troops in Aceh. The Russian Squadron has been ordered to Korea with all speed, but it is stated in St. Petersburg that its object in proceeding to the East is merely to protect Russian trade and shipping. Huge forest fires have occurred in Minnesota and Wisconsin, in which six towns have been consumed. The small Russian fleet in the Caspian Sea is to be replaced shortly by a larger and stronger one.

THE Import Market is much as last reported, and Textiles command small attention. Yarns are unsaleable and Shirtings are in similar plight. A small business has been done in Turkey Reds at reduced prices, but buyers do not go on. There have been a few enquiries for other kinds of Cotton goods, but without actual business, and the same may be said of Woollens. In the Metal market a small business has been done, and hopes are entertained of a revival now the autumn is coming on. Prices for Kerosene are firm and advancing, though sales have been only on a small scale. There is still little enquiry for Sugar, and the stock is ample. The Silk market is quiet, prices being slightly lower. Waste Silk has been largely taken, and quotations are unaltered, though rates remain firm. The Tea trade had been fairly active at the commencement of the week, but toned down towards the end, closing rather dull, though quotations remain unaltered. Exchange has weakened a point, and rates are somewhat unsteady at the close.

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The general election and the probable situation in the coming session of the Diet have divided with the war the attention of the vernacular press during the week. On the whole, the elections have passed off quietly and smoothly. With the exception of some remote islands and localities where elections have been deferred on account of inundations, all the results have been telegraphed to Tokyo. As usual, the classifications of the new members of the House of Representatives differ according to the organs of different parties. The list is headed by the Radicals with a little over 110; then come the Progressionists with about 50, the Constitutional Reformers 36-38, the National Unionists about 30, and the Financial Reformers 4, leaving about 60 non-party members. Supposing that the different parties range themselves on the basis of the old party programmes, the Radicals and their opponents will be found to be nearly equally balanced, with perhaps a very slight preponderance of weight in favour of the latter. But it is not likely that politics will move along the old grooves. The present war with China, and the removal of the Treaty Revision question from the arena of party politics by the conclusion of a new treaty with England, make it incumbent upon the various political parties to reconstruct their programmes. These causes have also removed the barriers that have hitherto divided parties that otherwise might have voted in unison. Such is especially the case with the Radicals and the Constitutional Reformers. The principal reason of the latter's secession from the former is to be found in the question of Treaty Revision and the side issues that arose from it. We may perhaps be safe in expecting that their reunion will take place before long. The situation is doubtless clearly perceived by the clever politicians of the *Kashim-to*, who, we are informed, are already setting in motion a scheme for the amalgamation of the so-called six factions devoted to the doctrine of a strong foreign policy. The object of the Progressionists is without doubt to prevent the drifting back of the Constitutional Reformers into the ranks of the Radical party. Whether such a scheme will succeed under the present circumstances, is extremely doubtful. The difficulty is that there is no clear basis for the union of these parties. Hitherto the doctrine of a strong foreign policy has supplied them with a semblance of such a basis, but that doctrine, originally derived from the principle of the strict enforcement of the treaties, has already lost whatever vitality it possessed at first. Another bond, which connected, if not all, at least some of the allied opposition parties, is the introduction of Party Government. But this principle has been studiously kept in the background, partly because on this subject the Radicals have been avowedly of the same opinion, but principally because it was not particularly agreeable to the National Unionists. It may, therefore, be concluded that the *raison d'être* of the union of the Opposition parties has practically been confined to the advocating of a strong foreign policy. The loss of motive for that doctrine now deprives the allied parties of all hope of intelligent co-operation. It is true much stress is laid upon the necessity for a vigorous prosecution of the Chinese war. But on this matter there is no second opinion, and it can, consequently, hardly be used as a party watchword. Under these circumstances, every intelligent observer of current events is persuaded that a considerable reorganization of party combinations will take place in the course of the coming session. What form the reorganization will take it is impossible to foresee.

The tone of the Japanese papers in discussing the conduct of the Diet in the coming session is very calm and reasonable. The organs of all parties are agreed in urging the new House of Representatives to give a cordial support to the Government in the prosecution of

the Chinese war, and not grudge any expenditure that may be necessary for the purpose. On the other hand, they unanimously call upon the Government to be frank and sincere in its dealings with the Diet. If the people of all classes and parties are united in giving a powerful support to those in office, it is because, say these journals, the Cabinet has adopted the views of the people in the prosecution of the present war. In return for the disinterested and patriotic behaviour of the people, those in power are urged to show an equal regard for the true interests of the country by making large reductions in the ordinary expenditure of the Government. In this connection, the Progressionist organ, the *Mainichi Shimbun*, refers to the conduct of Prince Bismarck at the time of the Austro-Prussian war, when, the estimates submitted to the Prussian Parliament having been rejected, he caused the budget to be carried out, regardless of the opposition of the people's representatives. Europe and America, says the *Mainichi*, are vigilantly watching the results of constitutional Government in Japan, and it is of vital importance for this nation to silence once for all the unfavourable critics of Japanese constitutional government by acting in perfect unison with the Government at the present important juncture.

Strange to say, the Radical organ, the *Yiyu Shimbun*, presents a more critical mood than the journals of the allied parties. Our contemporary cannot agree with those who maintain that the new House of Representatives should cordially coöperate with the Government in every respect in connection with the Chinese war. Nothing, says it, could be more injurious than an indiscriminate approval of the Government's measures, especially on such an important question as the war with China. Is it not common, asks the *Yiyu*, in the countries of the West for the Cabinet to fall on account of its policy in a foreign war? Altogether, our contemporary is more than usually moody and implacable. It will, however, be a little too rash to conclude that such is the attitude of the Radical party in general; for it is pretty generally understood that the *Yiyu* does not always adequately or correctly represent the views of the great party of which it professes to be the official mouthpiece.

The *Nichi Nichi Shimbun's* article on the subject elucidates very fully some of the points alluded to in the first paragraph of the present summary. Our contemporary mentions five reasons for its strong conviction that the old party combinations will not hold good in the coming session of the Diet. First, events have proved the baselessness of the suspicion that the Radical party enjoyed the special favour of the Government and the ill-feelings entertained against that party on this account have been removed; secondly, not only has the new Anglo-Japanese treaty been approved on the whole by the nation at large, but the people are also agreed in giving support to the Cabinet; thirdly, the absurd proposals of the Progressionist party concerning the policy to be pursued in the conduct of the war have failed to obtain the approval of the rest of the allied parties; fourthly, notwithstanding the efforts of the central election committee in Tokyo, the candidates of the allied parties competed with each other in various localities; and fifthly, now that Treaty Revision is no longer a burning question, the advocating of Responsible Cabinets alone is not sufficient to form a bond of union for the allied parties, for this principle is also approved of by the Radicals. These five causes, continues the *Nichi Nichi*, make it impossible for the various parties to arrange themselves according to the old lines of demarcation. Consequently, although the same members have in most cases been returned, the new House of Representatives will be, in the opinion of our contemporary, essentially different in character from the old. As to the probable attitude of the new House towards the Cabinet, the *Nichi Nichi* believes that there will be little oc-

casional for the display of animosity against those in power. The Budget to begin with has been compiled with a view to all possible reductions, so that there will be little room for further curtailment in the department of Ordinary Expenditures, unless indeed, the Radicals insist on the diminution of official salaries, which, by the way, they are likely to do. As to Extraordinary Expenditures, there will be less room for reduction in this sphere, for the Government will not propose any new undertakings. Thus the *Nichi Nichi* is inclined to think that there will be no question on which collision can take place between the Cabinet and the Diet.

A circumstance worthy of notice in connection into the recent elections, is the return of the representatives of that new political association which is beginning to gain influence in commercial and manufacturing circles, viz., the Financial Reform Association. Its numerical strength is as yet insignificant in the Diet, there being only four of its members there. But it is a healthy sign that an association, the principal object of which is to counteract the overwhelmingly preponderating importance which the interests of the landed class have hitherto been allowed to assume in the politics of the country, should gain in political influence. Mr. Taguchi, editor of the *Keisai Zasshi* and originator of the association, has been returned to represent a constituency in the capital. He is a man of broad and independent views, and one of the earliest and most consistent advocates of Mixed Residence. Such is the disinterestedness of his views on all subjects, that he is highly esteemed by men of all parties. The organs of the allied parties are recommending him to side with them in the coming session, but these papers, we are afraid, will be greatly disappointed if they think that Mr. Taguchi and his small band of followers will so far forget their own motto as to join hands with men who have been preëminently conspicuous as supporters of the farming class.

Concerning the Chinese War, the vernacular journals continue to insist on a vigorous prosecution of hostilities and on a complete subjugation of the enemy. No offers of mediation on the part of a third Power should, say these papers, be accepted by Japan until her object shall have been completely attained, which is to place Korean independence on a secure footing and so to crush the power of China as to leave her totally unable for many years to come to attempt any retaliation. Such, in the opinion of these journals, is the only way in which the peace of the East in general can be permanently secured. The *Kokkai* is afraid that its countrymen may sacrifice interest to empty honour. After the defeat of her forces at Phyöng-yang and the invasion of Manchuria by the Japanese army, the Chinese Government may perhaps attempt to conclude a peace with Japan on such terms as are apparently honourable to Japan but are really advantageous to China. The Japanese, says our contemporary, are always prone to sacrifice interest for the sake of honour, and there is just ground to fear that their natural propensity may betray them into a false step in the present instance. The object of Japan, continues the *Kokkai*, ought to be to secure honour and interest at the same time.

The *Yiji Shimo* is apprehensive that if business becomes stagnant and the Japanese sustain any serious reverses in the war, a peace party may be found. At present men of all classes are enthusiastic for war and there is not even a semblance of a peace party. But our contemporary is of opinion that such a state of things cannot last long, and that sooner or later a section of the nation—mostly men suffering from the immediate effects of war on business—will desire peace on reasonable terms. The pretext for such a peace will be furnished to men of this class by the expulsion of the Chinese from the Korean peninsula. These advocates of peace will then say that Japan's object to secure Korean independence has been sufficiently accomplished, and that, consequently

there is no further necessity for the prosecution of the war. The *Yiji Shimpō* is strongly opposed to such temporizing views. The project of such a peace, by whomsoever originated, must be condemned as the expression of selfish motives; and the authorities are advised to turn a deaf ear to all such views and to proceed fearlessly to the accomplishment of the great object for which the present war was undertaken.

The reforming efforts of the Government in Sōul are attracting the attention of the Japanese papers. The Sōul Ministers seem to be bent on bringing about reforms even in such trifling matters as the manner in which householders inscribe their names on their doors. They are, consequently criticised as impractical and unfit for the task of real reforms. But it is generally conceded by the papers of the better sort that the Korean Cabinet is really unable under the present circumstances to introduce any effective reforms, and that such a feat cannot be expected until the country is freed from the presence of the Chinese troops, and the people are fully convinced of the folly of relying upon the protection of the Chinese Empire. Some papers also blame Korea for not having declared war against China.

EDITORIAL NOTES.

STRIKE ON THE HOKKAIDO COLLIERY RAILWAY.

MORE than one hundred and thirty brakemen of the Hokkaido Tankō Tetsudō Kaisha have struck. The grounds of their discontent are deficient wages and excessive hours of work. In May last, when Mr. Hino Saburo was appointed Chief of the transportation section of the company, he assembled the train-masters and station-masters and declared to them among other things that since Hokkaido differed very much from the rest of the country in regard to the price of necessaries and the severity of the climate, the hours of work of brakemen should be shortened as much as possible, and their wages, which were barely sufficient to support life, should be increased. Now February and August are in every year the periods when the wages of brakemen are increased. It is far from re-assuring to learn that this increase varies only from 3 to 5 *sen* per month, but even such a paltry sum signifies much to those poor workmen. In February of this year, however, only a very small proportion of the brakemen were given an increase in wages, and so last month numerous applications for the increase of wages of brakemen under their control were forwarded by the various train-masters. The requests were generally granted, but it was found afterward that while every brakeman of a passenger-car had his wage increased by 5 *sen* per month, that of a goods-car only got 4 *sen*. The station-masters complained forcibly of what they considered an injustice to the brakemen, and urged the Head of the transportation department to reconsider his decision. The latter, however, refused to comply, on the ground that owing to that necessity for the curtailment of expenditure, it was impossible to raise all the brakemen's wages at a uniform rate. The brakemen were highly dissatisfied with this answer, and more than one hundred and thirty of them appointed fourteen representatives, who appeared at the Central Office in Sapporo on the 23rd ult., and presented a representation and a petition. The two documents set forth, among other things, that the working hours should be shortened to twelve hours per diem during the summer season and to ten hours during the winter, that when a brakeman who had been in the company's employ above three years was discharged, a month's wage should be given, while those who remained in the company's employ more than three years should receive an increase of wages of 5 *yen* per year, that the increase of wage this year should be not less than 5 *sen* a month and that hereafter it should be above 1 *yen* a year. The Head of the transportation department remonstrated with them and bade them to be faithful in their duty.

He said he would take care to have their wages increased in future, though it was impossible, he said, to make the increase this year owing to the necessity for curtailment of expenditure. The representatives were dissatisfied and left the office to confer with the main body of brakemen. The Company was in great consternation and at once telegraphed to the various station-masters to take suitable steps to conciliate the discontented brakemen. This proved unavailing, for on that very day 30 brakemen struck. The strike of so many men necessitated suspension of the running of the trains. As soon as the brakemen had struck the Company engaged some thirty new men, and employed the regular workmen and point-men of the stations as brakemen to meet the exigency of the occasion. But the train-masters now struck out of sympathy with the brakemen. Out of the whole number of 29 train-masters, 24 tendered their resignation. The Company thought that the ring-leaders should be found and properly dealt with, for if the leaders were removed the rest would be easily brought back to subordination. It was discovered that the centres of the movement was Mororan and Iwamizawa, and on the 24th five of the train-masters of the latter station were forbidden to leave the place so as to prevent them from instigating others. On the following day they were dismissed, together with three train-masters of the Mororan terminus and about thirty five-brakemen who were regarded as chief movers of the agitation. The Company's tactics were successful, for the league lost vitality when the leaders were dismissed, and the rest were obliged to return to work on the 25th. The fourteen representatives who were staying at Sapporo were highly incensed to see their project entirely frustrated and they instantly started in various directions to demand explanations from those who, contrary to their original resolution, had submitted so tamely to the orders of the Company. It remains to be seen whether the dismissed men will be able to induce the others to renew the agitation.

A HUMBLE FRIEND OF THE FOREIGN MINISTER.

SHORTLY after Mr. Mutsu, now Viscount Mutsu, Minister of Foreign Affairs, had returned from America, where he represented Japan, he with his family was spending a short holiday at Suma. One day he with his wife and daughter, the latter of whom has since died, were out walking. They came to a small brook which the ladies found some difficulty in crossing. A man, looking like a sailor, who observed the embarrassment of the two ladies, drew near and carried them across, one after the other, on his back. Mr. Mutsu offered him a reward for his trouble. The man, however, would not accept the money, and Mr. Mutsu with his wife and daughter walked onward rather puzzled by the man's refusal. They returned by the same road, and on reaching the brook, saw to their surprise the same man apparently waiting for their return, for he approached them cheerfully and once more bore the ladies over the brook. Mr. Mutsu, again pressed him to accept a gratuity, but the man persisted in his refusal. The man, however, accompanied the party back to the hotel. There he told Mr. Mutsu that he was a sailor of Bitchu named Jiotaro, that he had a junk just built which he had named *Myōken Maru*, and he asked Mr. Mutsu to write the name in ideographs. He explained that he did not know who Mr. Mutsu was, but judged from his appearance that he must be a person of importance, and he (the sailor) thought it would bring good luck to the junk if Mr. Mutsu would write its name for him. Mr. Mutsu did as he requested. The man was a native of Kamijima, Oda district, in the province of Bitchu. When he returned home he showed the writing to a common-school teacher of the village, and then he learned for the first time who was the writer of his ship's name. He was surprised as well as pleased. Subsequently the man was extremely fortunate in all his undertakings, till at last he became the proprietor of several junks, one of which he named *Mutsu Munemitsu Maru* in honour of his patron. His veneration for Vis-

count Mutsu has increased with the progress of his fortune, and now and then he sends Viscount Mutsu complimentary letters, and charms and other trifles. He has even come up to Tokyo once or twice and paid his respects to his patron. The latter treats him kindly and is used to speak of him as an acquaintance not very easy to parallel in such an age as the present, in which selfishness is the order of the day. This man seems to have been strongly moved by the present war, and he has lately sent a letter to Viscount Mutsu enclosing a draft of 20 *yen* as a contribution towards the war expenses. The letter reflects the character of the man:—

"I beg to present my compliments to you. I learnt when I reached Shimonoeki on the 6th of July (old Calendar) that the honourable Nagoya Garrison was going to Korea. I wished to offer its soldiers a farewell present, but I had with me at the time only 3 *yen*. But now I have reached Osaka, my destination, and I enclose a 20 *yen* draft to you. I wish you would be so kind as to have it applied to the purposes of the war. This is my trifling wish.

To the Honourable Mr. MUTSU.

JYOTARO, No. 3, *Myōken Maru*.

P.S.—As soon as I have some more money to spare, I purpose to send a second contribution.

THE SILVER MINE OF IKUNO.

It is rumoured, says the *Hochi*, that work in the silver mine of Ikuno has been suspended in consequence of the want of powder. A few years ago a powder magazine was constructed where a quantity of powder sufficient for one and a half or two years blasting is believed to be kept in store, and the *Hochi* therefore thinks it strange that the mine should be obliged to suspend work from lack of powder. Moreover, it is not known that the Government has prohibited the sale of mining powder, which is totally different from that used in war. Indeed, the *Hochi* hears that quite lately the proprietor of a certain copper mine in Hyuga bought a quantity of blasting powder. All such considerations induce the *Hochi* to regard this rumoured suspension of work at the Ikuno silver mine with some suspicion. Quite another cause is presumed to exist should the work of the mine be really suspended. It is that the mine is worked out, so that the quantity of silver produced does not pay the expenses of working. The estimate for the present year was, says the *Hochi*, that the mine would yield 117,000 *yen*, but the result thus far has proved contrary, and a loss of more than 20,000 *yen* has been incurred. There remains only four months this year and it is will be impossible even to recoup the loss much less to gain a profit. It is therefore suspected that the officers of the mine, with a view to temporize matters, may have fabricated such an excuse. The mine is most important to the well-being of the surrounding district, for the inhabitants live either directly or indirectly upon the working of the mine. It is said, therefore, that they are holding meetings with a view to arrange that the work may be carried on as before. The mine belongs to the Crown, and has been worked uninterruptedly since it was first opened in the middle ages.

PENNY WISE AND POUND FOOLISH.

A *SAHAI-NIN* (a house agent) living in Bamba-cho, Honjo, is of wide notoriety in the neighbourhood for his stinginess, though he is one of its richest citizens. He was therefore greatly exercised lately to see many of his acquaintances contributing toward the war fund. He must follow their example, he thought, to keep up an appearance of respectability. An ingenious idea struck him, and he began to lecture among the residents of the houses placed under his charge, urging them to contribute towards the Fund. In that way he succeeded in collecting 29.70 *yen* and himself added 30 *sen*, thus bringing up the whole to the round sum of 30 *yen*. He forwarded the sum to the Contribution Office, not, however, in the names of all who had paid a share but only in his own name. The announcement in the list of contributors given in the *Official Gazette* that the *sahai-nin* had given 30 *yen* towards the military chest around suspicion in the minds of many of the citizens in the neighbourhood, and some of them had the curiosity to enquire into the matter. It speedily appeared that the *sahai-nin* had con-

Original from

tributed one per cent. only of the whole subscription. The news of this infamous trick being noised abroad it soon reached the ears of the hood-winked contributors, who were highly incensed, and went to see the *sakai-nin*. They demanded that the sum of 29.70 *yen* they had entrusted him should be sent back, for, said they, the 30 *yen* appearing in his name being his contribution they had nothing to do with it. The wretched fellow could not but acquiesce in this just demand, and sent back the subscriptions, which the contributors have resolved to apply toward giving aid to the families of those living in the same ward who are hardly pressed for their sustenance on account of their bread-winners having been enrolled in the army. The *sakai-nin* had to pay dear for his trick.

AN "AGONY" COLUMN.

ALTHOUGH the art of advertising has not yet been carried in this country to that pitch of perfection (?) attained by our American cousins, flaming posters in particular being wholly unknown, still the Japanese are beginning to learn that one of the secrets of commercial success lies in judicious and frequent advertising. At present, with the sole exception of such journals as are devoted to a higher class of trade, like the *Shogyo Shimpō*, the *Yiji Shimpō*, and a few others, nearly two-thirds of the advertisements to be found in the generality of the dailies consist of announcements of the various real or supposed merits of certain quack nostrums or patent drugs, the invention of which is generally foisted on the shoulders of some wholly mystical foreigner, e.g. "Professor Tonrong of London," so universally advertised as the compounder of the *Yigyo* pill. Of late the space between the two inner pages of some dailies has been utilized as a sort of "agony column." In the *Asahi Shimbun*, some weeks since, there was an earnest appeal to a certain Ikeda Saka to return to her parents. She was stated to have disappeared over one month before. Some words in cipher followed, unintelligible to the general public. This advertisement must have appeared at least a dozen times. In the *Nichi Nichi Shimbun* of Fukuoka was, last month, the announcement of what seemed to be a genuine offer of marriage: "Wanted, a wife, must be good-looking and an expert needlewoman. Need not have means. The advertiser is in earnest," and then followed the full name and address of the would-be Benedict. The space devoted to personals of this description, which are still of rare occurrence, is sometimes taken up by astute advertisers, wishing to push the sale of their wares. Witness that excellent ad. of the proprietor of a new cosmetic, which begins with the warning, printed in the equivalent of large capitals, "Beautiful People Must not Look At This!" A few days ago, a lost or strayed child was advertised for in several of the metropolitan *Ko Shimbunshi*. Journalism is evidently progressing like all else in Japan.

ANOTHER VERSION OF THE BRITISH WARSHIPS' ACTION AT WEI-HAI-WEI.

THE *Kokumin* publishes a letter sent from Chemulpho on the 24th ult. from one of its war correspondents in Korea. It contains a remarkable account of the alleged action of the two British warships at Wei-hai-wei, when the Japanese fleet had proceeded there to attack the Chinese fleet supposed to be lying in the harbour. At 4 a.m. on the 9th ult., six first class Japanese war-vessels bombarded the forts of Wei-hai-wei and succeeded in crippling two of them. Fourteen other Japanese warships co-operated with the six in attacking the forts. In the meanwhile three torpedo boats were ordered under cover of darkness, to pass into the mouth of the harbour, from a direction different from that in which the Japanese vessels were engaged in bombarding the forts. The object of the torpedo boats was to discharge torpedoes at 10 Chinese warships that were then lying in the harbour. But as they were going to do so the two British warships, which were following the movement of the boats, suddenly used their search-lights, thus illuminating the harbour as clear as day. The Chinese warships which were perfectly

unconscious of the attack that was in progress suddenly espied the danger they were in and quickly drew apart from one another. When the British ships saw this they turned off their search lights and communicated the movements of the Japanese fleet to the Chinese by certain signals. Seeing their object thus frustrated, the boats safely withdrew. The anger on board the Japanese vessels supporting the torpedo boats was indescribable, so much so that it was even proposed to open fire on the British vessels. This suggestion was overruled with some difficulty, and they joined the main body of the fleet. As daylight was now approaching, the Fleet decided to withdraw. As they were steaming back they met a French warship coming up at full speed. She approached the Fleet and asked them the result of the attack. Her officers expressed great anger at the outrageous conduct of the British war-vessels when they were told of the action of the latter at Wei-hai-wei. The French vessel was on its way to watch the movements of the British ships and to witness the attack of the Japanese Fleet. The correspondent of the *Kokumin* alleges that he got this wonderful information from a certain Mr. Ozawa at Chemulpho. The plan of this invasion of Wei-hai-wei was to have been given in the same issue of the paper but it was erased, the press censors having forbidden its publication. It seems to us that they would have exercised a wise discretion in entirely suppressing such an incredible story, published without any evidence in its support.

JAPANESE WAR SONGS.

THE following war songs for the Japanese troops in Korea were composed by Mr. Yokoi Tadanao, a compiler in the Staff Office, in accordance with the command of H.I.H. Prince Arisugawa for the Japanese troops in Korea. They are called *Tosei Gunka*, War Songs for the Chinese Expedition:—

I.—STRIKE AND CHASTISE.

Strike and chastise China, for China is a deadly enemy of the Empire, is an enemy of Oriental peace. Invade it and change it into an upright country. Invade the enemy that offers obstruction to the exercise of the rights of the Empire, invade the enemy that is arrogant and insolent; invade the enemy that is ignorant and perverse and does not know the meaning of Oriental tranquillity. Strike and chastise China, strike and chastise China.

2.

Strike and chastise the Chinese troops, for they are cowards—they support the Government of China which spurns the honourable friendship of the Empire and offers resistance to the Empire. However great their armies in number, they are in reality an undisciplined rabble, and however fine their arms look, they are useless like fine ladies in pictures. In the naval battle off Hoto, China's warships were destroyed, and in the battle at Seikwan its troops were routed. The ships so frail, the troops so weak, how can they withstand us even though their number be counted by millions. Strike and chastise China, strike and chastise China.

II.—TO PEKING.

China is a country where in by-gone days teachings of sages prevailed; but as time rolled on the country has become retrogressive. It boasts of itself as the Celestial Kingdom, but its heart is barbarous and is the very reverse of celestial. Till its ignorance is dispelled the sky of the Orient must ever be dark. Now is the time to plant the flag of the Rising Sun on the walls of Peking and to illuminate its darkness. This is the duty of our glorious Empire, the Land of the Rising Sun. So forth, go forth, Imperial Army, march in emulation till Peking is taken.

III.—GALLANT WARRIORS.

If warriors go to war by land the turf shall receive the bodies of the slain. If warriors go to war by sea the ocean shall receive the bodies of the slain. From time immemorial our gallant warriors have gone forth in swarms. Human life lasts but for fifty years, who would wish to purchase a few miserable years of life at the cost of dishonour? March and fire as long as breath remains, for our lives are at the disposal of the Sovereign, our bodies are to be sacrificed to the glory of the country; let soldiers die with all their wounds in front. The souls of those that thus defy death shall be through the ages to come the guardian angels of Oriental tranquillity. So go forth, go forth, ye warriors, warriors go forth.

IV.—THE EMPEROR'S WILL.

War is not waged for the sake of Korea alone, but it is the Emperor's will to promote the future welfare of the Orient. Respecting the dread will of the Emperor, strive unceasingly against the enemies of peace until the Emperor's will is attained. Where-

ever a standard is unfurled we fight in the presence of our Sovereign; strive then to fulfil the royal commands and to deserve the royal commendation; your superior's command expresses to you the will of the Emperor; fight heedless of all but duty, though rifle bullets fly round you thick as hail-stones. If you fight with this unflinching spirit, nothing will be impossible to the army of Japan. Then the "Golden Eagles" will be ready to reward your glorious deserts. Then having firmly and permanently established peace, completed your duty, and relieved the Emperor's anxiety, you may return chanting triumphal songs.

* There is a military Order called the Order of the Golden Eagle.

THE MINISTER OF FINANCE ON THE MONEY-MARKET.

A REPRESENTATIVE of the *Mainichi* recently waited on Mr. Watanabe, Minister of Finance, and interviewed him as to his opinion on the state of the money-market. According to the Minister, bankers, and other capitalists, entertaining more or less apprehension as to the issue of the war, are disposed not to open their strong-boxes easily except on the hypothecation of most trustworthy securities, and even wish if possible to increase their reserves. A rise of interest is the natural consequence of this state of affairs. This decrease of credit in the money-market is inseparable from any such grave incident as a foreign war, but the Minister of Finance is of opinion that there has been less disturbance in this country than would be likely to occur in a Western country in a similar situation to that of Japan. As to a rumour lately current that there is a difference of opinion between the Treasury and the Bank of Japan as to the issue of convertible notes bearing five per cent. interest, the former urging the issue and the latter regarding it as inadvisable, the Minister of Finance could not but laugh at the absurdity of such a rumour. The Bank of Japan, said His Excellency, is highly interested in the issue of convertible notes, every issue is attended with a profit to the Bank, which is therefore eager to issue the notes whenever it is justified in doing so by the state of the market. That was the case in 1890. But the circumstances are different at present. The Bank is expecting applications for loans, and is rather mortified to find that there is little demand. It is true that now and then some applications are made for loans, but the securities offered are generally not very trustworthy, and the Bank is therefore obliged to refuse all such demands. The fact is, the ordinary note issuing capacity of the Bank is not yet exhausted. To the inquiry of the newspaper representative whether the development of the industry of the country would be arrested by the present war, the Minister replied that no apprehension need be entertained on that subject, for due measures will be taken to carry on the ordinary important affairs of the realm as in time of peace. Ordinary affairs which go to strengthen the foundations of a State should not of course be neglected. Consequently, Japan should attend to her railway construction, for instance, in the same way as before, for the stoppage of any such important business as railway construction which is most vitally related to the development of the resources of the country, would be a suicidal policy. The supply of the war expenses and the supply of capital required for the development of the resources of the country should be kept entirely distinct, and the former should not be allowed to affect the latter. It is for financiers to determine, said the Minister, how these aims can be carried out.

THE DOUBLE SUICIDE AT THE SENKAKU-JI.

THE Senkaku-ji is that famous shrine at Takanawa, Tokyo, where lie the bodies of the Forty-seven Loyal Ronin. It is a much-visited place and kept in excellent repair. Here, at half-past five on Sunday morning, the 2nd instant, were found the bodies of a young man of about twenty-two and a woman perhaps two years his senior. The metropolitan journals report that there was an almost theatrical display in their clothing and the manner in which they had taken their own lives. Both were dressed in thin muslin suits, beneath which they had on shrouds. On the upper part of the gar-

ment worn by the man there was a *sho-chiku-bai* picture, or a bit of the pine, bamboo, and plum trees, this grouping being significant of love. Along the lower hem of the robes worn by each were the words, *Namu Amida Butsu*, the Buddhist prayer and invocation at the time of death. Both man and woman had tied girdles of white crape about their waists, and the latter in particular had her hair carefully dressed and filled with elegant and emblematic hairpins of tortoise shell. Before cutting their throats they had spread a white garment beneath them on the ground. Everything was in accordance with the Japanese canons of olden time. So soon as the sad event was notified to the police an inquiry was instituted, which resulted in the discovery that the man was the son of a tolerably well-to-do lady residing in Shiba District, one Takejiro, a young fellow of much promise, the woman was a prostitute from one of the houses of ill-fame in Shinagawa. The reason for their suicide has not yet been made public, but it is doubtless the old story. Unable to escape from a life of degradation, the woman generally consents to die with him who would rescue her at all costs.

OUTRAGES BY KOREANS ON JAPANESE FISHERMEN.

THE *Mainichi* publishes the following account of outrages inflicted upon Japanese fishermen by Koreans in Korean waters. Ohama Sokichi and Fujita Hyosuke, fishermen of Yoshino-ura, Yamaguchi Prefecture, started for fishing in Korean waters in the beginning of July, each taking three assistants in his junk. On the morning of the 7th of that month the two junks reached a certain island off the coast of Chōl-la-do and the fishermen sent their six men on shore to get water. While the men were on shore, the two fishermen on the junks saw a Korean junk of about 100 *koku* capacity bearing down on them. This junk contained some thirty Koreans, who were observed on nearer approach to be armed with various weapons. As soon as the junk reached the two Japanese vessels, the Koreans instantly bound Ohama and Fujita, striking the former on the head and wounding the latter in the leg. Two of the sailors who had landed came back by that time and they also were tied hand and foot. The Koreans then searched the ships and went away taking with them 16 *kamme* and 600 *mon* of Korean coins, and various articles. The pirates hastily rowed away when they saw the remaining four fishermen coming back. The injured party reached Tsushima on the 13th and reported the outrage they had suffered to the police of the island. A similar incident happened to Yonefujii Yakei, another fisherman of Yamaguchi Prefecture. He with a Japanese and a Korean sailor had been engaged for a while in fishing in various places and came to a certain spot off the coast of Chōl-la-do on the 9th ult. Soon he observed a Korean vessel of some 200 *koku* capacity flying several flags rowing toward his junk. When the distance between the two became small, rifles were fired at the junk and one shot slightly wounded Yonefujii in the shoulder. While the three were in great consternation the vessel came close to the junk and several of the Koreans boarded her with swords in their hands. They bound the Korean sailor, wounded Yakei in several places, and knocked down the third man. Then they took 11 bales of rice, 34 *kuwame* of coins, a pistol, a clock, and all the fish that the Japanese had caught. At first it appeared to be the intention of the pirates to kill the three captives, probably on the principle that "dead men tell no tales," but their lives were spared on the intercession of the Korean sailor, and the pirate captain even returned a certain amount of food for the support of the three. The fishermen reached Tsushima on the 13th ult. and reported the incident to the police. It is said that there were about thirty-six Koreans in the pirate vessel.

TRADAL DEPRESSION.

COMPLAINTS are frequent that money is very scarce among business men in the metropolis just now. Available funds are being rapidly

invested in the new War Loan Bonds, and the money-lending fraternity are more imperious and make greater demands than ever. Mortgages are numerous and real estate is going for a song. Houses that were valued last year at a minimum of thirteen hundred *yen* now fail to fetch half that sum in the open market. Several comparatively large establishments dependent upon promised loans, now find it impossible to raise the money they require and are consequently in serious difficulties. It is popularly believed that the news of one or two great victories will at once have a beneficial effect on the money-market; if this does not ensue the failure of a number of firms may be expected with certainty. We have already referred to the dilemma of the cotton-spinners in Osaka; the same or a very similar state of affairs prevails in Tokyo, especially among petty manufacturers, publishers, and printers. The general feeling is, however, that there will be a change for the better before long, and in the meantime those who suffer most are trying to bear up bravely.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for July showing the foreign trade of the empire for the month:—

	1893. SILVER YEN.	1894. SILVER YEN.
Exports	7,018,665.550	8,355,051.480
Imports	7,208,113.560	9,883,227.000
Total exports and imports	14,226,779.110	18,238,278.480
Excess of imports	289,447.910	1,528,175.520
CUSTOMS DUTIES.		
Exports	184,464.864	261,092.946
Imports	261,092.946	13,150.506
Miscellaneous	13,150.506	
Total	458,708.316

INUNDATION IN AKITA PREFECTURE.

THE storm that raged in Akita and Iwate Prefectures on the 25th and 26th of last month was of a most violent description, and was followed by a disastrous flood. According to investigations carried out in Akita Prefecture up to the 1st instant, the casualties caused by the flood were as follows:—Deaths, 312; wounded, 9; dwellings carried away, 854; dwellings collapsed, 229; dwellings partially destroyed, 1,319; dwellings flooded, 13,260; cattle killed, 36. The districts that suffered

most were Honjo, where more than 50 persons were drowned, and Okachi Gun, where the deaths were counted at above one hundred. Innai, a village where a celebrated copper mine owned by Mr. Furukawa Ichibei is situated, and the neighbouring town of Gin-san, both of which are in Okachi Gun, suffered considerably. In Innai, out of 700 houses, more than 10 per cent. were carried away, while more than 60 persons were drowned. Gin-san did not suffer so much. The loss which the proprietor of the mine sustained by the flood is estimated at 130,000 *yen*, or more. Mr. Furukawa instructed his employés to begin at once the repair of machines, roads, and bridges. The town of Yokote suffered most. It is situated on the bank of the river of the same name, and the collapse of the bank at once changed the streets into canals. It is believed that the fatalities in this town alone must have reached to some 200. The sight of men and women clinging to the roofs of the houses carried away by the current, and piteously crying for help, was most heartrending. On one occasion, about one hundred persons were thus seen on the top of a large building. From Iwate Prefecture no precise news of the devastation wrought by the flood has yet reached Tokyo, owing to the interruption of the means of communication. Thus far the news thence is to the effect that several common school pupils were drowned at a place called Kurozawajiri and that 19 persons were either drowned or injured at Iwayado. In Yamagata and Miyagi Prefectures the rising of the rivers above the normal height was also alarming, breaking through the banks in many places, carrying down bridges, and overflowing the adjacent districts. Fortunately, no loss of human life appears to have occurred.

BIG GUNS.

RUMOURS have of late been frequently current along the coast of Izu that a small Chinese fleet was out at sea, ready to make a descent on some unguarded part of the coast. A most vigilant lookout is being kept, though the report appears to be utterly without foundation. Still some trepidation is felt by the peasantry along the coast-line, and this led the other night to a most ludicrous misapprehension. About two o'clock in the morning, a drizzling rain falling and everything still pitch-dark, an excited man rushed to a certain coast-guard station with the announcement that a naval engagement was going on some three miles out at sea. He had heard the dull roar of the guns and distinctly seen the flashes. The story did not meet with implicit credence, but in a little while a body of armed men, disgusted at having to turn out in such miserable weather, marched off in the direction indicated. The cause of the peasant's alarm was soon apparent. There was a thunderstorm at sea.

KYOTO RICE EXCHANGE IN TROUBLE.

THE Kyoto Rice Exchange is involved in serious trouble, according to an Osaka newspaper. The cause of the trouble is an old one, the embezzlement of the company's money by one of its officers. The fact having been brought to light, the Exchange was obliged to suspend its business on the 20th ult., and this was followed about a week later by the Noshomusho's order releasing all the officers of the exchange from their function. The speculation first came to light this summer when the account of the 18th half-year was to be settled. It was then discovered that Mr. Kise Tatsuyo, an ex-Manager of the Exchange, had embezzled its resources to the amount of as much as 15,000 *yen*. The Chief-Manager of the Exchange was Mr. Hiramatsu, a respectable merchant of Kyoto. He has suffered from chronic ill-health for seven or eight years, and has not attended at the Office which was nominally placed under his control. The nomination of this invalid to the most responsible seat was entirely due to a deep seated design on the part of Mr. Kise, who had tempted him to accept the sinecure. By his influence over his colleagues, Mr. Kise made them consent to his arrangement, and Mr. Kise himself was

virtually master of the Exchange. His cunning overreached itself, as is frequently the case with such swindlers. He speculated largely in rice, sustained a great loss, and soon suspicion fell on him of having counterfeited the shares of the Exchange. He was arrested last year at the Kyoto Local Court, since then the affairs of the Exchange were conducted by the remaining two managers. On the 5th of last month, a general meeting of shareholders had to be held. While the two managers were drawing up the balance-sheet for the 1st half year, they discovered to their alarm that a sum of more than 15,000 yen was not to be accounted for. It had evidently disappeared through the hands of Mr. Kise. The other managers held a consultation with the nominal President and the three at last resolved to tender their resignations some days previous to the holding of the general meeting. On the day of the general meeting one of the chief shareholders was entrusted with the task of the managers, who were bound to attend the meeting to give any explanation required of them. The temporary manager disclosed the embezzlement of the ex-manager, and he added at the same time that the missing sum would be made good by selling the shares which the delinquent had deposited in hypothecation at certain banks. The shareholders were not contented with this plausible way of recouping the loss of the Exchange, and they elected several commissioners to inquire into the real state of affairs. The Chairman of the commissioners was Mr. Hayashida, an ex-Member of Parliament and a most intimate friend of Mr. Kise, and he promised the shareholders to furnish them with a report in two days' time. This was but an empty promise, for though more than three weeks elapsed no report was forthcoming. In the meanwhile, the Local Government had been petitioned for an extension of time in which to furnish the balance-sheet. When a further request for prolongation was filed the local Government became suspicious, and instituted a secret inquiry. This inquiry confirming the suspicions, the matter was at once reported to the No-shomusho, which despatched a clerk to Kyoto on the 14th ult., with instructions to carry out strict inquiries into the books and documents of the Exchange. The result of this official research was the dismissal of all the principal officers of the Exchange.

THE FEELING OF THE TROOPS.

THE calling out of the First and Second Class Reserves and the consequent gathering and settling-off of over forty thousand men for the seat of war, have been accomplished noiselessly, with despatch, and without the least disturbance. The order for this step had been daily expected for more than a fortnight. Those who had served out their time in the Imperial Guard last year were recalled from whatever avocations they had entered upon and commanded to remain in their native towns and villages and there await the summons. This has meant, in very many cases, the interruption of business or the forcible sundering of half-formed ties, and could not do otherwise than bring sorrow or disappointment to many hearts. But we have yet to hear of an instance of any one trying to evade the injunction. The prevailing sentiment that this is a righteous war has gone far to reconcile every one to it, not to say to inspire all with a fresh access of enthusiastic patriotism. One trooper of the Imperial Guard, recalled to Kumamoto, writes to his English teacher in Tokyo *verbatim* as follows:—"I am now living in Kumamoto and waiting to fight Chinese soldiers if they come to this land. I am very glad to hear news of our victories. I have heard that Chinese soldiers are not so bravely; if they was damaged (he means "wounded") they will soon cry. But I am expecting to go to Chinese Empire, because I wish to kill many soldiers of that country." This pious wish will probably be fulfilled, for the writer is a young man of exceptional strength and skill. Another says, "I am called to enter the military service. This stops all my ambition and interrupts all my plans. Yet this is

a righteous war and I shall fight bravely and with all my might. God bless you, forever!" A third says:—"To-morrow steamer starting for Korea. Oh joy! I shall return a hero or die a hero." These men are in earnest and will fight to the death. There is no compulsion in their case.

Precisely the same feeling of exultation inspired those members of the metropolitan constabulary who were selected last month to attend the army in Korea. They were objects of envy to their fellows and the recipients of hearty congratulations from friends. On the night of their departure from Shimbashi Station the little telegraph-office there was besieged. The constables were sending their last messages to friends in various parts of the country; but they were doing this with beaming faces and a sense of superiority to the world at large—the non-combatant world—that was worth taking a journey to see. Their telegrams were pretty much all couched in the same terms: "I am just starting for Korea!" At all other times staid, reserved, and sober, they were then ready to shake hands or joke with everybody.

From Nagoya, Sendai, Fukushima, and a number of other large towns come the same reports. The soldiers are eager to join, and doubly eager to have a brush with the enemy. This last draft has taken not only thousands of young men but also numbers of those who have already made their mark in the world. But pen or brush has alike been laid aside without a murmur. The *esprit de corps* is preëminent. They mean to return and will return either with their shields or on them.

DRUGGED AND ROBBED.

On the 27th of last month a well-to-do master-mason started from Shimbashi to Kyoto, taking the night through-express. Travelling third-class the carriage was pretty full; but after passing Nagoya the traveller was left alone. At Baba a well-dressed man, apparently about twenty-eight years old, got in the train. He had the look of a prosperous merchant and soon began an animated conversation with the master-mason, who was pleased to have so well-informed a companion. Suddenly the newcomer took out a small packet of sandwiches, one of which he began to eat with evident relish, pressing another the while on the Tokyo man. The little courtesy was accepted, and the master-mason found the sandwich very much to his liking. Pretty soon he began to get drowsy; he struggled against the inclination for a while, but finally fell into a deep sleep. The next thing he knew the guard was roughly shaking him. The train had reached Osaka and he had over-slept himself. Annoyed and bewildered, the man proceeded to leave the train. His portmanteau, however, was nowhere to be found. Upon inquiry he learned that his complaisant travelling-companion had left the train at Yamashima, taking a bag with him answering to the missing article. The thief had made a good haul, no less than \$1,300 having been stowed in the valise. The police were at once notified of the theft, but no arrest has yet been made. The *Osaka Asahi Shimbun*, from which we take these particulars, urgently warns travellers against accepting either food or drink from unknown people in the cars. It appears that the section between Baba and Osaka is notorious for thefts of the above description.

"WO-JEN."

THE Japanese press is taking full vengeance for the insulting nature of the term applied to the people of this country by the Chinese Emperor in the Rescript declaring war with Japan. Up to the beginning of the present month *Shin-jin*, or *Shina-jin*, were the words invariably used in referring to the Chinese. Now no epithet is thought sufficiently opprobrious. *Chan-chan bosu*, "priests with sleeveless coats," is a favourite. The *chan-chan* is a kind of sleeveless coat worn by Japanese

children in their infancy, and a metaphor for puerility. *Bosu* of course applies to the shaven crowns of the Chinese. *Tonpi*, literally "pig-tail," is a word used not only in Japan. *Tonpi-kan*, "pig-tailed vagabonds," is a bit stronger. Celestial vagabonds," *ten-kan*, is also met with, and the opprobrium is intensified in this instance by the fact that the same word (though written with different ideographs) means "epileptics." China is referred to as *Mei-so koku*, or the "country of vague or mistaken ideas," for *mei* (迷), means *mayou*, "to be mistaken, to have erroneous ideas;" while *so* (想) is one way of writing "to think" (*omou*). One Japanese writer explains the two ideographs as meaning "the country in which people cannot make up their minds." In like fashion, Li Hung-chang is spoken of as *Mei-so-ya*, or the "father," or "old man" of the *Mei-so* nation. On the whole it would seem that *Wojen* has not been permitted to pass without due notice.

FISH OUT OF WATER.

WE read in the *Miyako Shimbun* that, on the morning of the 17th ultimo, a fisherman living in a village near Osaka picked up, at the foot of Temposan, a remarkable fish which, if it really resembles the illustration given in the *Miyako*, must be one of the marvels of the world. Viewed *en face* the fish bears an exact likeness to a Chinaman, the pectoral fins making fairly good ears while the tail (probably the dorsal fin) is long and spiny and serves as a queue. The length is given as six inches, the circumference being only five inches. The nose, a flat African one according to the wood-cut, is obviously impossible, and the eyes are, despite their rotundity, too human to have ever belonged to a fish. Yet it is related that the finder has applied for and received permission to exhibit his treasure-trove in the metropolis, where it will doubtless excite much attention. As it is an unique specimen, the fisherman's friends have advised him to name it the *tonpi-gyo*, or "pig-tail fish." It is possible that some erratic specimen of the genus *Tetradon* may have, in this instance, assumed an unusually suggestive cast of countenance; but contemplating the enormously elongated dorsal fin we incline rather to the belief that it is merely an immature sun-fish, as individuals of this genus have quite frequently been met with following the warm current of the Kuro-shiwo. Of course the *Miyako* cannot forego remarking that this is a very timely find and indicative of the supremacy of the Japanese over the Chinese at sea.

"KING SOLOMON'S MINES."

AMONG the new publications announced by the Hakubunkwan, we note a translation of Rider Haggard's "King Solomon's Mines," under the title of "The Great Treasure Cave." We have not seen the book, but it is said to enjoy great popularity already. A new edition of Mr. Matsui's version of "Don Quixote," and a translation of another of Tolstoi's forcible romances, "The Cossacks," are also advertised. "She" has not yet found a translator in Japan, though it ought to be a taking book if well rendered. An unsuccessful attempt was made, some time ago, to put Haggard's "Dawn" into Japanese. About one-third of the book appeared, but it failed to meet with popular approval.

A LOVER'S VENGEANCE.

A most tragic episode occurred recently in Kochi. Two years ago a young farmer in an out-of-the-way village fell in love with the pretty daughter of a fellow-villager. They exchanged vows, and the girl received some trifling gifts from her admirer. Called soon thereafter away on business, the young man kept up a desultory correspondence with his betrothed. Suddenly her letters stopped coming. So soon as he could he went back to his native village, only to find the girl false and the wife of another. Hers, it appeared, had been merely a girl's fancy. She was now the contented wife of a man whom she loved. The disappointed suitor thereupon arranged to arrange a meeting with

her, but all his endeavours were foiled. Finally he wrote to her insisting upon the return of the gifts he had once made. This the young woman foolishly refused to do. On the 19th of last month the discarded suitor forced his way into the dwelling of his former love and her husband. He cut off the wife's head in the most barbarous fashion and then seizing of the husband who was trying to escape, stabbed him to death. Taking the woman's head with him he returned to his own house. He then placed the head on a low table, and after upbraiding it in the bitterest terms, deliberately cut his own throat. Death was instantaneous.

FARRICIDE AND FRATRICIDE.

THE *Asahi Shimbun* gives a detailed account of a fearful series of murders perpetrated in a village in Kumamoto Prefecture, at the end of last month. The eldest son, Katsutaro, of a local stonemason had unfortunately become infatuated with a maid-servant engaged in a tavern in a neighbouring village, and would have made her his wife. But she insisted upon his bringing a sufficient sum with him to enable them to engage in some lucrative occupation. Not being able to raise the money, Katsutaro—a fine-looking young man just twenty-one years old—was at his wit's end. Finally he learned that his father would, on a certain evening, be in the possession of the sum of six hundred yen. He begged for the loan of a portion of this, but was refused, as the money was immediately to be paid out. Rendered desperate by his infatuation, he entered his father's house on the night of June 31st, and endeavoured to steal the money which he knew was close by the sleeping man's pillow. The father awoke, but before he could raise an outcry or recognize who the assailant was, his throat was cut from ear to ear. The same fate awaited the mother, who had been aroused by the dying struggles of her husband. The inhuman son then killed his young brother and two young sisters, all three of whom were awakened by the scuffling. The murderer then hid his bloody knife and clothes in the thatch of the roof, and went to his aunt's house, at a little distance, where he begged for a night's lodging. She was, however, struck by his fearful pallor and asked if he were sick. He replied that he was not, but felt a strange feeling of oppression. This, the aunt remarked, might be owing to some mishap at his own house; he had better go and see if all was well. He took her advice and went to the scene of his crime. In a few minutes the neighbourhood was aroused by shrieks, and bursting in found the five corpses lying on the floor, with Katsutaro beside them, apparently in a fainting fit. After bringing the young man back to consciousness, he told them what had occurred at his aunt's and that, on reaching his father's home, he had been so horrified at the sight that his senses had left him. Katsutaro was comforted and his wan, drawn expression taken to be only the natural consequence of the shock and his grief. The police were notified, and the members of the unfortunate family buried by the village people. Katsutaro made no attempt to fly, nor did he even go to see the woman for whose sake he had committed the unnatural crime. Yet suspicion fell on him, and a few days ago he was arrested. After having for some time stubbornly refused to say anything, he finally made a clean breast, and told the above story. "How," says the *Asahi*, "can Heaven permit such deeds?"

DECEPTIVE PETS.

MONEY is tight in Tokyo at present, and small blame to it. Yet there are those so favoured by Plutus that they can indulge their whims and fancies and go on buying rare but ugly specimens of the ground-pine, orchids with zebra-striped leaves, or whatever else may meet with their approval. Among one of the many fashionable fads of the moment is the fondness for lop-eared rabbits. It is not that these harmless rodents are attractive in general appearance; the *sine qua non* is that they must have

great length, if possible just a little bit longer than those of less fortunate rabbits possessed by anybody else. A gentleman given to this harmless mania has, the *Kaishin Shimbun* relates, on the whole had very hard luck. His purse not being very long, it was his ambition to get some perfect specimen at a reasonable price, although the finest lop-ears sometimes fetch as much as two hundred yen the pair. He invited a connoisseur one day to look at his collection, and was not a little ill-pleased to hear that he had none but the commonest sorts. Some time after this a man called on him and, after requesting secrecy, stated that he had procured—no matter how—a couple of the finest rabbits, which he was willingly to sell at the absurdly low figure of one hundred yen. The animals were inspected: their enormous ears were undeniable. A bargain was struck, and the happy purchaser again invited his friend the connoisseur to look at the latest additions to his collection. He arrived and was properly astonished not only at the ears but also the strange markings of the brutes. Happening to give a more than usually strong pull to one of the ears, it came off in his hand. Closer inspection showed that false ears had actually been deftly sewed fast to the originals, and that dye was responsible for their remarkable colour. The real value of the rabbits was about 40 sen.

A FRESH INCENTIVE.

THE private schools in Tokyo have reason to rejoice. Owing to the war with China and the recall of so many students to their homes, it has been expected that the attendance would, on an average, decrease as much as forty or even fifty per cent. The publication of the new treaty between Great Britain and Japan has, however, totally changed the situation. The vernacular newspapers urge young men to study English now with greater earnestness than ever before. Every merchant, every official, every learned man should be able to read, write, and converse in the Anglo-Saxon idiom, "for great numbers of English-speaking people will before long be residing in every town and city in Japan, and we should not appear ignorant in their eyes." This sounds wise counsel. And so the study of English has received a new and this time most probably lasting impulse. The schools are therefore making greater efforts than ever to employ those who speak fluent English and can cope understandingly with even Baconian intricacies of style.

ONCE ENOUGH.

KAWAKAMI OTOIRO's troupe of *soshi* actors are playing daily to crowded houses at the Asakusa-za, Tokyo, foreign patrons being in particular, according to the vernacular press, unusually numerous. We have already briefly noticed the play, a sort of melodramatic medley based on highly coloured versions of the naval engagement of Phung-do and the Sōng-hwan battle, where the "gallant little army" of Chinese is said to have made the best time on record in "concentrating rearwards." There is a striking similarity between the movements of the Chinese on this occasion and the bold action of Mark Twain and his fellow-pilgrims when, during their memorable journey through the Holy Land, the cry of "Bedouins ahead!" was raised. "I dashed at once to the rear," says Mark Twain, "to see if any more foes were coming in that direction. So did all the rest. We all remarked afterwards that if any had come upon us from behind they would have paid dearly for their rashness." At all events, the *soshi* actors are reaping a golden harvest from their daily imitation of the victory of the Japanese and the flight of their opponents. How one of the histrions was recently seized by an ardent patriot and well-dressed, is already familiar to our readers. And now the metropolitan journals report a fresh instance of like nature. In one scene, some Japanese soldiers are surprised by a mob of Chinese in ambush, and have to fight desperately. Just at this point two spectators sprang from the pit to the stage and begin hitting out right and left and howling over the pseudo-Chinese in a very thorough fashion. But this time the sympathy of the audience was not with

the assailants; one such scene was quite enough. The two men were at once seized and marched off to where their nervous temperament would have ample opportunity to calm down. The play then proceeded quietly.

REMARKABLE ARMOUR-PLATE TRIAL.

A REMARKABLE trial of English armour-plates recently took place, says *The Times* correspondent in the artillery polygon at Okhta, near St. Petersburg, with results that were certainly startling. There were three plates—one from Messrs. Cammell, measuring 8 ft. square and 6 in. in thickness, and two from Messrs. John Brown & Co., one being of the same dimensions as those of the Cammell plate, and the other 8 ft. square, 10 in. thick, and bent. All three plates had been face-hardened by the Harvey process. The gun used throughout was a 6-in. Oboukhoff of 45 calibres. The projectiles were of two sorts—namely, the latest improved Holtzer shell, made at the Russian Putilof works, and a similar shell with a Russian improvement, the secret of which is jealously guarded. The velocities of six rounds fired at the 6-in. plates were all about 1,850 foot-seconds. One round was fired with each projectile, which, on account of the curvature of the plate, struck with an obliquity of from eight to ten degrees. All the shells treated by the secret Russian process penetrated the targets entirely, and sped some thousand yards to the rear, while the other shells, under similar conditions, though obtaining greater penetration than has ever yet been reached by any projectiles known in England, were stopped and broken up. The secretly improved shells passed right through a wooden screen erected a short distance from the backing of the plates, so that there could be no doubt that they went through the plates undamaged, although no one was allowed to see them afterwards. It would seem that two lessons are to be learnt from this important trial. In the first place the Holtzer shell made in Russia is better than any known in England; and, secondly, the secret Russian improvement which it has always been expected would fail when tested by oblique firing has undoubtedly proved itself to be a remarkable success, and has placed in the hands of the Russian Government a projectile superior to any hitherto invented. The oblique tests in themselves will be immensely useful, as I understand that very little experience has up to the present been gathered by oblique firing against armour. This in real warfare would naturally be the rule and not the exception.

AUSTRALIAN IRON INDUSTRY.

So far nothing tangible has yet resulted from the efforts made during late years to establish the iron-making industry in New South Wales, although attention has from time to time been directed to many natural advantages possessed by several districts of the colony, namely, deposits of iron ore, with coal and flux in close proximity. The iron made in the colony at the present time is not from ore, but from scrap, and the quantity so manufactured during the year was 2,190 tons 11 cwt. 1 qr. 4 lb., valued at £14,786 6s. The Eskbank Ironworks, where this industry is carried on, are situated at Linlithgow, on the western side of the Blue Mountains, and employ about 150 men. In the Broken Hill district there were raised during the year 1,051 tons of iron ore, valued at £1,198. The bulk of this comes from Balaclava, about eight miles from Broken Hill, the rest of it being taken by the Proprietary Co. from the outcrop of the lode. It is solely used as flux.

"WILLIAM PITT."

THIS is the title of a little book of about 200 pages, containing an interesting biographical sketch of the great English statesman. The general arrangement of the work is based on the life of Pitt by Lord Rosebery, while for materials the author is indebted, besides to the book just mentioned, to writings by Macanlay, Goldsmith, and Lecky. The brochure before us contains portraits of the hero and his English

biographer, together with a short chapter on the latter, principally taken from an article in the *Review of Reviews* of March last. The first chapter in the body of the book, entitled "Who was Pitt?" is claimed by the author to be the result of original research. Therein Pitt is extolled as the model of a constitutional statesman, a personification of nearly all the qualities essential to true statesmanship. In describing the state of society in which Pitt moved and the political atmosphere by which he was surrounded, our author now and then lets fall significant, and generally well directed hints and reflections on the present state of things in Japan. The style is fluent and easy, though at times it is open to the charge of redundancy. Considered as a whole, the book is an exceedingly creditable performance, and the rising generation, for whom it is principally meant, is placed under great obligations to the author for the acquaintance it opens to them with one of the most remarkable characters in English History, we may say in the history of the world. The author is Mr. Takaki Nobutake, one of the brilliant band of young *literati* on the staff of the *Kokumin Shimbun*. An extremely young man, he has already made a reputation as a rising author by his *Life of Goethe*, the first work, we believe, ever published by him. Of that work we may speak at a future opportunity.

ALSACE AND LORRAINE.

Mr. SAMUEL JAMES CAPPER writes on the above subject in the *Contemporary Review*. He appears to have had a good deal of experience of the Franco-German war, and being greatly interested in the future of Alsace and Lorraine in connexion with the peace of Europe, he has recently spent six months in the annexed provinces to study the problems they present. According to the French, the chronic tension between France and Germany that has led to the arming of Europe to the teeth, and that is the cause of the standing menace of a great European war, is chiefly due to the seizure by Germany after the Franco-German war of the two provinces of Alsace and Lorraine, provinces which were originally, it must be remembered, parts of the Holy Roman Empire, and therefore historically German rather than French. Mr. Capper thinks that the French view is unsound. "With regard to it, I will now only remark that I am profoundly convinced from intercourse with large numbers of Frenchmen in France, and of French sympathisers in Alsace, that if Alsace and Lorraine had never been severed from the mother country, and even more, if to-morrow they were restored to France, the peace of Europe would not be materially advanced. France would still smart under her great defeat; she would still yearn for a *revanche*; but the possession of the great fortresses of Strassburg and Metz would give her a double-barrelled pistol to present at Karlsruhe, Stuttgart, and Munich. As an illustration of this, I may mention that when, a month ago, I passed a day in the company of my old friend, M. Emile Erckmann, known to fame as one of the authors of the immortal stories of Erckmann-Chatrian, he had been expressing the very natural and proper sentiment to him as a Frenchman that the cause of the present armed state of Europe and all our woes was the fact that Germany had dismembered France and taken territory, instead of being content with a few more milliards. "Yes," said a cory, an old gentleman who was present, "to take territory was contrary to the spirit of the age, and the occasion of all subsequent bad feeling. No, frontiers should be always respected; to alter them is barbarous." "Yes," chimed in M. Erckmann's housekeeper, an intelligent and educated woman, "all the mischief arose through taking the provinces." And almost in the same breath, she added, "There is only one natural frontier to France, and that is the Rhine;" and the old gentleman repeated with emotion, "Only one natural frontier, the Rhine." M. Erckmann said nothing; I think he must have seen the humour, not to say the irony, of the situation. Why is the Rhine the natural frontier of France by the Rhine should

Belgium and a great part of Holland, and of Germany, he absorbed in order to round off France? What good reason is there to call the Rhine the natural frontier rather than the Elbe, the Oder, or the Vistula? Yet this is what French people feel even after all their defeats and humiliations. It was because Napoleon III. felt that if he could but give to France the frontier of the Rhine he would assure his dynasty for, at least another generation, that much against his natural will and inclination he made war in 1870." It must be remembered that as far as sentiment was concerned, in 1870 Germany was wild with enthusiasm at the thought of taking back the provinces that for two centuries had been under foreign domination. The Germans probably did not realise how great would be the antipathy of the inhabitants to coming under German rule, and when that antipathy manifested itself it was at first unwisely met by repressive measures. But after all it was not sentiment that led Germany to annex the two provinces, but the necessity for defensive purposes that Germany should hold the great fortresses of Strassburg and Metz; and it is not by sentiment, not by the sentiment of the French nation at least, that the rightness of the retention of Alsace and Lorraine by Germany should be judged. The real question of importance is the sentiment of the provinces themselves. As long as the old patriotism subsists to an extent that might seem to justify a rebellion, if rebellion were likely to be successful (and rebellion can hardly ever be justified except by success), so long might it reasonably be held that France would have the right to go to war with Germany for the recovery of the lost provinces. Now, according to Mr. Capper, the diffusion of German education and the wise and lenient government of the provinces during the last few years have tended to dry up the springs of anti-German sentiment, and to render the people ripe for a truly national absorption into Germany. "The strong sentiment obtaining at this moment in Alsace-Lorraine in favour of France seems to me closely analogous to the Jacobite sentiment which lingered in Scotland until the beginning of this century. It was powerful as a sentiment long after it had ceased to be a motor of practical politics. There is also, doubtless, in Alsace the feeling of patriotism among those who still regard themselves as French. They will speak either French or the Alsatian patois, but German they will not speak. The President of the Evangelical Synod at Metz, who has been there now for twenty-three years, came originally from Mülhausen. At Metz he preaches in German, and has now little occasion to use the French language. When, however, he visits his friends at Mülhausen they will not suffer him to speak German. He may please himself whether he will speak French or the Alsatian patois. To speak German would be to show that he had become a "Prussian." On the other hand, the Burgomaster of Strassburg, who is at the Town Hall all day and every day, where he receives all sorts and conditions of men and women, told me his French was growing quite rusty, because he hardly ever had occasion to use it."

A LITTLE THIEF.

WHETHER kleptomania be hereditary or not, it is at all events pretty certain that the mania does sometimes appear in the form of an incurable infirmity. Otherwise it would be difficult to explain the extraordinary performances of the fourteen-year-old daughter of a petty merchant in Tokyo, who is now undergoing her third term of imprisonment for larceny. Though not in need of money, she seems incapable of keeping from theft. Her last escapade was the stealing of quite a quantity of jewellery from a friend's house. This was at once turned into cash, and with the proceeds the little kleptomaniac went out junketing to Asakusa Park and various other places of amusement. When arrested and accused of theft she confessed her fault very coolly and seemed to think that she had done nothing much out of the way. The plea of mental

mania will, however, not be put in this time. She is to have five years in the penitentiary in which to learn the vast difference between *meum* and *tuum*.

MR. TATENO.

The *Washington Post* has the following about Mr. Tateno:—

Mr. Gozo Tateno has served as Japanese Minister in this country for nearly four years, a term of service longer than that of any of his predecessors, except possibly Mr. Yoshida. He is now, in the due course of official routine, summoned to Japan, there, as is the rule with officials of his class, to assume the responsibilities of office in one of the home departments, or to go to another foreign post.

Mr. Tateno during his service as Minister to this country has succeeded in maintaining, and, indeed, increasing, all of those relations of hearty good-will and cordial friendship which have marked the official intercourse between the United States and Japan. The Japanese Legation has always been a potent factor in the creation of these pleasant relations, and it is no small praise to say that Mr. Tateno has done his full share in sustaining the traditions of his office. In his own country, first as an official of the Imperial Household, he came into close contact with Gen. Grant during his visit to Japan, and he received then and afterward many tokens of the cordial friendship which the distinguished soldier had formed for him. Subsequently, as Governor for ten years of the city of Osaka, the commercial metropolis of Japan, it was Mr. Tateno's fortune to be able to render many kindly offices to the American residents of that city. So that when he came to the United States as Minister he brought with him an enviable reputation as a liberal and intelligent official, and as a man of many pleasant social qualities. It is perhaps the highest praise we can render him to say that his career as Japanese Minister to the United States has fully justified the reputation. Mr. Tateno will take with him the good wishes of all who have had the good fortune to meet him here, and no good fortune can befall him in the future without gratifying hundreds of his American friends.

FUNERAL OF THE LATE MR. MOGI YASUBEI.

ONE of the most magnificent Japanese funerals seen of late years in Yokohama took place on Sunday, when the remains of the late Mr. Mogi Yasubei, head of the wealthy firm of Nozawaya, silk merchants, were interred in the Soto-ku-in, Motomachi. The ceremony was conducted according to the Buddhist rites of sepulchre and lacked nothing in the way of gorgeousness both of priestly vestments and ritual. The coffin, which left Bentendori at 2 p.m. was preceded by the Town Band and followed by an immense mourning train. Flowers and funeral ornaments sent by friends and connections were exceedingly numerous and took a very long time to reach the temple. The gifts to the poor of Yokohama and persons attending the funeral either as mourners or spectators were on a most lavish scale.

A SYMBOLICAL BATTLE.

THE *Chu-o Shimbun* reports that a few days ago in Fukuyama, Fukushima Prefecture, a hotly-contested battle took place between a host of dragon-flies and a flight of swallows. What the reason of the disagreement was our contemporary fails to note; at all events the conflict lasted for some hours, the swallows finally giving way before the pertinacious attacks of their pigmy adversaries. So far so good, although a naturalist would hesitate to place full credence in the above narrative. Its value, however, is at once apparent when we remember that *Akitsu-shima* "The Dragon-fly Islands" is an old poetical metaphor for Japan. The swallows are mere vagrants and not residents, hence may be considered as foreigners. Moreover, the majority of the fleet-winged *Cypselidae* who periodically visit Japan come from Formosa or Southern China, where they spend the winter months. And the moral of that is, to quote the Duchess in "Alice in Wonderland," "the more there is of mine the less there is of yours."

MR. EDMUND YATES' WILL.

MR. EDMUND HODGSON YATES, of 1, York-street, Covent-garden, and 2, Eaton-gardens, Hove, who died at the Savoy Hotel on May 20 last aged 63, left personal estate of the gross value of £31,719 11s. 2d. Mr. Yates desired that immediately after his death his jugular vein should be opened by his medical attendant or some other surgeon, and that a fee of 20 guineas should be paid for the operation. He also desired that his body should be cremated. His books are to be sold by Christie and Manson, Solicitors and Comptroller, or some other firm of auctioneers. It was his wish that the *World* should

not be sold. He bequeathed all his interest in that periodical and the properties connected therewith to trustees who are to carry on the publication for 21 years and are to receive liberal remuneration in each year when the profits exceed £4,000, and are also to accumulate a reserve fund for the equalization of dividends.

THE "HOCHI" ON THE DIPLOMATIC NOTES APPENDED TO THE ANGLO-JAPANESE TREATY.

Among the objectionable points in the new Anglo-Japanese Treaty, that which strikes the public most must be, says the *Hochi*, the article that defers the enforcement of the new Treaty for five years. It is true that when it has been in force for twelve years Japan will be entitled to revise the Treaty once more and to conclude a new one on the footing of perfect equality; but the longer the enforcement period is postponed, so much the more distant is the date at which a new treaty on the footing of equality can be made. We suspected, says this organ of Count Okuma's party, that there must be some definite cause for postponing the enforcement of the new Treaty for five years and the explanation is given in the diplomatic note published in the latest issue of the *Official Gazette*. In the note it is stated that the Imperial Japanese Government recognizes the advantage of having the Codes of the Empire already in operation when the Treaty stipulations at present subsisting between the Government of Japan and that of Great Britain cease to be binding. This explains why the period of the enforcement of the new Treaty is to be postponed so long. The note says that it is advantageous to Japan to have the Codes in operation when the Treaty stipulations at present subsisting between the two Powers cease to be binding; for our part we do not think, continues the *Hochi*, that the immediate enforcement of the new Treaty would be attended with any disadvantage to Japan, seeing that there are, in default of the Codes, Regulations and usages relating to civil and commercial affairs. On the contrary, it is a disadvantage to Japan that the period at which a new equal treaty may be made should be deferred to so distant a date. Now everybody knows that to make Treaty Revision conditional on the enforcement of the Codes was one of the points strongly censured by the public whenever Treaty Revision has been under consideration, on the ground that the independence of the Japanese Legislature would be invalidated by such a condition. In the present case, however, Japan takes the initiative in the matter, and intimates that the period of the enforcement of the new Treaty shall be deferred till the Codes are put into operation. This is only a plausible way of evading the charge of abandoning the independence of the Japanese Legislature, while on the part of Great Britain the result is practically the same as if the coming into operation of the Codes were made a condition precedent to Treaty Revision.

OUTLOOK FOR TEA AND RICE PRICES.

The war between China and Japan, says *Bradstreet's*, occurs at the time of the year its influence on our rice market would be the least felt. We are about entering upon the new crop of domestic rice, and importations of foreign rice are made with careful reference to the actual demand for the brief period intervening before the arrival of our new crop. "No China rice is received in this country east of the Rockies, and the season for the importation of Japan rice has passed, and all contracts for present supply have been filled, hence we do not see why the war should affect the market here. Should it continue for several months, the prices of next season would be affected thereby. What other causes may come in to influence the market one way or the other are not connected with the war, except that conditions attending such hostilities always affect prices of breadstuffs more or less." So report Dan Talmage's Sons. The price of tea has been little affected so far, although the increased demand for teas within the past week has been quite perceptible, and we judge this has been occasioned somewhat by the war news from the East. This has been principally in New York and Boston, and we might

note some increased demand from Chicago, but the country generally has shown no inclination to increase their purchases over ordinary trade demand. From cable advices the crops of tea are likely to be as large as last year, and unless the China ports are closed there is no reason to expect any very material change; but if the different tea ports are closed, of course the export for the season would be much curtailed, and as the trade in the country have only moderate stocks, there would be a fair prospect of seeing rather higher prices, especially as teas are exceptionally low at present. "We are unable to cable to Foochow in cipher," say Carter May & Co., "but with other tea ports we are in daily communication, and our dispatches in a general way confirm newspaper reports."

KOREAN NOVELTIES.

In keeping with the general tendency to learn as much about "Things Korean" as possible, several of the metropolitan *Ko Shimbunshi* are now publishing novelettes or serial stories based on Korean episodes, or the scene of which is laid in the Peninsular Kingdom. Particularly amusing and well-written is the serial entitled *Chosen Seibatsu*, or "The Korean War," which is now appearing in the *Miyako Shimbun*, the rival of the *Asahi* in all that appertains to the best modern light literature. The tale deals with Hideyoshi's Korean expedition, and is for the most part historically authentic. The increased demand for *Chosen-asago*, that species of the convolvulus which is popularly supposed to have been introduced from Korea, is also well-known to florists, who in consequence, despite the lateness of the season, are setting out young plants and even raising some from imported seeds.

GENDER AND THE WOMAN'S MOVEMENT.

A NOTWORTHY minor manifestation of the most important movement of our time—most important because destined to be of transcendent influence in the moulding of human character and human destiny—is the gradual disappearance of distinctions of gender from our language. We no longer speak of a woman who writes poetry as a poetess, a woman who devotes herself to literature as an authoress, a woman who carves statues as a sculptress. Such woman are poets, authors, and sculptors, just as the men are—the sex is lost in the art. The boldest divergence from the old usage we have yet seen occurs in the July number of the *Review of Reviews*. In this magazine is published a list of fifty "men of letters and of science" who have signed a certain memorial. Now of these fifty men, no less than eight are women!

FUNERAL OF MR. RICHARD INGLIS.

THE funeral of Mr. Inglis took place yesterday, starting from the Masonic Temple, and was numerously attended, both by the Masonic Fraternity and by officers of the Nippon Yusen Kaisha, the chief officials from the Head Office in Tokyo being also present. Mr. Inglis came to the East in the service of the "Castle" line of steamers, subsequently joining the Mitsui Bishi Company, and after several years afloat as "chief," was appointed "superintending engineer" (out-doors) of the Nippon Yusen Kaisha, in which service he gained the respect of all with whom he came in contact through his ability and his trustworthy character and amiable disposition.

NEW STEAMERS.

THE Agent of the "Shire" line of steamers at this port, Messrs. Dodwell, Carlill and Co., have received a telegram stating that the three new steamers ordered by the company will be ready for delivery in November next. These vessels will have 12-knot speed, and be placed on the Japan berth.

FOUND DEAD.

ON Sunday afternoon, the 2nd instant, the body of a young woman, about nineteen years of age, was found washed up on the sand bar opposite the Hotel Metropole, Tsukiji. Decomposition had not yet set in, and a jagged cut some three inches long was found in the neck, the larger

arteries being severed. The feet were securely tied. Suicide appears to be out of the question, and the theory of the police is that she had attempted to die with her lover, getting him to cut her throat before being thrown into the river. The man must thereafter have lost courage and decamped. What makes the case unusually sad is that the poor girl would have been a mother in another two or three months.

LEFT FOR THE SEAT OF WAR.

THE *Yifu* says that a large number of distinguished persons assembled at Shimbashi Station at two o'clock on Tuesday morning. Among those present were Counts Ito, Inouye, Saigo, Oyama, and Kuroda, Messrs. Yoshikawa and Watanabe, Viscount Hijikata, Lieutenant-Generals Takashima, Miura, Soga, Shigeno and Torio, Prince Iwakura, Viscounts Shinagawa and Kagawa, Major-Generals Kodama, Okayama, Tanaka and Nogi, Messrs. Kiyoura Keigo, Ito Miyoji, Shirane Senichi, Sonoda, and Miyoshi Taizo. The name of the departing officer did not transpire, but he is believed to have been General Viscount Yamagata. Mr. Komura, Japanese *Chargé d'Affaires* at Peking, left the capital for Korea the same morning.

ARRIVAL OF THE "SHIBATA MARU."

THIS vessel, which is the crack Hankow tea steamer *Moyun* renamed after being purchased by the Nippon Yusen Kaisha, arrived here yesterday from Cardiff direct, having come up through the Straits of Sunda to escape capture, as it was known that the Chinese had been informed of her passage through the Canal, and were keeping a sharp look-out for her along the usual route. She was out from Cardiff 33 days and steamed 8,900 miles right off, her engines never being at rest. The Company and the Captain are to be congratulated on the safe arrival in this harbour of so valuable a ship as this, the latest addition to the fine fleet owned by the Nippon Yusen Kaisha. She was brought out by Captain Matthias.

THE RUMOURD MURDER OF FIFTY JAPANESE IN FORMOSA.

THE *Yomiuri* states that a Nagasaki correspondent has written to a person in the capital to the effect that the rumoured murder of over fifty Japanese, engaged in camphor making at Taiwan, Formosa, is a fact beyond doubt. The intelligence was brought to Nagasaki by one of the ill-fated party, who had a narrow escape from sharing death with his comrades. The Japanese camphor-gatherers were murdered by Chinese, and all the property belonging to them was appropriated by the assassins. The murders are said to have occurred before the declaration of war between China and Japan.

DEATH OF MR. PH. VON HEMERT.

WE regret to record the death at Hakone on Monday forenoon of Mr. Ph. von Hemert, one of the oldest residents of this port. The deceased gentleman had been in failing health for some time past, and only left for the Hakone Hills a few weeks ago in the hope that the cooler atmosphere there would brace and invigorate him. This, however, was not to be. He leaves two sons and one daughter, for whom general sympathy has been evoked in their irreparable loss.

THE SPREAD OF CIVILIZATION.

WITH this title the Chicago *Journal* publishes a clever woodcut illustrating the China-Japan war. Beneath a picture labelled "European Fashions," containing four figures representing respectively England, France, Germany, and Russia, all armed to the teeth, and each threatening all the others, stand the figures of China and Japan. They are in military dress, and are flourishing sword and revolver. Japan is saying to China, "Come on, John; let's show him that we're just as advanced Christians as they are."

DECORATIONS.

THE reported presentation of decorations in recognition of services rendered in accomplishing the revision of the British Treaty is now an accomplished fact. The following gentlemen have been honoured: Viscount Aoki, Envoy Extraordinary and Minister Plenipotentiary, re-

ceives the Grand Insignia of the Order of the Rising Sun; Mr. Hayashi, Vice-Minister of Foreign Affairs, the Second Class of the same Order; Mr. Nakada, Private Secretary of the Foreign Minister, and Mr. Sato, Secretary in the Foreign Office, the Fifth Class of the same Order; Mr. H. W. Denison, Foreign Adviser in the Foreign Office, the Second Class of the same Order.

HOT WEATHER.

A CORRESPONDENT of the *N.-C. Daily News*, writing from Kiukiang on the 25th ult., states that the thermometer there registered 106° in the shade on the previous afternoon. There was, however, no sickness in the port. The temperature at Sicawei on Saturday (Aug. 25th), rose to 102.9°, a similar point having been reached on the 14th of August, 1892; which is the highest temperature recorded since the commencement of the observations in 1873.

A COLLISION CASE.

IN reference to the Arbitrator's award in the arbitration case concerning the collision between the *Chingtu* and the *Pallas*, formerly the *Kachidate Maru*, the *N.-C. Daily News* understands that both sides having been found in fault, there will be, in accordance with the terms of the submission, a further reference to the Arbitrator to determine the amount of damage, and each side will bear half the total loss.

THE "KOWSHING'S" OFFICERS.

MR. TAPLIN, chief officer of the ill-fated *Kowshing*, has left for home by the P. & O. *Surat* from Shanghai. Captain Galsworthy is proceeding home by the N.P.R. steamer *Victoria* via Tacoma. It was reported in Shanghai that they had been ordered home to give evidence as to the sinking of the *Kowshing*, which is to be made the subject of a searching inquiry by the British Government.

ELECTRIC LIGHTING IN BANGKOK.

THE *Siam Free Press* leads the public to expect the lighting of the principal thoroughfares of Bangkok with electricity in another month. Already, says this journal, the first step has been taken, and the eight incandescent lamps which are burning every night at the Patto San Yot gateway are a proof of the fact that the Siamese are off with their old love, the kerosene dip, and are now enamoured of the pure white light of the *farang*.

CURIOUS ACTION.

A REMARKABLE action against an East Lancashire newspaper has been entered for trial in London before a special jury. The plaintiff, a well-known Lancashire solicitor, claims damages and an injunction, alleging that his practice has been injured by the newspaper's withholding his name in cases where he has been successful as an advocate, and only giving it in cases which he has lost. Eminent counsel have been briefed on both sides.

HONGKONG FREE OF PLAGUE.

THE Agent of the Pacific Mail has received a telegram from Hongkong stating that the port has been declared free from plague, consequently clean bills of health are now issued to all ships leaving. The agents of the Canadian Pacific have received a telegram from Hongkong advising that the Plague Proclamation was withdrawn on the 3rd inst.

PAUCA VERBA.

A JAPANESE familiar with English is responsible for the atrocious statement that the conversation to be held between the Japanese commander-in-chief and the Chinese Generals at Phyong-yang, upon their capitulation, will be restricted to Yeh, Yeh, and Nieh, Nieh.

THE STRANDING OF THE "NAM YONG."

THE Marine Court of Inquiry sitting at Singapore to inquire into the circumstances of the stranding of the steamer *Nam Yong*, while on a voyage from Java to Singapore, found that the ship was not navigated in a careful and sea-

manlike manner. Captain Nicol was severely censured and his certificate was suspended for four months.

NEW JAPANESE MINISTER-RESIDENT TO HOLLAND AND DENMARK.

MR. AKABANE SHIRO, First Secretary in a Japanese Legation, who was promoted on the 3rd inst. to the rank of Japanese Minister-Resident, has been appointed to the Court of Holland. He is also commissioned to take charge of his country's diplomatic business in Denmark.

THE NEW RUSSIAN PROJECTILE.

THE secret of the Russian projectile which was recently tried and found so successful in penetrating armour-plates is said to have been discovered by a firm in Sheffield, who have offered to supply the Government with shells similar to those used in Russia.

THE MURDER OF PÈRE JOSEPH JOZEAU.

DEFINITE news has been received in Shanghai that Père Joseph Jozeau was murdered at Hong-ju on the 29th July, not by Koreans, as previously reported, but by Chinese soldiers. Hong-ju is a short distance south and a little east of Yashan.

FIRE IN SHANGHAI.

AN extensive fire broke out about 9 o'clock on the evening of the 28th ult. in the Honan Road, Shanghai. The damage done could not have amounted to less than Tls. 100,000, one long alone being insured in five or six companies for Tls. 40,000, and there will be little salvage.

THE *Kokumin* states that Mr. Sone, Japanese Minister to France, has reported to the Japanese Government that France has resolved to maintain strict neutrality although she will not declare it formally.

FORLORN BRITONS.

Many admirable things have been written and spoken by the journalistic opponents of Treaty Revision during the past fourteen or fifteen years, but we think that the palm of originality and graceful patriotism belongs to the proposal most recently advanced, namely, that since British subjects in Japan find themselves betrayed and deserted by a worthless, incompetent, and craven Government like that of Lord Rosebery's, they should appeal to the Governments of America and the Continental Powers to interfere between them and the misfortunes entailed by the Downing-street statesmen's infatuation. Nothing could be more opportune or dignified than the suggestion. British subjects have never been troubled by scruples about assuming a supplicatory attitude towards foreign countries; have never been accustomed to think that the United Kingdom's prestige would suffer by an open confession that its rulers are cowards and incapables; have never taken any pride in the fancy that a Britisher, in whatever part of the world he may find himself, is sure of at least as good protection from his Government as is a citizen or subject of any other Power. Not being disturbed by any of these notions or sentiments, Englishmen will be well advised if they go on their knees at once to whatever Western State has not yet betrayed its people into Japanese hands. Portugal or Spain might be induced to step into the breach and ward off the calamities that her Britannic Majesty's Ministers have condemned their unfortunate nationals to suffer. The thing had better be taken into *avisandum* at once. The Citizens' Committee have been sleeping for four years, and it is now high time that they should wake up and make arrangements for forwarding to Washington, Vienna, Rome, or Madrid a petition signed by all the British subjects in Japan, praying to be protected against the blunders of Her Majesty's advisers. It is a miserable thing to be a Britisher, anyhow, but it would be worse if we could not count on some sympathy and assistance from foreign Powers when our own Government shows its helplessness to protect us.

KIND WISHES.

We are informed by the *North-China Daily News* that "nearly all the foreigners in Japan and Korea, that is, those who come most in contact with the Japanese, hope, as far as our information goes, that Japan will 'get a licking' in the present war." That is a large proposition, but our perspicacious contemporary supplements it, a few lines further on, when it says:—"Many foreigners in China are inclined to think that a good licking will do the Chinese Government good, but they are only willing to see Japan administer this medicine on condition that some one subsequently gives Japan a full dose of it. It is felt everywhere in the Far East that if the Japanese bring China to her knees, they will be insupportable; while it is not thought that China, if she is finally victorious, will be any more disagreeable than usual." There is nothing like brutal candour. The *North-China Daily News*, at all events, wants Japan beaten, and generally one finds little difficulty in persuading oneself that what one wants very badly, a great many others must want also. But is there not something sublimely audacious in this proclamation of ill-will? Fancy a little community of Orientals living for purposes of trade in England or France who should proclaim, through their journals, that they want the country of their temporary adoption to get a good licking when it is engaged in a war of the most vital importance. There need not be much doubt about the reward that such a community would bring upon its head. But here it would seem that the patience of the Japanese is supposed to be inexhaustible, and their affection for foreigners to be proof against every shock. At a supreme crisis of their national career we tell them, in the loudest and frankest manner that we want to see them worsted, and we expect them, nevertheless, to go on liking us! Happily, however, if the latest assurances of the foreign local press of Yokohama may be trusted, the foreigners in Japan do not want to see Japan beaten. Quite the contrary.

ARREST OF A BANK ROBBER.

THE *Yif* states that a Japanese, named Okabe Meiji (26), eldest son of Okabe Hanbei, the keeper of a pawn-shop at Kagacho, Kyobashi, Tokyo, was arrested in the capital on the 5th inst. on a charge of having obtained yen 6,500 by fraudulent misrepresentation from the Hongkong and Shanghai Banking Corporation at Yokohama. The man has been sent to the Yokohama Police Office. Harada Matsutaro (28) and Yamagami Michizo (27) have been arrested as accomplices. Okabe was formerly an employé in the Mitsui Bussan Kaisha, and upon leaving it went into the employ of a foreign firm at Yokohama, leaving the latter company in March last. Harada attempted to proceed abroad, but was arrested at Kobe.

It appears that the fraud perpetrated on the Mitsui Bussan Kaisha came about in the following manner. A draft purporting to be drawn by the manager of the Japanese firm here in Yokohama against a shipment of sulphur consigned to the Mitsui Bussan Kaisha's branch in Hongkong, was presented to the Yokohama branch of the Hongkong and Shanghai Banking Corporation, and was duly negotiated. The draft was then sent down to the Head Office of the Banking Corporation, Hongkong, and was duly honoured by the Mitsui Bussan Kaisha there, no suspicion of its fraudulent nature being entertained by the Japanese firm. The Mitsui Bussan Kaisha lost no time in putting the matter in the hands of the police upon the fraud being discovered, with the result that three men are now in custody.

The French have introduced coffee culture in Tonquin with good prospects of success. Both the Liberian and Arabian varieties of coffee trees are cultivated, and all are reported as doing well.

KOREAN AFFAIRS.

The following telegram, dated Fusan, August 31st, 2.20 p.m., is said to have been received in Tokyo:—"The Japanese army has advanced as far as Nam-chhon, and, in consequence of information obtained by scouts, has laid out military cordons against the Chinese." The exact position of Nam-chhon is not known, but it must be somewhere about seventy-five miles from Söul, and about fifty from Ph्यों-yang. This report remains to be confirmed, but if it be true, it must be inferred that the Japanese army is gradually approaching Ph्यों-yang. According to mail advices from Söul under date of August 25th, it seems that the advance guard of the Japanese army which had gone forward as far as Ph्यों-san and Su-heung had been called back to Kai-söng where the main body of the army was stationed. Simultaneously with this retrograde movement of the Japanese vanguard, all the Chinese troops that had marched across the Tai-dong-gang are said to have fallen back upon Ph्यों-yang.

The following telegram, dated Fusan, August 30th, 6.35 p.m., is published in the *Nichi Nichi Shimbun*:—"The two Chinese Generals, Yeh and Sheh, with 2,000 troops under them, the remnant of the army routed at A-san, have joined their countrymen at Ph्यों-yang by a circuitous route."

The following telegram is also said to have been received from Fusan on the 1st instant:—"The Japanese residents at Wön-San will all leave for home on the 7th instant." Commenting on this singular intelligence, the *Nichi Nichi* opines that its countrymen at the northern port in Korea may have decided on the course attributed to them from the fear of the possible arrival of Chinese braves from Ph्यों-yang.

A number of Japanese ladies at In-chhön have volunteered as nurses. They left for Yong-san on the 23rd ultimo. They are the wives and daughters of the leading residents at In-chhön.

It seems, according to the guarded statements in the vernacular press, that General Count Yamagata, Commander-in-Chief of the Japanese Army in Korea, left the capital on the evening of the 3rd instant or early the next morning.

It is stated in the vernacular papers that Bok Yeiko is still staying inactive in a suburb of Söul, because of the jealousy of the party of Gio Inchu, who hates Bok, and opposes the design to give him any influential position in the new Korean Government.

The telegram said to have been received by a Yokohama firm stating that the Japanese fleet has bombarded Port Arthur is generally discredited in Tokyo.

We learn from the *Kokkai* that a message reached Tokyo on the 3rd instant to the effect that an insurrection had broken out in the Shantung district and that a detachment of troops despatched from Wei-hai-wei had been routed by the insurgents. The *Hochi* says that according to a telegram that reached Tokyo on the 3rd instant, from Kai-yang via Fusan, a heavy rain-fall occurred in Ph्यों-an-do for several successive days, causing the rivers of the district to inundate the adjoining lands. The Tai-dong overflowed its banks, carried away the bridges constructed by the Chinese troops and even damaged to no small extent the fortifications thrown up by them along the bank. It is also stated in that paper and others that a similar inundation has occurred in Pechi-li, China, causing loss of life and extensive damage to property. The *Hochi's* Saseho correspondent writes that, according to information from a trustworthy quarter, the well-diggers sent to Korea a few weeks ago have succeeded in finding good underground springs from which the men-of-war in Korean waters can now be supplied, so that water need no longer be sent from Japan. It appears that the daily allowance of drinking water to each man on board a Japanese man-of-war has hitherto been only one go a day; it is difficult to credit this statement.

For the past few days it has been reported that within three weeks the expected battle

Ph्यों-yang will be fought; but it is now stated with confidence that the encounter between the two armies will not be delayed more than a week. There are rumours of a daily increase of Chinese forces at a Ph्यों-yang. But, according to trustworthy reports, it does not appear that the whole army stationed there exceeds twenty thousand, even including the Korean auxiliaries numbering three thousand. It may, however, be that fresh reinforcements will join the Chinese army before the Japanese attack takes place. Much impatience is manifested on account of the delay. But it must be remembered that the expulsion of the Chinese from Ph्यों-yang is not the ultimate aim of the Japanese army. Were that the only object in view, the attack would have been made long ere this. The thorough preparations which are now being made, and which necessitate the present delay, have a far more important object in view. Besides this necessity for thorough preparations, another circumstance doubtless enters into the consideration of the Japanese military authorities, and it is that in the northern part of Korea and in Manchuria, the months of July and August and part of September are unsuited for serious military operations not only on account of heat but on account of frequent inundations. It is confidently expected by well-informed persons that when the Japanese army once begins to move its actions will be rapid and decisive.

The recent inundations of the Tai-dong river are said to have caused much damage to the fortifications, etc., constructed by the Chinese army, the principal among which is the destruction of a pontoon-bridge.

The *Nichi Nichi Shimbun's* Shanghai telegram, dated the 5th instant, announces that Wu Ta-cheng has been appointed Commander-in-Chief of the Chinese army in Korea, and that he has already left for Ph्यों-yang at the head of a select body of troops.

There is a rumour that the Viceroy Li has started or is about to start for Moukden, where the head-quarters of the Chinese army will be established.

The *Kokkai's* Söul correspondent reports that the Korean Government has decided to notify to the foreign Governments the fact of its alliance with Japan, and that as a consequence of this decision a body of Korean troops under Li Toko has been ordered to proceed northwards to join the Japanese army. By alliance is probably meant the coöperation of Korea with this country in the coming invasion of China.

Concerning the Commission appointed by the Chinese Emperor to investigate the conduct of the Viceroy Li, a singular story is circulated in the Japanese papers. According to this story, one of the Commissioners, Chang Chi-tung is said to be acting in concert with Li. Chang has long been known as one of the greatest rivals of Li, but they are now reported to be in secret alliance for mutual assistance. Li wants a friend to protect him from the machinations of the Ministers at the Court, while Chang is equally in need of one to help him out of the embarrassments in which he is involved in connection with the iron works. Reciprocal services have for the time united the two rivals, and their union, it is said, has once more made the Viceroy Li master of the situation. We reproduce this story for what it may be worth.

According to the *Asahi Shimbun's* information, the forts of Wei-hai-wei are said to have been seriously damaged by the bombardment of August 10th. Fort No. 2, says our contemporary, was completely demolished, while such injury was done to the seven guns of the fort that they are entirely unfit for use. Only one shell from the forts is said to have touched the Japanese fleet.

Concerning Yuan Shikai, formerly the Chinese Resident at Söul, contradictory reports are published by the Japanese papers. It was at first reported that he had committed suicide soon after his return to Tientsin. This was succeeded by another report that he had died of fever. Subsequently it was stated that he was at Ph्यों-yang in command of the Chinese troops there. But now the story of his death by fever has again been revived with circumstantial cre-

dentials. It is said he arrived at Tientsin on the 22nd of July, where he at once saw his chief, the Viceroy Li; that being then seriously ill, he stayed at his chief's house; and that he expired at 10 a.m. on the 25th of the same month.

There is a report that Minister Wong on his return to Tientain fell into disgrace with his chief, Viceroy Li, on account of his want of skill in managing the diplomatic affairs under his charge while he represented his country at this Court.

The Chinese captives taken at Söng-hwan are now staying at Hiroshima. They are said to be greatly pleased with the handsome treatment they are receiving there. They do not know a word of Japanese, and their wants have to be conveyed through the interpretation of a staff officer of the Garrison.

Later.

According to telegrams received in Tokyo from Fusan on the 6th instant, it appears that the attack on Ph्यों-yang by the Japanese army is daily expected at the above mentioned Korean port. According to the *Kokkai*, Lieutenant-General Nozu, the Commander of the Japanese army, is said to have left Söul on the 1st instant, while Major-General Tatsumi marched northward on the same date by a different route. At all events important news may be expected in a couple of days.

The *Nichi Nichi Shimbun's* Fusan correspondent telegraphs as follows, under date of September 5, 5.10 p.m.:—"According to a despatch from Söul, things are said to be very quiet there. Means of transportation being extremely bad, the residents in the capital are complaining of the scarcity of necessities. Marquis Saionji is daily paying visits to the King at the Palace; exchange of social entertainments are frequent between the Japanese and the Koreans, between whom there is now perfect friendship. The Tai Wön-kun is a frequent guest at banquets given by the Japanese. Business in the various Departments of State is in a state of great confusion. Every Korean of note has come to feel keenly the necessity of reforms, but the principal difficulty in the way is the want of a man of sufficient weight and ability to superintend the work of reforms. Finance is in an embarrassed condition, but with proper management, it will not be difficult to get a revenue of from 8 to 10 million yen."

The following telegram has been received from Fusan, under date of September 5th, p.m.:—"The Chinese fleet which had been hiding in the Gulf of Pechili is reported to have come out to Wei-hai-wei a few days ago."

MR. STEAD & ADVANCED WOMEN.

In the latest issue of the *Review of Reviews* Mr. Stead devotes a long article to Advanced Women, and gives the portraits of some of those who have lately written popular books. It is a matter of grave doubt whether a long succession of Spiritualism, Mental Telepathy, Theosophy, Madame Blavatsky, Mrs. Besant, and lastly Borderland, has not slightly upset the centre of Mr. Stead's intellectual gravity. The article is calculated to do not a little harm to the cause of women's higher education, for many mothers, aye and fathers too, are apt to think on reading such a paper if the advancement of learning has no better effect than to set the minds of their daughters grovelling in the subjects set forth in these effusions, less education would be more wholesome and they would be healthier and better perhaps if they were brought up in the sweet simplicity of their grandmothers, since the result as far as the minds of the new writers are concerned has not been elevation—but rather degradation.

Women sometimes are apt to forget they hold the future conduct of men in the palms of their hands. Are they not the mothers of the future men? Why complain that the age of chivalry is a thing of the past, when by the power of teaching by precept and example they can mould them into what they will, if they wish it shape them into the most chivalrous gentlemen. Let them give purity for

purity, and respect and consideration will most certainly follow in their train. Mr. Stead speaks of Sarah Grand having boldly walked up to the portal of Silence and bombarded it. Let me ask him what ultimate good is likely to accrue from open discussion of subjects like these between men and women. One of women's greatest safeguards is modesty of thought and speech, and if these are torn asunder, will the breach made tend to ultimate increased morality. The "Heavenly Twins," for instance, talked over between girls and young men, cannot fail to suggest many evils in existence that Sarah Grand will never cure, and which had better be forgotten than made a matter of open discussion between the sexes. But the worst evil that is likely to arise from a paper so widely spread and generally read as the *Review of Reviews*—is the mischief that is likely to come from the unfortunate allusion to the one sad mistake of George Eliot's life. No better illustration of the fallacy of the doctrine, "Do evil that good may come," can be presented than that the lifelong sacrifice she made for the man she loved, is now being held up as an excuse for the misconduct of others. As her life does not readily fall into everybody's hand a few words in extenuation may here be introduced.

When George Eliot was a schoolgirl she had a companion named Sarah Henning, to whom she was very much attached. This girl had a brother who was a ribbon manufacturer at Coventry, and his business took him frequently to Germany, where he became imbued with the free thought of the time. Eventually he wrote a book on the life of Christ, and this book George Eliot read. From the very moment she began to doubt the Divinity of Christ her whole life was upset. To begin with, she felt she could not go to Church, and quarrelled with her very Calvinistic father in consequence. Finally she left home for good, and applied herself regularly to literature. Eventually she made the acquaintance of George Henry Lewes one of the cleverest critics of the day. He was a married man, but permanently separated from his wife; it has been said she was hopelessly insane, but a profound silence has been maintained on this subject, and only a few know the real cause of the separation. George Eliot believed there was a higher marriage law than the civil or religious rite, but she never for one moment expected other people would think as she did, and was fully aware when she left England for Weimar with Mr. Lewes, that the step she was taking would be misunderstood and that she was raising a barrier that would exclude her from society generally. On her part it was an act of "abnegation of self and devotion to others." As no one can sin against a social law and not suffer—she was fully prepared to pay the penalty demanded, as the sole letter written on the subject to her friend Sarah Henning shows. Through many long years she worked side by side with Mr. Lewes and helped to maintain his wife and two sons. Mr. Stead's readers must not suppose for one moment that the work done in the world by the advanced education now given to girls results solely in outpourings such as *Mona Caird*, *Sarah Grand*, and *Mrs. Mannington Caffyn* are now treating us to. There are thousands of women all over the world, earning honourable livelihood for themselves, in various ways adapted to their physical and mental strength, and better able for being "advanced" to take care themselves than they would be without education. The firmer the foundation, the better the edifice erected thereon, for true knowledge, like truth itself, endures for ever and ever.

T.A.S.

H.E. the Japanese Minister, Viscount Aoki, entertained a number of gentlemen at dinner at the Westminster Palace Hotel on 14th inst. The company present were:—The Lord Mayor, Baron Campbell, Baron von Siebold, Professor W. Anderson, Alderman Treloar, Mr. Uchida, Mr. Tayni, Mr. Hayashi, Mr. Akiyama, Professor Elgar, Mr. Frank Dillon, Mr. A. G. Angier, Mr. Alfred East, Captain Shiba, Mr. A. Diösy, Mr. Chas. Holme, Mr. Paul Bevan, Mr. John Mogford, Mr. Huish, Mr. W. S. Hall, Mr. T. B. Hain.

ENGLISH, AMERICAN, AND RUSSIAN OPINIONS ON THE WAR.

No news of actual hostilities had reached England before the English mail left. The *Times* wrote as follows on July 24th:—

It is probable that the Japanese people will go into war, if war it is to be, with a light heart. They are not unjustifiably proud of their army and their navy. They are ambitious of taking their place as the leading Power of the Far East, and they have an hereditary jealousy and dislike of China. Nor is it at all unlikely that they will be greatly encouraged by the earlier stages of the struggle. Exact information about the Chinese army is very difficult to obtain, but that very fact lends great weight to the opinion that its organization and equipment are very defective. The Japanese may accordingly count not unreasonably upon initial success. But if the Chinese go into the matter in earnest, Japan may in the long run pay dearly for her earlier victories. China has enormous staying power. She can go on pouring men into Korea in numbers which will be found very hard to cope with, even by greatly superior Japanese troops. She will be practically at home, while the Japanese will carry on war at a great distance from their base, and will depend absolutely upon their command of the sea. Whatever may be the defects of the Chinese Army, Chinese seamanship seems to command the respect of competent critics. The Chinese Navy is not to be despised by the Japanese, and it is capable of rapid reinforcement. If once thoroughly roused, the Chinese will make a long fight, and will grow stronger as they go on. Everything, of course, depends upon the way they take the matter, but in all the circumstances we are rather disposed to think they will take it seriously. In their contests with European Powers they probably felt that after all it was only the fringe of their Empire that could be touched, and they knew that they could never strike a vital blow at their opponents. The case is different when they are beset by their next-door neighbour, and when their whole position, not among barbarians whom they despise, but in the East which is their home, is visibly at stake. The awakening of China which Occidentals have never thoroughly accomplished may be effected by Occidental methods in Oriental hands. It can scarcely be doubted by any one that if once China were thoroughly awakened she might play a considerable part in the world far beyond the coasts of Japan.

The *Saturday Review* of July 28th contains an article on the "Korean Quarrel":—

If we could be sure the contest between China and Japan for the command of Korea would remain, in the modern phrase, localized, it would be possible to regard it with feelings not very remote from amusement. There is something decidedly absurd in the thoroughness with which Japan has adopted the clothes of Europe. It has not only everything handsome about it in the way of weapons and Parliamentary institutions, including a most unmanageable Opposition, but it has supplied itself with a mission of the most imposing character. The Japanese have undertaken to introduce the benefits of civilization into Korea, and have conducted themselves just like a real civilizing Power engaged in elevating humanity by progressive blows and knocks. If the dispute could be confined to them and the Chinese, we could afford to look on not without a rather comfortable conviction that our advanced and advancing Japanese friends will make sooner or later a discovery which seldom fails to be made by those who fall out with that enemy—namely, that it is one thing to beat a Chinese army and quite another thing to beat the Chinese Government. The difference between the two feats is much that between killing a handful of black-beetles and excluding the race effectually from the kitchen. The Russians could tell the Japanese something, and so could the French officials in Tonquin. Perhaps, also, Her Majesty's Indian and Foreign Offices could be helpful.

It might have been imagined that a war between the two most powerful nations of the East, even though European interests were to be entirely unaffected, might arouse in the breast of a "civilized" journalist other feelings than those "not very remote from amusement." The combatants might ask him to remember, in the words of the toad in the fable, that what is sport to him is death to them. But we are too familiar with the cynical savagery of the *Saturday Review* to expect any wincing on its part so long as English withers are unwarped. We may, however, confidently anticipate a thunder-

ing jingo article in the next number we receive, for this will have been published after the arrival of the news of the sinking of the *Kowshing*. The present article goes on to advocate English neutrality, and to speculate on the danger of Russian interference.

The *Novaya Vremya* (Moscow) writes as follows:—

Japan has spent much energy and money in perfecting her armament. It is not to be imagined that a practical people like the Japanese have gone to so much trouble for nothing. It is evident that a war of conquest on the mainland is the object. But Russia cannot afford to acquiesce in the conquest of Korea by the Japanese. Japan would be a very different neighbour from the weak Korean kingdom. Japan is not only powerful but aggressive. Russia must receive a harbour in Korea to protect her trade.

In the *New York Herald* of August and there is an article on the Japanese Declaration of War and on the *Kowshing* Affair:—

Yesterday war was officially declared against China by the Japanese. The declaration comes late and, considered from the standpoint of international law and custom, was unnecessary, for the very simple reasons that hostilities had begun, and that China's ultimatum to Japan, which placed the date of July 20 as the extreme limit when Japan should remove her forces from Korea, was a declaration of war absolute and not merely "to all intents and purposes."

It is true that China's "declaration" has not yet been published, though the despatches from Shanghai printed in the *Herald* a week ago last Sunday distinctly intimated that China had declared war. Like the very interesting character in Bret Harte's classic poem, the remark may be permitted that for "ways that are dark and tricks that are vain the heathen Chinese is peculiar." The official declaration is still presumably somewhere up Li Hung-chang's sleeve. Japan showed good sense in her course of action in not permitting herself to be bamboozled by this delay on the part of China.

Every act of China's since July 20 has been an act of war against Japan. First there was the despatch of ten thousand men on ten chartered transports from Taku to Korea, one of which the *Kowshing*, was so summarily dealt with by the Japanese. Then on July 25th she ordered her northern army to cross over the frontier into Korea with the purpose of eventually fighting the Japanese in Korea, who are there by virtue of a treaty. This treaty allows the presence of a small body of both Japanese and Chinese troops in Korea in case of necessity, but does not authorize the sending of a vast army there by China, as she has already done. There needed no declaration of war after these acts of hostility had been made apparent.

The case of the sinking of the *Kowshing*, about which England has become unnecessarily violent in her denunciation of Japan, is one that should be decided entirely on the basis of the question as to the date of the official or non-official declaration of war by China. Japan has, it is true, very wisely and without delay apologized to England for having inadvertently fired upon the British flag which the *Kowshing* floated at the time she came to grief. She also declares her readiness to pay compensation for the losses inflicted upon the English company owning the ship. But, bearing in mind the fact that this transport had six guns on board, one thousand soldiers entered on the ship's register as coolies, four chiefs of battalion, and fifteen colonels of the Chinese army, that is to say a complete hostile expedition fitted out to fight Japan, we very much doubt whether any international court of diplomatic experts would hold Japan guilty of infringing international law applicable under the circumstances.

Herr von Rengarten, of Riga, is about to start walking round the world. He intends to go through South Russia, the Caucasus, North Persia, and Turkestan to Siberia. There the indefatigable tramp will winter. When spring comes he will enter the Flowery Land. Across China will be his route. He will reach the Pacific. After crossing to Japan he will take ship for South America. Vast Brazil, with its interminable mountain-ranges and dense forests, will then have to be traversed. Practically the traveller will have finished his labours at New York. From there he will sail to France. It is a comparatively short walk home then. He hopes to be back in Riga in 1900. He will beat the Wandering Jew. It is a long time to be away. What a number of strange sign-posts he will pass!

THE PHYSIQUE OF JAPANESE STUDENTS.

A MOST interesting lecture on the physical constitution of Japanese students was recently delivered by Mr. INOUE Ki, late Minister of State for Education. He had previously undertaken a tour of inspection among the Middle Schools of the interior, going as far south as the Kei-Han districts (Kyoto and its neighbourhood), so that his address was based on personal knowledge and experience. After remarking that, in his decided opinion, the Middle School curriculum should be much more highly developed than it is at present, he held that the establishment of more than one Government Middle School in any one locality was undesirable. Turning then to the physical constitution of Japanese students as a class, the speaker quoted the opinions of a number of foreign authorities on this subject, with special reference to the dicta of Dr. BÄRLZ. He had found with regret that the actual condition of the students fully bore out what had been said by foreign critics. He had, in the first place, been struck with the great number of near-sighted students. In one of the classes of the Kyoto Higher Middle School, no less than seven out of a total of seventeen, wore spectacles. The ratio of those thus compelled to use artificial aids to vision rose with the rank of the class, so that, for example, in the sophomore class of the Collegiate Course in the same school, no less than sixty out of every hundred students were myopic. On the other hand, among those pursuing a medical course, the ratio fell as low as 20 per cent., and this despite the fact that the total number of school-hours per week was far greater in their case than in that of the students of any other course. The reason of this, however, was patent. In the medical course, the study of foreign languages was not compulsory, as in the case of all other courses. With respect to the weight of the body, the Japanese were, in general, far behind Occidentals. Dr. BÄRLZ had shown that whereas the average weight of German students at the age of twenty-one was 17.290 *kwamme*, that of Japanese students at the corresponding time of life was only 14.630 *kwamme*. Mr. INOUE supplemented this statement by stating that the average weight of graduates of Ordinary Middle Schools is, the average age being about eighteen, only a little more than 14 *kwamme*, while that of the alumni of the Imperial University, generally at the age of twenty-four or twenty-five, falls actually short of this figure. To this point the most earnest attention of the educational authorities should be given. The body-weight of a man must increase until his forty-fifth year: yet with respect to University students the opposite is the rule, and this in the very time of life in

which the development of the physique should be most rapid. This untoward phenomenon is attributable to three causes; excessive study, want of proper exercise, and deficient nutriment. With thirty hours weekly of school tuition, of which four only are spent in gymnastics and drill, and with scanty and insufficient physical nutriment, it is not surprising, thinks the late Minister, that the physique of Japanese students is so alarmingly backward in its proper development. The excess of school-hours is mainly attributable to the study of foreign languages, this being in fact the most serious problem in the question of secondary education in Japan. At present the primary object of the graduates of both ordinary and higher Middle Schools, is to matriculate at the Imperial University, and as instruction there is for the most part in languages other than Japanese, the acquirement of these Western tongues forms the most important branch of the curricula of the lower schools. To obviate this defect, Mr. INOUE suggests that the Higher Middle Schools should be reorganized, so that they might figure as collegiate institutes wherein special courses could be taught. In all such colleges the study of foreign languages should be dispensed with. The study of Western tongues should be confined to the course of higher education, open to such as desire to matriculate at the Imperial University. It is, however, in our opinion, an open question as to whether any drastic measure of this kind could succeed. The immediate and universal inclination of Japanese students is in the direction of scholarly and unproductive studies, by far the majority affecting to despise practical science or technical knowledge; the result of centuries of class-isolation is that they refuse to—in their opinion—lower themselves to the interests of factories and machine-shops. Mr. INOUE has actually found this idea deeply ingrained in the minds of students. After inspecting a certain Middle School, he questioned individually the members of the graduating class as to their aim in life after bidding farewell to school. The majority of the young men were the sons of well-to-do farmers or tradesmen, yet one and all declared their intention of entering higher educational institutions, indirectly hinting that they were ashamed to succeed to the practical and prosaic pursuits of their fathers. One of the boys most innocently replied that he was resolved to go to Tokyo to prosecute his studies, but he had yet no idea of what course of study he would pursue. This mania for learning, learning of a gentlemanly nature, and contempt for all practical pursuits, is very evident in the minds of Japanese students. Nor are they alone to blame for this bias; their fathers and brothers share the same idea and are ambitious to make them scholars. How long it may take before this regrettable bias is eradicated or whether it

can indeed ever be done away with, is a question without an answer; for the Japanese are by nature an improvident race and regard all questions of hard cash as sordid.

With regard to exercise and diet, much may still be done in the way of improvement. As far as physical exercise is concerned, what is true of Japanese students is equally true of grown-up people. The Japanese of the middle and higher classes are wholly indifferent to this important factor in health. They are, taken as a group, characteristically mature in their ideas, regarding all outdoor games and exercise as proper to boyhood only. Prior to the Restoration the case was different. Then fencing, wrestling, and other arts of physical prowess were much practised, not only by the *Samurai* but even by merchants and farmers of ambitious dispositions. It is true that this physical education was accomplished at the expense of mental culture; but the middle and higher classes were none the less endowed with robust health and fine physique. With the advent of the new order of things the whole state of affairs was reversed. The development of the mind is now paramount; the body is of secondary importance, or of none at all. The result is only that which can be, under such circumstances, expected: we see, week after week, men of high promise and extraordinary intellectual capacity succumbing, at an early age, to the attack of such diseases as those to which an enfeebled physique is most liable, consumption and cerebral maladies. This is indeed a most serious matter, and whether considered from an economic, military, or any other standpoint, demands thorough investigation and the instant adoption of remedial measures. The constitution of the Japanese, especially those belonging to the higher classes, is unquestionably degenerating, contrary to the experience of the Occident. We have no statistics or accurate proofs at hand whereby to give emphasis to this opinion, but that the physical strength of the Japanese is deteriorating may be inferred from the fact that, as a general thing, the armour of the knights of old is far too big for the men of the present generation to wear. We do not, however, mean to suggest that the Japanese of to-day are so absorbed in their pursuits that they do not give due attention to the relaxation of mind and body, for this is far from being the case. They are an eminently pleasure-loving and pleasure-seeking people, more so, perhaps, than those of any other country. In fact they are too fond of certain forms of *desipere in loco*, which are not, one regrets to see, calculated to promote the health in any way, being decidedly injurious on the whole. Their pleasures are of a sensual sort, including the imbibing of *saké*, and other attendant evils; and such recreations are as pernicious as the want

of physical exercise itself. It is a very difficult matter to approach, yet we suggest that special stress should be laid on the importance of physical exercise, and that to this intent some national game ought to be brought into fashionable prominence. None of our Western outdoor sports appear adaptable to the Japanese; one and all are regarded as childish. The best and easiest thing would be to revive the palmy days of fencing and *jūjitsu*. Both of these arts are knightly, manly, conducive toward the promotion of quick presence of mind, of the utmost value in self-defence, and, so to speak, national exercises. They are, finally, not attended with any great outlay. To this day there are some fair representatives of the great fencing-masters of bygone times, while Mr. KANO JIGORO, the greatest exponent of *jūjitsu* and an enthusiast in the art, is doing his best to revive an interest in the greatest and most noteworthy of the physical exercises of Japan.

THE SUBJECT-MATTER OF PHILOSOPHY.

IT is by no means easy to give a clear and comprehensive definition of the term philosophy. As in the case of many other extremely abstract notions, we can best furnish a definition after giving a number of particular instances that are comprised within the field of the general idea.

We enter the laboratory of a chemist. We see him about to add a solution of barium chloride to a solution of sodium sulphate. "What will happen," we ask him, "when the addition is made?" "A white precipitate will appear in the test-tube." How do you know? "Because such has been, in my experience and in that of others, the invariable result of making this particular experiment." "How do you know that causes which have invariably produced a certain effect in the past will continue to produce the same effect in the future?" "I am a chemist," he will reply, "the answer to your question must be given by philosophy."

A lecturer on mechanics is demonstrating the properties of masses moving in space. We interrupt his discourse to ask, "But has space any real existence outside our own consciousness?" "I am lecturing on physical science," he will answer, "I have nothing to do with metaphysics."

An evolutionist is describing the proximate causes that, in his opinion, have led to the differentiation of species from one or a few primitive forms. But behind these causes is there, or is there not, a single cause which in its nature has some resemblance to the human mind?

We learn from an astronomer that the attractive force of the moon is one of the principal causes of the tidal movement of the ocean. "What do you mean by the term cause?" "When in our experience two phenomena have such a relation that

the occurrence of one is an invariable antecedent of the occurrence of the other, and we are led by our observation of nature to infer that if the first phenomenon did not occur, then also the second phenomenon would fail to appear, we say that the first phenomenon is the cause of the second." *Is our idea of causation, then, thus wholly derived from experience; or has it a deeper meaning than that which suffices for the study of physical science?*

A practical moralist is explaining to us the wickedness of some infraction of the accepted code of duty. True, we may answer, we feel with you that it is wrong, and we should try to act on the lines you suggest. But we want to dive beneath the surface of things; we want to understand the inner principles of right conduct. *Why ought a man to do one thing rather than another? Is there any absolute standard of morality; or are our ideas of right and wrong based entirely upon canons of utility. Can we prove that the will is free? Is the deterministic theory incompatible with the ideas of ethical obligation and moral responsibility?*

A religious teacher tells us that we should spend our lives in the worship of God, and in preparation for a future state. *What are the proofs of the existence of God? What grounds are there for belief in a future state?*

We learn from a logician that the fundamental principle of inference is that so far as there exists sameness, identity, or likeness, between two things, what is true of one thing is true of the other. *But whence do we get this great principle? Is it a pure law of the mind, or is it a product of experience?*

In proving a geometrical theorem, a mathematician makes use of the axiom, "Two straight lines cannot enclose a space." *Whence does the mind obtain the axioms of mathematics?*

A psychologist analyses for us the processes by which we form general ideas. He shows us that when we observe a number of objects, we compare and we discriminate; we detect certain points of agreement according to which we arrange the objects into certain classes; to the thought of each class we give a special name by which in future we shall always distinguish this concept or general idea. *But how do they arise, these fundamental powers of the mind, the power of detecting identity and the power of discrimination. What are "thoughts" and what are "things," and what is the nature of the relation between them?*

Widely divergent in scope as the various questions we have italicized appear to be it will be noticed that they have one common character; they all relate to ideas that seem to lie at the very root of their respective departments of thought, to ground-ideas or principles. It is, however, with very unequal degrees of clearness that the existence of such principles and

the subordination of these principles to philosophy are recognized by those that pursue the various subjects of study we have named. In geometry, for instance, a succinct enumeration of the axioms and the postulates is the very first step in the exposition of the science. In religion, again, the fundamental importance of the principles we have mentioned is admitted on all hands; but the extravagant claim is made by many religious teachers that in this exalted sphere reason is out of court, and that the postulates of religion must be accepted on faith, that is, without enquiry. In physical science, on the other hand, while few of the leaders fail to recognize that, for instance, no scientific prediction can be made without the postulate that causes which have invariably produced a certain effect in the past will continue to produce the same effect in the future, and that this postulate is subject to criticism by philosophy: yet many physicists, biologists, and even, strange as it may seem, psychologists, appear to think that we should pluck and eat the apples on the tree of knowledge without enquiring how they grow: and such men, with an arrogant ignorance rivalling that of the religious dogmatists, speak scornfully of philosophy as a mere collection of verbiage which science can afford to despise.

None the less, we cannot fail to see that some such principles as those we have considered underlie, tacitly or explicitly, every department of human mental activity. *An examination of these principles and a discussion of the evidence upon which they are based form the subject matter of philosophy.*

Three terms much in use to designate different portions or different aspects of philosophy require explanation; these are, epistemology, ontology, and metaphysics. Epistemology discusses one of the problems we have mentioned as underlying psychology—the relation of thought to things. By the Germans, this province of philosophy is called *Erkenntnisstheorie*, the theory of cognition. To give an actual example of what is meant by epistemology, we may refer to an article on "Mind and Matter" published in this journal on September 8th, of last year; the article was a sketch of our own views on the theory of cognition. Ontology, the science of being, is philosophy regarded from an entirely different aspect. It is an endeavour to contemplate what is called the real universe as distinguished from the phenomenal, the universe as it appears to us. It is, in fact, an attempt to obtain a grasp of the absolute, the unconditioned. This is the most difficult, the most obscure, and to many it seems the least profitable, department of philosophy. Some, indeed, those chiefly that trace their philosophic descent from HUME, and those that have developed the critical rather than the constructive aspects of the Kantian philosophy, believe that the only fruit of the study of ontology

is to show that ontology is impossible; but others, especially the large and influential school of which HEGEL is the philosophic father, regard ontology as the chief end and glory of philosophy. These rival views cannot now be discussed. We will merely repeat, that whereas epistemology examines the relation between thought and things, ontology deals with the actual, the "real," nature of thought and things alike.

Metaphysics, finally, is a word that has been used in very various senses. Originally it denoted all that part of science which dealt with the mental as distinguished from the material aspect of the universe. But since in modern times some scientific men speak of psychology itself as a physical science, it is evident that the old use of the term has been entirely abandoned. In the preface to the first edition of the *Critique of Pure Reason*, KANT describes metaphysics as "the battlefield of those endless controversies about the principles that transcend the limits of experience and withdraw themselves from experimental tests;" and throughout the book he most commonly employs the word as synonymous with philosophy in the widest sense. At the present day it is still often used with this extended meaning; but frequently it is employed rather as a synonym for ontology. Especially is this the case when metaphysics is used as a term of disparagement by those that regard all ontology as chimerical.

We append the well-known definition of DE MORGAN, in which metaphysics is treated as coterminous with philosophy: "The science to which ignorance goes to learn its knowledge, and knowledge to learn its ignorance. On which all men agree that it is the key, but no two upon how it is to be put into the lock."

DIPLOMATIC NOTES ACCOMPANYING THE NEW TREATY.

I.

Foreign Office, July 16, 1894.

SIR,—With reference to Article XIX. of the Treaty between Great Britain and Japan signed this day, in view of the fact that some of the British Colonies and foreign possessions enumerated in that Article might be prevented from acceding to the present Treaty by reason of their inability to accept the stipulations relating to military service contained in Article II. of the said Treaty, and in order to avoid future misunderstandings, Her Majesty's Government request from the Government of Japan an assurance that any of the said British Colonies and possessions may accede to the present Treaty under the condition that, notwithstanding such accession, they shall not be bound by the stipulations of Article II.

I have the honour to be with the highest consideration, Sir, your most obedient, humble Servant,

KIMBERLEY.

Viscount AOKI, &c., &c., &c.

II.

Japanese Legation,
London, July 16, 1894.

MONSIEUR LE COMTE,—In reply to the note of Her Majesty's Government, referring to Article XIX. of the Treaty between Great Britain and Japan signed this day, and requesting, for the reasons given in the said note, an assurance that any of the British Colonies and foreign possessions enumerated in that Article may accede to the present Treaty under the condition that, notwithstanding such accession, they shall not be bound by the stipulations of Article II., the Government of Japan hereby give the assurance desired.

I have the honour to be, with the highest consideration, Monsieur le Comte, your Excellency's most obedient, humble Servant,

AOKI.

The Right Honourable
Earl of KIMBERLEY, K.G.,
&c., &c., &c.

III.

The Undersigned, Envoy Extraordinary and Minister Plenipotentiary of His Majesty the Emperor of Japan, in virtue of special authorization from His Imperial Japanese Majesty's Government, has the honour to announce to Her Britannic Majesty's Principal Secretary of State for Foreign Affairs that the Imperial Japanese Government, recognizing the advantage of having the Codes of the Empire which have already been promulgated in actual operation when the Treaty stipulations at present subsisting between the Government of Japan and that of Great Britain cease to be binding, engage not to give the notice provided for by the first paragraph of Article XXI. of the Treaty of Commerce and Navigation signed this day, until those portions of said Code which are now in abeyance are brought into actual force.

The Undersigned avails himself of this opportunity to renew to the Earl of Kimberley the assurance of his highest consideration.

(Signed) AOKI.

Japanese Legation, London, July 16, 1894.

For the convenience of our readers we here reprint the three articles referred to in the preceding diplomatic notes:—

Article II.—The subjects of either of the Contracting Parties residing in the dominions and possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, National Guards, or militia: from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Article XIX.—The stipulations of the present Treaty shall be applicable, so far as the laws permit, to all the Colonies and foreign possessions of Her Britannic Majesty, excepting to those herein-after named, that is to say, except to—

India.	The Dominion of Canada.
Newfoundland.	The Cape.
Natal.	New South Wales.
Victoria.	Queensland.
Tasmania.	South Australia.
Western Australia.	New Zealand.

Provided always that the stipulations of the present Treaty shall be made applicable to any of the above-named Colonies or foreign possessions on whose behalf notice to that effect shall have been given to the Japanese Government by Her Britannic Majesty's Representative at Tokyo within two years from the date of the exchange of ratifications of the present Treaty.

Article XXI.—The present Treaty shall not take effect until at least five years after its signature. It shall come into force one year after His Imperial Japanese Majesty's Government shall have given notice to Her Britannic Majesty's Government of its wish to have the same brought into operation. Such notice may be given at any time

after the expiration of four years from the date hereof. The Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MISSIONS TO THE BLIND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should be very glad if some of the readers of the *Mail* could give me some information on the following points relating to missions to the Blind of Japan:—

1.—Is there any Christian mission to the Blind in Japan?

2.—Has the Bible, or have parts of the same, been embossed and published in Japanese; and if so what system of embossing has been used?

Thanking you in anticipation for kindly inserting this letter,

I am, yours truly,

ENGLISHMAN.

September 3rd, 1894.

MISREPRESENTATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Correspondence in the *Mail* of August 11th about misrepresenting the Japanese, has just come under my eye. I wonder that those who have referred to it in later numbers have only referred to the Earl of Harrowby's statement, which they have justly explained. But why is Miss Box left under a stigma for saying that the only possible chance of salvation for a Japanese woman was in being reborn as a man in the next life? The Rev. Mr. Akamatsu, a high authority in the Hongwanji temple in Kyoto, said the same thing at the time of the visit of Dr. Murray Mitchell to this country ten or twelve years ago. Buddha himself is represented as saying: "Although woman may not be born into my country, yet the woman who hears the name of Amida Buddha and is excited thereby to the hatred of the condition of woman and an earnest longing for the salvation of herself and others, shall not be reborn as a woman." Or as some others put it, "The sins of three thousand of the worst men all put together do not equal the sins of one woman, and her only hope is that by patience, obedience, and freedom from jealousy she may next time be born a man so having a chance to get near the goal of Nirvana." It looks to me as if Buddhism called its women degraded. I fail to see where the misrepresentation is. With all deference to Japanese women, whom I properly admire, with her gentle patience, submission, and self-oblation, many of whom I love as dear friends, and many of whom are enlightened, educated Christian women—with all deference to such, I say when all over the country, in the interior, a woman is used as a beast of burden, and one often sees a woman and a bullock harnessed together, to pull heavy loads: when Japanese girls are still forced, absolutely forced on pain of being considered self-willed and disobedient to parents, to marry men who are known to be immoral, and whom they abhor: when a Japanese husband educated abroad, and enlightened too, compels his wife to black and put on his foreign boots for him, to walk behind him on the street, carrying a large heavy package, too great for her strength, while he, her lord and master, walks empty-handed in front—very modern instances of which I could give you—when one of the most recent issues of the *Japan Mail* gives an account of a girl being sold by her father to immoral uses, to relieve his money distress: when there is no decent, respectful, honourable word in the language by which a man can refer to his wife: when the radical ideograph, signifying woman, doubled means strife and contention, tripled means the most immoral disorderly conduct: when the same radical in nearly all its combinations means something bad or low, like slave, jealousy, opposition (in a bad sense), craft, envy, unmanly covetous, or loose character, thus by the very language making all women, from the Empress down, low or false—in fact, I myself, a foreign woman feel degraded by it—when all these things are yet cases, can there be any just complaint if

foreigners represent Japanese women—not the few enlightened educated ones around Tokyo and the large centres, but the mass, who are to be sure vastly superior to Chinese or Hindoo women, but the generality all over the country—as degraded, and of grade made low? That is, out of grade with the men of Japan and their Western sisters, and would it not be well for the Japanese “conscript fathers,” who do not like the terminology, to remember that until woman is given due honour, no nation can be called truly enlightened:

Yours truly,

H. FRANCES PARMELEE.

August 28th, 1884.

[Our correspondent will not lack sympathy in her efforts to improve the status of Japanese women. But we suspect that if she had studied the story of women of the lower classes in other countries, she would be less shocked by the things she sees here. Women working like beasts of burden; girls forced to marry men of the most depraved character; husbands that subject their wives to indignities; girls sold for immoral purposes—all these are abuses that can be found even in good old England, where certainly woman stands on a sufficiently high grade. Excessive enthusiasm may prove only injurious to the interests of a cause that has the best wishes of all thinking men.—Ed. J.M.]

THE ELECTION.

Up to last evening returns had been received from the following electoral districts:—

TOKYO CITY.

Name of successful Candidate.	Political Party.	Political Party of Previous Representative.
Sukeyoshi Tada-haru.	Strict Enforcement Party.	Re-elected.
Yamada Chyubei.	Economic Reform Party.	Independent.
Nakajima Matagoro.	Radical.	<i>Kaishin to.</i>
Kusunoto Masataka.	Constitutional Reform Party.	Re-elected.
Yasuda Zenjiro.	Independent.	National Unionist.

Sudo Jiichiro.	Economic Reform Party.	Independent.
Tanaka Shimpei.	<i>Kaishin to.</i>	Re-elected.
Taguchi Ukichi.	Economic Reform Party.	Unionist.
Hatoyama Kazuo.	<i>Kaishin to.</i>	Re-elected.
Hamano Shigeru.	Independent.	<i>Kaishin to.</i>
Hashimoto Shozo.	Economic Reform Party.	<i>Kaishin to.</i>
Takagi Seinen.	<i>Kaishin to.</i>	Re-elected.
Ishizuka Masataka.	Radicals.	Re-elected.
Nakamura Yoshimasa.		

KYOTO U.

Hotta Yasuo.	Independent.	<i>Seimu Chosa.</i>
Takemura Tobei.	Strict Enforcement Party.	Re-elected.
Yasuda Masataro.	Radical.	Re-elected.
Kitagawa Kokio.	Independent.	Radical.
Ishiwara Hanyemon.	Independent.	Independent.
Kawarabayashi Yoshio.	Radical.	Re-elected.
Komichi Tomotsune.	Const. Ref. Party.	Re-elected.

OSAKA CITY.

Awaya Shinazo.	National Unionist.	Re-elected.
Toyoda Bunzaburo.	Strict Enforcement Party.	Independent.
Mayekawa Makizo.	<i>Kaishin to.</i>	Re-elected.
Akioka Gichi.	Independent.	Re-elected.
Nakano Jihei.	Independent.	Independent.
Nakano Hiroto.	Radical.	Nat. Unionist.
Sugeno Michichika.	Independent.	Radical.
Higashio Heitaro.	Constitutional Reform Party.	<i>Doshi Club.</i>
Sasaki Seisha.	National Unionist.	Re-elected.
Sakurai Yoshioki.	Independent.	Oriental Radical.

KANAGAWA PREFECTURE.

Shimada Saburo.	<i>Kaishin to.</i>	Re-elected.
Tokumasa Gentaro.	Radical.	Radical.
Yamada Taizo.	Radical.	Re-elected.
Yamada Kakoku.	Radical.	Re-elected.
Mizushima Hataro.	Radical.	Radical.

HYOGO PREFECTURE.

Kashima Hidemaru.	<i>Kaishin to.</i>	Re-elected.
Den Teichiku.	Radical.	Re-elected.
Kano Iwakichi.	Independent.	<i>Kaishin to.</i>
Hanai Jinyemon.	Independent.	Radical.
Ishida Kannonosuke.	Radical.	Re-elected.
Nishimura Shintaro.	<i>Kaishin to.</i>	Re-elected.
Nagaura Tsugu.	<i>Kaishin to.</i>	Re-elected.
Kozuka Ryu.	<i>Kaishin to.</i>	Re-elected.
Oka Seitsun.	Radical.	Radical.
Sakurai Tsutomu.	Radical.	<i>Kaishin to.</i>

There are only three electoral districts left from which reports have not been received. These are the 3rd district of Wakayama (two members), the 1st district of Akita, and the 5th district of Gifu, the polling in which latter two places has been postponed. Of the distinguished names defeated in the present contest we may note that Mr. Abei Iwane, of wide notoriety in connexion with the Treaty Enforcement Agitation, has been defeated once more by his previous rival, Mr. Hirashima Matsuo, of the Radical Party; Mr. Oi Kentaro, the foremost demagogue of the same league, by Mr. Sakurai Yoshioki, a new member; Mr. Ooka Ikuzo, of the National Unionists, by Mr. Takagi Seinen, of the Progressionist Party, in the 12th district of Tokyo; Messrs. Sato Shozo, Kobayashi Kusuo, Kato Heishiro, Kato Masanosuke, and Takanashi Tetsushiro. Of the two hundred and ninety members thus far returned, one hundred and thirty did not sit in the last House. Of the new members we may note Messrs. Taguchi Ukichi, Sudo Jichiro (both from Tokyo), Sakurai Tsutomu, an ex-Governor of Kagawa Prefecture, and Kajiyama Teisuke, who once represented Japan in Seoul.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, August 11th.

By some mistake, the source of which can not be traced, it was first announced, that Mr. Kaneko would be the new Japanese minister to the United States; but the mistake has since been corrected. Mr. Kurino may expect to be cordially received in Washington.

The following item explains itself:—

Washington, August 7.—The House Committee on Judiciary voted to-day to report against the admission of Japanese to citizenship. A bill introduced by Mr. Everett, of Massachusetts, providing that section 2153 of the revised statutes shall not operate to exclude Japanese from naturalization, was called up. The sentiment of the committee seemed to be against any enlargement of naturalization privileges, and the bill failed.

This action, however, will scarcely serve to strengthen the friendly feelings between Japan and the United States. In this connection another item is quite interesting:—

Cleveland, O., August 8.—[Special.]—Judge Hutchins has admitted a woman to citizenship of the United States, a judicial act with few if any precedents. The woman is Mrs. S. Louise Patterson, a court stenographer. She was born in Weyach, Switzerland, Feb. 14, 1853, and came to this country when 14 years old. Under the law persons coming to the United States under age are not required to take out first papers. Mrs. Patterson made application for naturalization papers in May of this year and the question as to whether or not it would be granted has been in abeyance since. Yesterday Judge Hutchins, who is a favorite with the ladies, came down to the court-house purposely to hear the application.

There are at present fifty or more Japanese residing in this city and engaged either in educational or mercantile pursuits. These have organized the "Chicago Japanese Association."

with head-quarters in room 63, Adam's Express Building. They have already raised money to send back home two of their number to fight for them.

Masuo Ikuta, Ph.D., of the University of Chicago, "is working on some disputed points in para-nitro-diphenylamine and para-nitro-phenylmethylamine. Seven years ago Dr. Ikuta prepared a thesis, while in a German university, on this subject. But since then disputes have arisen about the accuracy of his conclusions—Professor Nef, of the university, in fact siding with the opposition—and now Dr. Ikuta is proving, by elaborate experimentation, that his critics are wrong."

A Chinese daily paper has appeared in New York City with the tremendous title, "The Uninterrupted Roar of the Fiery Trumpet of the God of War." It is printed on pink paper and illustrated by Chinese artists. It consists of only one sheet, 14 by 18 inches, printed on both sides, four columns to the page. Yung Kwai, a Yale graduate, is the editor, and two Americans are the publishers.

The American public continue to feel a deep interest in the Sino-Japanese war. In some cases the interest is hellephant, as the following clipping will make evident:—

Washington, D. C., August 6.—Several hundred letters containing tenders of service to the Japanese government in the present war with China have been received at the Legation here. They came from nearly every part of the United States. One from an ex-Confederate at Greenville, Miss., offering to raise a battalion, and even a regiment, of men, if desired, at that place and New Orleans. Another is from the foreign legion of Cleveland, Ohio. A third came from an individual who was willing to raise a company of picked sharpshooters, and a fourth was from a person who had some torpedo device he was willing to part with for a consideration. Such communications as the last mentioned are turned over to the naval attaché of the legation, to do with as he deems best. To the others the legation officials return polite declinations. It is a penal offence for Americans to serve either in the Chinese or Japanese service while the two nations are at war, so that the latter government cannot under any circumstances accept the offers.

It is reported on apparently good authority, that President Cleveland will not hesitate to acknowledge the new Republic of Hawaii. This is unpleasant news to the Royalist Commissioners, who by the way, have not received a cordial welcome in Washington.

The President has also acknowledged the new government in San Salvador by accepting as its minister to the United States Dr. Guzman, also minister from Nicaragua.

F. H. Underwood, U.S. Consul at Edinburgh, died at Leith on the 7th inst. He was a writer of no mean ability, one of the founders of the *Atlantic Monthly*, and an old abolitionist in Boston. Another "old-timer" has passed away in the person of Austin Blair, Michigan's "war governor," at the age of 76. He was one of the organizers of the Republican party, was Governor of Michigan from 1860 to 1864, and a Member of Congress from 1866 to 1872.

The State election in Alabama has gone against the Republican-Populist-Jeffersonian Democrat "combine" with Kolb as candidate again for Governor. Kolb, however, cries "fraud," and threatens to make a spirited "contest" against the installation of Congressman W. C. Oates in the gubernatorial chair.

President Cleveland has appointed Ainos M. Thayer, of Missouri, to be U.S. Circuit Judge; A. S. Priest, of Missouri, to succeed Thayer as U.S. District Judge; and James D. Porter, of Tennessee, to be U.S. District Judge. The last-named has been Governor of Tennessee and First Assistant Secretary of State (under Bayard), and is now U.S. Minister to Chili.

The Republicans of Idaho have nominated Governor McConnell for re-election and Edgar Wilson for Congress.

The river and harbour appropriation bill has been reported from the conference committee. It gives an increase of almost \$2,000,000 over the House Bill, and calls for a sum total of \$11,488,180.

The tariff is still unsettled. There have been rumours of agreements, followed at once by new disagreements. Dissatisfied Democrats of the House of Representatives called a caucus, which met on the 7th, but could not agree upon any action. There are said to be "signs of a break up in the Senate," "signs of yielding on the part of the Senate members of the committee." The President is backing up the House Bill, and may finally, as in the case of the repeal of the silver purchasing clause of the Sherman Bill, gain his point; *heredomo*.

On the 8th inst. at Defiance, Ohio, was celebrated the 100th anniversary of the erection of Fort Defiance by Gen. Anthony Wayne, who said at the time: "I defy the English, the Indians, and all the devils in hell to take it."

"Have you shot the clutes?" is a big advertisement greeting the eyes of the people in all parts of this city. The Paul Boyton Chute Company has constructed some artificial rapids, down which a hab-bottomed boat shoots "like

greased lightning "and jumps up two or three times in an artificial lake. It is fun!

On the 9th inst., at ten o'clock at night the limited Oklahoma and Texas express on the Chicago, Rock Island and Pacific Railway jumped the track on a high trestle near Lincoln, Neb., and, crashing to the ground, was destroyed by flames. The number of killed and injured is very large. It is said that some one had evidently tampered with the track.

Private Cedarquist, who was court-martialled for absenting himself from target practice on Sunday, has been released from imprisonment by President Cleveland; and Major Worth, who issued the command for the practice, is to be tried before a court-martial.

There has been a little trouble with miners in and around La Salle, Ill.; on the 8th inst. deputy-sheriffs had a fight with a mob, and killed one Polish miner and wounded two others.

On the 7th inst., a mob of French-Canadians wrecked the Baptist, the Anglican, and the Salvation Army mission-houses in Quebec.

On the same day the strike of packers at South Omaha became very serious. Strikers surrounded the packing-houses, challenged all persons trying to pass through their lines, and assaulted non-union workers. The number of deputy-sheriffs has been increased, and two companies of the state militia have been sent to the scene of disturbance.

The American Railway Union did not take any action with reference to declaring the great strike off, but left the matter with the local unions, almost all of which at once took that action. But the strikers are now finding difficulty in getting back to work, as the employers are unwilling to discharge the new men that have shown themselves efficient.

The Pullman Car Company has now resumed work in almost all departments with more than 1,200 workmen, and will gradually add to the number till 2,000 are employed. The remaining companies of the State militia at Pullman, East Hammond, and the Stock Yards have been called in. Shippers who incurred losses of goods during the strike have filed claims against the city to an aggregate amount of over \$275,000.

There is a plan in the mind of Debs for the organization of the greatest labour union in the world. It is to be known as the American Industrial Union, and is to absorb the Railway Union, the Knights of Labour, the American Federation of Labour, etc. A general convention to consider the plans of organization will be held in Chicago about Oct. 1st.

The Attorney-General of this State has begun *quo-warranto* proceedings against the Pullman Palace Car Company on the ground that it exceeds charter rights by owning stock in another corporation (the Allen Paper Car Wheel Company) and by exercising municipal functions in the town of Pullman.

The assemblage of Coxeyites at Rosslyn, Virginia, were to-day driven across the Potomac by companies of State militia.

The long-continued drought in these parts was broken yesterday and to-day, but in many places came too late to save the corn. The result was, that, "for the first time within anybody's knowledge," corn is selling at a higher price than wheat. In Nebraska the situation is so serious, that a petition has been presented to Gov. Crouse, urging a special session of the Legislature to provide immediate relief for the sufferers in the western part of the State where crops are said to be almost a complete failure. R. G. Dun and Co.'s report out to-day says:—"The advance in corn discloses a general belief that the injury to this most important crop has been so great as to affect materially the traffic of railroads, the demand for manufactured products, and the cost of meats for the coming year.

This evening's paper says, that it is likely that the House of Representatives on Monday will accept the Senate Tariff Bill.

The Senate, having finished the discussion of the new Chinese treaty, will probably take a vote on it on Monday (13th August).

Washington, August 7.—The officials of the Korean Legation are themselves taking steps looking to the shipment to Korea of any supplies that may be donated by the people of this country. For this purpose the good offices of the American Trading Company, of New York, have been invoked and it has been asked to look after practical details of the movement. This Company, however, owns no steamers, but has branch houses in Korea, Japan, and China. Replying to the request, it has promised to do everything possible to promote the movement.

THE CHINESE NAVY.

Chefoo, May 24.

When Captain Lang, R.N., was permitted to leave their service four years ago, it was generally considered that the Chinese naval authorities had committed a fatal mistake. The organization of the nascent fleet had made astonishing progress under that devoted officer, and it was, I believe, his own opinion that another two or three years of unremitting labour would have brought the Chinese navy up to the point of being able to hold its own on the high seas. When, therefore, he was intrigued out of the service by his own subordinates, who proved themselves for that occasion stronger than the strongest Minister of the Empire, it was predicted that the Chinese fleet would soon lose its training and degenerate into a disorderly mass of corruption. While I confess to have shared in these apprehensions, candour compels me now to say that they have not as yet been realized. The Chinese fleet has not only kept the sea, but to outward appearance has made considerable progress since 1890. Without a single European officer, except a German engineer here and a German gunner there, the fleet has made extensive cruises every year, free from accident of any kind. It has just gone through its second triennial inspection by the Viceroy, Li Hung-chang, and another Imperial Commissioner, General Ting, and has knocked about the various ports in the Gulf of Pechili in a way to test at least the efficiency of engines and boilers and the manœuvring skill of the officers. The ships have been moved about in perfect order; both in target practice under steam and in evolutions in open water they have acquitted themselves as well as possible, and in ten days' operations not the slightest hitch has occurred. As I write, the ships are flaunting their many coloured bunting in the bay in front of me, H.M.S. *Centurion* and the French flagship *Bayard* keeping their company in expending much powder in honour of the Queen.

The warships—exclusive of yachts carrying the Commissioners and their suites—which took part in the display were 20 in all—the Pei-yang, or Northern Squadron, 11 ships; the Nan-yang, or Southern (Nankin) Squadron, six ships; and the Canton Squadron, three ships. Of these the only vessels of any importance are those of the Pei-yang Squadron, and their names, in the order in which they sailed, are as follows:—

Ting-yuen (flag), 6, iron armour-plated barquette, 7,335 tons, 6,000-horse power, built in Stettin.

Chen-yuen (commodore), sister ship.

King-yuen and *Lai-yuen* sister ships, 4, armoured cruisers, 2,900 tons, 5,700-horse-power, built in Stettin.

Chao-yung, and *Yang-wei*, sisters, 6, steel armoured cruisers, 1,350 tons, 2,400-horse power, built by Armstrong.

Chi-yuen 3, steel cruiser, 2,300 tons, 2,800-horse power, built in Stettin.

Chih-yuen and *Ching-yuen*, sisters, 5, steel cruisers, 2,300 tons, 7,600-horse power, built by Armstrong.

There are other effective vessels belonging to the Northern Squadron which took no part in the manœuvres—notably, six Armstrong gun-boats, "alphabetical," each carrying one 35-ton gun. Half of these are kept in dock, but they are perfectly efficient. I made a short trip in one, steaming easily nine knots, and with everything in good order.

Though as ships the Southern Squadrons are more or less abortions, they are well armed; indeed, the best firing was done by one of the Canton vessels—from French guns, I believe.

The concentration of the naval strength of China in the north is due to two things—that the Gulf of Pechili is the invaders' road to the capital, and that it is the Viceroy of the Northern Province who is the actual leader in organizing the national defence. The impulse which has brought the navy and coast defences up to their present state of efficiency has not been expended. On the contrary, the energy which has been thrown into the inspection just concluded proves that the question of national defences is pressing seriously on the Government. For 11 days two high officials, over 70 years of age, have been labouring incessantly from morning to night, climbing up and down ladders of ships, scrambling over forts, watching drills, examining schools, giving audience to innumerable commanders, and directing the new works to be undertaken. The Tartar General, who had never before seen the sea, and who is, moreover, really infirm, is only, of course, a nominal conductor to Li Hung-chang, on whom rests the sole responsibility. Well aware that the mere possession of costly ships and modern guns goes only a little way towards affording national security, the Viceroy Li seems resolved to have the crews as well trained as is possible. The schools of instruction are vigorously supported

competent European officers are at their head, and the results are surprisingly good. The Chinese are a most teachable people, and there is no kind of exercise at which they do not quickly become expert. The battalion drill of the blue-jackets at Wei-hai-wei, who have been trained by Lieutenant Bourchier, R.N., excited universal admiration. The exercises could not have been better done; the men were smart and evidently in the best spirits. They do semaphoring work exceedingly well, and in fact everything which can be taught by men to men the Chinese learn and practise well.

The scientific branches are also thoroughly looked after. They have German torpedo instructors, English and German Gunnery instructors, and professors of astronomy, chemistry, mathematics, &c. The Chinese officers are consequently perfectly trained in everything that pertains to the naval profession, and they are apt pupils, as every tutor who has had to do with the education of Chinese youths will testify.

They are handicapped by having not only to learn, but practically to carry on their work in a foreign language. This, in the navy, is English. The signal book, compiled by Captain Lang, is in English, and the drill books, in which the proper drill for every gun in the service has been elaborated by Lieutenant Bourchier, are also in English. The peculiar structure of Chinese necessitates the use of some alphabetic language, for Chinese ideographs cannot be telegraphed. Hence the men have to learn at least as much English as enables them to spell out words in semaphoring, and the officers are obliged thus to communicate in English.

There is still a great hankering after some foreigner competent to take the place of Captain Lang; but no Western Power could lend an officer nor could any officer accept the service except on conditions which the Chinese can never grant. In the schools a man of character and tact may maintain his position without sacrificing his dignity or his usefulness. But it is not easy. In the executive service it is impossible for any foreign officer to gain such authority as would alone enable him to do himself justice. Whatever language may be used in speeches, letters, or even agreements, the Chinese will never give any foreigner authority in their militant services. And if any one were to imagine that he had it, the fate of the Lay-Osborne flotilla and of Captain Lang would be repeated.

But, unfortunately, for China, it is precisely in the internal economy of the ships, where the foreign director is least tolerated, that he is most needed. No true estimate can be formed of the value of the Chinese navy without taking into account that which is hidden from view. The muscles may be all right and yet the viscera diseased. It is rather a wide question, and cannot be put in a nutshell; but, if one could get at it, the secret relations of the officers of the navy with each other would give the key to that important problem—How would the Chinese fleet comport itself in face of the enemy? The men are, beyond doubt, splendid material, docile and muscular. Taken from the ranks of the poor, and for the first time in their lives well fed, well washed, and well clad, they become transformed in a greater degree than our own bumpkins when drilled and set up. Any man might be proud to command them.

But have the men reason to be proud of their officers? They see their superior from the admiral down to the cabin steward, greatly addicted to gambling. The highest officers are reputed to be lucky; in fact, a considerable part of the monthly pay is popularly, perhaps jocularly, supposed to circulate in a back current through their fingers. Then the clan system is still rampant. Competent men are served in favour of brothers and nephews with no qualifications. Everybody knows that under the family system of China poor relations swarm round every man who gets on, and the navy is no exception. They can by no means be shaken off, and, as they cannot all be supplied with cash, every never is strained to provide them with the means of living, no matter at whose or what expenses. Sir Joseph Porter, with his cousins whom he reckons up by dozens, would be no burlesque in China. This is one of the rotten places in the Chinese navy.

There are others—systematic speculation, the contract system with its division of the spoils, the starving of the needs of the service in order to put money into the pockets of the officers, and matters of that sort, winked at by those in authority for good reasons.

To the foreign onlooker it seems impossible that either loyalty to the Government or a proper *esprit de corps* can co-exist with these gross abuses, and it is on such premises that the expectation of a collapse in the Chinese navy is founded. But these same phases of official corruption pervade throughout the civil administration, and have

done so from time immemorial. Yet the Government goes on, and, indeed, it is a question, whether, with all its faults, the Government of China is not on the whole as successful as that of any Western State. The same things have not in all cases the same significance. In the West if one saw a ship dirty she would be properly pronounced inefficient; not necessarily so in Oriental countries. An officer gambling with his sentry would be incompatible with any kind of discipline at all in any country but China; but it would be rash to build, even on such a fact as that, a theory of the worthlessness of a Chinese navy. What the fleet really would do in an emergency it would be rash in any man to predict. For the present the ships cruise about in company, visiting neighbouring countries, make a brave show, never collide with each other, or even get their paint scratched.

Probably the safest ground of confidence in the ultimate fighting value of the Chinese navy is the evident determination of the Imperial Government to make it efficient. They will make many mistakes, they will waste enormous sums, they will be nearly strangled by time-honoured abuses; but they are a dogged people, with large resources, and, as a nation, massive.—*The Times*.

THE JAPANESE ARMY IN KOREA.

A correspondent who signs himself "W. A. T." writes:—"The Chinese have sent an army to Korea. . . . But it would be as reasonable to match brave men armed with pitchforks against brave men armed with rifles, as to pit man for man, the Chinese in their present condition against the Japanese.

"The Japanese are armed with the Murata magazine rifle, and there is no better rifle in Europe. It is manufactured at the arsenal at Tokyo; 1,200 men are employed, and 120 rifles turned out a day in times of peace. Its bore is .303, the same as our Lee-Metford; it is sighted to 1,200 metres. It carries ten rounds in the magazine on the Remington principle; the bullet is lead, coated with copper, that metal being plentiful in Japan; the Geneva Convention has no jurisdiction here, so the copper bullet is not tabooed.

"The Japanese cavalry are well equipped, though, to our ideas, badly mounted, but they are thoroughly aware of their shortcomings, and are taking steps to remedy them by degrees. The horse they are mounted on is, after all, the horse of the country, and no animal could be better adapted for service in Japan or Korea.

"The same applies to the artillery horses, which are simply 14 hand ponies, but strong and hard to a marvellous degree. Their field guns are 7-pounders, made at Osaka on a pattern of their own. I forget its name, but its action is simple and rapid and resembles Krupp's; they have also 12-pounder Krupps, and heavy Armstrong guns for the defence of forts.

"Their drill is that of the German army 20 years ago. They are precise and steady, and the officers know their work and how to teach it. In the cavalry, swords were carried on the saddle until the Emperor one day remarked it, and said that only gentlemen wore swords and the horse is not a gentleman, so swords are now worn on the body.

"One great feature in all barracks is the gymnasium. The men are thoroughly trained in this department, and some of the feats I saw performed by cavalry recruits of the guard at their annual general inspection last year would have done credit to any circus.

"Their wonderful neatness, completeness, and regularity is what struck me most. Everything was tidy, everything was ready, everything was there. Their only trouble was the wearing of European boots. Men who had all their lives been accustomed to straw sandals having to thrust their feet into hard leather boxes, so to speak, very soon went lame. A movement was on foot a few months back to shoe them with leather sandals which would obviate the evil. Whether this has been done or not I cannot tell. But this is the only thing I noticed that required alteration after a very careful inspection of the three arms, both guards and line.

"The troops they remind me most of are our Indian Gorkhas, and of all native and colonial troops that I have seen—and I have seen most of them—I would, next to Gorkhas, prefer a regiment of Japanese. They are brave, temperate, patient, and energetic, and though the Chinese might be made, under European officers, as fine soldiers as they are, at this moment they are about 200 years behind them; and, although the victory is not always to the strong, as found out in the Boer campaign, from every data that a soldier can judge by the Japanese should beat the Chinese in Korea with the greatest ease."—*Times*.

CHINESE AND KOREAN TRADE.

A late number of *London Transport* contains a synopsis of the first decennial report of the Chinese maritime customs on the trade, navigation and industries of the ports open to foreign commerce in China and Korea, prepared under the direction of the British representative at Peking.

In view of hostilities between Japan and China, this work gathers added interest, for prolonged warfare there may be severely felt along the seaboard of the countries involved.

The report under review covers the trade of the principal Chinese ports from 1882 to 1891, the growth or decrease of revenue, condition of the opium trade, state of the money market, imports and exports, and other details of importance.

The report from Newchwang indicates its prosperity is dependent on the agricultural culture, there being no mining or manufactures of importance there and no modern means of transportation. A leading article of import is seaweed (from Russian Manchuria), which is eaten as a vegetable. This is a centre for trade in ginseng, wild raw silk, deer horns, skins and pelts. A railroad is partially constructed.

From Chefoo comes the report that within ten years there has been an increase of trade "in every direction" except in importation of opium. The gains have been in passenger traffic and the establishment of trade by water with non-treaty ports in the north of the province of Shantung.

Chungking is stated to rank high as a distributing centre, having ample banking facilities. The two most important products of Szechuan are salt and opium, the latter cutting a considerable figure since the city has been made a treaty port.

The trade of Ichang, more than 700 miles from the mouth of the Yangtsekiang, has not prospered much, owing to want of regular steamer traffic and insufficiency of tonnage. The chief importation there is cotton yarn. The situation of this city is not favourable for trade, the surrounding country being sparsely settled. The opening of Chungking as a treaty port (near Hankow), about 1,250 miles up the Yangtse river, is said to be likely to render Ichang "merely a place for transshipment." Hankow, not far from Ichang, is a much larger place, and its trade has increased heavily within ten years, particularly with Odessa, in tea, at the expense of London in the same article. It has also been exporting more freely of silk, hides, and hemp. The province of Hunan, some 600 miles inland, south of the centre of the empire, is said to be exceptionally favoured commercially and industrially, owing to the establishment there of manufacturing enterprises, iron and steel works, iron and coal mines, an arsenal, cotton mills, etc. The ancient city of Wuhu is said to have developed a large trade in rice, due principally to competition and lower transportation charges.

Among the staple articles of consumption in the trading district of Chinkiang, sugar is conspicuous. Apart from the opium trade, the year 1882 was the most prosperous as regards revenue; the three succeeding years showed considerable decline, followed by better totals till 1891.

With regard to the important port of Shanghai, the most interesting points connected with foreign trade are increased interchange with Japan, growing demand for Indian fabrics, import of kerosene from Russia, increased export of China products, "rise of brokers to the place formerly held by merchant princes on account of the violent fluctuations of the silver exchange," and the deterioration of native manufactured products. It is stated that if Chinese railways are ever built the commerce of this port will naturally extend; but the future of Shanghai "greatly depends on China and the Chinese." At Ningpo the opium importation has declined, but the total foreign imports have increased 50 per cent. The demand for sugar shows a very remarkable increase. The importation of kerosene oil, cotton yarn, and matches and sheetings has risen in an important degree. Green tea makes up about two-thirds of the value of the export trade, but the tea business has not been good for some years past, and is on the decrease. The transport of goods is almost entirely by boats on a huge network of creeks and canals. There are no pack animals or carts.

At Foochow instead of material progress there has been steady decline, and in point of resources and commercial activity the outlook is less promising than it was ten years ago. At Tamsui the three principal events during the ten years have been the blockade by the French forces, which temporarily restricted trade operations in 1884-85, and drew the attention of the Chinese government to the strategic importance of Formosa; the construction of a railway of great importance to trade, and the creation of Formosa into a separate

province, which has quickened the movement of trade, though heavier taxation has prevented its full development. Besides the railway terminating at the port of Keelung, the telegraph connection has been completed and the roads have been greatly improved, but economy has led to the dismissal of almost all the foreigners connected with such work, their general deterioration. Taiwan, the port of the southern half of the island of Formosa, was opened to foreign trade in 1858, but business did not commence till 1865. Produce from the interior is conveyed in bullock carts. Southern Formosa did not share in the improvements introduced by the Governor Liu, and, with the exception of the telegraph, matters are still in as backward a condition as ever. "It no longer pays to ship sugar to Europe or America, and Japan is the only foreign country where Formosa Sugar finds a profitable market." Vermouth, beer, and porter "are much appreciated by the Chinese at Taiwan," and there is a considerable importation of these liquors.

At Amoy, with the exception of tea, trade has shown a considerable improvement. It is only the demand for low-priced tea which keeps the trade alive, and "Japanese competition bids fair soon to drive China tea out of the American market where Amoy teas are sold. In the last ten years the Japan export to the United States has doubled, whilst the Amoy export has fallen 50 per cent. Strangely enough, the natives appear to view the loss and ruin of this important trade with absolute indifference and without moving a finger to retrieve their position." As a tea port, Amoy is now important only from its placing tea from Formosa on the market. The report from Swatow shows that it is a strong trade centre, and that its growth promises a good future, at least for native interests; there is no present indication of decay, even in the foreign opium trade; but all causes combine to prevent the increase of foreign business houses, and the prospects of foreign merchants are not hopeful. Canton, without a railway or waterworks, has the telegraph and "the largest mint in the world," electric lighting, a native newspaper press, and a "thriving of native-owned steam craft." New industries have been started and old ones improved. "The future prosperity of Canton must mainly depend on the development of the West river as a trade route," as it is the natural channel for the interior commerce of the southern portion of the empire; but its advantages have so far been neutralized by heavy taxation.

Fusan, Korea, is at the moment a point of some interest, although the population is small. "A Korean steamship company has been established there and has met with much success. Yuesan has been opened to the trade of all nations since 1883, and it has prospered fairly well. No western nations have, however, yet established themselves at the port. The east coast of Korea, in all its length of 600 miles, affords "only four or five harbours, and there is no navigable rivers." Large schools of whales and smaller fish are frequently seen. "A closer view reveals a country by no means desolate; the lowlands are fertile, and the range of mountains contains splendid scenery and an abundance of game from tigers downwards. The port of Yuesan stands in a superb natural harbour covering an area of forty square miles. The two things absolutely needful to rouse this people to energy and commercial activity are unrestricted competition in every walk of life, as opposed to the present baneful system of monopolies, and secure enjoyment of the fruits of labour and enterprise."

It is of interest to add that, as indicated by China's foreign trade returns for 1888, one-third in value of her importations were of opium and nearly one-half cotton goods, woollen goods, and metals, together amounting to only about one-sixth of the whole, other receipts being trivial.

Of the total value of her exports about 40 per cent. were of tea shipments and a little more than that of silk, raw and manufactured, the remainder not calling for special comment.

In 1888 also the import and export trade of China with Great Britain and its dependencies and colonies amounted to about 70 per cent. of the total value of her foreign commerce. Russia in Europe and Asia took nearly 12 per cent. of China's foreign trade, the continent of Europe (Russia excluded) about 7.5 per cent., the United States nearly 6 per cent., and Japan 5 per cent.—*Bradstreet's*.

A metal that is inexpensive and heavier than lead is desired for the future rifle-ball. Tungsten is about one and a half times as heavy, and almost as hard as steel, so that a tungsten ball penetrates a steel plate 3 inches thick at 650 yards, while a similar ball of lead only penetrates a 2½ inches plate at 325 yards. But the present high price is an obstacle to the use of tungsten.

Original from

THE REPORTED ATTACK ON PORT ARTHUR.

The *North China Daily News* published the following article on September 1st:—

The news which we were able to publish yesterday as an "Extra," announcing that the Japanese had attacked Port Arthur, created considerable interest here, and its significance was at once appreciated by those conversant with China's defences. The telegram, which was from our Chefoo correspondent, and dated 31st August, 10 a.m., was in the following terms:—

"Japanese troops attacked Port Arthur. The *Redpole* was despatched thither last night."

The word "troops" was taken to mean that the attack had been by land, and when the possibility of this came to be discussed it seemed to be generally recognised that such a thing was not only possible, but very probable. Port Arthur, as the great Chinese arsenal—the only one in fact where the largest men-of-war can be docked—has been strongly fortified under the supervision of Mr. von Hanneken, but despite the statement in the Customs Decennial Reports that "the port is defended from attack both by sea and land," it is alleged that the chief attention has been paid to the sea approaches, leaving an assault by land quite within the bounds of possibility. The modern guns of heavy calibre are believed to render a naval attack a hopeless task, but as before stated, the land defences seem to have been neglected. Only five miles off, to the west, is Pigeon Bay, with safe access and deep water, where the Japanese war-vessels might land troops, who would then have a fairly easy country over which to operate, by keeping somewhat to the north. Another attack it is suggested might also be made from the north, the distance from Port Arthur being about seven miles and the country gently undulating, and largely under cultivation. With all the topographical characteristics the Japanese have evidently made themselves familiar, and, it is recalled that about two years ago a Japanese expedition made very careful surveys in these regions.

Presuming the Japanese were to capture Port Arthur it would be a tremendous blow to China, the seriousness of which could hardly be over-estimated. China has practically only two harbours of refuge in the North, Port Arthur and Wei-hai-wei. At the former only has she a dock accommodating the largest men-of-war, for Wei-hai-wei is simply a harbour, and the only other dock is the small one at Taku. With Port Arthur in their possession the Japanese would have a magnificent base for naval operations, and Wei-hai-wei, on the opposite promontory, being only five hours' steaming off, would be seriously threatened, whilst the chances of landing troops at Shanhaikuan would be greatly increased. In every way, therefore, the safety of Port Arthur is of vital importance to China.

Concerning this article the *Hochi* writes as follows:—

A report that the Japanese fleet had attacked and taken Port Arthur was received here a few days ago but was generally discredited. The news published by the *North China Daily News* of the taking of Port Arthur cannot be regarded as trustworthy, but this journal's account of the topography of the district and of the tactics to be pursued in attacking this important stronghold is worthy of attention.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 3.

The Count de Paris is dying. He is sinking gradually, and has received the sacrament in the presence of his family.

Detachments of the Colonial Reserves of Holland are under orders to embark on the 8th and 28th inst., to reinforce the troops in Acheen.

London, September 5.

The Russian Squadron has been ordered to Korea with all speed, but it is stated in St. Petersburg that its object in proceeding to the East is merely in order to protect Russian trade and shipping.

Huge forest fires have occurred in Minnesota and Wisconsin, in which six towns have been consumed.

London, September 7.

M. Stambuloff will be prosecuted for insulting King Ferdinand at an interview.

German newspapers state that a number of British officers and seamen and some native troops have been seriously wounded in encounters with the African chief Nana on the coast in the Bight of Benin. Reinforcements have been ordered.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Kobe, September 6.

The training ship *Tsukuba Kan*, which was recently in collision with the *Toyo Maru* in the Kii Channel, and had to be beached on the Island of Awaji to save her from sinking in deep water, has been got off and arrived safely in this port this afternoon. No pumps were going, though there is a big hole in the ship's side just abaft the mainmast, the breach having been stopped with timbers and tarpaulins, and the work appears to have been exceedingly well done.

(FROM THE "N.C. DAILY NEWS.")

London, August 25.

Owing to the illness of H.I.M. the Czar of Russia, the great manoeuvres at Smolensk, in which a hundred and fifty thousand men were to take part, have been cancelled.

London, August 31st.

The small Russian fleet in the Caspian sea is to be replaced shortly by a larger and stronger one.

London August 29.

All the Liberal papers admit that the recent meeting in Hyde Park, to promote the abolition of the House of Lords, was a fiasco.

The British Authorities at Aden have detained the new Japanese man-of-war *Tatsuta* from proceeding to Japan.

(FROM SAIGON PAPERS.)

Paris, August 14.

An agreement between France and Belgium with reference to the Congo has been signed.

Paris, August 16.

The Press congratulates M. Hanotaux on the conclusion of the Congo agreement.

Paris, August 17.

A plot has been discovered at Barcelona to murder M. Dupuy, who is staying in the Pyrenees.

(FROM TONKIN PAPERS.)

Paris, August 17.

Disorders have broken out in the South of Morocco.

Admiral Razvogow has been assassinated by an employé in the harbour department at Cronstadt.—*Daily Press*.

(FROM JAPANESE PAPERS.)

Fusan, September 6.

A Ninsen correspondent, under date the 4th instant, states that the preparations for an engagement have been satisfactorily effected, and the fight will probably take place to-day.

Fusan, September 6.

A French man-of-war arrived here to-day. Other French vessels will follow.

Shanghai, September 6.

A few days ago a French Custom officer was murdered by Chinese on the borders of the French possessions of Annam and Tonquin.

Fusan, September 5.

Several Chinese men-of-war, which were lying in Bokkai Bay, assembled at Wei-hai-wei two or three days ago.

Shanghai, September 6.

A Chinese general, named Ei Jo-sei, was ordered on the 22nd ult. to proceed to Korea, and left Tientsin the same day. A detachment the Ho troops accompanied him.

Later.

A detachment of 2,500 fresh Chinese troops led by Ei Jo-sei, is to be stationed at Shin-ju, and another 4,000 troops, under command of Ka Ki-sho, has been dispatched to Yo-chhon.

Shimonoseki, September 5.

Five Chinese war-vessels were preparing for war in the neighbourhood of Woosung on the 31st ult., but they seem to have no intention of proceeding to sea.

Later.

All the vessels of the China Merchants' Steam Navigation Co. have assembled in Shanghai.

Later.

Some 8 cannon, 200 tons of ammunition, 100 tons of coal, 50 bags of rice and 60 coolies were shipped at Shanghai on the 16th ult. for Formosa.

Later.

Rumour has it that General Lien Ei-fuku has reached Formosa accompanied by 5,000 soldiers.

Marukame, September 5.

The transport *Sogoku Maru* ran on to a shoal off Oki-shima, and has not yet has been floated.

Fusan, September 5.

A Söul correspondent announces that every thing is quiet in the capital, but great scarcity of various articles is experienced as a consequence of insufficient communication with other towns. Marquis Saionji has been paying daily visits to the Korean Court. Entertainments have been given and returned by the Koreans and Japanese. The Tai Wön-kun has been present at a banquet given by Japanese.

Shanghai, September 5.

The Chinese Government has issued a notification to the effect that Japanese subjects residents in China shall be amenable to Chinese law.

Hongkong, September 4.

No new case or death from pest has been reported since the 1st.

Fusan, September 6.

Lieutenant-General Nozu left Söul on the 3rd for the north.

Later.

It was rumoured among the foreign residents of Ninsen that a great battle was fought between the two armies lately. This is a misconception arising from the return to that town of some disabled Japanese soldiers from Söul. The men have not been engaged in war, but are being invalided home to Japan by reason of sickness.

Osaka, September 7.

A Söul correspondent, under date the 31st ult., states that a majority of the pro-Japanese officials in the Korean Government have sent in their resignations owing probably to friction in the official circle. The message adds that a rumour is current to the effect that Ming, the ex-Premier, has been captured in Phyöng-an Province, and sent to Tientsin. According to the statement of a Chinese captive, who was sent up to Söul on the 30th, the Chinese troops in Phyöng-yang are under strict discipline, and are very heartily received by the natives of the locality. The soldiers entirely differ from those met by the Japanese forces at A-san.

Shizuoka, September 7.

Heavy rains have fallen here, and several houses have been struck by lightning.

Wakayama, September 7.

Severe rain and a violent thunder storm visited here last night.

Shimonoseki September 7.

The *Mogami-gawa Maru* passed here to-day with 80 Chinese prisoners-of-war, which she was conveying from Saseho. She is bound for Ujina. It is said that one of the Chinese prisoners died at Saseho. The *Kisogawa Maru*, which arrived here this morning, brought intelligence to the effect that the work of conducting telegraph wires between Söul and Phyöng-yang has been completed.

Osaka, September 7.

A Shanghai telegram, received by the Mitsui Bussan Kaisha to-day, states that the Custom Authorities of that port will impose 2.8 taels duty on a bale of Japanese yarn in addition to the ordinary Customs charges.

Hongkong, September 7.

The American Consul at Amoy reports that there are no cases of pest in that port, and no reports of the outbreak of the epidemic have been received from any other district. The British Consul at Canton has reported that the pest has been stamped out there.

CHESSE.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 137.

- WHITE. BLACK.
- 1—B to Q sq. 1—K to Q 4
2—B to B 3 ch. 2—K x Kt
3—Q to K 7, mate if 2—K to B 5
3—Kt to Q 6, mate if 1—K to Kt 4
2—B to K 2 ch. 3—K to B 3
3—Q to K B 3, mate if 2—Kt interposes
3—Kt to Q 4, mate if 1—Kt moves from Q 2
2—Q to B 5, ch.
3—Q to Q 4, mate.

Correct solutions received from Omega, W.H.S., Diganima, and J.D.

We may point out to those who have not had time to analyse the above position that the black pawn at R 7 prevents a second solution beginning K to Kt 2.

PROBLEM No. 139.

By J. DOBRUSKY.

White to play and mate in three moves.

GAME No. 159.

In simultaneous performances which Mr. Blackburne has recently given in the South of England, he has played havoc with the French Defence. The following game, which he won at Eastbourne from Mr. Boys, is noteworthy because of its pretty finish, and also as being identical, move by move, with a game which Mr. Blackburne had previously won at Hastings from Mr. Muller. The notes are from the *Standard*:-

THE FRENCH DEFENCE.

- WHITE. BLACK.
- Mr. Blackburne. Mr. Boys.
- 1—P to K 4 1—P to K 3
2—P to Q 4 2—P to Q 4
3—Kt to Q B 3 3—Kt to K B 3
4—B to Kt 5 4—B to K 2
5—B takes Kt 5—B takes B
6—Kt to B 3 6—Castles
7—B to Q 3 (a) 7—Kt to B 3 (b)
8—P to K 5 8—B to K 2
9—P to K R 4 9—P to B 3 (c)
10—Kt to K Kt 5 10—P takes Kt (d)
11—B takes P ch. 11—K takes B
12—P takes P dis. ch. 12—K to Kt sq.
13—R to R 8 ch. 13—K takes R (e)
14—Q to R 5 ch. 14—K to Kt sq.
15—P to Kt 6

And Mr. Boys resigns.

Notes.

- (a) Both sides follow the opening moves of the well-known game won by Fritz of Mason in Nuremberg, 1853.
(b) The correct move here is 7.....P to B 4, and the continuation 8 P to K 5, B to K 2, 9 P takes P, B takes P, &c. Developing the Q Kt without having previously moved the Q B P is invariably disadvantageous in the French and in kindred openings.
(c) He had nothing better now than 9.....P to K R 3, preventing 10 Kt to Kt 5, because of 10.....B takes Kt, &c. But White's best answer to 9.....P to K R 3 is 9 P to K Kt 4, &c. (d) This capture is too dangerous. The best would have been 10.....P to B 4.
(e) The following pretty variation is brought about by Black's refusing to take the Rook:-13.....K to B 2; 14 Q to R 5 ch, P to Kt 3; 15 Q to R 7 ch, K to K sq; 16 Q takes P ch, K to Q 5; 17 R to R 8, Kt takes Q P; 18 R to Q sq, Kt takes P ch, 19 R to K 2, B to B 3; and Black saves the game.

In a paragraph, which was recently published in the *Belfast Northern Whig*, it is pointed out that whilst is realistic and holds the mirror up to nature, depicting actual life, the world as it is. But chess is "idealistic, and has seized on the eternal principles of justice and equity. Thus, chess is well adapted to be the consolation of those whose lot in life is not so happy as it ought to be.

Seated at the game we can forget our hardships, the solicitors who send no briefs, the editors who reject our manuscripts, the fondly-loved mistress who is going to marry some one else; the burden falls from our shoulders, and we move freely. But there is more than this. By means of the chess-board we enter into a region of equity and fairness, where righteousness reigns, and all men are equal."

GAME No. 160.

Played between Mr. J. P. Cooke, of Montreal, Canada, and Dr. T. D. Davis, of Pittsburgh, U.S.A. Scores from the *Pittsburgh Dispatch*:-

BISHOP'S GAMBIT.

- WHITE. BLACK.
- J. P. Cooke. T. D. Davis.
- 1—P to K 4 1—P to K 4
2—P to K B 4 2—P takes P
3—B to B 4 3—P to Q 4
4—B takes P 4—Q to R 5 ch.
5—K to B sq. 5—B to Q 3
6—P to Q 4 6—Kt to K 2
7—Kt to Q B 3 7—P to K B 3
8—Kt to K B 3 8—Q to R 4
9—K to B 2 9—P to Q B 3
10—B to Kt 3 10—B to R Kt 5
11—P to Kt 3 11—B takes Kt
12—Q takes B 12—Q to R 5 ch.
13—R to K 2 13—Kt to Q 2
14—R to B sq. 14—P to K Kt 4
15—Kt to Q sq. 15—Kt to K Kt 3

32—P takes B

Black announced mate in five moves.

Slightly more than a year ago, Lasker challenged Tarrasch to a match and received a reply which was in substance: Go win your spurs and if they clink merrily upon your return, I may consider your proposition. The conundrum for the inquisitive mind to grapple with is: What would be Lasker's answer now to a challenge from Tarrasch?

GAME No. 161.

The following very pretty game was played recently at the British Chess Club, London. Score and notes from the *Baltimore News*:-

CUNNINGHAM GAMBIT.

- WHITE. BLACK.
- Rice. Donisthorpe.
- 1—P to K 4 1—P to K 4
2—P to K B 4 2—P takes P
3—Kt to K B 3 3—B to K 2
4—B to B 4 4—B to R 5 ch.
5—P to Kt 3 5—P takes P
6—Castles 6—P takes P ch.
7—K to R sq. (a) 7—P to Q 4
8—P takes P 8—B to R 6 (b)
9—Q to K 2 ch. 9—K to B sq. (c)
10—R to Q sq. 10—B to Kt 5 (d)
11—P to Q 4 11—Kt to K B 3
12—Kt to B 3 12—Kt to R 4
13—Kt to K 4 13—P to K B 4
14—R to B sq. (e) 14—Kt to Q 2

- 15—Q to Kt 2 15—B to B 3
16—Q Kt to Kt 5 16—Q to K 2
17—Kt to K 6 ch. 17—K to B 2
18—K Kt to Kt 5 ch. 18—B takes Kt (f)
19—Q takes B 19—B takes B
20—Q takes Kt ch. 20—P to Kt 3
21—R takes P ch. 21—Kt to B 3
22—P to Q 6 (g) 22—P takes P
23—R takes Kt ch. 23—Q takes R
24—Q to Q 5 (h) 24—P to Kt 3
25—Q to Kt 7 ch. 25—Q to K 2
26—Kt to Kt 5 ch. 26—R to B 3
27—Kt to K 4 ch. 27—Q takes Kt
28—Q takes Q 28—Resigns.

Notes.

- (a)—Sated with carnage and travel-worn the Black Pawn is unless except as a bulwark to the White King. Bird suggests leaving the former at Kt 6.
(b)—B to K 2 or B 3 is preferable
(c)—Black cannot advantageously interpose.
(d)—It seems better here to move one of the Inert Knights.
(e)—Well played; if P takes Kt, White gains two Bishops for a Knight.
(f)—If K to Kt 5, 19 Q takes B, P takes Q, so B to Q 3 ch., and mates next move.
(g)—See diagram of this curious situation.

BLACK—DONISTHORPE.

WHITE—RICE.

(h)—A very strong and winning move.

REPORTS.

The American steamer *City of Peking*, Captain Searle, reports:—Left San Francisco the 16th August; had moderate to light west to south-west winds to September 1st; thence to port light to fresh variable winds and heavy rain squalls. Arrived at Yokohama the 4th September.

The German steamer *Nürnberg*, Captain Hugo Walter, reports:—Left Hongkong the 31st August at 5 a.m.; experienced through the Formosa Channel fine weather and light easterly winds; thence to Van Diemen Strait fresh and strong N.E. winds, rough sea, and easterly swell; thence to port light easterly winds with rain squalls, moderate sea. Arrived at the Quarantine Station the 6th September at 9.35 a.m.

The British steamer *Victoria*, Captain John Pantou, R.N.R., reports:—Left Hongkong the 28th August at noon, Amoy the 29th, Shanghai the 1st September, and Kobe the 6th at 5.30 a.m. and arrived at Yokohama the 7th September at 9.30 a.m.; had fine weather throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

Nothing satisfactory about this market. Yarns are woefully neglected. Shirtings also. Some little business was done in Turkey Reds at low prices; but sellers are not willing to go on. There is a talk of some enquiry for Indigo Shirtings, but so far no business results. Woollens—Some enquiry

ATKINSON'S WHITE ROSE

The most admired of all Perfumes. Other odours pall upon the sense, but ATKINSON'S "White Rose" is ever fresh and sweet.

ATKINSON'S EAU DE COLOGNE

Renowned for a couple of centuries, this Perfume has given rise to a legion of Worthless Imitations. Use only ATKINSON'S ESSENCE make, which is the finest. Of all Dealers.

J. & E. ATKINSON,
24, Old Bond Street, London.

CAUTION! Only genuine with shield-shaped blue & yellow label & usual Trade Mark, a "White Rose," and address in full.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

THE GREATEST WONDERS OF MODERN TIME.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles

"MONEY AND TRADE" is the Journal for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

THAMES ELECTRIC & STEAM LAUNCH CO^Y

ELECTRIC LAUNCH "GLOW-WORM," BUILT BY T.M. CO.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 11 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections. Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 15TH, 1894.

SUMMARY OF NEWS.

MANY deaths from lightning have been reported during the week.

THE Bank of Japan sent 1,500,000 silver dollars to Hiroshima on the 9th inst.

THE war loan, fixed at 30,000,000 yen, has been subscribed for twice over.

THE censorship of the Press, in regard to war news, has been withdrawn.

TRAINING for the autumn race meeting has commenced on the Negishi course.

TYPHOID fever and dysentery are still very prevalent in the southern prefectures.

THE inhabitants of Yokohama have subscribed yen 3,462,300 towards the War Loan.

MR. IJUN HIKOKICHI has been appointed Secretary of the Japanese Legation in England.

MELODRAMAS based on the Korean War are drawing big houses in Tokyo and Yokohama.

A LARGE number of veterinary surgeons and shoeing-smiths have been dispatched to Korea.

CERTAIN residents of Kochi Prefecture have, it is said, under consideration the organization of a privateering fleet consisting of three vessels with which they intend to attack Chinese vessels.

coasting along the Southern shores of the Middle Kingdom. The promoters intend to raise the equipment expenses from among the peers.

ONE of the performing elephants in Harmston's Circus died of inflammation of the bowels on Monday afternoon.

THERE will be only three crews in the International boat race at the autumn regatta—Scotch, English, and German.

SOME skirmishing between advanced guards and outposts of the two armies is reported from the neighbourhood of Phyoŋ-yang.

THE *Yoroku Choho* is publishing three columns of news and comments in English twice weekly. Only Japanese are employed on the work.

A LARGE quantity of canned beef has been sent to Korea. The supply of fresh beef in the capital is running short and prices are rising.

THE "Eyton and Pratt Cup" was won by *Spray* on Saturday afternoon in the race for the A division boats of the Yokohama Sailing Club.

THE Government has granted permission to foreign war correspondents and newspaper representatives to follow the Japanese army in Korea.

THEIR Imperial Highnesses Princesses Tsune and Kane returned to Tokyo on the 10th inst. from Nikko, where they have been staying for some time.

QUARANTINE and medical inspection of vessels coming up to Japan from Hongkong have been abolished, owing to the Colony's being declared free from the pest.

HARMSTON'S Circus has been playing to good houses during the week; the proceeds on Wednesday evening were given to the Red Cross Society's funds.

THE son of a wealthy widow living in Tokyo strangled his mother during a fit of temporary insanity last Sunday, and then committed suicide by hanging himself.

THE gale on Tuesday evening was felt in Yokohama, but comparatively little damage was done. The small tent enclosing Harmston's menagerie was blown to tatters.

NOTWITHSTANDING the heavy floods in the north eastern districts of the main islands, the Japanese rice harvest this year is estimated to be above the average yield about 20 per cent.

THE *Tenkyo Maru*, seized by the Chinese at Tientsin, is to be returned to Japan, the Chinese authorities finding that she sailed before the declaration of war between the two countries.

H.I.M. the Emperor, accompanied by his principal Ministers of State and a brilliant staff, left the capital on Thursday morning en route to Hiroshima where he intends to make his headquarters.

THE master of the *Nippon Maru*, which went ashore on the Chinese coast, has had his certificate suspended for five months, the Marine Court of Inquiry finding that he had displayed gross carelessness.

H.I.H. PRINCE KOMATSU YORIHITO, who set out on a tour through Europe and America some time ago, reached San Francisco on the 6th inst., and is expected to return to Japan by the 20th of this month.

Yokohama was visited by a severe typhoon on Tuesday, which caused the destruction of two vessels.

and many sampans, besides overturning a chimney and bringing about the death of a Japanese tinsmith.

LORD and Lady Randolph Churchill arrived by the Empress packet from Vancouver on Monday. After a day or two in Yokohama they left for Miyashita. Lord Randolph is travelling for the benefit of his health.

MR. SHIBUSAWA EIICHI, the great merchant banker of Tokyo, has been escorted by two *soshi* of late, others of the fraternity having threatened to assault Mr. Shibusawa for having, as they alleged, sold coal to Chinese.

THE Osaka Mint struck gold and silver coins to the following amount during last month:—5-yen gold pieces, yen 60,000; 1-yen silver pieces, yen 1,280,000; 20-sen silver pieces, yen 316,840.40; 10-sen silver pieces, yen 391,200.

THIRTY-FIVE houses and sheds were completely consumed by fire on the 7th inst. at Gobancho, Niigata, four persons being more or less severely injured. Thirty-six dwellings were burnt at Yonenotake, Yamaga-gun, Kumamoto Prefecture, on the 5th inst. On the 10th inst. 68 houses were destroyed in Otaru-gun, Hokkaido; the same day 40 dwellings were burnt at Kamiiso-mura.

REUTER telegraphs that the Comte de Paris is dead. He expired peacefully in the presence of his family, and will be buried at Weybridge, England. The Omsk-Ural Railway has been opened for traffic, and the Russian Customs in Central Asia will be opened on Thursday. The details of the recent forest fire in America are most harrowing. The number of lives lost is estimated at one thousand. That the Turkish Government has protested against the occupation of Kassala by Italy is stated to be unfounded. Fresh serious revolts are taking place in Morocco. The British Customs' Yearly Report states that the consumption of tea is largely increasing. The English Court has gone into mourning for ten days on account of the death of the Count de Paris. There are several indications of a rapprochement between the Vatican and the Quirinal.

AN improvement can be recorded in the Import trade. In Yarns a small business has been done through holders accepting a slight reduction, and a few sales of heavy Shirtings have also been effected. Black Velvets were in some request, and Turkey Reds have been taken steadily during the past few days. Some indents are said to have been made for certain Woollens, and enquires are being made for Blankets and Italian Cloth. Though transactions are far from extensive in the Metal market, things keep moving on a small scale and there is a good all-round enquiry. There have been but few sales of Kerosene and holders still continue firm, but the stock is large and increasing, the American and Russian oil in case and bulk now being equal to nearly 700,000 cases. In the Sugar trade, Formosa sorts are still neglected, though there have been moderate quantities of Manila moving at rather higher figures. Whites are quiet. Buyers of Silk are looking for lower prices, and the business actually put through was done at easier rates, but the trade has been limited. There has been very little done in Waste. In the Tea trade there has been a good demand, and more money paid for suitable parcels, good leaf being still wanted at current rates, the stock of all grades being reduced to narrow dimensions. Export figures to date show a million pounds over those of last year at same period. Exchange, which rose a point early in the week, has been steady and the rate maintained to the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Emperor's journey to Hiroshima in consequence of the removal to that place of the Imperial Military Head-quarters, has called forth enthusiastic manifestations of loyalty and patriotism from the whole press of the capital. That His Imperial Majesty has been pleased to undertake this long journey and to endure the inconveniences of a temporary residence for the sake of the better prosecution of the war, has aroused unbounded enthusiasm throughout the country. On the morning of the 13th instant, the whole route traversed by the Imperial procession from the palace to Shimbashi station was lined on both sides with a dense crowd of loyal citizens bidding farewell to their gracious Sovereign. Similar enthusiasm, we are informed, was manifested at every place along the route of the Imperial progress. The papers do not know how long the Emperor is going to stay at Hiroshima, but they state that, according to the turn events may take, the military head-quarters may be removed still further westward, and even into Chinese territory!

Concerning the war, it is believed that the attack on Phyang-yang must have been begun by this time. The metropolitan papers are urging with increasing energy the importance of continuing the war until China shall have been completely humbled. Not that a peace party has actually sprung up in Japan; but they deem it necessary to warn the nation against a premature peace, because they have a suspicion that, after the expected victory over the Chinese at Phyang-yang, efforts will be made by China to induce the European Powers to mediate between the contending parties. Some of the Opposition journals, too, seem to fear that the Cabinet may be inclined to accept negotiations for peace. Again they perceive that the result of tradal depression will sooner or later produce a peace party among men of business. These considerations induce the vernacular papers to lay special stress upon the importance of continuing the war to the bitter end. We reproduce a few of the chief articles on this subject.

The *Yiji Shimo* is positive in declaring untrue all the rumours that have lately been circulated concerning the offer of mediation by any foreign Powers. Such offers were absolutely rejected by Japan previous to the commencement of the present war, and there is no reason, says our contemporary, to believe that they have been renewed now that the contest has actually begun, and the probable issue of the struggle is tolerably certain. To propose mediation at such a time would be acting entirely in the interests of China, and, consequently, it ought to be well-known to foreign Powers that no such mediation will be accepted by Japan. These Powers, continues the *Yiji*, may desire peace for the sake of their own commercial interests. Doubtless the present war seriously disturbs trade in this part of the world, but such a state of affairs will be only temporary and trade will ere long revive with two-fold energy. To come between Japan and her object, is an act which any Power that values in the least the friendship of this country will think twice before committing. Consequently, our contemporary is inclined to think that there is little danger of a premature peace being commended to Japan by any of the foreign Powers. The *Yiji*, however, is really afraid lest the increasing stagnation of trade may lead to the formation of a party clamouring for peace. The great body of merchants being of *chonin* birth, it is not to be expected that patriotism and public spirit will be as strong among them as among the *shizoku* and other classes. The *shizoku* are ever ready to sacrifice life and property for the sake of their Sovereign and their country. The merchants, too, doubtless possess this virtue in some degree, but their ruling passion is self interest. So if ever a peace party is destined to arise in this country, it will be among the mercantile class. The *Yiji*, therefore, repeatedly ad-

peals to the business class to suffer patiently the temporary inconveniences and hardships of the situation and to wait till the conclusion of a glorious peace with the enemy, when trade will revive with redoubled force.

The *Fuyu Shimbu*, the Radical organ, observes that now that hostilities have been or are about to be recommenced on a large scale, there is no occasion for talking of peace. The path before Japan is clear enough; namely, to go straight to Peking and dictate terms to the vanquished enemy. "We have no doubt," says our contemporary, "that such is the unanimous opinion of the whole people. We shall not hesitate to denounce as a traitor any body who may at this juncture advocate the conclusion of a peace with the enemy." The Radical organ then goes on to dwell on the importance of dealing a lasting blow to China for the sake of modern civilization as well as for the general peace of the East.

The *Mainichi Shimbu* is agreed with the rest of the Japanese papers in thinking that the defeat of the Chinese at Phyang-yang will perhaps lead the Peking statesmen to open negotiations for peace. Were Japan's object confined to the maintenance of Korean independence, it would say the Progressionist organ, be easy enough even now to conclude a peace with China securing the peninsula against the interference of the Middle Kingdom. "But Japan," continues our contemporary, "is now determined to obtain for herself a commanding position in the East, and to raise her prestige among the various Powers of the West. In order to attain these objects, it is absolutely necessary to strike a vital blow against China and utterly to deprive her of power to obstruct this country's path. It is a remarkable fact that a paper which has always been regarded as one of the most pacific in the capital writes in this tone. It may also be noted that the party to which this paper belongs, namely the *Kaishin-to*, is notable among those clamouring for an aggressive policy.

The *Kokumin Shimbu* is very angry that the countries of the West are disposed to question the right of Japan to prosecute the present war. Nothing is easier than to justify her conduct in this matter. The justification is based on no less a ground than the right of civilization to conquer barbarism. Such, continues the Tokyo journal, was the ground on which England placed Egypt under her protection; such also was reason why France assisted the struggle of the Americans for independence; and such now is the *raison d'être* of Japan's active efforts to assist Korea in the maintenance of her independence and the reform of her national institutions.

The question of reforms in Korea receives a considerable amount of attention from the Japanese papers. The work of reform seems to be making very slow progress. It is even reported that dissension has arisen among the members of the new Government in Seoul, and that a number of those belonging to the progressive party have tendered their resignations. With a people indifferent to the dignity of the country and with a Government, many members of which are men of conservative ideas, incapable of understanding the motives of a new civilization, the responsibility which Japan has assumed—say the metropolitan papers in respect of Korean reforms is a very serious one. It will be impossible to carry out any effective reforms until an object-lesson shall have been given the Koreans by the complete humiliation of China. As soon as the Koreans begin to perceive the superiority of Japan to China, reforms will become possible. From this point of view alone, it is of absolute importance, say the vernacular papers, to reduce China to a state of complete helplessness.

The treaty of alliance between Japan and Korea recently promulgated has received a share of journalistic attention. The treaty being simply the expression on paper of what has actually existed for some time, there is nothing

particularly noteworthy in the comments of the metropolitan papers on this subject. The *Kokumin Shimbu*, we may notice, remarks that, upon the expiration of the present treaty, it ought to be replaced by one of a permanent character, like that which exists between France and Annam. The *Yomiuri Shimbu* observes that Korea by combining with Japan for the purpose of fighting against China has placed herself in a situation out of which there is no retreat. Their declaration of enmity against so formidable a country as China, may, thinks the *Yomiuri*, tend to rouse the fallen national spirit of the Korean people.

Indignation is expressed against the treacherous conduct of the Chinese Government with respect to the neutrality of Shanghai. According to the information received by the Japanese papers, the Chinese Government is said to be using that place for the enlistment of foreign adventurers, the importation of arms and ammunition, and other warlike purposes. The *Hochi Shimbu*, among others, urges the Japanese Naval authorities to blockade Shanghai. Japan, says our contemporary, is sincerely desirous to limit the horrors of war as narrowly as possible, but she must not be expected to look on idly while her enemy is constantly disregarding its obligations in regard to the peculiar position of Shanghai. The *Kokumin Shimbu* is more moderate. It advises the Japanese Minister of Foreign Affairs to approach the foreign Governments concerned and ask them to issue instructions to their Representatives in China to see to the strict maintenance of the neutral character of the settlement in Shanghai. The foreign Governments, in securing the promise of the Japanese Government to place Shanghai outside the sphere of warlike operations, have incurred an obligation to see to the rigid maintenance of the neutrality of this port. Should such representations fail to produce the desired effect, Japan would, then says the *Kokumin*, be justified in rescinding her promise to regard Shanghai as neutral territory.

The *Nichi Nichi Shimbu*, writing on the subject of "England and Russia in the Far East," cautions its countrymen against making a hasty choice of the friendship of either of these Powers. Our contemporary agrees with the rest of the Tokyo papers in believing that the interests of these two countries are diametrically opposed. The *Nichi Nichi* dwells at some length upon the keen watch which each is keeping upon the movements of the other in this part of the world, and thinks that their jealousy and animosity has of late been increasing. The Japanese nation is recommended to keep a vigilant watch on the relations between these two Powers. The *Nichi Nichi*, however, warns its countrymen against manifesting either especial good will or especial animosity towards one or the other of these Powers on account of any transient considerations.

The talk of a triple alliance between Japan, Russia, and France is beginning to engage the attention of a small circle of politicians in Japan. There is no paper which has committed itself to a belief in the advisability of such an alliance, but one or two of them have tentatively introduced the subject. The *Kokumin Shimbu* is one of these. Alluding to the conference which the Ministers of Russia, Germany, and England, recently held at Chefoo, the *Kokumin* expresses surprise at finding Russia in such company. Our contemporary is inclined to think that Russia has a very erroneous idea of the object of Japan in the present war. The Northern Power, perhaps, thinks that Japan's object is to obstruct the progress of Russia on the Asiatic continent, and is consequently, not so friendly to Japan as she would otherwise be, and as her ally, France, has proved to be. So far as Korea is concerned, Japan, continues our contemporary, would never consent to the occupation by Russia of any part of the peninsula. But Japan has no desire or intention to monopolise Chinese territory. If Russia is desirous

of extending her dominion to the interior of China, Japan has no objection to such a move on her part. Japan and Russia ought to be and can be good neighbours, if each keeps within proper bounds. Japan is not at all afraid of coming into direct contact with Russia or any other European Power on the continent of Asia. On the contrary, if Russia advances from the north-west of China, Japan will be glad to welcome her as her new neighbour. It will be, continues the *Kokumin*, to Russia's interest to remain friendly with Japan. These facts will easily be recognized by Russia, if the Japanese diplomatists take the trouble to explain the situation to her. Such in brief is the substance of our contemporary's remarks on the subject.

EDITORIAL NOTES.

THE LATE COUNT YANAGIWARA.

THE late Count Yanagiwara, whose death and funeral we have briefly noticed in other issues, was one of the Court nobles who played a conspicuous part in the accomplishment of the Restoration. He was born in 1850, and was the second son of Lord Yanagiwara Koai, who has lived a retired life since 1872, leaving the title and the management of the house to the late Count. During the war of the Restoration he was appointed Vice-Commander of the Imperial Army despatched to restore peace and order along the Tokaido. It was he who received the key of the castle of Yedo from Katsu Rintaro, now Count Katsu. In recognition of the distinguished services he rendered to the cause of the Court, he was rewarded with a hereditary pension of 300 *koku* of rice. In the late year *Meiji* (1869), when the administration was entirely re-organized, he was appointed Junior 1st secretary of the Department of Foreign Affairs. Next year he was despatched to Tientsin on diplomatic business, and again to the same place the following year as Vice-Ambassador subordinate to the late Marquis Date for the conclusion of the Treaty with China. His official connexion with China continued for some years; he accompanied Count Soyejima when the latter was ordered to China in connexion with treaty affairs; was appointed Envoy Extraordinary and Minister Plenipotentiary to Peking in 1870, and was commissioned to cooperate with the late Okubo Toshimitsu when the latter was sent in August of the same year in connexion with the celebrated affair of the Formosa Expedition undertaken by Japan. As a reward for the meritorious service which the late Count rendered on that occasion, he received a present of 1,000 *yen*. Next year he was recalled and was appointed a senator. In February of 1877, when the Satsuma rebellion broke out, he was ordered to proceed to that province to instruct the Shimazu families to admonish their old retainers to keep order, and also to transmit official notice to the leaders of the rebellion that they had been deprived of official titles and were regarded as rebels to the State. After the war was over he, in recognition of the service he had rendered on the occasion, was decorated with the Order of the Rising Sun of the 2nd class. In 1880 he again returned to the diplomatic service, and was appointed Japanese Representative at St. Petersburg. Three years later he returned home and was appointed President of the Decorations Board, Vice-President of the Senate in 1888. President of the Senate next year. Subsequently he was a Privy Councillor, a member of the House of Lords (Imperial nominee), and lastly a Court Councillor, which latter post he resigned in 1890 on account of weak health. The Count was said to be a man of great energy and resolution, and his premature death is mourned by all.

A YOUNG COLONY.

MR. TAMAKI HANYEMON, a native of the Bonin Islands, is a man of adventurous spirit, devoted to the work of starting commercial enterprises in the southern islands of Japan. When the *Meiji* Government first endeavoured to open up

the Bonin Islands he was employed as a guide, and when an expedition was despatched against Formosa some time ago he accompanied the troops. Subsequently the idea occurred to him to colonize St. Paul, an island that lies betwixt the Bonin and Hachijyo groups. In the autumn of 1887, when Baron Takasaki Soroku, then the Governor of Tokyo, equipped the *Meiji Maru* for the exploration of the southern islands, Mr. Tamaki was allowed, with several of his followers, to sail in that vessel; the object of Mr. Tamaki's party was to be conveyed to St. Paul. They were landed on the island, but begged that, as they could not ascertain whether the island could furnish them with fresh water, the ship would call at the island on her way back. The ship reached Yokohama after a few weeks, but without fulfilling the promise she had made to the men left on the solitary island. The officers of the ship were greatly censured for their neglect, and the St. Paul desertion affair became for a while the topic of the day. The Tokyo Municipal Government thereupon despatched a steamer of the Nippon Yusen Kaisha to the island. The party had been more fortunate than had been apprehended by the public. Drinking water could not indeed be had at first. The adventurers found the whitened skeletons of human beings who must have been stranded on the islands and there perished for want of water. They were thus stimulated in their exertions to find water, lest they should share the same miserable fate. With a bit of iron found on the shore they began with indefatigable energy to dig a well not far from the sea. Their efforts were not in vain, for the island being volcanic they saw to their immense delight a jet of warm water issuing from the well after it has been dug for some distance. When this pressing need had been satisfied, the party began to investigate the further resources of the island. Albatrosses abounded, and were so unfamiliar with men as not to fear them, and to be easily captured. They used the flesh as food, and preserved the feathers. These were subsequently exported to Europe and America, where they are extensively used for the decoration of ladies hats. Guano is abundant. Sharks also are numerous on the coast. These comprise all the resources of the island. The settlers now number more than one hundred, and they are actively engaged in the work of colonization. A wide extent of land has been reclaimed and planted; pig-raising has also been undertaken. Another most noteworthy work undertaken and accomplished by Mr. Tamaki was the construction of a landing place. Landing was extremely dangerous in rough weather, but Mr. Tamaki by making use of an extinct crater that protruded into the sea made a safe landing stage. He dug three more wells, laid out a street which he christened Tamakicho, constructed a bathing establishment, and persuaded a doctor to come from Tokyo. The Government has recognized Mr. Tamaki's earnest exertions in converting a desert island into an inhabited place, and has established a post office, while the Yusen Kaisha has consented to call at the island several times a year. In the island there is no law court, no police, and no Government official, and the inhabitants live in fraternal familiarity. Recently a sum of 189 *yen* was collected and was sent to Tokyo as a contribution towards the war fund.

THE LAST REGULATIONS PUBLISHED BY THE LATE MINISTER OF EDUCATION.

HIMSELF suffering from the disadvantages of a weak constitution, Mr. Inouye Ki, the late Minister of Education, endeavoured most energetically to promote the bodily development of students. He expressed some time ago his opinions on the health of higher school students, the substance of which was published in a recent article. As his last legacy to the educational matters of the realm, Mr. Inouye had a notification issued over his signature on the very day of his resignation, concerning the physical education of common school pupils. The notification starts with the preamble that in consequence of the decay of warlike exercises since the Res-

toration, and of the tendency of teachers and scholars to pay a predominant attention to the culture of the mind, neglecting for the most part the equally important culture of the body, physical education is in a very backward state. Then follow points, nine in all, to be specially kept in mind in the primary education of boys and girls. The late Minister urges that in common gymnastic exercises, as in military drill, the utmost attention should be paid so as to bring about active movements of all parts of the body; that students should be encouraged to take their exercises cheerfully, and that mere formalities concerning the posture of boys and so forth should not be too strictly adhered to; that to boys of higher common schools, military drills chiefly should be given, accompanied by war-songs now and then; that common school boys should be made to wear foreign clothes or short-sleeved Japanese clothes; that boys and girls of common schools should be induced during the intervals of school-hours to amuse themselves as much as possible in the open air; that as to make the pupils take notes of lessons or commit to memory what they have been taught, being liable to over-tax their brains, these methods should be employed only in exceptional cases; that for the same reason compositions should not be demanded from pupils of lower grades, that to change the order of pupils according to the result of examinations and to award prizes to the most successful, are liable to over-stimulate them and tend to injure their health, therefore these methods should be abolished hereafter; that common school boys should be forbidden to smoke tobacco; and that pupils in cities should be enjoined to walk to and from school, not to use *jirikisha*.

FOREIGN WAR CORRESPONDENTS.

THE Government has now determined to give facilities to foreign war-correspondents in Korea. Properly accredited correspondents will be given permission to accompany the Japanese army. They have, however, been warned that, while all possible help will be afforded them, they will have to be content with Japanese food and Japanese sleeping accommodation. Two correspondents of New York papers have already started for Korea.

MURDER OF JAPANESE IN FORMOSA.

THE vernacular press publishes some particulars concerning the supposed murder of some fifty Japanese camphor workers at Formosa. The information was originally given in the *Moji* newspaper. Mr. Tanaka Katsuzo, a native of Nagasaki, was a man of adventurous spirit, though above sixty-three years of age. It was in February last that he secured permission from the Taotai of Formosa to manufacture camphor in a forest belonging to the Government some seventeen miles away from the capital of the island. He took with him about fifty labourers. In July, last a letter came from him, stating that though the party had met with some difficulties at first they had finally overcome them, and were at that time on a fair way to success. Since then no news has been received from them, and their families were in great anxiety about their welfare, when the report began to circulate, some two weeks since, that the party had been attacked by the natives and that all had been cruelly murdered, with the exception of one Fukuta, a native of Nagasaki, who had managed to escape and to return home. Some of the relatives of the emigrants at once called on Fukuta. He had indeed returned home, but whether from fear or from exhaustion he was confined to bed apparently sick. The visitors questioned him earnestly about the fate of their relatives. His reply was very strange, vague, and more or less incoherent. By putting together his hesitating replies the following account was obtained. The party of more than fifty Japanese was attacked one evening by the natives, and all except himself were killed. Fukuta escaped, and through the help of a certain Chinese with whom he was on very intimate terms, he was able to reach home. The matter reaching the ears of the Taotai, the latter came to the spot next day and had the remains of Mr. Tanaka placed in

a coffin, while the bodies of the others were unceremoniously buried. The date of the event is not very clear, but it is certain that it must have happened before the declaration of war. What is therefore thought strange is that no communication was received in Japan from the Taotai of the island about the affair. The actions of the survivor since his return lends some countenance to the suspicion that his story is false, for his attempt to conceal his return, and his strange way of replying to the questions put by the relatives of the poor victims, are inexplicable on the supposition that he has told the truth, the whole truth, and nothing but the truth. The *Moji* paper declares that there must have been some foul play in the affair, and an investigation is needed.

WIFED OUT.

ONE hears from time to time good reports concerning the spread of Christianity in Kochi Prefecture. There certainly is need of a civilising factor in that part of Japan. Elections are there most fiercely contested, always with attendant bloodshed; the *soshé* is there in his native element; he swaggers and threatens and carries sword-causes or bludgeons, and his services, questionable and illegal though they be, are constantly requisitioned by men who ought to know better than to appeal to brute force. Finally, murders of colossal dimensions are of not infrequent occurrence. The death by violence of one man generally includes that of most or all of the members of his family. On the night of the 23rd of last month another wholesale slaughter is recorded as having taken place in Kami-nata-mura, one of the larger villages in that troubled prefecture. Two local constables, brothers, had for some years been connected with another man, the husband of their only sister, in the *saké*-brewing business. Some time in June the brother-in-law suddenly announced an intention to divorce his wife and retire from the trade. It was found that he had expended a large sum to redeem a prostitute from the house in which she had lived. The woman thereupon became the new wife of the ex-*saké*-brewer, who was now urgently requested by the angry brothers of his former spouse to return monies he held of theirs. This, he alleged, was an impossibility, as he had paid out all the funds he possessed. Doubly indignant at this and at the harsh manner in which he had divorced their sister, the two brothers entered his house in the dead of night and killed him, his two children (their own nephew and niece), the man's mother, the ex-prostitute wife, and another woman who happened to be living in the house at the time. The elder assassin thereupon immediately disembowelled himself, while the younger threw himself from a height of some seventy feet into a bamboo-grove, receiving fatal injuries, although still alive according to the latest reports. This is the third or fourth time this year that similar terrible crimes have been reported from Kochi, while our readers may still remember the story of those two desperadoes last year, who took to the mountains and finally committed suicide after killing no less than ten people and terrorizing a whole district for more than a month.

DISCOVERY OF COAL.

MR. TOMIYASU YASUNOSUKE, a native of Fukuoka, is reported by the *Shin Choya* to have discovered a large coal bed in the vicinity of Shirakawa village, Chichibu district, Saitama prefecture. He has applied for the lease of several million *tsubo* of land. Of this the lease of about a million *tsubo* has been licensed, to be followed with the lease of the rest in a few days. According to the opinion of an expert who has examined the minerals extracted from the new bed, its quality is said to be far better than that produced at Toga and Kurate, in Chikuzen, and is on a par with the coal of Tagawa. The new bed is favourably situated, the transportation of coal being only 15 miles from Honjo Station, on the Nippon Railway. The cost of transport to Ueno terminus is estimated to be about 10 *yen* per 10,000 catties. The cost of raising to grass does not differ much from that involved in the Hokkaido and

Kyushiu collieries, while cost of transport to the capital is thus less than one half that of the others. It is therefore expected that should capital be freely invested in the new colliery and its coal abundantly imported into Tokyo, the other coal companies will suffer severely. In the Kwanto district the only bed hitherto known was that at Hakusui, Iwaki, and it is wondered why a bed of such excellent quality and of such great extent as that discovered by Mr. Yoshitomi has not been found before.

WELL SERVED.

STORIES of *sakai-nin*, or house-agents, are quite frequent in the vernacular press now-a-days, nor do these tales redound to the credit of the fraternity. The *Forosū Chōhō* recently published an incident which gives a good insight into the peculiar ways of the more objectionable of such agents, never very popular even in the best cases. A certain *sakai-nin* having the charge of some six or seven unpretentious houses in one of the poverty-stricken by-streets of Hongo District, Tokyo, is notorious for his greed. He is accustomed to add a *sen* or two to the rent when the hirer of one of the houses draws, in his estimation, too much water, under the pretence of the well-rope wearing out by such frequent friction; or when some other too often opens and shuts the gate, alleging a consequent depreciation in the value of the hinges and wood-work. For these and sundry other reasons the avaricious agent is bitterly hated, and his victims have long waited for an opportunity to pay him back in kind. Last July he made a new rule: he would shut the entrance gate every night at ten, and any one who demanded admittance later than that hour should have to pay one *sen* penalty. The renters being mostly poor people whose avocations often kept them out late at night, this regulation was felt to be particularly severe. The other day the *sakai-nin* happened to be, for a wonder, invited out by an old school-friend, and in the delights of *saké* and fish completely forgot the hour. On reaching his home, he found the gate closed and barred. Not wishing to break a rule made by himself, he climbed laboriously to the roof of the house nearest the gate and began to creep cautiously towards his own dwelling. But this the victims of his avarice had expected, and so soon as his dark silhouette became visible raised a vociferous shout of "Robbers! robbers!" He tried in vain to make his well-known voice heard from the roof-tree. In another minute some ladders were placed against the wall; he was seized, hauled down, and then subjected to a most thorough and scientific thrashing. A light being brought, the pain-distorted features of the agent became distinct. His assailants, chuckling in their sleeves, began at once apologizing for their mistake and, with great show of contrition, helped him into his house. The agent, it is said, is still unaware of the trick played him, but the "one *sen* admission" fee has been abolished.

THE "TSUKUBA-KAN" IN KOBE.

THE operations with the object of floating the *Tsukuba Kan*, beached ten days ago, on Awaji after being in collision with the *Toyo Maru*, says the *Kobe Chronicle* of the 7th inst., have proved successful, and the gunboat came into the harbour yesterday afternoon, towed by three of the Government transports chartered from the Osaka Shosen Kaisha, and looking little the worse for being half-submerged for several days. She is now lying off the Ono Naval Yard, drawing 17 ft. 1 in. of water forward and 19 ft. 6 in. aft, and is evidently considered quite safe, as there are no pumps going, and the fracture is now well above water. She was struck by the *Toyo Maru* on the main chains on the starboard side abaft the mainmast, the collision carrying away a boat and twisting the davits and cutting her right down to the water's edge. It is probable that her being struck on the channels, which are carried away, saved her from worse damage, while to this fact is also probably due the remarkable extent of the injuries suffered by the *Toyo Maru* in collision with a wooden vessel. Very great credit is due for the workmanlike fashion

in which the temporary repairs have been executed. The fracture, from 15 to 18 ft. wide, caused by the crash of the *Toyo Maru* into the man-of-war, has been stopped by timbers being placed across it, these being again covered with tarpaulin. Tarpaulin was also placed by divers over the port-holes under water before pumping was commenced, and the operations having been favoured by calm weather no difficulty was experienced in pumping out the vessel and towing her off. There is talk of repairing her at the Ono Naval Yard, and it is expected that if this is done repairs will only occupy about three weeks. To all appearance the good old ship has suffered no serious structural injury, and will be good for many years' service yet.

A REPORT FROM THE JAPANESE CONSUL AT SŌUL.

IN his report to the Foreign Office under date of 25th ult., the Japanese Consul stationed in the Korean capital states that there are several hundred Europeans and Americans in Sŏul who have been accustomed to procure their daily necessities from the Chinese general provision merchants who kept shops there. But since the war broke out, these Chinese merchants, more than ten in number, have closed their shops and gone home. Foreigners therefore find a difficulty in obtaining supplies, for the Chinese in Chemulpho have also taken their departure. Nor can goods be easily obtained from Cheshoo or Shanghai or Nagasaki, for there are no facilities of transport, the vessels plying between Korea and China or Japan being almost entirely employed on official service. This is indeed a good opportunity for Japanese merchants of means who are trustworthy and have experience as storekeepers of foreign articles. In fact, should they promptly and skilfully seize the opportunity they will be able to get the command of this field of trade and to displace the Chinese from it altogether in future. People seem to think that Sŏul is still a dangerous place of residence and hesitate in consequence to invest capital in any enterprise that is to be carried out in the Korean capital. But this is groundless; the period of danger has already passed away in Sŏul, and though several battles may yet be fought on Korean soil, the safety of Sŏul may be relied upon. The Consul therefore advises the Japanese merchants not to lose this good opportunity of making profit.

MR. MAX POLLMANN.

THE *Hokkaido Mainichi Shimbun* has the following:—"Mr. Max Pollmann, the German brewer of the Sapporo Brewery Co., is about to return to his native land, after several years' service in Sapporo. Mr. Pollmann came to Japan in 1887 under contract to the Hokkaido Administration Board, and was so entirely successful in producing the malt liquors now so celebrated throughout the length and breadth of the land, that when his agreement expired he was asked to remain for another term of years with the brewery, which had meantime become a private concern. Mr. Pollmann then engaged for another term, which has just expired, when he was offered a renewal of his contract, but the attractions of "Fatherland" prevailed, after so prolonged an absence, and Mr. Pollmann leaves Sapporo in a few days for the south on his road home. He takes with him the good wishes of the company that he has served so well, and leaves behind him many friends who regret his departure."

DELIBERATIONS CONCERNING EDUCATION IN KOREA.

THE Japanese people are bent on doing everything in their power to help the Koreans out of the mire of stagnation and decay. Already a scheme to construct a railway between Sŏul and Chemulpho and Fusan is talked of in certain circles, and now we notice that a body of eminent educationalists recently assembled to discuss how to provide an efficient educational system in the Peninsular Kingdom. Most of these educationalists are not in the Government service. Mr. Tsuji, President of the Japanese Educational Society, is at their head. They met once in the latter part of last month, and at a

second meeting, held at the hall of the Society on the 5th instant, the programme of the new association, which is called the Korean Educational Investigation Society, was discussed and adopted. The object of the Society is to inquire into matters pertaining to education in Korea; and to establish the methods to be pursued in furtherance of education in that country. The society is to hold a regular meeting every fourth Saturday. The subscription is to be 20 *sen* a month, to defray the expenses of the Society. It will be located in the office of the Educational Society of Japan. The standing committee of five members was elected that day, with the result that Messrs. Tsuji Shinji, Iyawa Shuichi, Takashima Shigenobu, and Yamanouchi Teru-ji were chosen. The chairman was chosen out of the members of the committee, and the choice fell on Mr. Tsuji.

A Japanese gentleman who has lived for a considerable period in Korea makes the following remarks on the educational system to be adopted in that country. Educational institutions that are urgently needed in Korea are of three kinds, viz., common schools, high schools, and technical schools. The high school should be of a status midway between a common school and a high school of Japan, and should aim at educating students in the shortest possible space of time. The curriculum should contain a foreign language, morals, geography, history, the rudiments of physics and chemistry, mathematics, and economics. As for the foreign language to be taught, this gentleman is of opinion that Japanese should be adopted; because the Japanese language is philologically akin to the Korean, and because the knowledge which is now most needed can be obtained through the medium of the Japanese language. Those who matriculate at a high school should either be made teachers of common schools or be appointed to Government offices, or should be made to prosecute further studies at a technical school. For the technical schools the same gentleman recommends six courses:—agriculture, engineering, medicine, law, literature, and one or two physical sciences specially adapted to the requirements of Korea. They should be as practical as possible, and the term of education should not extend beyond three years. The students should be taught at the cost of the Government. The curriculum of the elementary schools should be simple, comprising six subjects only: the Korean vernacular, Chinese, geography and history, morals and arithmetic. In conformity with the customs of Korea, boys and girls should be rigidly separated, even in common schools. In carrying out any such regular educational system in Korea the text books should be compiled in colloquial Korean. And it is important to inculcate the notion that pursuance of these higher studies is attended with direct practical benefit, as for instance, an appointment to an official position; to convince students that they may attend schools without any risk of interference on the part of China or of the Ming faction, and so forth.

A RECENT ARRIVAL FROM SHANGHAI INTERVIEWED.

MR. YAMANOUCHI IWAQ, the Manager of Mr. Kishida's drug store at Shanghai, has lived about ten years in China. He recently returned to Japan, having left Shanghai on the 22nd ult. We take the following from the account of his opinions on the war published by the vernacular press:—China is bent, says Mr. Yamanouchi, on gaining an ultimate victory over Japan, by wearying her antagonist out, relying on her own vast staying power in prosecuting the war. China will rely on commercial and other indirect methods of attack rather than on a bold use of the weapons of war. But such measures will be suicidal. Suppose, for instance, the export of cotton to Japan be forbidden, then some half a million farmers in Kiang-su who subsist by cultivating cotton, will be suddenly deprived of the means of subsistence and will be brought to starvation. The depression trade at Shanghai since the war broke out has been striking. This

is chiefly due to the want of steam communication and the accumulation of goods in warehouses. There is another cause that has conducted toward this result, and this is the preparations for the celebration of the Empress-Dowager's Birth-day in November. For this ceremony a sum of some fifteen million taels is to be spent, the bulk of the fund coming from the local offices. The share which each local office is to supply must be paid in silver, owing to the appreciation of gold; and a large quantity of Mexican dollars having been withdrawn from the market of Shanghai, these coins show an appreciation of 5 to 6 per cent. The scarcity of money is a serious difficulty to the trade of Shanghai. The war has also seriously affected the business of the China Merchants' Steam Navigation Company. The ships of the Company are lying idle in harbour, for the Company is afraid to send them to sea. Nor is it easy for the Company to hire foreign vessels. To give an instance of the difficulty: an English sailing-ship that had been chartered before the war broke out at 800 taels for the transportation of goods from Shanghai to Tientsin, has refused to fulfil its contract since the loss of the *Kowshing* at less than 1,800 taels. Even at such a high rate the goods may after all not reach their destination, for a condition is inserted in the contract in virtue of which the vessel may sail back without forfeiting the hire whenever she spies a Japanese man-of-war. Such being the case, the coasting trade of China is almost at a standstill. The anxiety felt by the Navigation Company may be inferred from the following story. When news appeared in the foreign and native papers of Shanghai that the Japanese Residents' Club had decided to send back a certain number of the Japanese staying in that city, the manager of the Branch office of the Steam Navigation Company called upon the Club, and requested its managers that, as he was willing to intercede with the authorities for the safety of the Japanese residents in Shanghai, they would reciprocate this good office on behalf of the ships of the Company, and intercede with the Japanese Government to allow the Company to carry on the coasting trade unmolested. Mr. Yamanouchi is of opinion that the issue of the war will have a most vital relation to the future commerce between Japan and China. The Chinese people are prone to be over-bearing towards those whom they consider weak, though subservient to those of whom they are afraid. Consequently, should the Japanese fail to gain a signal victory, the Chinese would become even more arrogant towards the Japanese than they have been in the past, so that commercial transactions with them would be unbearable. It is because England has succeeded in frightening the Chinese that English merchants are preëminently successful in trade with China. France has not been so fortunate, and the French merchants therefore fail to reap in the Chinese markets so great a profit as their more sturdy neighbours.

A BIG INDUSTRIAL ENTERPRISE IN OSAKA.

MESSRS. AWAYA SHINAZO, M.P., Hokyo Zensaku, and other influential personages of Osaka are, says the *Nichi Nichi*, contemplating the establishment of an electric motor company in Osaka. Their project is to make use of water power for the generation of electrical energy. They have employed three experts, who have explored the neighbouring districts to discover available sources of water. After months of investigation the experts have pointed out three suitable sources of power, all dependent upon the water of the river Seta. The capital required for the project seems to be about the same whichever source is chosen, being a little above four million *yen*. It is not clear from the paragraph in the *Nichi Nichi* what power is available, but it is estimated that if 15,000 horse-power can be procured the profit on the capital would exceed 10 per cent. It is said that the gross horse-power in the various factories in Osaka is about 25,000, and that the electrical power would be cheaper by about 30 per cent. than steam. The total retrenchment of expenses that would accrue from those factories from the substitution of electric

city for steam would not be less than one million *yen*, to say nothing of incidental benefits, sanitary, at *celtra*. The projectors hope to carry out this scheme as soon as the war is over, but for fear lest they should be forestalled they have already submitted their scheme to the Government.

DEATH OF A CIRCUS ELEPHANT.

HARMSTON'S Circus has suffered a heavy loss by the death on Monday afternoon of Topsy, one of the trained elephants. Of a most tractable disposition, this six-year old female pachyderm was a great favourite with the patrons as well as all the members of the Harmston combination, being a playful but gentle beast. She had been in the best of health, seemingly, up till Tuesday last. Just before the time when she was to appear in the ring that evening, in company with her sister Bahl, she had a slight attack of illness. The fit passed away and both elephants went through their performance to all appearance as usual. Next day, however, Topsy again showed signs of indisposition, and later symptoms of tetanus set in, to give place as time wore on to other complications, which eventually resulted in death. A *post mortem* examination revealed the fact that death was really due to inflammation of the bowels.

A ROBBER CAUGHT.

In the early part of last month, a robber entered the residence of Mr. Mitsui Hachirozaemon in Sambancho, Tokyo. Mr. Mitsui is one of the heads of the great Mitsui firm, and there were in consequence a large number of fine articles in the house, a goodly proportion of which the burglar managed to appropriate, such as dozens of girdles, scores of cravats, and a great quantity of clothing, the total being valued at a little less than one thousand *yen*. The metropolitan press now report that the thief was captured in Aomori Prefecture on the 4th instant. He had sold or pawned everything, with the exception of two old and famous swords, the handiwork of the great makers Samonji and Masamune. It was his possession of these celebrated blades that led to his detection. The promptness of his capture and tracing to so distant a portion of the Empire speak well for the excellence and vigilance of the metropolitan police. The man is said to be an old offender and as slippery as the proverbial eel.

AN IRRECONCILABLE GHOST.

SEVERAL years before the Restoration, while Tokyo was still Yedo and the Shogunate still in power, there lived a wealthy vintner in Tanimachi, Azabu District. His store was the largest in the city; his clerks numerous; while he himself led a life of idle ease and sensual delights. The wife, neglected and not over-well treated, frequently remonstrated with him, urging that such a course of conduct could not fail to ruin even the best business. Improvident and deaf to good advice, the vintner kept on the downward road, until at last he stood on the brink of ruin. Once again the faithful wife pleaded for reform, but met with even greater disdain than ever. The same night she made up her mind to quit this world. Stuffing the sleeve of her upper garment into her mouth, she sprang into the well. Assistance was promptly summoned and the body drawn up, but life had become extinct before the possibility of rescue. Relieved of what he considered an incubus, the vintner immediately married one of his numerous female intimates. In one year after, the new wife was seized with a sudden malady and died on the very day and at the very hour that the poor suicide had quitted this world. Shocked, but not seeing anything more than a coincidence in this, the *sake*-brewer married again, only to have his third wife die in the agonies of child-birth on the recurrence of the fatal day. This was enough. The repentant vintner shaved his head and became a wandering devotee travelling from shrine to shrine and ever offering up prayers for the repose of the spirit of his maltreated wife. Some years passed away in this manner, when the uxorious nature of the ex-vintner made itself manifest. In one of the southern towns he married a fourth wife,

and until recently was engaged there in trade, his business slowly going from bad to worse. One son was the result of this marriage, and on his right arm he bears a strange birth-mark like the mark of teeth on the very spot where the wine-merchant's first wife had bitten herself in dying. Hoping to do better in the metropolis, the man came up with his son to Tokyo last month and opened a shop in Iigura. But on the very first night he was haunted with fearful dreams, his dead wife appearing to upbraid him for having returned to the scene of his former excesses. At the same time the son suffered from excruciating pain in the arm that bears the birthmark. Deeming this a final warning, both father and son received, a few days ago, the tonsure and became priests. They have gone to a distant temple in the mountains, and intend there to pass the remainder of their days in prayer and meditation. Thus much the *Asahi*.

SUSPENSION OF THE "NIPPON."

Owing to the rigorous censorship of the press at present, at least with regard to all that relates to news from the seat of war as well as to the movements of the Japanese troops, it has been fondly hoped that even the most radical journals would escape coming under the ban of suspension. The *Nippon*, famous for the number of times that its publication has been interdicted, generally presents two or three blank columns daily, proof positive that the editorial pen has lost none of its wonted vitriolic fervency and that the imagination of the staff is as lively as of yore. The latest breach of the Press Regulations made by the *Nippon* is said to have resulted from certain sarcastic comments on the new treaty between Great Britain and Japan. Our contemporary remarks, anent the fact that tariff autonomy will be secured to this country in seventeen years, that this sounds very pretty, but that it is like a picture (*e*, a play on the word *ei*, the ideograph for England) of *mochi* (cakes made from rice-dough). *Mochi* is pleasant enough to eat, but a mere sketch would never suffice to fill a hungry man. Besides, it is by no means assured whether the other Treaty Powers are going to give Japan some cakes even in the dim and distant future. In this style the *Nippon* maunders on, seemingly oblivious of the fact that a certain portion of the Yokohama local press is so disgusted with the rank favoritism for Japan exhibited in the Kimberley-Aoki compact that it would forswear its birthright and plead for the intervention of less servile nations.

BURGLARY ON THE BLUFF.

The house of Mr. L. Ph. von Hemert, No. 223-D Bluff, was visited by a burglar during the small hours of Monday morning. The daring thief forced an entry through the bath-room and from there found his way to Mr. von Hemert's bedroom. Here he abstracted a suit of clothes which had been worn the previous day, and which contained keys, two pocket-books, a sum of money amounting to \$20 in notes, and some important documents. After calling in the police, a search of the premises was made, but no trace of the man could be found. The pocket-books were afterwards discovered in the compound, but the money had disappeared. An hour or so later the clothes were found lying on the road leading to Negishi. The keys were still in the pocket, but all the small money, with the exception of a half *sen*, was missing. The police are trying to track the thief.

THE 72ND NATIONAL BANK IN DIFFICULTIES.

The 72nd national bank, of Saga, is, according to the *Fiji*, in difficulties, and was obliged on the 25th ult., to suspend payment. The trouble originated in a rash misappropriation of the Bank funds to the amount of more than 150,000 *yen* by Mr. Koga, the manager, on behalf of a mining enterprise. The enterprise failed, and while the Bank was subjected to great embarrassment on that account, a similar trouble overtook its Nagasaki Branch. The officers of the Branch office were notorious for the luxurious life they used to lead, and at last one of them absconded, taking with him money to the value of 18,000 *yen*.

from the Bank. He was soon arrested, and his nine colleagues were also arrested on the charge of complicity. A run was made on the Branch office which, however, was met by remittances from the main office in Saga. The panic spread to the main office and before the Branch office had had time to send back the surplus of the remittances, applicants began to besiege the main office demanding their deposits. The Bank asked for assistance from other banks, and hoped to be able to tide over the difficulty, but the demands for withdrawal became so incessant that the Bank was obliged to suspend payment on the 25th ult. Besides the 150,000 invested in the mining enterprise, the manager, Mr. Koga, is said to owe at least 50,000 *yen* to the Bank. Fortunately he is a man of means, his property being estimated at about 200,000 *yen*, and it is believed that the Bank will be enabled to reopen its business without sustaining any particular loss. The capital of the Bank is only 80,000 *yen*, but the total of the deposits is said to have reached above a quarter of a million *yen*.

ACTIVE DRILL.

Among the thousands who have been commanded to re-enter the army, there are many who would seem to have so far forgotten their former drill that they are in need of a new course of instruction. At all events the great parade-ground at Aoyama presents each day, despite the rain, a lively and interesting picture. Whole companies are marched and counter-marched; squadrons of cavalry fly over the muddy roads; gun-waggons and trains plod heavily along. Most of the men thus undergoing a "post-graduate" course, are intended for active service in the field at no distant date. Drill-sergeants are in great demand, and many of those whose time expired last November have been recalled to act in this capacity.

At the Koishikawa Arsenal and elsewhere the making of cannon-balls, bullets, guns, etc., is carried on day and night. At all hours the great chimneys can be seen belching forth columns of smoke or long streamers of fire. Nearly five hundred workmen have been engaged in addition to the regular number, and even these are found insufficient to cope with the orders that pour in from the Army and Navy Departments. Many thousand knapsacks and other leather-gear have recently been contracted for with some of the largest firms in Tokyo. The *Fugetsudō* has received a command to prepare another one hundred and fifty thousand *kin* of biscuits, moderate in size and slightly sweetened as to taste. It is also reported that the Ebisu Beer Brewery has received a large order for beer in casks, this being considered by some as preferable to the native *sake*, which is so highly intoxicant.

COOLIES FOR KOREA.

BETWEEN Shinagawa and Shimabashi Stations, or rather just after leaving the former, there are long rows of houses built in precisely the same fashion and close to the railroad. The majority of these are, as a rule, unoccupied, as the place is not considered a prosperous one. All these dwellings belong to one man, a former *amma*, the owner of a well-known *mujin* (lottery) in Bancho. The ex-*amma* does not enjoy a very good reputation, his wealth being popularly ascribed to sharp and questionable practices. A few days ago no less than fourteen of these empty houses were suddenly rented, and into them moved nearly fifteen hundred peasants and labourers, all under contract to go as coolies to the seat of war. It must be a pretty tight squeeze for the men, as the buildings are of the smallest. These coolies are paid according to a graded scale:—25 *sen* daily while in Tokyo; 20 *sen* daily when on board ships; and 35 *sen* daily when actually at work in Korea. They are spoken of as being an orderly lot. All are eager to leave for active service; not, they declare, because of the increased wage, but owing to their desire to be of some real use in the war with China. This is fully creditable to Japan. The beachcombers and

vauriens of Yokohama and the other open ports are not needed. The Government is using its own people only: sturdy men, accustomed to labour and inured to hardship and a life in the open air. The wage offered is not high, yet it has given occupation to a large number of poor agriculturists already.

WOMEN AS JURORS.

ACCORDING to Chief Justice Howe, of Wyoming, women as jurors have been a success in that State. He was the first judge who opened his court with such a jury. He admits that he was prejudiced against women at first, but now he says that "they were careful, painstaking, intelligent, and conscientious. They were firm and resolute for the right as established by the law and the testimony. Their verdicts were right, and after three or four criminal trials the lawyers engaged in defending persons accused of crime began to avail themselves of the right of peremptory challenge to get rid of the female jurors, who were too much in favour of enforcing the laws and punishing crime to suit the interests of their clients. After the grand jury had been in session two days the dance-house keepers, gamblers, and *demi-monde* fled out of the city in dismay to escape the indictment of the women grand jurors. In fact, I have never in my twenty-five years of constant experience in the courts of the country seen more faithful, intelligent, and resolutely honest, grand and petit jurors than these." This is very encouraging, and I am heartily glad that the women have done so well in Wyoming. The only feature that is at all alarming is the predilection for conviction evinced by the fair sex. Women are, in the opinion of many, really more cruel than men and certainly much more vindictive. There is some reason to believe that when a woman sees a prisoner in the dock the inference to her mind is, not that he should be tried, but that he should go to jail. Who would like to be tried by a jury of women in an action of breach of promise, seduction, or divorce?—*The Province* (Victoria, B.C.).

QUESTIONS OF NEUTRALITY.

ANOTHER point upon which we, in common with most other people, here have fallen into error is the liability of British subjects in Chinese service engaging in such work as the transport of troops in Chinese vessels. We are informed upon the highest legal authority here that such work does not fall within the scope of the Foreign Enlistment Act, and British subjects are free, as far as their own Government is concerned, to engage even in military duties for China—at their own risk, but they cannot appeal to the British Government if they get into trouble. Moreover, it has been made clear to us that the British law authorities here regard such work as the manufacture of guns, torpedoes, powder, arms, etc., by British subjects on Chinese soil and for Chinese Government use, as in nowise infringing the laws of neutrality and as being perfectly legitimate phases of manufacture. These are points upon which most people are liable to go astray, and it is therefore well to have them expounded even briefly upon such high authority.—*China Gazette*.

A NOCTURNE IN BLACK.

ON the evening of the 7th instant, about an hour before midnight, a police-constable on duty in Kodamura, one of the Tokyo suburbs, saw a strangely dark figure prowling behind some houses on his beat. As he approached, it seemed stealthily to retreat. Alarmed and believing it to be a supernatural apparition, the constable speedily called for aid. A thorough search was instituted, which resulted in the finding of a trembling female, evidently a blackamoor, and absolutely nude. Inquiries made at the nearest Police Station, where the woman was supplied with some clothing, elicited the fact that she was the wife of one of the villagers. Her husband after having been absent for some time had suddenly returned that night, and had found her in a compromisingly intimate conversation with a neighbour. His jealousy knowing no bounds, he had stripped and then

painted her black from head to foot, turning her finally out of doors. Ashamed to go to the house of any friend or relative in that pitiful condition, the woman had been hiding behind the houses for nearly two hours before discovered by the police. The husband, sent for at once to explain his conduct, positively refused to take the woman back, his suspicions being, as he alleged, well-founded; so the poor black-amoer was forced to take up her quarters in the station-house for the time being.

THE PRESS CENSORSHIP.

THE daily monotony of the press censors was a little ruffled the other day, on account of the suspension of the *Nippon*. This paper published a leading article in its issue of the 7th instant, in which it described the new Treaty with Great Britain in abusive terms as presenting a specious appearance but as being of no practical benefit to Japan so long as treaty revision is not similarly accomplished with the other Powers. This article was submitted to the Press Censors in common with the war news, and was allowed to pass unchallenged. But as soon as the article was published on the 7th instant it was condemned by the Peace Bureau of the Home Department as tending to disturb the public tranquillity and the paper was suspended, to the great surprise and indignation of the staff. The suspension was of very short duration, for the paper was released from the ban in three days. The *Nippon* protested strongly upon its re-appearance against the action of the authorities, condemning it as entirely inexplicable, absurd, and inconsistent. The mystery was soon cleared up. In the issue of the *Official Gazette* for the 11th inst. Mr. Nishi Senshiro, a councillor of the Foreign Office, was sentenced to a fine of one month's salary, in consequence of having overstepped his competence in the exercise of censorship. Mr. Nishi being only a member of the Press censors committee whose official function is to deal only with matters relating to the war, it was a breach of official routine on Mr. Nishi's part to inspect and pass an article which was entirely unconnected with the war. This part of the censorship is in the hands of the Peace Bureau, and as it held the article in question to be dangerous to the public tranquillity the *Nippon* was suspended, while Mr. Nishi was punished for the error he had committed.

It is satisfactory to learn from the vernacular press that the Government contemplates the abolition of the press censorship. The idea of discontinuing this is said to have originated with Count Inouye. It is believed that the Cabinet has already decided to adopt the Count's proposal, and that the matter is now under deliberation by the Privy Council.

THE "TOROZU CHOHU."

ALTHOUGH not long in existence, having started in November of the year before last, the *Toroazu Chohu* is making a very strong bid for the leadership of the metropolitan *Ko Shimbun*. The paper is well-edited, bright, and well supplied with news, though inclined, as a rule, to be slightly dictatorial. It is now said that the success of the *Toroazu Chohu* has been something phenomenal. Nearly one-third cheaper than the majority of its rivals, the circulation is popularly put at seventy thousand copies daily, or nearly twice as many as the *Osaka Asahi Shimbun* claims to publish. Trusting to the unparalleled favour with which the paper has met, the proprietors began, on the 11th instant, printing three columns of the first page in English, two being taken up by an editorial and the last column being filled with some four or five notes. This is by no means the first instance of the kind. Some eight or nine years ago the *Anglo-Japanese Review* was brought out as a weekly journal, owned, published, and written by Japanese. The *Mainichi Shimbun* was connected with this publication, which soon ceased to exist owing to the lack of funds and push, not to speak of the terribly incorrect English that marred it from first to last. We may reasonably hope that the "English Department" of the

Toroazu Chohu will not meet with a similar fate. And yet, one cannot help regretting that in this latest venture the English text is so faulty and ungrammatical: some paragraphs are wholly unintelligible, leading the bewildered reader through a maze of words that ought to mean something, but don't. This is a radical mistake. The good intention of the *Toroazu Chohu* is so manifest that it should not fail to attain its object on account of linguistic inaccuracies. If the foreign public is to be attracted it must be given really interesting, intelligible reading matter. One can both understand and thoroughly sympathize with the sentiment that prompts the employment of Japanese writers alone; yet it is obvious that it is better not to publish an English Department at all than to print articles which those whom the *Toroazu Chohu* evidently desires to teach will either fail to understand or else cavil at. We say this in all good faith, and with the sincere desire to see our contemporary's venture turn out successful hereafter. Such a journal as the proprietors state their intention to publish ought to do well; and it is highly laudable that the attempt should have been made. Only one feels that there will have to be an improvement in style before any degree of success can be anticipated. As an advertising medium, on the other hand, the *Toroazu Chohu* is deserving of foreign patronage.

PRESENTATION OF THE IMPERIAL STANDARD.

THE Third Regiment of Infantry, garrisoned at Azabu, Tokyo, were yesterday presented with the Imperial Standard which they are to guard on the occasion of the Imperial journey to the south of Japan. The whole regiment was drawn up in front of the great Shiba Temple, the Zojoji. As the standard was brought forward the men presented arms and displayed intense eagerness at this symbol of Imperial power, while the regimental buglers gave the charming "Salute to the Flag," known as *Kuni no Shime* or "Peace of the Land." The *mi-hata* was borne by a lieutenant, escorted by five or six ensigns with drawn swords. After the salute, the regiment marched off, with the silken standard floating proudly at the head. The whole scene was very impressive.

EXCITING CHASE AFTER BURGLARS.

A REMARKABLE chase after burglars occurred recently in London. The scene was the establishment of Mr. J. J. Cavey, jeweller, who leases premises forming a block of buildings bounded by Cheapside, Bread-street, Friday-street, and Watling-street. Access was first gained by means of a ladder to the premises of the London Glove Company, and thence to the offices of a Mr. Harwood, on the first floor. There an attempt was made to force a panel, through which admission could have been gained to a staircase leading to the jeweller's shop. Apparently the thieves were unconscious of the fact that two of Mr. Cavey's assistants regularly slept upon the premises. One of them, Mr. Norworthy, the manager, was awakened by a noise as of wood being splintered by a knife. Rising and partially dressing, he sat for ten minutes listening to the sounds, and, being satisfied that an effort was being made to force an entrance, quietly aroused his companion, Mr. Jones, and went to the Cheapside entrance of the shop, where he cautiously beckoned a policeman, told him that there were burglars in the house, and asked him to arrange at once to have the block surrounded, so that they could not escape. This precaution having been taken by the police, several constables entered by the private door, but the thieves heard them ascending the staircase and made off. A chase, which was maintained for over ten hours, then commenced. Three men were seen escaping by a high wall at the back of the building, and a moment afterwards a loud crash was heard. It was found that one of the gang, a young man of about 22, had fallen through a skylight into the basement—a distance of 20ft.—but when discovered and taken into custody he seemed to have sustained no worse injury than a scratch or two. No fewer than a score of police officers engaged in the pursuit of the

other burglars, the chase beginning about 6 o'clock in the morning and continuing until between 4 and 5 in the afternoon. The two men ran along a wall 50ft. or 60ft. high, clambered over roofs, and dived through windows in a manner which was amazing. No little risk was incurred by the police in following them, and one officer was severely cut by broken glass. Soon after 4 o'clock the thieves suddenly disappeared from view, but they were found hiding in a bale of dry goods in a warehouse fronting Friday-street. It is stated that they were well known to the police.

CHINESE TROPHIES AT THE SHOKONSHA.

A LARGE number of flags taken from the Chinese in the battle of Song-liwan are now being exhibited in front of the Shokonsha Shrine on Kudan-zaka—the great shrine dedicated to the spirits of the soldiers that have fallen in battle since and including the days of the Restoration. Thousands of people are daily gathered round the place, their countenances beaming with delight at this most tangible proof of the superiority of the Japanese arms. Some of the flags are very large, gaudy, and elaborately decorated. It is interesting to listen to the remarks of the eager gazers, but especially so when any relatives of those who took part in the battle make their appearance. These good people are at once distinguishable from all the rest, and not alone by reason of their proud remarks that "my brother" or "my cousin" did this or that. The exhibition of flags is of itself well worth seeing, but to one having a knowledge of the Japanese idiom the scene is of double interest.

SOME OF THE MEN TAKEN.

THE calling-out of the First-class Reserves has resulted, as might be expected, in sorrow to many households. The metropolitan journals report two cases which are of peculiar interest. One unfortunately included the crime of infanticide. One time expired soldier had married a young wife, who, some two months ago, died in childbirth, leaving him with an infant daughter on his hands. On being called to go to Korea he made strenuous efforts to get some one to take charge of his baby; but being very poor was unable to procure a home for the little one. There being apparently nothing else to do, he killed the child and then joined his regiment. The crime was not discovered until after his departure for Korea, and he left word, it appears, with a friend that he was resolved to die on the field of battle. Another man had just established himself as a *dōgu-ya*, or dealer in miscellaneous articles of furniture, in Ogawamachi, the busiest thoroughfare in Kanda District. So soon as the order reached him to rejoin the army, he stuck out a placard saying that he would sell out his whole stock at less than cost price. Ridiculously small sums were not refused; things worth three or four *yen* in the open market selling for as little as twenty or thirty *sen*. The loss must have been very great, but it was imperatively necessary for him to leave as much cash as possible in the hands of his wife, and in the forty-eight hours at his disposal it would have been impossible for him to get rid of his stock in any other way. The *Miyako Shimbun* says that the man exhibited the utmost equanimity at this ruinous sale and joined his regiment with no sentiment of regret for what he had had to do.

A MICROBE-PROOF BUILDING.

THE fame of Dr. van der Heyden's glass house appears to be spreading. We take the following notice of it from the *Chicago Post*:—A new kind of dwelling house has been invented. It is remarkable in many ways, being suitable for any climate, whether tropical or arctic, air and water tight, and as near disease-proof as any building can be made. It is warranted microbe-proof, and should any stray disease-producing germ through any accident or oversight find its way within the forbidden precincts, the conditions it finds there will be so obnoxious to its life and feelings that it will immediately die of despair. The new kind of building is a

Japanese invention. Dr. W. van der Heyden, of Yokohama, is its originator and builder. He has constructed one for his own use, and has lived in it for over a year, testing its qualities. Glass is the chief article of construction in the new building. It walls are constructed of a series of glass boxes filled with a solution of alum. These boxes are formed of two panes of glass each four-tenths of an inch in thickness. The glass is fixed in iron frames screwed together. The whole is so constructed that the building will resist the influence of heat, cold, shocks, and earthquakes. Between the joints of iron framework felt is inserted, and then the space is covered with boards. The roof is flat and is supported by cast-iron pillars. It, too, is glass, with strips of rubber covering the joints. Over the glass is spread a thin layer of ashes, and upon this is placed a light wooden frame, which is covered with cement to protect the interior from the radiation of heat. The building has outer and inner walls with a space between affording air passages to neutralise all the atmospheric influences without. No doors or windows appear in the building proper. The superstructure is placed on a foundation of brick, the walls of which enclose a sort of basement, and it is through this basement that ingress and egress to and from the residence portion are obtained. The building is heated and ventilated on the most scientific principles. Pure air is secured from the upper atmosphere and conveyed to the interior of the building through pipes after it has been screened through fine wire netting and filtered through cotton batting so as to deprive it of any microbes or other disease germs it might contain. The heat is also brought into the house through pipes running to open flues. The whole limits of the building are made as aseptic as a wound-dressing of Lister.

JAPAN AND AMERICA.

WHILE the vernacular journals speak with gratification of the very decided expression of opinion in America in favour of Japan with regard to the war, some not unnatural surprise is evidenced that the United States should not have been the first to conclude a revised treaty with this Empire. The *Nichi Nichi* and others, however, point out, and with justice, that the difficulty was to get England to accede to Japan's proposals. So soon as Great Britain consented, all the other Treaty Powers would follow suit as a matter of course. At the same time, the United States has so often and so loudly been quoted as Japan's "first and best" friend, that the present slight veer in public opinion is noteworthy. "What we want," says a too-hasty *Ko Shimbunshi*, "is deeds; not mere expressions of friendship."

THE FOUNDER OF THE ROSEBERY FAMILY.

THE elevation of the Earl of Rosebery to the Premiership has naturally, says the *Glasgow Herald*, led to the publication of a number of anecdotes bearing upon his family history. The founder of the family was neither more nor less than a Culross hammerman. His name was Duncan Prymrois, described as a "burgess of Colrois," and he was the father of Gilbert Prymrois, who became surgeon to James VI., and direct ancestor of the present Earl of Rosebery. Labourists will be delighted, and perhaps, as has been hinted, hereditarians will not be surprised to learn that this Duncan Prymrois was a thorough-going trade unionist. His name is appended to a notarial instrument which is still in existence, and which purports to have been executed at the Monastery of Culross on 12th May, 1549, in the fourteenth year of the Pontificate of Pope Paul III. It ratifies an agreement among the "craftis mene or symthes of the toune of Culrois, conventit altogether, with ane consent and assent, for the utilitie, weill, and proffit of us and our craft, and the commonweill of us all. The leading article of the contract is to the effect that no forge shall be erected by the servant or apprentice of any craftsmen till he be judged qualified by the corporation to carry on the trade, and that he shall have sufficient means of his own without being necessitated to borrow on credit. A still more significant provision in

the agreement is "that naime of us sall use this craft of ours in na toune nor place of Scotland, bot allenarlie in the toune of Culrois quhair it has bein of usit of before." "The penalty to be incurred by any contravener of the articles of agreement," says Mr. David Beveridge, who goes into this matter very thoroughly, in his most admirable local history—"Culcross and Tulliallan"—"is for the first offence to be reduced from the rank of a master to that of a servant for one year, or to pay a fine of twenty marks Scots; for a second offence the delinquent is to be debarred from exercising his craft for three years; and for a third, he is to be expelled from the corporation." Modern trade unionism has made considerable additions, such as "picketing," to the sanctions of the old guilds or corporations, but these would seem, from the examples that have been cited, to have been tolerably severe.

BITTER POVERTY.

A DISTRESSING story comes from Aoyama, one of the most thinly populated districts of Tokyo, and where the homes of a great many very poor people are to be found. In Minami-machi was the humble dwelling of a worker in leather, a middle-aged, childless man, who for years had been struggling with the direst poverty. Despite hard work he found it impossible to pay the pittance of rent, and was four months in arrear at the end of August, the house-agent dunning him daily to distraction. To make matters worse his wife suddenly sickened and died on the 1st instant. Having absolutely no funds and nothing on which he could raise money, he was unable to defray the expenses of a funeral. He therefore placed the corpse in a large *tsubo* or jar, and fled from the place in which he had known only sorrow. Some three days after this, the house-agent, enraged at getting no reply to his frequent calls, burst open the door. Near the jar a letter was found written on a scrap of paper:—"I beg that the bones of my dear wife may receive a decent burial. I have no funds nor can I obtain any. I go now to end my own worthless, sad life; but if my request be granted my spirit shall return in gratitude from the shade of the tall grasses (i.e. the grave) to bless those who have done the last offices to her whose footsteps I now follow." This last touching appeal was acceded to, and the body of the unfortunate woman properly interred.

SOLDIERS AND THEIR HOSTS.

It is estimated that upwards of fifty thousand soldiers are in Tokyo at the present moment, the majority being composed of those called upon to serve a second time, or members of the First Class Reserve. The barracks are full to overflowing, and the houses of wealthy private citizens have in several cases been requisitioned, as many as forty or even fifty men being billeted on one house. Among others, the fine residence of Mr. Maeda, ex-Minister of Agriculture and Commerce, which is situated in Shiba District, gives shelter to a proportionately large number of soldiers. Mr. Maeda is at present in the country, but so soon as he had heard of the fact from his wife, he telegraphed to say that his "guests" should be treated with the utmost consideration and have the best of food given them. In particular he ordered that *Satsumajiru*—a sort of native *olla podrida*, consisting of many kinds of vegetables and meat—should be twice daily on the bill of fare, as this description of soup is considered especially strengthening. Other Tokyo residents have shown themselves equally eager to provided for the creature comforts of the soldiers, who say that they prefer living in private houses rather than in barracks. To judge from the above, the preference is not unreasonable.

THE "KEISAI ZASSHI" ON THE RICE MARKET.

A FALLACIOUS notion is now entertained by a portion of the public, writes the *Keisai Zasshi*, that the increase in the price of rice is due to the agency of the rice exchanges, and that some strong step should be taken to prevent it. This opinion has the sanction of no less a personage

than Count Ogi. His statement on the subject appeared in a recent issue of the Metropolitan papers, in which he was reported to have said that the increase of the price of rice being due to the action of rice exchanges, the Government should place them under strict supervision, if not abolish them altogether. Nothing can be more erroneous than such a notion, comments the *Keisai*, for the establishment of rice exchanges is instrumental in equalizing the price of rice and their development should rather be encouraged. To attempt to regulate the rice market by administrative measures must be condemned strongly, being an act of absurd injustice. The sudden rise in the rice market is generally attributed to the War. Susceptible even to a very delicate influence, it is not strange if the market has been affected seriously by the present affair. Still it is a question worthy of careful consideration whether the war can be regarded as the principle factor in the rise in the price of rice. In case of war in Japanese territory, by which the farming of the country would be seriously affected, or in case Japan were dependent upon China for her food supply as England is dependent upon America, it would be quite natural and reasonable that the price of rice should rise. But neither supposition applies to the present condition of Japan. A large number of troops have been despatched by Japan to Korea, but the people are attending to their ordinary occupations as if nothing extraordinary had happened; and therefore so long as the crop is not below the average there will be more than enough to feed the forty million inhabitants of the country. Such calm considerations did not at first occur to the rice dealers and they therefore raised the price of rice to an extraordinary height; since then they have begun to understand the situation, and the price of rice is gradually declining. According to inquiries carried out by the Department of Agriculture and Commerce the total area of the cultivation of rice showed last year an increase of more than fourteen thousand *cho* over that of the previous year, but in the total yield there appeared a decrease of four million *koku* in round numbers, or about 10.1 per cent. of that of the preceding year. This must have contributed more or less to the rise in the price of rice. Nor should we overlook in this connexion the depreciation of silver. The rice market of the present year is, however, regulated by the crop of the year, but all the critical days with respect to the prospect of the rice crop (they are 1st of August, the 210th and 220th days calculated from the 1st day of the year, all in old calendar), have been passed safely, we may predict that this year's crop will be satisfactory. The *Nichi Nichi*, writing on the same topic, says that the total yield of rice of this year will be 10 to 20 per cent. above the average. The districts where the prospect was best were the north-eastern part of the main island and a portion of Hokuriku-do. Unfortunately, the former was visited by a terrible flood last month, causing not only serious damage to the crop but also the death of several hundred persons. It is therefore presumed that the yield of rice in those provinces will not be much better than the average. That is not, however, the case with the provinces in Hokuriku-do. There the crop is better than has been seen for forty years. The quotations in the rice exchanges of those provinces are therefore considerably lower than those prevailing elsewhere, the difference being as much as 2 *yen* per *koku* between these exchanges and the Rice Exchange of Tokyo for rice negotiable in November. It is said that certain rice merchants of Tokyo have sent to that district for a large amount of rice.

RAILWAY MONOPOLY.

Most extraordinary to relate, in spite of the untold blessings which the C.P.R. millionaires say they have bestowed upon Canada, the list of newspapers which persist in regarding the policy of that line as tantamount to robbery and extortion continues to grow longer day by day. The *Edinburgh Times*, in its issue of the 2nd instant, devotes a column and a half to throwing

some side lights on the "little ways" of that corporation, and says that the North-West Territories are "bled white" by its blighting policy. "We live," says our contemporary, "in the hope of a future competing transcontinental railway passing through Edmonton. Should that future railway be under the control of the C.P.R., God help us!"—*The Province* (Victoria, B.C.).

ABOLITION OF THE PRESS CENSORSHIP.

THE Press Censorship was abolished yesterday by Imperial Ordinance No. CLXVII. Simultaneously with the publication of the Ordinance, the Ministers of State for War and for the Navy issued notifications to the effect that for the time being the publication of news relating to military or naval movements, actual or proposed, shall be forbidden, except in cases in which sanction for publication has been given by the respective Ministers of State.

This implies, of course, that newspapers which publish news without the sanction of the authorities will be suspended according to the provisions of the ordinary Press law. The newspapers, have been protesting against the Censorship, not merely as irritating, but as totally unnecessary, for, they said, no Japanese newspaper would be so unpatriotic as to publish news that might by any possibility give information useful to the enemy. If the newspapers act in accordance with the spirit of their protestations, the suspensions should be few in number.

REGULAR GENERAL MEETING OF THE SPECIE BANK.

THE 29th regular general meeting of the Specie Bank of Yokohama was held on the 10th inst. at the Offices of the Bank. More than one hundred shareholders attended the meeting, which was presided over by Mr. Sonoda Kokichi, Chairman of the Bank. He addressed the assembly as follows:—Gentlemen—In giving the report of the 29th half-year's business of the Bank, I propose to make a brief statement with regard to the effect of existing commercial conditions on the business of the Bank. The commerce and industry of the country have recently undergone a steady development, large sums were required for the purchase of the shares of various new companies, and the money-market was in consequence extremely active. The agricultural class being also prosperous, an increased importation of foreign goods was invited, and immense quantities of raw materials, machinery, and articles of general consumption were brought to Japan. It is satisfactory to find that a similar activity has been witnessed in the export trade. With regard to silk, the foremost staple of Japanese foreign commerce, the new year was begun with considerable quantities idly stored in the warehouses of merchants, but since then the bulk of the silk in stock has been disposed of, and its export has thus far attained a large amount; other exports, tea, coal, etc., have also been brisk. In short, the total export during this first half-year largely surpassed that of the corresponding period of the preceding year. Turning to the condition of other countries, we find the markets in America still remaining in a very depressed state, and the markets of Europe not much better. The growth of the Japanese export trade at such a period may be regarded with satisfaction. Still as the import trade has shown greater activity the balance has ended in its favour. Thus during the half-year just concluded an increased demand for capital for various industrial enterprises at home, and the shipment abroad of a certain amount of specie, have brought about an unusual activity in the money market, both in Tokyo and in the provinces. The result has been a rise in the rate of interest, which the banks thought necessary as a precautionary measure. As to the influence of the present war on the commerce and industry, not only of the Powers concerned but also of countries in Europe and America, the matter belongs to the second half-year, and need not now be considered. In fact, it is still impossible to predict the influence which the war will exercise upon the commerce and industry of Japan and also of Western

countries. One thing which should be alluded to in this connection was the necessity to close for a while the Bank's Branch office at Shanghai. Great anxiety had been felt here about the Branch office since the war broke out, but as the letters that came from the Branch removed much of the anxiety and as the Branch office was subsequently placed under the protection of the American Consul, it was thought that there would be no need to close it. This hope turned out to be delusive, for, when it appeared that the Japanese who remained in China would be subject to Chinese Jurisdiction, the withdrawal of the Bank's officers at the Shanghai Branch was unavoidable. What is to be noted in this connection is that, apprehensive that such a step might become necessary, the Branch had previously settled all accounts with Chinese merchants, while it secured the promise of a foreign bank in Shanghai to undertake any outstanding business after the closure of the Branch. The Bank is therefore of opinion that no particular loss will be sustained from this part of its business. It ought to be observed in conclusion that, the Bank has no intention of entirely abandoning its business in China. As much business as possible will be carried on by correspondence. The following is the profit and loss account as passed by the shareholders:—

	Yen.
Total Income	1,448,011.418
Total Outlay	967,547.232
Balance	480,464.186
Brought forward from the Preceding Account	34,548.411
Total Profit of the Half-year	515,012.597
To Reserves	86,700.000
Rewards to Officers	48,046.000
Dividend—15 per cent. per annum	337,500.000
Reserves for the New Office Buildings	20,000.000
Carried Forward to the Next Account	22,766.597

JUDGE CHITANI AGAIN.

AFTER a dispute lasting more than six months between the Minister of Justice and Judge Chitani, whose sudden removal from the judgeship of the Supreme Court to be Chief of the Local Court of Okinawa is regarded by the Judge as unconstitutional, the Nagasaki Disciplinary Court has at last given a preliminary judgment in favour of the Minister of Justice. As the judgment is simply preliminary and does not yet touch the main point in dispute, and as the Judge has appealed against this preliminary award, no one knows when this troublesome case may be definitely settled. The judgment of the Nagasaki Disciplinary Court is simply confined to the question whether the matter falls under the jurisdiction of the Nagasaki Appeal Court, under which the Local Court of Okinawa is placed, or whether, as Judge Chitani protests, his case should be examined by the Supreme Court. The main argument in the written protest which the Judge had submitted to the Nagasaki Court of Appeal was to the following effect:—The Defendant, being at present a Judge at the Supreme Court, a disciplinary Court which is to be held against him in accordance with Arts. X. and XVI. of the Law of Discipline for Judges, should be held at the Supreme Court. The Minister of Justice issued an official note on January 15th of this year appointing the Defendant be chief of the Local Court of Okinawa. This notice having been issued without the consent of the Defendant should be regarded as null and void, for Art. LXXXIII. of the Law of the Organization of Courts expressly provides that the Minister of Justice shall have no power to remove a judge without the latter's consent. The Minister of Justice contends that he transferred the Defendant to the new post in virtue of the proviso of the same article. This proviso is however, applicable only to those cases in which on a vacancy's occurring in a given court there is no proper judge to fill that vacancy, or when after the existence of the vacancy has been communicated to all the Courts throughout the country there is still no judge who volunteers to take up the seat. In such cases the Mini-

ster is entitled to remove a judge without the consent of the latter. Thus a great distinction exists between what the provision allows and the case in question, where there was not only a judge in the same Court who can fill the vacancy, but another judge from another court who also wished to be removed there. The Defendant therefore concludes that the order which the Minister issued to remove him to Okinawa was illegal, and failed to affect his official position as Judge of the Supreme Court. The verdict of the Nagasaki Court was as follows:—Protesting that his appointment as the Chief of the Okinawa Local Court was illegal, the Defendant sent back the official note embodying that appointment to the Minister of Justice. The Defendant further protested that as his action in the matter was due to his interpretation of the law, wherein he differed from the Minister of Justice, and cannot therefore be regarded as an unreasonable neglect of duty, a Disciplinary Court ought not to be held upon it. Even if the Defendant be charged with having neglected his duty, since he still occupies the position of Judge of the Supreme Court, his case should be tried at the Supreme Court. Now the present case has originated from the Defendant's having refused to accept the appointment as Chief of the Local Court of Okinawa and to proceed to the place of appointment, and therefore even if the Defendant be free from the charge of having neglected his duty, this point cannot be clearly established unless the matter be fully examined. Consequently, the Court deems its examination of the case a proper step and rejects the protest of the Defendant as to the non-existence of jurisdiction.

A DISGRACEFUL INCIDENT IN SŪL.

The occurrence of a disgraceful incident at the Japanese camp in SŪl in the latter part of last month is reported in the *Mainichi Shimbun*. It was on the occasion of a certain religious ceremony conducted with Japanese military flags. The chief officiating priest was Mr. Fujii Jitsu, who has held for several years a foremost position in the Shingon sect of Shintoism. It appears that he was not on good terms with Mr. Konishi, a subordinate functionary in the same sect, who also had to play an important part in the ceremony. On the morning of the very day on which the ceremony was to be held, the two men had a violent quarrel and the reverend junior declared his superior to be a vulgar fellow unworthy to superintend any such august ceremony as that about to take place, and that he would bring disgrace upon the sect to which he belonged. The elder priest became highly incensed at this insult and forbade the younger to take part in the ceremony. The indignity to which he had been subjected preyed on his mind, so that he had recourse to liquor to drown his sorrow, and when the time for the ceremony came he was completely intoxicated. Somehow he managed to proceed to the altar and began to read a certain sacred composition, but in the intonation of a drunkard, rendering the words perfectly unintelligible to all who were present on the occasion. Though horrified at the sacrilegious performance the audience forbore to interrupt him. When he returned to his seat he spoke rudely to Lieut.-General Viscount Nozu and to Mr. Otori, who were present at the ceremony. He was indicted for his misconduct by Mr. Takehisa, the Chief of the Japanese Police force in SŪl, before the Japanese authorities in the Korean capital, and after careful examination it became apparent that the man was insane and he was acquitted on this ground. When the affair was reported to the Central Office of the Shingon Sect in Tokyo, the ecclesiastical authorities at once telegraphed to the Mr. Fujii that he was dismissed from his office. A humble apology was also offered both to the General and to Mr. Otori.

THE PATRIOTIC ASSOCIATION DISSOLVED.

THE object of the Hokoku-kwai, or Patriotic Association, was, as explained in a speech by Mr. Fukuzawa reported in our columns a few weeks ago, to raise by voluntary contributions a

sum of money for the prosecution of the war. Mr. Fukuzawa was one of the principal promoters of the scheme, and himself contributed 10,000 yen. Shortly afterwards, however, the war loan was floated and it was surmised that the majority of those who had at first intended to offer contributions, would naturally prefer to subscribe to the loan. Nevertheless, at first it appeared that the original plan of the Hokoku-kwai would be adhered to. In fact, the projectors held a meeting subsequent to the announcement of the Loan and decided upon the detailed rules as to the carrying out of their own scheme. But soon even the most enthusiastic of the promoters began to think of abandoning their project, so that when the Committee met a few days after the bye-laws of the Association had been discussed, a member introduced a resolution to the following effect:—"That whereas any attempt to realize the original intention of the Association would be likely, now that the War Loan has been floated, to divert money from the Loan, and whereas the Government accepts contributions from private persons, therefore it is proposed that the Association should be dissolved." A hot debate ensued, but on a division the resolution was carried. It was then decided that the opinion of the members of the Association with regard to the resolution passed by the Committee should be obtained, and that if the majority of the members endorsed the decision of the Committee the contributions thus far received by the Association should be returned to the respective donors and that the expenses incurred for this project would be borne by the originators. This happened on the 9th instant, and we are now told that the majority of members of the Association shared the views of the Committee, and that the Association was dissolved on the 12th. Several of the metropolitan papers strongly censure this proceeding. Whether the capitalists will contribute in their individual capacity, as the representation suggested, remains to be seen.

AN APPRECIATIVE AUDIENCE.

THE melodrama of the war at the Asakusa-za in Tokyo is having a great run, and Kawakami's troupe are finding imitators everywhere in consequence. Not only are two Yokohama theatres producing a similar play, but even the best playhouse in the metropolis, the Harukiza, has yielded to the popular caprice of the moment and announces "a great drama" founded on the incidents of the war. Kawakami is everywhere fêted and daily in receipt of gifts from admirers. One of his auditors, writing over the signature of "A Member of the Red Cross Society," recently sent him a large *hibachi* or brazier of fine workmanship, the box being was filled with cakes. The present was accompanied by a letter stating that the writer had seen with delight the brave exploits of the actor "in Korea," and as the weather was getting cooler he begged his acceptance of the brazier to be used "in camp." The cakes were intended for the hard-working and victorious "soldiers." Another elderly gentleman, whose son is now serving with the army in Korea in the capacity of a surgeon, wrote to his boy telling him that he had seen the realistic drama at the Asakusa-za, and therefore knew just how great the fame of the triumphant Japanese was already and still would be. He exhorted his son not to fail in his duty and to consider his own life as nought if by his death he might be of use to his country. On the whole, Kawakami's play is unquestionably the most popular thing produced on the Japanese stage since the beginning of the present era.

A CORRECTION.

WE have to thank the *Japan Gazette* for pointing out an error in a recent issue. In a note on the punishment of Mr. Nishi, one of the Press Censors, by a fine of a month's salary, in connexion with an article on the New Treaty, for publishing which the *Nippon* was suspended, we said, "Mr. Nishi being only a member of the Press Censors' Committee whose official function is to deal only with matters relating to

the war, it was a breach of official routine on Mr. Nishi's part to inspect and pass an article entirely unconnected with the war." But, as the *Gazette* points out, by the Imperial Ordinance establishing the Press Censorship, the Censors were given power to deal with "matters concerning foreign relations and war affairs." Mr. Nishi, therefore, had proper authority for inspecting the article in question, and this inspection cannot, as we suggested, have constituted the overstepping of his powers for which he was punished.

GEORGE MEREDITH.

THE following striking criticism of George Meredith, by Mr. Stanley Little, is published in the *African Review*:—"The Ascent of Man," and "Social Evolution," chance to be enjoying a temporary vogue just now. But the novel which George Meredith has given to the world is infinitely more important than either of these works, which after all are merely ephemeral contributions toward the solution of problems which will only become soluble, if at all, in those distant ages when man has accomplished his cycles and is about to make way for his successor, a being greater than he. Art transcends philosophy as mind transcends matter. Art is the realisation of the crude matter of philosophy. And Meredith is a supreme artist. None the less so because his novels offend against almost every canon which pedantry has set up as the standard by which fictional art should be judged. Mr. Meredith's characters are neither clearly differentiated types, nor do they embody actual flesh and blood. They are simply manifold expressions of the many-sided nature of the man who created, or rather who actually represents them. They connote the varied changes of a kaleidoscopic personality. Mr. Meredith is a keen, restless thinker, sentient to his fingertips, who never moulders in conviction, or allows the delicate fibre of his artistic ego to be crushed into concrete shape by receiving the impress of definite principles. The man is a prince of individualists, for the very reason that he is always growing, always changing, always expanding. To be the same to-morrow as you were to-day is to be non-individual. You have accepted certain principles from outside and inside; you have hardened into a recognisable shape, but the shape is that of a stone effigy, not that of flesh and blood. You are petrified, in fact, and belong to a certain stratum; you are classified ready for the museum—no longer, in the full sense of the word, alive. Alive! that is the word. George Meredith is intensely, almost phenomenally, alive. His vitality is absolutely miraculous. Such a writer is the despair of the ordinary Briton, but of all the writers of to-day sure of attracting the best minds to him in the ages to follow, Meredith probably stands first. His knowledge of woman's nature is deeper in itself and more graphically set forth than any woman writer possesses or can depict. For after all we understand most fully that which interests us the most. Woman is the supreme problem of man, and it is because Meredith is so pre-eminently virile, so intensely sympathetic, so supremely sexed, that he knows and paints woman as no other writer knows and paints her.

TWO UNFORTUNATES.

FROM Shizuoka comes a sad story. The daughter of a certain tradesman in that prefecture was last month compelled to become the wife of a man for whom she felt no affection. She had already in secret plighted her troth to a young and handsome fellow-townsmen; but her father bade her forget the youthful lover and marry a man of means, more than twice her age. The poor woman pined away. On the night of the third day of the Bon festival—the 15th of the present month, as the lunar calendar is still reckoned by in the interior on the occasion of this religious ceremony—she went to the river to watch the boats launched by pious people and illuminated dimly with paper lanterns,—tiny craft bearing gifts of rice or *sake*, with votive scrolls to those in the spirit-land. As she stood gazing on the bank of the river, her former betrothed stepped sud-

denly to her side. He had been drawn by lot as one of those to enter the army, and for three long years would never have the chance of seeing her face. The young wife, lovelorn and hopeless, proposed that they should die together. He produced a dirk, and with this she stabbed him to the heart, immediately afterwards hanging herself from the outstretched bough of one of the gloomy old trees that grew near the river's brink.

FATAL INSANITY.

A VERY deplorable event occurred on Sunday evening, the 9th instant, at Honjo, one of the western metropolitan districts. The widow and the only son of a wealthy usurer had their home in Midori-cho, where they lived in comfort if not luxury. The son was spoken of as a young man of exemplary conduct and devoted to his mother. For the last five or six months, the young man showed signs of mental aberration, although not of a violent kind. On the evening above mentioned he suddenly made his appearance at the Honjo Police Station, and in an incoherent and almost unintelligible manner said that some one had just murdered his mother. Hastening thither the police found the unfortunate woman strangled with a man's loin-cloth and quite dead. The son standing by all at once seemed horror-struck, and as one who had just awakened from some frightful dream. He rushed out of the house, and though immediately followed by some constables was not discovered until two hours later; he had hanged himself from the branch of a tree in Susaki-mura, not far from Honjo. The belief is that he had murdered his mother in a momentary access of mania, and then taken his own life so soon as he fully realized what he had done.

THE ST. LEGER.

THE result of the Leger is a complete upset, and the winner, Sir Frederick Johnstone's Thorsile, a bay filly by Petrarch out of Thisle, is probably a rank outsider, as her two-year-old career was not marked by a single win in three attempts, though she won a race at Goodwood this year. Ladas and Matchbox, the second and third, have been referred to when they ran in the Guineas and Derby. We see by recent papers that Bullington, who defeated Ladas subsequent to his Epsom victory, fractured his hock at Liverpool, and the inflammation set up went to his lungs and killed him.

THE ALLEGED ATTACK ON PORT ARTHUR.

THE *North China Daily News* of Sept. 3rd states:—"Telegrams were received here on Saturday, discrediting the report that Port Arthur had been attacked by Japanese troops. The fact is that a Japanese force, which had landed in Society Bay, made a reconnaissance on Thursday last, but finding the landward defences, which have been recently improved by Major von Hanneken, too strong, retired without actually attacking."

NEW "BLUE-TUNNEL" STEAMERS.

MESSES. SCOTT & Co., Greenock, have contracted with the Ocean Steamship Company of Liverpool to build and engine two first-class steel screw-steamers of 4,500 tons each, with a carrying capacity of 7,000 tons, for their British and China trade. They will each be supplied by the builders with triple-expansion engines to indicate 2,500 horse-power. These vessels are duplicates of two now under construction by Messrs. Scott for the same Company.

A SPORTSMAN FROM THE SOUTH.

MR. T. S. THOMSON, an old and well known resident of Singapore, says the *Free Press*, who for many years has stood *facile princeps* first in the field of *shikar*, takes a three months run to Japan by the French mail. His first intention was to get some bear-shooting in Hokkaido, but his medical adviser will not sanction the risk of so great a change of climate at present.

INDIRECT RESULTS OF SANTO'S CRIME.

A FRENCH newspaper has put together the deaths directly and indirectly caused by President Carnot's assassination. The chief *piguer* of M. Carnot's stables died of a stroke brought on by grief and excitement. A boy

was accidentally stabbed to death by a school-master who was demonstrating too realistically how Caserio committed the murder. A woman at Perpignan, who went mad on suddenly being told the news, threw herself out of the window and was killed. Indirectly, the event caused the deaths of the foreman of the men who arranged the funeral hangings at the Elysée, and of four persons who were killed in the crowd.—*Spectator*.

STEAMERS IN COLLISION.

ABOUT 3 a.m. on the 9th inst., a collision occurred between No. 3 *Seigi Maru* (1,300 tons), owned by Mr. Fukunaga of Osaka, and a tank steamer—probably the *Langoe*—belonging to Messrs. Samuel Samuel & Co., of Yokohama and Kobe. The former was passing Rokuren-to, distant about 5 or 6 *ri* from Shimonoseki, on a voyage from Ujina to the west. The Japanese steamer was very seriously damaged, and was at once beached at Rokuren. No person was injured. The tank-vessel sustained but slight damage, and as she was able to resume her course is expected to put into Kobe shortly.

THE MAXIM GUN.

The Portsmouth authorities have recently tried with complete success a 37-m. Maxim gun, which throws a shell exactly 1 lb. in weight, and, being perfectly automatic, will discharge 300 shots per minute. The gun was tried from the foretop of the *Hera*, put at extreme depression, and worked admirably. The second trial was from the bows of a sailing pinnace, and everything succeeded as well as if the gun had been on shore.

THE "PIQUE."

H.M.S. *Pique* (cruiser), Captain G. A. Callaghan, was to be prepared at the conclusion of the manoeuvres for service on the China Station, where she relieves the *Leander*. She is a vessel of 3,600 tons and 9,000 h.p., being a twin-screw cruiser of the second class.

THE PORTUGUESE MINISTRY.

A TELEGRAM dispatched by Mr. Sone, Japanese Minister to France, reached the Foreign Department on the 13th inst. It announces that Senhor Robo Davila has been appointed Foreign Minister in the Portuguese Government.

THE ENGLISH HARVEST.

A PRIVATE telegram received in Yokohama states that the English harvest prospects are unfavourable owing to bad weather.

REPORTED LANDING OF JAPANESE TROOPS ON AN ISLAND IN SOCIETY BAY.

The *China Gazette* of Sept. 6th states:—"We are in receipt of information upon which credence can be placed that the Japanese troops, in strong force, have occupied the large island in Society Bay, about 40 miles north-west of Port Arthur, as a base for operations. This news has been known in Peking and Tientsin for several days, and rumours of something of the kind had reached Shanghai, but we are the first, outside official circles, to obtain any definite information on the subject. According to the chart, this island would be either Murchison or Milne Island, the two largest of the scattered group that forms the small archipelago. There is good anchorage on the south side of Murchison, which is from eight to ten square miles in extent, with a bare, undulating surface, the whole country being about 100 feet above the level of the sea. A portion of the Japanese fleet has returned to Japan to convey more transports. The island would easily accommodate 100,000 men. Houses and temporary buildings are already being erected at convenient points. The landing was effected without the slightest attempt at resistance on the part of the Chinese military forces and officials, whose chief tactics now seem to be to keep the knowledge that the enemy has landed on Chinese soil a secret from the people."

THE EMPEROR'S JOURNEY.

Everywhere along the line, from Shimbashi to Nagoya, His Majesty the Emperor was warmly welcomed whenever the train stopped on Thursday, while deputations from schools and Town Councils were drawn up at most of the stations passed *en route*. The Imperial Party left Tokyo by the 7.30 train on Thursday morning. A large number of distinguished persons had assembled at Shimbashi station long before that hour, while the roads from the Palace to the railway-yard were thronged by students from all the schools and colleges in the capital, representatives of public associations, and others. The Emperor bade an affectionate farewell to H.I.M. the Empress and H.I.H. the Crown Prince and then entered his saloon. The Imperial train reached Yokohama at 8.09 a.m., where His Majesty was warmly welcomed by the Governor and leading local officials. Yokohama residents turned out in their thousands, and loud were the cheers given as the train was shunted on to the southern line. The Town Band was in attendance and played some martial music on the sea-road. The Japanese flag floated from every available flagstaff and pole in the neighbourhood, making the scene look additionally festive. Cheering again broke out as the train moved out again on its run south towards Hiroshima. A telegram from Shidzuoka states that the Emperor passed through there at 2.15 p.m. A very loyal reception was given him by the citizens. The Emperor arrived at Nagoya at 6.50 p.m., where he passed the night.

TREATY OF ALLIANCE BETWEEN JAPAN AND KOREA.

In view of the fact that on the 25th of July, 1894, the Korean Government entrusted His Imperial Majesty's Envoy Extraordinary and Minister Plenipotentiary at Seoul, Korea, with the expulsion, on their behalf, of Chinese soldiers from Korean territory, the Governments of Japan and Korea have been placed in a situation to give mutual assistance both offensive and defensive. Consequently the undersigned Plenipotentiaries, duly authorized by their respective Governments, have, with a view of defining the fact and of securing in the premises concerted action on the part of the two countries, agreed to the following Articles:—

Article I.—The object of the alliance is to maintain the independence of Korea on a firm footing and to promote the respective interests of both Japan and Korea by expelling Chinese soldiers from Korean territory.

Article II.—Japan will undertake all warlike operations against China, both offensive and defensive, while Korea will undertake to give every possible facility to Japanese soldiers regarding their movements and supply of provisions.

Article III.—This treaty shall cease and determine at the conclusion of a Treaty of Peace with China.

In witness whereof, the Plenipotentiaries of the two countries, have signed the treaty and hereunto affixed their seals.

Done at Seoul this 26th day of August, 1894.

(Signed) KEISUKE OTORI,
H.I.J.M.'s Envoy Extraordinary
and Minister Plenipotentiary.

(Signed) KIM IN SHIKU,
H.K.M.'s Minister for Foreign
Affairs.

THE ALLIANCE BETWEEN JAPAN AND KOREA.

Writing on the Treaty of Alliance between Japan and Korea, promulgated by the *Official Gazette* of the 11th instant, the *Nichi Nichi Shimbun* proceeds as follows:—"Korea's rupture of friendly relations with China, and her delegation to the Japanese Minister in Seoul the authority to drive the Chinese troops out of her territory, has removed her from the position of a neutral and has placed her at once in the situation of a belligerent against the Middle

Kingdom. Even if there had been no definite treaty of alliance like the one just made public, there ought to have been no doubt of the combination of the two countries for offensive and defensive purposes against China. There may, however, be persons who, in the absence of a declaration of war against China by Korea, may erroneously consider the latter in the light of a neutral state. The publication of the present treaty leaves no further room for doubt. The object of this treaty, as stated therein, is to secure the independence of Korea, and, consequently, that object cannot be said to have been attained until Korea shall have been completely liberated from the interference of China under the latter's pretended right of suzerainty. Japan has no intention of converting Korea into her own protectorate: it is her chivalrous intention simply to help that country in its efforts to become an independent state. Should the Chinese be driven out of Korea and should there be no fear of their return, there would be no necessity to maintain the present treaty of alliance. So it is simply a temporary arrangement. But it would be a grievous mistake to suppose that Japan's duty will have been completed by the mere expulsion of the Chinese from Korean territory. It is the duty of this Empire not only to drive the Chinese out of Korea, but to secure Korea against all danger of China's again making pretension to suzerainty over the peninsular Kingdom. Consequently, Japan must proceed with hostile operations until China shall have been completely humbled. Under these circumstances, even after the flight of the Chinese troops into their own country, Korea will have the obligation to give every facility to Japan in respect of the transportation of provisions, re-inforcements, ammunition, and so forth. For this purpose, the expiration of the present treaty has been fixed, not at the expulsion of the Chinese forces from Korea, but at the conclusion of peace with China. Such peace, it need hardly be added, will not be concluded until China has been thoroughly subdued. It is, indeed, idle to expect that peace will be concluded while there remains any possibility of China's reasserting her pretended right of suzerainty over Korea. Conclusion of peace under such conditions is absolutely excluded by the present treaty of alliance, the object of which is to place the independence of Korea on a secure footing. The issues of a war are always attended with some uncertainty, but it now lies for our Army and Navy to attain the object aimed at by the treaty under consideration. We have no doubt that our arms will be crowned with complete success, and that this treaty will terminate at a not distant date."

KOREAN AFFAIRS.

The latest batch of letters from the Japanese war correspondents is from Kai-song, dated August 27th-29th. The greater portion of these letters is taken up with the repetition, with now and then unimportant additions and corrections, of what has already been noticed in these columns—collisions between the scouting parties of the two confronting armies, the hostile attitude exhibited toward the Japanese by the Koreans in the northern provinces, the hardships of campaign life, and so forth. From these correspondents we gather that the total strength of the Japanese army marching toward Phyong-yang is about 10,000, divided into three parts, the right, left, and the reserve. The right wing,—under the command of Major-General Tatsumi, had marched as far as Sak-nyong by about the 28th ultimo. The object of this force seems to be to take a circuitous route to the north of Phyong-yang and to attack the enemy's flank. The left wing is under the command of Major-General Oshima, who led the troops at A-San; and it left Kai-song for the north on the 29th ultimo. The reserve under the direct command of Lieut.-General Nozu is marching a few miles in the rear of the left wing. The distance between Kai-song and Phyong-yang is

about 120 miles, and supposing that the Japanese army to move at the rate of 10 miles per diem, it could not have come in sight of the Tai-dong-gang earlier than yesterday. Considering the nature of the roads to be traversed, it will be more reasonable to allow a few more days for the arrival of the Japanese army at the Tai-dong river. This calculation is on the supposition that the detachments of the Chinese army that have crossed the river have all fallen back upon Phŏng-yang on the approach of the enemy. This is very likely, and indeed such was the purport of a report received in Tokyo a few days ago.

Mr. Kuroda, the chief war correspondent of the *Nichi Nichi Shimbun*, tells an interesting story of a Chinese prisoner taken in the neighbourhood of Sak-uyōng. The captive was on his way from A-san to Phŏng-yang, when he was seized by the Japanese scouts. He received wounds in the leg at the battle of Sōng-hwan. He is said to have been in terror lest he should be butchered by the Japanese. Nothing could exceed the frantic joy which he expressed when he was told by Mr. Kuroda of the treatment he would receive at the hands of his captors. He has been sent to Yong-san, a Japanese garrison in the vicinity of Sōul. Mr. Kuroda, who can speak Chinese, also questioned him about the strength of the Chinese force at Sōng-hwan and other matters. The Chinese captive stated that the total Chinese troops defending the stronghold of Sōng-hwan was 3,200; that the loss on their side was about 300 killed and 200 wounded; that the arms carried by the Japanese were far superior to those of the Chinese soldiers; and that great destruction was wrought by the shells discharged by the Japanese field-pieces.

According to a Fusan telegram, dated August 27th, the Chinese fleet, which had assembled at Wei-hai-wei, is said to be still stationed there without any apparent intention of coming out of its retreat.

The following telegram is said to have been received in Tokyo from Shanghai on the 7th instant:—"Admiral Ting of the Northern fleet has been deprived of his commission as a disciplinary measure." The *Nichi Nichi Shimbun*, which publishes this message, doubts its truth.

As we stated in our last issue, it has been announced by the *Official Gazette* that the military head-quarters are to be removed to Hiroshima on the 13th instant. On that morning, His Majesty the Emperor will leave Tokyo, attended by the military staff of the head-quarters, as well as the Minister President of State, the Ministers of War, of the Navy, and of the Household. The Imperial party will stop that night at Nagoya. The following day they will probably proceed as far as Kyoto, reaching Hiroshima on the 15th instant.

Opinion is now agreed in putting the probable date of the engagement between the Japanese and the Chinese armies at Phŏng-yang between the 13th and the 15th instant. The *Kokkai* believes that the first conflict between the two forces will take place at Sōng-chhōng, a prefectural town to the north-east of Phŏng-yang. It should be remembered that the right wing of the Japanese army under the command of Major-General Tatum, is moving by a circuitous route to attack the enemy on the flank. Sōng-chhōng is on this route, but it is doubtful whether the Chinese will dare to come out so far from their stronghold.

We alluded some time ago to the fact that an alliance was about to be formed between Japan and Korea. The matter has now been settled and we publish the treaty in another column.

That the Japanese army in Korea is under strict discipline is admitted even by the worst enemies of this country. But even the best regulated army is not entirely free from occasional cases of examples of irregularities and disorderly conduct. That up to the end of last month, that is during a period of nearly two months in the peninsula, there had been only two cases calling for trial by court-martial must be accounted a remarkable record in the history of a military campaign. On August 27th two

private soldiers belonging to the commissariat department were tried and condemned to penal servitude, one for 3 years and the other for 13 years. Their names are Hosoya Chokichi, 32 years, and Hagino Kyutaro, 21 years, respectively. Hosoya's crime consisted in entering the house of a Korean, and, after the flight of the inmates, taking possession of a mat and a pair of copper chop-sticks. He did not, however, carry off these articles, for just as he was leaving the house, he was met by a Japanese interpreter and warned by him against robbing the poor Koreans of their property. He was, however, subjected to the full penalty awarded by the Military Criminal Code—three years' imprisonment. The other miscreant Hagino, while acting as inspector of the transport *Kamiyoshi Maru*, entered the house of a Korean, in company with one of the crew of the ship. They both carried drawn swords, and carried off five pumpkins, a quantity of tobacco and a pipe, and killed a pig. He was sentenced to penal servitude for 13 years.

Concerning the Chinese captive caught by the Japanese at one of their outposts, about whom we have already quoted some statements from the *Nichi Nichi*'s correspondent, the *Yiji Shimpō*'s Sōul correspondent mentions that on his arrival at the Korean capital the wounds on his leg were dressed by a Japanese surgeon and he was supplied with clean linen and new clothes. He will be sent to Japan as soon as the state of his wounds permits his removal. At present he is detained at the Consulate. The poor Chinaman, says the correspondent, complains much of the cruelties of Chinese officers to their men, and of the small pay Chinese soldiers are receiving.

According to a Fusan telegram, the Chinese fleet at Wei-hai-wei is said to be daily sending out a scouting vessel to see if the enemy is not coming. But the scouting vessel does not come out further than ten miles from the port.

The *Hochi Shimbun*'s Sōul correspondents writes that on the 31st of August, Marquis Saionji a messenger of the Japanese Emperor, had an audience with the King of Korea. Afterwards he was also received in audience by the Queen, this being the first instance of a foreign Ambassador being admitted to her presence.

The *Nichi Nichi Shimbun*'s Fusan correspondent inform us that a French gun-boat entered that port on the 4th instant. The object of her visit is said to be to investigate the facts relating to the murder of a French missionary by Chinese soldiers at Hon-ju.

According to a Fusan telegram, dated the 10th instant, the attitude of the Koreans in the neighbourhood of Kim-chhōng towards the Japanese army is said to have completely changed for the better since the arrival of a small party of Korean soldiers to act in concert with the Japanese.

The Japanese authorities in Sōul are taking much pains to relieve the distress of the poor in that city. The Japanese Consul requested the Korean Board of Metropolitan Police to draw up a list of the poor needing help. The police investigations have resulted in the discovery that the total number of people in distress in the city and suburbs is 2,687. The Japanese Consul issued tickets to these persons on the 1st, 2nd, and 3rd instant. The holders of these tickets were to receive rice and money from the Japanese authorities at Yōng-san on the 5th instant. The total amount of rice and money to be given in relief was estimated at 12,070 yen. The money will be given partly in the new Korean pieces (silver and copper).

Letters from Korea agree in stating that the work of administrative reforms is not likely to make real progress until the expulsion of the Chinese troops from the peninsula. The Tai Wōn-kun himself is reported to have said as much. Some correspondents state the Regent is not in sympathy with any scheme of progressive reforms, and hint that another change of Cabinet is necessary to set the work of reform in motion. But in view of the many erroneous reports which these correspondents have lately sent home respecting Korean politics, it is well

to receive this discouraging news with a large allowance.

According to more trustworthy information, it is stated that the Japanese officials and the Korean Ministers of State in Sōul are on the most friendly terms.

On the 2nd instant, the Japanese Minister gave a ball in honour of the Imperial Ambassador, Marquis Saionji. It was attended by the Korean Minister and Vice-Ministers of State, the foreign Representatives (with the exception of the British), and Consuls, and the principal Japanese officials in Sōul.

A telegram from Shanghai, dated September 10th, states that the Peking Government recently addressed a note to the foreign Representatives, asking them that the war-vessels of their respective countries should heave-to when signalled by a Chinese war-ship, so that an officer from the latter may board them and see that the foreign flags flown by them are not a ruse adopted by Japanese men-of-war. This ridiculous request was of course contemptuously rejected by the foreign Representatives.

The report that China has sent 95,000 troops to Shanhaikwan is received here with suspicion. It is now further reported that this force will be sent forward by transports to Newchwang.

Of the recruits raised in Hunan, 2,000 are stated to have already gone to the north. They are armed with swords and spears.

As already stated in these columns, His Majesty the Emperor leaves the capital this morning. The express train carrying the Imperial party will leave Shimbashi at 7.25 a.m., and arrive at 6.40 p.m. at Nagoya, where His Majesty will stay for the night in the Hongwanji Temple. The next morning, the Imperial party will leave Nagoya at 9.20, and reach Kobe at 4.30 p.m. On the 15th, the progress will be resumed at 9.30 a.m., Hiroshima being reached at 6.40 p.m.

The following telegram, dated Fusan September 12th, 11.40 a.m., has been received by the *Nichi Nichi Shimbun*:—"According to a trustworthy report received in Sōul, our army routed a party of Chinese cavalry in the vicinity of Hwang-ju, and subsequently attacked and took possession of the citadel of Hwang-ju. No further news has yet been received, but it is believed that a great battle is now taking place in the neighbourhood of Phŏng-yang." Hwang-ju is a prefectural town about twenty-five miles south of Phŏng-yang.

Another telegram from Fusan states that Marquis Saionji and suite have already left Sōul for home.

Formidable reports are circulated about the strength of the Chinese troops south of the Amnok-gang (Chinese, Ya-lu-kiang). Their number is put at 40,000—50,000. But considering the difficulties that have to be surmounted in moving such a large force into a foreign territory, the Tokyo journals think that the total strength of the Chinese in the north of Korea cannot exceed 30,000 at most.

A Japanese who has just returned from Shanghai states that the two Japanese students of the Japan and China Commercial Training School, who were arrested on the charge of being spies and were surrendered to the Chinese authorities by the American Consul in Shanghai, have been executed in a barbarous manner.

Some of the papers state that a report has been received in Tokyo, announcing that the Japanese army proceeded to Phŏng-yang in two divisions, one by way of Hwang-ju and the other by way of Gang-tong, and that, after several hours fighting, the Chinese army fled in great disorder, and with great loss of life. The date of this engagement is put by some on the 10th and by others on the 11th instant. The *Nichi Nichi*, however, informs us that no such report has as yet been received by the Government.

General Count Yamagata, accompanied by Major-General Ogawa and other staff officers, including H.I.H. Prince Kanin, a lieutenant of cavalry, have reached Sōul. They embarked for Korea at Ujina on the 8th instant.

THE NEW TREATY.

MEMORANDUM.

The Undersigned having on the 29th June, 1894, telegraphed to his Government as follows:—

"Board of Trade want to replace the words Japanese Customs 'Returns' by the words 'average prices,' because they say that these Returns already include the amounts for insurance, transport, &c."

The Undersigned received the following answer on the 11th July, 1894:—

"You can assure British Government that Customs Returns do not include insurance, transportation, or commissions; they contain original values only as prescribed in Tariff Convention, 1866. Customs Returns much better and more constant basis than average prices."

With reference to this the Undersigned has no hesitation to declare:—

1. That the prices which served as a basis to the Conventional Tariff of 1866 are not the prices which are adopted since in the Custom-house Statistics as the medium price of the imports.

2. That the Custom-house Statistics are made up on the contrary on actual documentary evidence which is at their disposal, and represent the average *original* prices, without the addition of insurance, transport, and commission.

3. The Regulations under which British trade is to be conducted in Japan (Treaty of the 26th August, 1858) contain the following at the end of Article III:—

"On each entry the owner or consignee shall certify in writing that the entry then presented exhibits the actual cost of the goods, and that nothing has been concealed whereby the Customs of Japan would be defrauded, and the owner or consignee shall sign his name to such certificate."

"The *original invoice* or *invoices* of the goods so entered shall be presented to the Custom-house Authorities, and shall remain in their possession until they have examined the goods contained in the entry."

The Undersigned is not aware that any subsequent arrangement has altered the principle of the production to the Custom-house of the *original invoices*, and it is his impression that these documents serve as material for the Custom-house Statistics which the Imperial Government wishes to adopt as basis.

The Austrian-Hungarian Treaty of the 18th October, 1869, contains the same stipulations, and it will be remembered that the Conference of Tokyo for the Revision of the Treaties, 1882, accepted this Treaty as the model Treaty on which the revision was to be based.

(Signed) AOKI.

Japanese Legation, London, July 13, 1894.

BRADYSEISMS.*—I.

Because the following notes on the slower movements of the Earth Crust have been written more with the object of completing a scheme than with the hope of extending our present knowledge, I ask the reader not to look for that which is novel but to regard this section of the subject as an old story with here and there a new illustration.

In Japan, as in many other countries, the mountains formed of crumpled sedimentary strata testify to the fact that deposits which were once horizontal have suffered enormous distortional change, while around the coast line of the country there are ample illustrations indicating that even during the memory of the living the relative position of land and sea have suffered alteration. Ancient maps and historical records dating back a thousand years or more throw light upon the coast lines as they once existed.

At many places during the last 20 years and

in some cases even 10 years, we are told that harbours have grown shallower at rates varying from one foot in three years to one foot in ten years. Only small vessels are now able to enter these harbours, rocks which were beneath the surface are now above the water, posts to which ships were fastened are now 180 feet inland; it is observed that shallow wells pass through beds of shells like those living in the sea; the mouths of rivers have grown shallower; the tide leaves a greater area of coast bare than it did in former years, fishermen who placed their nets at a distance of 1,200 feet from the shore to find water of a similar depth have now to go a distance of 1,800 feet. These and other facts point to the conclusion that at many places, as for example round the Shimabara Gulf, in the Inland Sea, on the coast of Sagami, to the north and south of Sendai, and generally on the eastern and southern sides of Japan, elevation has been taking place within the memory of the living.

From other places I learn that grass and rice-fields are now represented by beaches of sand of shingle; that the depth of the sea has increased at rates of from 1 foot in 16 years to 1 foot in 5 years; that rocks have sunk, the height of the tide has increased; that buildings are nearer to the water line than they were when first erected; in some cases the water is approaching roads and buildings so rapidly that the inhabitants are contemplating moving inland; that maps of a hundred years ago show that former dwelling places are now beneath the sea. Although in Japan we have no submerged forests or "dirt beds," on the west coast we find near Iwanai and on the shores of Kaga submarine depressions following the line of valleys on the land. All these facts point to the conclusion that certain districts, especially those to the North of Noto bordering the China Sea, are slowly sinking.

Those who describe these changes usually attribute them to the accumulation of sediment, the washing away of coast material, or to the occurrence of some great earthquake, although in no case has it been stated that the changes accompanied such disturbances.

By taking a series of maps representing the Tokyo district, the first of which dates from the year A.D. 1028, and super-imposing them one upon the other, the average rates at which a greater portion of the ground on which the present city has been built has grown seawards can be readily observed. At one point the average rate has been 38 feet per year, while at another it has been only 2 ft. per year.

During a residence of nearly 20 years in Tokyo, I have seen mud banks appear which now have been reclaimed, so that the area of the ground bordering the sea frontage has been increased by *very many* acres.

These changes are no doubt largely due to the deposit of sediment brought down by the Sumida and other rivers entering the bay; but when we look at the shell borings in the rocks flanking this sheet of water, we are compelled to admit that this rapid shallowing and growth of land must at least in part be due to actual elevation. As one example of these shell borings, I may mention several lines of them in the cliff forming the face of the Bluff at Yokohama. The rock is a soft clayey tuff and the borings are to be seen in this at a height of about 20 feet above high water mark. Because this rock is so extremely soft and easily acted upon by the weather it is difficult to suppose that the borings can have been formed more than 50 years ago. If, however, we double this limit and exclude paroxysmal action, we are led to the belief that elevation has been going on at a rate of 1 foot in 10 years, a rate quite comparable with those obtained along coast lines which have been already mentioned. Eighteen years ago near the site of these makings a point of rock projected into the sea which I do not remember ever having been able to pass. For the last few years at low water I have passed it repeatedly, walking on what is practically a rocky surface. A little more

at many places on the coast of Japan land has been emerging from the waters at the rate of about one inch per year.

Round the shores of Japan, especially upon the South Western coast of Yezo, sea worn caves and hollows, raised beaches, and terraces, are evidence of more extended elevation. Near Hakodate and from Matsumai towards the north, these latter, which are from 20 to 40 feet in height are so well defined that they attract the attention of passengers on passing steamers. On the western side of Iterup the first terrace, which is half a mile or so in breadth, has a face about 130 feet in height. From two hundred to three hundred feet or so above this, the level of a second terrace is reached

Here as on the western side of the Pacific, it will be observed that as we travel northwards traces of ancient shore-lines occur at higher levels, and what is generally true for Northern latitudes is generally true as we proceed down the Coast of Peru and Chili for a distance of more than 2,000 miles towards Valparaiso. At the latter place Darwin found such indications at an elevation of 1,800 feet, while A. Agassiz found corals attached to rocks at a height of 3,000 feet.

Although the above illustrations have been drawn from Japan, similar illustrations of the instability of the land relative to the surface of a neighbouring sea or ocean can be drawn from nearly all the sea coasts of the world, the most striking, perhaps, being those which have occurred in the historical period, or within the memory of man. In some instances the movement has not been altogether in one direction,—which is perhaps one of the most remarkable features connected with these phenomena—but as in the well-known case of the temple of Jupiter Serapis, since the Roman Period, an area has been depressed some 20 feet and then re-elevated.

That these movements have not been absolutely continuous is indicated by the faulting to which folded strata has been subjected; while earthquakes, which are so frequent along the Eastern seaboard of Japan, announce to the inhabitants of that country that in spite of the never ceasing degradation caused by rivers and mountain torrents tending to reduce the country to sea level, resistances to folding process have been overcome, and that the Empire is yet growing.

The next object we have in view is to describe, but with a brevity which to many may be undesirable, the theories which have been advanced to explain these various movements, the most stupendous of which have crumpled up sedimentary strata to form mountain chains which define the watersheds and give to us our grandest scenery. For many excellent and well-known reasons, it is generally accepted that these movements are mainly due to the fact that we live upon a crust which by folding and puckering is accommodating itself to a nucleus which as it cools must necessarily contract. Many ingenious and well-considered theories have been adduced to show how this general hypothesis may suffer modification.

Babbage has suggested that local movements of the Earth's surface might be directly due to the effects of heating or cooling. For example, in thick accumulations of sediment we should expect to find a rise in isotherms, which would be followed by expansion and elevation. Sir John Herschel, on the other hand, points out that areas on which sediments have accumulated until they are of vast thickness are usually areas of subsidence. The Rev. O. Fisher, who has brought forward so many well-considered facts and arguments to show that the crust of our earth by lateral crushing was not only crushed upwards to form mountains but was thickened downwards, uses this fact in conjunction with many others, to show that the crust of our earth is like a broken sea of ice floating in hydrostatic equilibrium on some fluid or viscous substratum, and therefore capable of adjusting itself to changing loads upon its surface. The same writer, because he does not find that either the cooling of the nucleus of

* Brady, slow—primar, earth movement.

the Earth or the extravasation of water from beneath the crust is sufficient to account for the amount of contraction observed, investigates the amount of crumpling which might be expected by an extension of the crust owing to the injection of more or less vertical dykes of igneous rock.

To the above brief outline of the causes which might lead to movements in the crust of our earth, may be added the mechanical changes which are occurring and have occurred in the superficial portions of our earth by the infiltration of water, and the action of this in conjunction with heat and pressure. Chemical changes have taken place, materials have been hydrated, rocks have been slowly converted from a glassy to a crystalline state, and all these and other metamorphic actions are accompanied with a change in volume, and consequently swellings and contractions have been brought about.

Having briefly enumerated the various hypotheses and facts that the geologist has at his disposal to explain the raising and the lowering of tracts of land relatively to the water which surrounds it, we next turn to the possible manner in which the water might be raised or lowered. Last century, Werner suggested that there ought to be a general rising of the waters of the globe, unless they were gradually being absorbed into its interior—owing to the accumulation of detritus which ocean beds continually receive from the land, and Manfredi calculated that if all the rivers carried $\frac{1}{10}$ of their volume of solid material, there would be a rising in the oceanic envelope at a rate of 4.6 c.m. per 100 years. Small as the amount is, inasmuch as rivers on the average probably do not carry more than $\frac{1}{1000}$ of their volume as suspended sediment, the result obtained is 20 times too large. Mr. Alfred Tylor, making a similar investigation, infers that the rise in the level of the ocean would be at a rate of about 3 m. per 10,000 years. Even if we add to the land detritus some hypothetical estimate of the quantity of volcanic material which from sub-aerial and from submarine sources is filling up the ocean bed, the causes would be altogether inadequate to explain the oscillatory changes in level about which the geologist holds such positive evidence. Dr. Mallet held that our globe was once entirely covered by water, and Trautschold endeavoured to show that as the mountains rose the waters gradually disappeared into the vacuities they must leave behind. One extremely effective cause in changing oceanic configuration to which attention was first drawn by Adhemar in 1842, and which has attracted the attention of many mathematicians and physicists, are the alterations in the position of the earth's centre of attraction, as for example such as might occur by accumulation of ice and snow at one of its poles. Dr. Croll tells us that the removal of about half the ice now probably existing in the antarctic continent and transferring this to the arctic regions would carry the earth's centre of gravity sufficiently far to cause a rise of level in the ocean of 285 feet at the pole and in the latitude of Edinburgh of 234 feet. This being the case, and assuming that the poles have been alternately glacial, then traces of sea terraces ought to be found at higher levels as we proceed from the north to the south. To a certain extent this is true, but the cause is too general, and while it explains a few of the phenomena that come before us, it is at variance with the majority.

All that has been done in this section has been to give an imperfect outline of well known theories which have been adduced to explain the movements of the land or the movements of the water, and if we except slight changes in the configuration of the oceanic envelope which may possibly have accompanied glaciation, we conclude that the building of our continents has depended on the oscillations of the rocky crust—the ocean level has been permanent whilst the ground has moved.

What I wish to do in the next section is not to controvert this doctrine, but to determine the degree to which it may reasonably be modified and to point out that very much of that which is usually attributed to glacial action may possibly be due to fluctuations in ocean level.

OCEANIC METHYPSOSIS.*—II.

The inference to be drawn from the concluding sentence in the last article is that upheaval or subsidence, of which evidence is exhibited on many coast lines, find an explanation in the mobility of the land, and are not due to the rising and falling of the waters or to changes in the configuration of the oceanic envelope. The object of the present article is to show that during geological time, although there may not have been any marked change in the general form of the ocean-sphere, there may have been considerable changes in its level, this level being measured relatively to the centre of the earth. If this is established, then many oscillatory movements attributable to the land which, for example, are apparently necessary to explain alternations of marine, estuarine and land accumulations may in part be explained by the movement of the waters.

As illustrations of possible fluctuations in water level, we shall first take the case of a lake or inland sea. If the lateral ridges confining such a body of water are steep, so that the cross section of the basin is V-shaped, the sinus of the depression containing the water forming with its boundaries a right angle, or an angle less than a right angle, then lateral compression, which could cause an actual elevation of the boundary ridges because it would be accompanied by a large rise in the confined waters, might appear as a depression of these ridges. As a second illustration, let the boundaries meet at an angle greater than a right angle and the water lie in a dish-like hollow. In this case lateral compression would result in a large fall in the water level, and the land elevation, as measured from the water datum, would be greatly exaggerated.

Whether movements of this description, by which the boundaries of inland seas or lakes and valleys have approached or receded from each other, are of assistance in explaining phenomena apparently due to changes in water level, is a matter for consideration. The main fact to which it is desired to draw attention is that a slight change in the average slopes of ocean depressions results in the advance or retreat of water from a considerable area on all gently sloping shores. With a basin of given form for a given depression or elevation the amount of this movement is calculable. That these movements may be considerable can be realized by a simple experiment. Take a board, say 10 feet long, with a groove along its length. Let this be supported at its two extremities and the groove be filled with water. The weight of the board together with that of the water it carries will cause it to slightly sag. By placing a small weight on the board the sag may be increased, say 1 millimeter, and it will then be observed that the water will run inwards for a distance of 30 or 40 millimeters. In this experiment the sag in the board is an exaggerated representation of a depression in the earth's crust, like an ocean basin, and if the horizontal movement of the water in the model is at least 30 times that of the vertical displacement it is not difficult to appreciate how very much greater the relationship would be had the model more truly represented the actual form of an ocean bed.

We will now extend our considerations to a globe completely surrounded by water. If we exclude the idea of tumefaction, elevations and consequent depression in the crust of such a globe, so long as these do not protrude above the surface of the liquid envelope, could not produce any change in its level. Should, however, protrusion take place, as for example in the formation of a continental area, there would be a sinking in the level of the water and the volume of the waters which would recede from the shore lines would be exactly equal to the volume of land which appeared above the surface. The newly created land surface would therefore owe its origin, first to the fact that it had been actually elevated, thereby increasing its distance from the centre of the globe

of which it formed a part, and secondly, to the fact that the waters had actually receded to fill a depression and had decreased their distance from the centre.

From this point my object is to determine to what extent we are justified in ascribing the existence of the continental elevations to actual uplifting, and to what extent they may be attributed to a retreat of the waters. The materials out of which continents are formed show that the greater portion of them were accumulated beneath the sea. The folding and the faulting in mountain chains show that actual movements have taken place in the rocky crust, and also that such movements have not altogether been confined to land surfaces.

Elevations and depressions have taken place within historical times, while earthquakes tell us that movements are continuing not only in the rocky crust but also beneath the waters near our shores. The evidence of what is taking place or has taken place beneath the deep ocean is extremely small, and as to whether ocean basins have been formed by radial contraction, by bending of the earth's crust, or possibly by other means, is yet a field for speculation. What we know more definitely are that the mean height of the continental areas relatively to present sea level is something greater than 1,000 feet; that the mean depth of the surrounding oceans may reach 15,000 feet; and that the relative areas of land and oceanic surfaces are as 1 to 3. Assuming these numbers to be approximately correct, if the land excrescences could be uniformly spread over the bottom of the sea from whence they came, the result would be equivalent to spreading a block of material 1,000 feet in height over an area three times as large as that which it now occupies, while the waters would rise to cover an area four times the size of that which they now present. Overlooking the fact that varying circumferences would be involved in these operations, the height to which the waters would rise would be 250 feet above their present level. The conclusion which follows this, is that as the continents grew upwards above the surface of the oceans, there was an equal volumetric sinking of the waters, and whatever value we give to the mean height of our land, or to the ratio of the areas of land to water, we arrive at the conclusion that a little more than one quarter of what we see as continental elevation is the result of an apparent uplift. With a mean height of land, as given by Dr. J. Murray, of 1,937 feet, the apparent uplift due to the recession of the waters would be 487 feet. When land surfaces have gone up, then the oceanic level must have gone down, and during geological times these movements and their converse have been oscillatory and in opposite directions.

To gain some idea of the extent that the retreat of the ocean into growing oceanic depressions has played in accelerating the exposure of strata we will commence at a stage in the earth's history when it may have been represented by an uncrumpled sphere covered by a deep ocean. With a mean oceanic depth of 15,000 feet and a mean height of our continents of 1,000 feet, the total height of the continental protuberances is 16,000 feet, and if this 16,000 feet of material could be spread over a sphere drawn through the present mean depth of the waters such a layer would be 4,000 feet in thickness. The Rev. O. Fisher in a similar calculation takes his datum line through the greatest depth of the ocean, or about 9,000 feet lower than the one I have used. Adding this quantity to the 4,000 feet of my calculation, our results representing the dimensions of the uncrumpled sphere are in accordance. By such an operation we obtain approximate dimensions for a primitive lithosphere, and the present waters distributed over such a surface would have a depth of 11,250 feet.

After solidification of the crust we cannot imagine changes of any magnitude taking place in this crust due to its own contraction by farther loss of heat. The only deformation it has suffered since it hardened has chiefly been in consequence of accommodating itself to a shrinking nucleus.

With conditions somewhat of this nature, we are in a position to sketch the general character of the changes, which have succeeded each other in the original formation and to water during the evolution of continental areas. From the writings of Dr. A. V. Tillo, it appears

that the relative areas of the different geological groups as at present known, stand to each other in the following proportions:

Archæan.....	20.3	Mesozoic.....	20.2
Palæozoic.....	17.5	Tertiary, &c.....	42.0

Although some 27 per cent. of the surfaces of the continents are unexplored, it is not likely that the relation between these numbers will be greatly altered. As the sum of the above numbers represent the present land area, which is one-third of the oceanic area, then we can approximately determine the ratio of land to sea at the termination of each of the preceding epochs.

The values of land to sea would be as follows:—

Archæan.....	1:19	Mesozoic.....	1:6
Palæozoic.....	1:10	Tertiary, &c.....	1:3

The next factors required are a series of numbers representing the mean heights of successive land areas. If these are assumed to be proportional to the thickness of the rocks which constitute them, the figures representing which are according to the investigations of Dr. Haughton proportional to the time taken to form such strata, the following table is obtained:—

Archæan.....	343 feet.	Mesozoic.....	913 feet.
Palæozoic.....	768 feet.	Tertiary.....	1000 feet.

If, however, the mean heights are proportional to the land areas exposed, the table becomes:—

Archæan.....	203 feet.	Mesozoic.....	580 feet.
Palæozoic.....	378 feet.	Tertiary, &c.....	1,000 feet.

From what we know of the growth of mountain ranges, which have added largely to the height of continental areas, especially in Tertiary times, and because it seems likely that a great increase in land area means a correspondingly large increase in average height, the latter table is the one which will be employed.

It will be observed that the chief inaccuracies in the foregoing data depend upon the ratios which have been assumed respecting the relation of land to oceanic area at the close of certain epochs in geological history. The last of these ratios, because it has been determined by actual measurement, cannot be far from the truth, but the remainder are more and more inaccurate as we proceed back in time. Notwithstanding these inaccuracies, and admitting that they are extremely large, it seems impossible that they should fail to lead us to a truer idea of the changes which have taken place in continental development than sheer guesses would furnish. The commencement of the evolutionary process we wish to trace, may be taken at the end of Archæan times, when by the deformation of a primitive sphere buried beneath 11,250 feet of water a continental area has been exposed, the area of which relative to that of the surrounding waters is as 1:19, while its mean height is 203 feet. To bring this about, there must have been a real elevation of 193 feet, while 10 feet more has been exposed by a vertical fall in the waters receding to occupy the depression formed by the uplifting of the land. The fall in the mean depth of the ocean would be 602 feet, and its mean depth would increase to 11,842 feet. The general slope of the land along a line 3,000 miles (18×10^6 feet) in length, which may be taken to represent an average slope between the centre of a continental area and the bottom of the surrounding ocean, would be such that the 10 feet of vertical fall would expose a fringe of land along the coast with an average breadth of 11,623 feet.

If we treat the other cases similarly and tabulate the results, the relationship of land to water at the termination of successive geological epochs may have been something like the following:—

	Mean height above sea level.	Vertical exposure due to fall in water.	Exposure due to actual elevation.	Mean depth of ocean.	Depression in ocean bed.	Breadth of shore exposed by fall in water.
Archæan.....	203	193	11,842	602	11,623	21,465
Palæozoic.....	378	368	12,210	720	11,842	22,052
Mesozoic.....	580	570	12,415	840	12,058	22,898
Tertiary.....	1,000	990	12,500	1,000	12,500	23,500

As there is a great want of exactness in the data on which the above table is founded, no attempt has been made at accuracy in the method of investigation, and therefore it can only be looked at as suggestive of the character of the changes which have brought about the present relationship of land and water. The average breadth of the existing shore lines due to the retreat of the ocean is seen to be about 47 miles, but had the average slope been measured along a line 6,000 miles in length rather than 3,000 miles this quantity would have been doubled.

The main fact is that after a long series of oscillatory movements in the earth's crust, continental areas have been formed, the average

height of which is about 1,000 feet. To accomplish this it seems impossible that there should not have been equal volumetric oscillations in the oceanic envelope, and we conclude that about one quarter of what is generally regarded as due to the uplifting of the earth's crust is really due to a recession of the waters.

Although, on the whole, there has been during geological time a considerable fall in ocean level, in the next section I shall endeavour to show that the process has been oscillating, and from time to time many considerable rises in this level have occurred.

HONGKONG NEWS.

A telegram which has reached Hongkong from Peking announces that an Imperial Edict was issued on the 29th August which states that Her Majesty the Empress Dowager, being most solicitous about the health of the troops now stationed at Ping-yang, which have to endure the heat and various other hardships in fighting battles, desires that 40 chests of preventive pills be handed to Li Hung-chang, who will forward them with the greatest despatch to General Yeh for distribution among the armies, and orders the latter to carry out the wish of Her Majesty accordingly.

The Italian cruiser *Piemonte* left Italy at the end of July for the Far East, she is to call at Zanzibar, before proceeding to Colombo and Singapore, and then go on to Shanghai and Korea. She is one of the finest and most powerful cruisers in the Italian navy, being built near Naples in the dockyard of Lord Armstrong. Her dimensions are—length 92 metres, width 11 metres 15 c.m. and depth 5 metres, and her registered tonnage 3,500. Her engines are of 14,000 h.p.; at 7,760 h.p.; she can steam an average of 20½ miles per hour, and at 12,000 h.p. she runs 22½ knots. Her armament consists of six 15 cent. guns, six 12 cent. guns, 10 fifty-seven millimetre guns, six thirty-seven millimetre guns, and four torpedo dischargers. The *Piemonte* can store enough coal to carry her a distance of 14,000 miles.

On September 3rd at about half-past nine o'clock in the morning as Mr. W. E. Van Eps was driving along Caine Road, westward, in a four-wheeled pair-horse buggy, the animals bolted in Bonham Road. Mr. Van Eps, finding it impossible to stop them, sprang out, near Ball's Court, and was afterwards found with his head and face badly cut and his ankle sprained. Meantime, the horses, in going round the bend about 100 yards from Pokfulam Road, ran into a wall on the harbour side of the road, with a 30ft. drop just below. The wall gave way, and the trap fell over, dragging the animals with it, and bringing down a mass of masonry. A few yards further was the cook-house of "Nullah Side," which narrowly escaped being wrecked. One of the horses was killed on the spot, but the other when freed from the traces seemed all right; the buggy was badly smashed. Mr. Van Eps was taken to the Civil Hospital, badly shaken but not seriously injured. A gentleman in a jinriksha very nearly had a collision with the runaways.

The registration of brothels in Hongkong has been abolished, the Home Government forcing the local authorities to the action in deference to the opinion of Exeter Hall. The Hon. A. J. Leach, Q.C., the Acting-Attorney-General of the Colony, in moving the second reading of a Bill to amend the Women and Girls' Protection Ordinance, 1890, and the amending Ordinance of 1891, said this was done by direct order of the Secretary of State, in the face of official reports from Hongkong. Early in 1893 the Secretary of State wrote that the registration of brothels and the inspection of their inmates was a system contrary to the recognised policy of Parliament, and so it must be abolished; six months were allowed to make the change. The Colonial-Surgeon wrote in April, 1893, to the Colonial Secretary, who forwarded the letter to the Secretary of State, strongly objecting to the abolition of the system on sanitary reasons. About the same time the Registrar-General forwarded a memorial from

the Committee of District Watchmen, pointing out that the change would result in the brothel-keepers having greater opportunities of tyrannizing over the poor women and girls in their houses. Notwithstanding all representations, the Secretary of State repeated the order and made suggestions as to dealing with nuisances created by the brothels after being freed from registration. Accordingly the present Bill had to be brought forward, and the officials had to obey orders and carry the Bill through. Mr. C. P. Chater and Dr. Ho Kai both strongly protested, though, as acknowledged in their speeches, they knew full well remonstrance would be futile. The former said:—"As the Attorney-General has informed us, it has been ordained that the Bill is to be passed, and after such an order, all the recommendations of those who are best able to pronounce an opinion from experience, long residence and special knowledge, have been studiously ignored. The arguments against the measure are many and weighty, and have been put forward in the most cogent manner without effect, and it would be a futile task for me to recapitulate them, knowing as I do that arguments are useless to combat the orders of the Colonial Office in a matter like this, and that prejudice must carry the day against the views of those who might reasonably expect that their long residence, experience, and knowledge of the East and of its ways and requirements should entitle them to some consideration. In giving an adverse vote I may say, sir, that we unanimously protest against this ill-timed and ill-advised measure, which as far as I can see can do no possible good, but will certainly work a great deal of harm and misery." Mr. McConachie having also protested, a division was taken. The motion was then carried by the official vote against the non-officials—5 to 4. After passing the Bill through Committee, a motion was made that the Bill be read a third time and passed—Mr. Chater moved an amendment "that the Bill be read a third time this day six months." Dr. Ho Kai seconded, but the amendment was lost by 5 to 4.

A strike of *jinriksha* coolies was declared in Hongkong on the 4th September, on account of the new regulation requiring each man's licence-number to be shown on his jacket. Hitherto, says the *China Mail*, the clothing of these coolies has been a standing joke against this colony ever since the popular pastime of globe-trotting was invented; and residents have always said it was disgraceful that the Government allowed such dirty, ragged, unwholesome specimens to be at large. None but a few understood that the wily '*ricksha*' man invariably borrows a whole jacket and a complete pair of the other garments when he goes up to the Police Station to pass muster and get his licence. At such times, every coolie looks quite respectable, or else sends a respectable-looking proxy. Now at last the Government have ordered that the '*ricksha* coolies' numbers must be put on their jackets—that is to say, on the high-class habiliments exhibited at the licensing *levée*, meaning thereby that the said jackets will have to be regularly used in the streets, instead of the economical, self-ventilating scarerow rig. That is why the coolies have stopped work, confident that as usual the authorities will tender an apology through the Protector of Chinese and cancel the obnoxious order. A few coolies were willing to ply for hire this morning, but they were soon stopped by the Guild bullies. Half a dozen of the latter were arrested by the police for intimidation, and for the remainder of the day not a single public '*ricksha*' was to be had in the city. According to time-honoured custom there should now be loud protests against the "ill-timed action of the Government in promoting useless fads;" but if, on the other hand the Captain Superintendent of Police is backed up in his very sensible declaration the other day, the Chinese coolies will be taught a sound lesson—that though they may stop working if they choose to starve themselves, yet they must not try any more of that "game of bluff" supported by violence which has been tolerated only too

YAMATO-DAMASHII A CHIMERA!

IN writing on the Korean affair, the *Spectator* has several times exhibited a surprising, and even painful, ignorance of the subject. We have seldom seen in a reputable paper so outrageous a blunder as that which is to be found in an article in the *Spectator* of July 28th, entitled "An Asiatic War." We quote the passage to which we refer: the italics are our own.

"The result of a Chinese victory would be much more momentous. If China wins in Korea, she will win largely through the use of her Fleet. Such a victory might easily suggest to her the possibility of conquering Japan. It is true that China has not more than one General capable of attempting such an undertaking, and he is more than seventy years of age. But suppose a year or two's hard fighting in Korea produced a Tartar General of ability and a Tartar Army of one hundred thousand troops of good quality, there is nothing fantastic in supposing that such a General might insist on crossing the one hundred and forty miles that separate Korea from Nagasaki. And when once in Japan, our hypothetical General might gradually conquer the whole country. Such a feat might be impossible in Europe because of the national opposition, *but in Asia such national feeling hardly exists.* The Japanese could not be got to fight against the Chinese as the Spaniards fought against the French. The ideal of nationality is not an Asiatic product. *Men there, as in the rest of the world, will fight to save their hearths and homes, but a national uprising cannot be counted on to defeat the plans of the great conquerors.*"

The absurdity of speaking of "Asia" as if it were a coherent and homogenous whole, has never been more manifest than in this extract. Undoubtedly there are countries in Asia in which national feeling is almost unknown, but even in Asia, except in the case of barbarous tribes, such a state of things is somewhat exceptional. The existence of national feeling in China is sufficiently manifested by an earlier passage in the *Spectator's* own article:

"But if the Japanese took Peking it is a hundred chances to one that the Manchu dynasty would collapse before a rebellion such as that which was crushed with such difficulty thirty years ago. The true Chinese hate the Tartars, and the Secret Societies, which keep alive, in the most active form, the desire to expel the Manchus and restore the authentic rulers of the Empire, would be certain to move in case of such a disaster as we have foreshadowed. The result would be that the Chinese Empire would blow up, as powder-magazines so often blow up, at the end of a day of defeat."

What is this if not evidence of the existence of a national spirit in China? Still, in China it may be true enough "that a national uprising cannot be counted on

to defeat the plans of the great conqueror." And it is true that in the case of great empires held together, not by the bond of race, but by the force of military organisation, there is outside the dominant military caste no national sentiment for the empire as a whole. And even in that caste the imperial spirit tends greatly to weaken with time. But where the area of government coincides with the area of nationality, national spirit exists in the East as it exists in the West; and it amazes us to find that the *Spectator* is ignorant of the charges that have been frequently levelled against the exuberant nationalism of Japan. There are few countries in the world in which an invading army would have a smaller prospect of success.

A PLEA FOR LINGUISTIC ACCURACY.

WHOLLY different though the construction and general form of Japanese phraseology be from those of European tongues, it is nevertheless surprising to find how aptly the language of this country lends itself to the rendering of Western ideas. The older *Yamato-koto-ba*, despite its liquid sonance and sonorous periods, was one of limited capacity: while it fully answered the needs of the people of that day it could never have done the duty required of the modern Japanese tongue which, first of all, has to be preëminently adaptive and elastic. This is the case with the Sinico-Japanese of the *Meiji* period. It is not always a dulcet speech. The softer remnants of the language of the ancient *monogatari* are more than neutralised by the employment of hybrid Chinese words with harsh palatals and gutturals. Such terms as *sek'kaku*, *kak'koku*, *gungwan*, *chugakko*, *genko*, and a host of others, though expressive and terse, are by no means sweet-sounding. *K* is the consonant most frequently employed, especially as an initial; *d* and *r*, with a palatal pronunciation, are almost indistinguishable from each other; the surd sound of *tsu*, *dsu*, or *zu*, is also very guttural. The language of the lower classes in the metropolis is nasal and disagreeable to listen to, particularly on account of the flattening of the vowel digraph (not diphthong) *ai* into *ē* or *ei*. But all this only goes to show that the Japanese language has made vast and rapid changes, not only in the last three or four centuries, but noticeably within the last two decades.

As an insular tongue, Japanese is geographically compelled to undergo frequent alteration, remodelling, expansion. This is a well-known phenomenon, and nowhere more strikingly observed than in the history of the English language. As the irate Teuton, according to GRANT ALLEN, was pleased to observe, we are "nozzing into Japan," or, as an old second-hand Chermans; or, as another philosopher has remarked, the

tongue of Great Britain is only "Dutch spoken with an American accent." It is, nevertheless, true that Japanese has not been subject to such vital changes principally owing to the policy of non-admittance of foreigners. At the same time the rules that affect the growth of language elsewhere have similarly influenced this tongue. No one can, without study, now-a-days read with understanding books or documents of eight or even five centuries ago. Precisions and learned men love to affect the verbal terminations of the *monogatari*; they appear in the journals of to-day side with the most modern *argot*; yet the language has changed and simplified greatly since the days even of the *TAIKO*. And more than this, although there are here no such linguistic phenomena resulting from isolation as those we meet with in China—where the inhabitants of two villages fifty miles apart are, as a rule, totally unable to understand each other—still there are vast differences in local phraseology. A peasant of Aomori Prefecture would find it difficult, if not wholly impossible, to grasp even the general drift of a conversation held by natives of Kumamoto, not to speak of Satsuma.

On the other hand, and for the same reason of national isolation, Japanese has not hitherto helped to enrich foreign languages, with a few exceptions. For many years lexicographers were puzzled to account for the etymology of *moxa* and *bonae*, more than two centuries ago adopted into English. We now find, in the latest edition of WEBSTER'S Dictionary, *moxa* correctly derived from the Japanese *mogusa* ("burning-grass"), while *bonae* is said to be corrupted from the Japanese *bussō*, "a pious man." This is manifestly incorrect. The word comes from *bōsu*, the *■* sound being probably due to the nasal pronunciation of the people of Nagasaki, where the term first became current among Europeans. We meet of late years with several other words taken bodily from the Japanese; such as *daimio*, *daimiate*, *Shogunate*, *hara-kiri*, etc., all of which are now to be found in standard English dictionaries. Nevertheless, as already pointed out, European tongues have not profited to any extent by the introduction of Japanese words. Quite different is the case in Japan. The entrance of Spanish, Portuguese, Italian, and Dutch missionaries or merchants, some three centuries ago, into Japan at once added quite a large number of new words to the people's vocabulary, such as *tafuru* and *dondaku* (Dutch); *kasuteira* and *būdoro* (Spanish); *tanto* and *birōdo* (Italian), for example. Since the days of the Restoration, the influence of the English tongue has, on the contrary, been paramount, and scores upon scores of words have now been successfully introduced from England and America into Japan. And here is just the point where we would urge both precaution

and accuracy. Professor CHAMBERLAIN has learnedly shown that to write *mishin* for "machine" is only in accordance with certain recognised laws, which have resulted in making, e.g. *otokoshi* out of *atoshiki*. This, then, is excusable. But the following list of words heard almost daily and to be found in advertisements of all sorts, is decidedly unsatisfactory. While making every allowance for the difficulty experienced in transliterating English words with *kana*, still there is not one of these but which could be written much more correctly:—

<i>Penki</i>	Paint
<i>Furafu</i>	Flag
<i>Soppu</i> or <i>Sôpu</i>	Soup
<i>Hanisu</i> or <i>Nisu</i>	Varnish
<i>Meriki</i> or <i>Miruku</i>	Milk
<i>Sutenshion</i> or <i>Sutëshion</i>	Station
<i>Stonpochi</i>	Steamboat
<i>Kô iu</i>	Coal-tar
<i>Pen</i>	Pin
<i>Hoko</i> or <i>Hokko</i>	Fork
<i>Supon</i>	Spoon
<i>Hanhechi</i> or <i>Hanwachi</i>	Handkerchief
<i>Poketsu</i> or <i>Hoketsu</i>	Pocket
<i>Bisuteki</i> or <i>Bifuteki</i>	Beefsteak
<i>Kiyabetsu</i>	Cabbage
<i>Sampun</i> or <i>Shampun</i>	Champagne
<i>Terigurafu</i>	Telegraph
<i>Furanketto</i>	Blanket
<i>Kondensu</i>	Condensed
<i>Madorosu</i>	Matrose, "sailor"
<i>Meriken</i>	America; American

The number could be still greatly multiplied, but this is sufficient for the purpose of our argument. Not one of these crippled words but could be far more accurately transliterated; why not write *peinto*, *furagu*, *sûpu*, *vuanishi*, etc.? Why should "pin" be made *pen*, or, still worse, the initial *A* be dropped in "American"? Why should the corruption *hanisu* be abbreviated into *nisu*? There is neither rhyme nor reason for such arbitrary mis-transliterations. Besides, each year sees the Japanese *kana* improved upon, or made more capable of transliterating foreign words. Mr. FUKUZAWA was, we believe, the introducer of the *nigori*'ed sound of *wu* (ウ), making it *vu* (ヴ). In the *Eigaku*, a monthly magazine published in Tokyo, we see that the liquid *l*, hitherto invariably transliterated as an *r*, has now a *kana* equivalent. *La*, *li*, *lu*, *le*, *lo*—for this is the order of the vowels in Japanese—are therein reproduced with ヲ ° ヱ ° ノ °. The *Dai Nihon Chûgaku-kai* goes even a step farther: the whispered digraph *th* transliterated with *kana* of the *s* series, a small circle being attached to the upper part of each sign; while the vocalized *th* is rendered by the *t* series with accompanying circlets. Under such circumstances, the list of verbal abortions just given is inexcusable. All these words are now part of the Japan tongue: they have been definitely adopted into the language. And without being hypercritical it is surely better to adopt literal groups having the same, or nearly the same, sound as the original words, than to invent new and illogical terms, which are neither fish, flesh, nor fowl.

THE ANONYMOUS LETTERS IN BERLIN.

THE miseries and anxieties anonymous letter-writing may produce find a pointed illustration in the sudden arrest of Herr VON KOTZE and his secret examination in the military prison at Berlin. He was accused of being the author of certain obscene and libellous anonymous letters sent to high dignitaries of the Court and to members of the Imperial Family. Master of Ceremonies, special favourite of EMPEROR and EMPRESS, related to the oldest and noblest houses of Prussia, he, if any one, seemed above the shadow even of suspicion; and yet, when getting ready to attend the dedication of the new cathedral at Berlin, he was by special command of the EMPEROR led away, not to church, but to prison. It was a terrible blow. The scandal sure to follow the contemplated arrest, the EMPEROR had been told, would be immense; but the Sovereign was naturally and properly indignant at a man whose poisoned missives had caused so much suffering and was determined to strike no matter how high the personage, no matter how great the scandal. Unfortunately, with the arrest of Mr. VON KOTZE, an altogether innocent man had been seized, and the real mischief-maker could gloat over another victim. Mrs. VON KOTZE appealed to the EMPEROR in person, but in vain. On behalf of her husband she left no stone unturned, and being rich in her own right, promised 100,000 marks for the discovery of the anonymous letter writer, evidently a man of no mean station in Berlin society. How well informed this man must have been of what was going on, may be inferred from the following fact. Count and Countess HOHENAU, related to the Imperial House, and the special objects of the writer's hatred, received a letter telling them that they would have to disappear from Berlin at last, as the Count had been transferred to the garrison town of Hanover; and, indeed, a few hours afterwards, Count HOHENAU was informed by the EMPEROR himself that he had been made an Adjutant and was to reside in Hanover. Perturbed by this coincidence, the Count handed the anonymous letter to the EMPEROR, who, extremely indignant, ordered a strict investigation. In the Nobles' Club a blotting-paper with faint traces of the names contained in the anonymous letters, but with no fragments of the letters themselves, was discovered. Suspicion fell on VON KOTZE and his arrest followed. Until convicted, a man should be presumed innocent; but there were few, at the time of his arrest, who did not deem VON KOTZE guilty. The most benevolent could not understand how so high a dignitary, basking in the warm sunshine of Imperial favour, a courtier of courtiers, could risk his position for the sake of gratifying envy and spite in a

manner so dastardly and contemptible. They discussed learnedly on yet unsolved enigmas of psychology and recommended VON KOTZE as an individual that would repay a careful examination by psychologists and alienists. But soon voices were heard defending the prisoner. VON KOTZE was a retired Captain of Horse, and this fact was made an excuse for holding a secret investigation before a military tribunal. This mode of trial aroused great public sympathy with the prisoner, for the prejudice against military tribunals is still strong throughout Prussia. The non-official press denounced the secret investigation, and demanded that for his alleged offence, which was of a strictly civil character, VON KOTZE should receive an ordinary civil trial. A devoted though apparently very candid friend of the prisoner tried to show in a very thorough and elaborate argument that VON KOTZE was in reality and sober truth far too much of a dunce ever to have been guilty of such beautiful though nasty and malicious poetry as appeared in some of the anonymous letters. Other friends, again, tried to convince the public that VON KOTZE was so fully conscious of the utter worthlessness and even nothingness of his own wretched self and so firmly convinced of the all-sufficiency of imperial favour that such naughtiness could never have entered his loyal though perhaps somewhat stupid head; in other words, his being the author of those scurrilous letters was an intellectual and moral, in short, a psychological impossibility. These friends were evidently sincere and well-meaning, but it does seem doubtful whether VON KOTZE fared worse at the hands of his foes or at those of his friends.

Sixteen days passed away and on the seventeenth VON KOTZE was again a free man. As he stepped out from the gates of the military prison, two members of the Imperial family and several courtiers received him kindly to show him that he was no pariah, no outcast from the society in which he had moved. VON KOTZE however, shook off the dust of the capital from his feet and went into the country to rest from the terrible strain to which he had been subject. The guilty party is still unknown, at least to the public. That he moves in high circles is beyond doubt. If German papers state that he cannot for that reason be proceeded against in a normal way, they evidently mean to say that he is to be ostracized by the Court, quietly but effectively. The mischief of all such anonymous productions is that innocent persons are almost invariably suspected; and if in this case the people now try to guess which member of the Imperial family has written these letters, and if some papers, on the strength of anonymous outpourings, speak of palace intrigues and unspeakable corruption at the Berlin Court, it is merely a new proof of how rapidly mischief of this kind outstrips the intentions of its author and fastens suspicion on men and institutions wholly unconnected with those originally concerned.

CORRESPONDENCE.

MODERN JAPANESE PHYSIQUE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your issue of September 4th gives a very interesting account of a lecture, by the late Minister of State for Education, on the physical constitution of Japanese students. The lecturer stated that, while the body weight of a man should increase until his forty-fifth year, the average weight of the Alumni of the University at 24 or 25 fell below the average weight of graduates of the Ordinary Middle Schools; and accounted for this "untoward phenomenon" by excessive study, want of proper exercise, and deficient nutriment.

The following statements from the College Physician of Yale and Amherst will help to distinctly recognize one other cause.

First, I quote briefly from a somewhat lengthy article of the College Physician of Yale.

At the end of the senior year the record of the '01 class stood as follows:—There are 77 men who have never used tobacco. There are 22 men who have used it slightly. There are 70 men who have used it regularly.

The growth of the men in four of the principal anthropometric items is as follows:—

	WEIGHT.	HEIGHT.	GIRTH.	LUNG CAPACITY.
Non-users.....	15.78 lbs.	59.4 in.	32.4 in.	51.06 cub. in.
Irregular-users.....	20.05 lbs.	70.0 in.	32.3 in.	51.45 cub. in.
Habitual-users.....	30.00 lbs.	72.1 in.	32.9 in.	52.77 cub. in.

It has long been recognised by the ablest medical authorities that the use of tobacco is injurious to the respiratory tract, but the extent of its influence in checking growth in this and in other directions has, I believe, been widely underestimated.

Prof. Hitchcock M.D., of Amherst College writes:—

In separating the smokers from the non-smokers, it appears that in the item of weight the non-smokers have increased 24 per cent. more than the smokers; in height they have surpassed them 37 per cent. and in chest girth 42 per cent. In lung capacity there is a difference of 8.36 cubic inches." Dr. Seaver adds: "If this be true of college students what must be its effect on younger boys? Their undeveloped organs cannot so well resist the influence of this poison, and they must be dwarfed and stunted far more than those who are older.

With this scientific demonstration before us, and with the painful fact of how widely tobacco is and has been used in this country, it would be an easy process of induction to find one cause for the abnormal physical condition referred to by the late Minister of State for Education; one cause of the fact, also referred to, that "the armour of the knights of old is far too big for the men of the present generation to wear;" and one cause of the wide prevalence of pulmonary disease in Japan. Such violation of physical law is a striking commentary on the words of scripture: "Visiting the iniquity of the fathers upon the children unto the third and fourth generation."

B. CHAPPELL.

Karuizawa, September 6th, 1894.

[In the last official document issued by the late Minister of Education before his resignation, shortly to be published in these columns, the Minister urges that students of common schools should be forbidden to smoke tobacco. It thus appears that he fully recognises the pernicious influence of tobacco on growing boys.—Ed. J.M.]

THE STATUS OF WOMEN IN JAPAN.

(TRANSLATION.)

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 4th instant I notice a letter signed H. Frances Parmelee, on Japanese Women. You comment on this letter to the effect that abuses similar to those complained of may be found in England. Be this as it may, I, a Japanese woman, feel bound to protest against what I conceive to be slanderous charges against my sisters. It is untrue that, as your correspondent says, "one often sees a woman and a bullock harnessed together." It is true that in a large city like Tokyo the wife of a common labourer may help her husband in various manual operations, and may give him assistance in the drawing of a cart, but this is something very different from being harnessed to a cart like a bullock. Is there anything derogatory to her womanhood in a woman's thus contributing towards the maintenance of the family? If what I have heard be true, such a practice is not peculiar to Japan. I have been informed, for instance, that in Flanders, North Germany, and Denmark, and even in such flourishing cities as Berlin and Brussels, it is far from uncommon to see a woman assisting her husband in the pulling of carts. Similar

drudgery on the part of women is also said to be very common both in England and America, as you point out in your foot-note. Another misrepresentation is that referring to the conduct of Japanese husbands, and particular surprise is expressed at the conduct of those educated abroad. It is true that in Japan married people do not walk arm in arm as in Europe and America, but that the wife generally walks behind the husband. It does not follow, in this country, that this is derogatory to woman's honour. A Japanese gentleman educated abroad is far from being to blame in this matter as your correspondent would imply; he does well to conform to the social etiquette of his country, and in fact those educated abroad sometimes err in their attempts to introduce the western customs, thus causing the daughter of a respectable family educated in an entirely different way to blush. With regard to the statement that the ideographs denoting women and feminine qualities have a derogatory signification, it must be remembered that the application of them was first made in China, and that here in Japan they have merely a conventional signification. I have been informed that similar derivative peculiarities may be found in similar derivative words in the English language. I admit that in the West we do not meet with such cases as those not uncommon in Japan, where a girl not unfrequently prostitutes her body to rescue her parents from poverty; but is this not better, if the choice is to be made between the two evils, than the self-degradation which girls in Europe frequently expose themselves to without any such laudable motive? Ignorant as I am of the conditions of western life, for I have never travelled in Europe or America, it seems to me that the conduct of foreigners in this country is far from being creditable, and far from indicating the possession of a higher morality than that of Japan. Nor can I exonerate the missionaries. They appear arrogantly to regard the Japanese as an inferior race, and, acting on this crude notion, their preaching is supercilious, as well as superficial, and simply serves to awaken feelings of contempt and anger in the more intelligent members of their audience. Thanking you for your kind efforts to publish impartial and correct information on Japan and the Japanese, I remain, Sir,

Yours, etc., YANATO SAKURAKO.

September 4th, 1894.

IF SAUCE FOR THE GOOSE, WHY NOT FOR THE GANDERS?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With the desire to perfect myself to the utmost extent in the use of the English language, I have lately been studying the pages of the *Japan Gazette*, and endeavouring to regulate my style by the example of that carefully written and scholarly journal. Not doubting that I was entirely safe under its guidance, I ventured, not long ago, to compose an essay upon the subject of the various nationalities now represented in my country, the opening paragraph of which I beg to submit for your kind consideration.

"It is not disputed that the number of Englishers in Japan is large, but their opinions may not be united on all points, since there are many Scottishers and Irishers, not to speak of Welshers, who do not always follow the Britishers' lead. Between these latter and Americans, no very strong alliance exists, and with respect to Frenchers, Russians, and subjects of other great powers, as well as Swissers, Portuguesees, and people of minor states in general, it is difficult to discover much community of interest."

You may judge of my astonishment and grief when, on presenting my treatise to the respected teacher who has taught me for many years, I was informed that my designations of the natives of Western countries were simply barbarous. In vain I extracted a copy of the *Japan Gazette* from my *fukusa* and pointed out that the citizens of England were habitually called Britishers. In vain I urged that if the title were correct in the one case, it should surely be permitted in the others. I was snubbed in a manner very disagreeable to a Japanese-er's feelings, and given to understand that the authority on which I relied was not recognized in Europe as wholly unimpeachable. Politeness forbids me to communicate this statement directly to the *Japan Gazette*, but I take the liberty of appealing to you, and inquiring if it is within the limit of possibility that a newspaper of such exalted claims can really be in error upon a matter concerning which every educated foreigner ought to be properly instructed. If I cannot trust my *Gazette* as an arbiter of taste and refinement of expression, where, I ask, am I to turn?

Truly yours,

STUDENT.

September 9th, 1894.

AUSTRALIAN IRON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Among the great Australian manufacturing industries of the future, that of iron is destined to occupy a prominent place, for the mineral is found in many parts of the island continent, although nowhere in such abundance or so rich in quality as in New South Wales, though which colony it is extensively diffused, principally in the form of magnetite, brown hematite or goethite, limonite, and bog iron. Magnetite, the richest form of iron ore, is plentiful in many places. According to the Government Statistician of New South Wales, the result of a number of analyses made from magnetic deposits at Brown's Creek, in the County of Bathurst, and at Wallerawang, where veins were opened out a few years ago, show that the samples of ore yielded from 40.89 to 56.85 per cent. of metallic iron. At Wallerawang a variety of garnet, containing a large percentage of metal, occurs in conjunction with the ore in the veins, which is described as "extremely well adapted for reduction in the blast furnace." Brown hematite, or goethite, occurs in very extensive deposits in the Blue Mountain Ranges, the principal centres, at present known, being situated at Mittagong, Picton, and Berrima, in the southern district; in the Lithgow Valley and at Wallerawang, in the western districts; and in the vicinity of Port Stephens on the northern coast. The result of a number of analyses of this kind of ore denotes that it is very rich in metallic iron, containing a percentage of 42.69 to 64.48 per cent., and in the majority of cases 55 per cent. of metal. A sample of hematite from the Maitland district contained 60.83 per cent. of metallic iron. A sample of brown hematite from Mount Pleasant, near Wollongong, analysed during 1891, gave 54.28 per cent. of iron. The value of these deposits is enhanced by their almost invariable occurrence in proximity to limestone and coalbeds. It is fortunate, also, that the main lines of railway pass through the regions where the deposits are most easily worked. Again quoting Mr. Coghill, it may be mentioned that "limonite,"—a variety of brown hematite—principally occurs at Lithgow, Eskbank and Bowenfels in the Blue Mountains, in several parts of the Hunter River coal-field, and at Bulli in the Illawarra district. This ore is usually found very rich in metal, and contains an average of over 50 per cent. of iron, while the English clay bands, which are mostly carbonates, only contain about 30 per cent. of metallic substance. It occurs in lenticular layers of no great extent in the coal measures. Bog iron ore, which is impure limonite, is principally found at Mittagong, and assays of this ore gave a percentage of metal equal to an average of over 45 per cent." Several attempts have been made to utilise the principal iron deposits, but, so far, the high cost of production, compared with that in Europe and America, has proved an insurmountable difficulty. When this has been overcome, there will be found an immense field for the development of the iron manufacturing industry in Australia, as shown by the fact that the average value per annum of the iron and iron manufactures imported into the seven colonies of Australasia during the period 1888-1891 was £7,169,119. Mr. Coghill states that "in a report, dated January, 1891, by the late Mr. C. S. Wilkinson, Government Geologist, it is stated that the iron deposits in the districts of Mittagong, Wallerawang, and Rylstone contained in sight 12,944,000 tons of ore, estimated to yield 5,853,000 tons of metallic iron. These districts are most favourably situated for the establishment of smelting works. Of late, public attention in England has been drawn to the possibility of manufacturing iron within the colony, and a mining expert was sent out from that country to inspect the iron, lime, and coal deposits, and to report upon the probable cost of establishing the industry in the colony; so far the visit has been without result." When the mineral resources of New South Wales become better known, it is not improbable that European iron-masters may find it advisable to establish branch works on a large scale in the colony. The principal works for the manufacture of iron from the ore are situated at Eskbank, near Lithgow, where red siliceous ore, averaging 22 per cent., and brown hematite, yielding 50 per cent. metallic iron, have been successfully treated. Abundance of coal and limestone are found in the neighbourhood. This establishment, however, is at present closed. A successful attempt has been made at Mittagong to make gas-pipes, &c., from iron smelted from the ore, and taken direct to the mould, without first making it into pig iron. Some years ago the iron smelting works at Fitzroy, Mittagong, were established, but after producing a considerable quantity of pig-iron the operations were discontinued. In each case, however, raw

materials for the successful production of iron were found in abundance, but, as before mentioned, the cost was too high. When this has become reduced, the iron-manufacturing industry of New South Wales will become a substantial fact.

Yours, etc.,
JOHN PLUMMER.
Sydney, July 16th.

MISSIONS TO THE BLIND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In answer to your correspondent "Englishman," I would say that our mission, has during the past year turned its attention somewhat to teaching and providing literature for the blind. We use the "Braille" system (called in Japanese "Tenji") which is, I believe, now adopted, on account of its superiority to other methods, in nearly all countries. The letters in this system are represented by raised dots punctured in the paper with a kind of style, the blind being able to write as well as read it. Two Japanese ladies in our Mission learnt the Braille method in the School for the Blind at Koishikawa, Tokyo, and have since taught others of our workers.

They have taught about ten blind men at different times in the towns of Nagano and Numazu, but at present have only found one woman willing to learn. We are hoping shortly to start a school in Tokyo. Besides teaching, we write books for the use of the blind. Three copies of the first half of S. Mark's Gospel, some reading books, and a few tracts are all we have attempted yet as the demand is small, but we are hoping before long to have copies of the Gospels and other books for sale. There is also a School for the Blind under the C.M.S. at Gifu, but I am sorry to say I do not know any details of its work.

I am, Sir, etc.,
ELIZABETH THORNTON,
S. Hilda's Mission.

1, Nagasaka Machi, Azabu, Tokyo, Sept. 7th.

THE SMALL FARMER IN AUSTRALIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It has frequently been asked what chances a practical farmer, with a limited amount of money capital, possesses in Australia, but the answer depends upon a variety of circumstances. It is essential, however, that the intending agriculturist, whether on a large or small scale should have some knowledge of the differences of climate, labour conditions, means of access to markets, etc., compared with those with which he has become familiar in the old country. The character of the soil and climate differs considerably in various parts of Australia, and while in one place farming on a small scale is found remunerative, in another it will be attended with loss. In New South Wales, the greater portion of the coastal districts north and south of Sydney is admirably adapted for the small farmer, the soil generally being fertile and the rainfall abundant during certain seasons. On the broad tablelands, forming, as it were, a portion of the back-bone of the colony, fruit-growing is often found successfully combined with ordinary agriculture, and in not a few instances forms a remunerative pursuit by itself. Further inland, the country partakes more largely of a pastoral character, although in places the soil is sufficiently good for the small farmer, so far as the work of production is concerned, but the greater the distance between his farm and the nearest market, the larger will be the area required for cultivation if he desires to reap a substantial reward for his labour and enterprise. There are several million acres of Crown land open to selection on favourable terms in many portions of the colony, but most of the richer areas have already been taken up, chiefly by speculators. The selector generally has a very labourious time of it for the first two or three years. Trees have to be felled, scrub removed, and fences of some kind or other erected before he can place more than a few acres under cultivation. Hence many experienced men, who have had time to look about them, prefer leasing or purchasing land which has already been cleared and prepared for cultivation. Among the smaller farms entered in competition for the prizes offered by the New South Wales Department of Agriculture, in 1892, was one at Forbes, 250 miles from Sydney, which may be regarded as typical of its class. It consisted of 140 acres of land, the cultivated portion comprising 55 acres of wheat, 20 acres of hay, 12 acres of grape vines, and 11 acres of fruit trees and vegetables, the former preponderating. Portions of the remaining 40 acres were occupied by dairy sheds, piggeries, and poultry runs. The water was conserved by means of underground

and other tanks, one being reserved exclusively for domestic purposes. The implements comprised single and double furrow ploughs, mowing machine, stripper, winnowing machine, and all the tools necessary to work farm, orchard, and vineyard. For the conservation of fodder there was a hay-shed, roofed with galvanised iron, while all the stacks were thatched. The farm house was a well constructed wooden building, roofed with galvanised iron (the use of which is universal in Australia), and containing seven rooms; the kitchen, outbuildings, store-room etc., being detached. The orchard and vegetable garden were the most remunerative portions of the farm, which, as a whole, was shown by the books to be a paying concern. There are numerous small farms of a similar character, differing only in details, scattered throughout the eastern and central portions of the colony, and in almost every instance, where attention is given to local requirements, they have repaid the time and labour bestowed upon their management; and it may be said that, as a rule, the prospects of the industrious and experienced small farmer in New South Wales generally are of the most bright and encouraging nature.

Yours, etc.,
JOHN PLUMMER.
Sydney, July 9th.

THE TYPHOON IN KOBE.

GREAT DAMAGE DONE.

The most severe typhoon from which this district has suffered since the memorable storm of August 1891, says the *Kobe Chronicle*, was experienced here yesterday (September 11th). About eight o'clock in the morning it was noticed that the wind, which had been blowing in heavy squalls all night from the east, showed signs of going round to the south, always a dangerous point for Kobe in a typhoon, and an hour or two later it was blowing with such force that steamers in harbour commenced to get up their steam with a view to taking up safer anchorage ground. By twelve o'clock several steamers had left the harbour and steamed out to safer positions, while the *Nürnberg*, which had first come to the pier in order to discharge her cargo because of the rough water, was compelled to leave it again and steam out with the others.

Though it had been blowing freshly for several days, the typhoon came on somewhat unexpectedly, and the owners of several of the yachts had not taken the usual precaution of taking their boats in to the camber. Four of these lying off the Bund, the *Ivis*, *Olga*, *Shamrock*, and *Rose*, began to drag their anchors shortly before noon, and about this time Mr. Buschel's *Ivis* broke loose and came rapidly ashore, being completely smashed up on the Bund wall in the course of a few minutes. She was followed shortly afterwards by Mr. Shepherd's *Rose*, which was also reduced to matchwood in a very short space of time. The anchors of the other yachts fortunately held, and though the boats were tossed about like corks on the water during the afternoon and dragged their anchors considerably, they rode the storm out well, two sendos indeed remaining on the *Shamrock* and one on the *Olga* throughout, not being able to get ashore after the wind developed such terrific force. A tremendous sea got up in the harbour and outside, and the various vessels which had taken up safer anchorage in the bay could be seen from the shore tossing about in a remarkable fashion for the usually quiet Inland Sea. The *Tacoma* especially seemed to roll gunwales under, and appeared to almost go on her beam ends at times, so heavy was the sea. The *Oanfa*, which took up a position to the east of the boat-house, had a very narrow escape. Between two and three o'clock she commenced to drag her anchors, and at one time it seemed as if she was going ashore on the sand bight running out at the mouth of the water-fall stream. Fortunately steam was up, the vessel being advertised to leave at noon, and the engines were put full speed ahead to relieve the strain on her cables, but the force of the wind may be estimated from the fact that even then she forged very slowly ahead, winning her way to a safe position inch by inch.

About four o'clock the wind hauled round to the west and began to moderate, and by six o'clock all further danger was over, but by this time the shore along the Bund was a mass of drift-wood from broken junks and sampans, wrecked yachts, and the remains of a water-boat which came ashore early in the afternoon. During the height of the storm great masses of water were hurled over the sea wall, and the air was occasionally full of flying splinters, with which the Bund is now covered; but the Bund was not flooded as was the case in the great typhoon three

years ago. About 1 o'clock a large sampan with three men, which had failed to get in to the camber, anchored at the entrance and appeared every minute as if it would be dashed to pieces. The men yulohed with energy to relieve the strain on their anchor, and at last one of them jumped overboard, and notwithstanding the imminent danger he ran of being dashed to pieces, safely reached shore. The others resigned themselves to the inevitable, but eventually got shore safely as the sea went down.

We have heard of no casualties at sea up to the present, though it is to be feared that the storm has not passed without exacting its tribute of human life. Fears are expressed that we shall hear of serious floods in the unfortunate Okayama prefecture, as the centre of the storm appears to have passed from the Pacific through the Bungo Channel and across the main island between Okayama and Hiroshima. In answer to our inquiries, Captain Mahimann, the Harbour Master, informs us that only the outer limits of the N.E. and S.E. quadrants of the typhoon passed over Kobe between 11.30 a.m. and 5 p.m. The following are the readings of the barometer and thermometer from 6 o'clock yesterday morning:—

	Bar.	Ther.	Wind.	Force.
6.00 a.m.	29.89	79°	E.N.E.	6
10.00 a.m.	29.77	81°	E.	5
11.30 a.m.	29.72	81°	S.S.E.	8
1.00 p.m.	29.67	82°	S. by E.	9 to 10
2.00 p.m.	29.62	82°	South	9 to 10
3.00 p.m.	29.60	81°	S. by W.	10
4.00 p.m.	29.60	80°	S.W. by S.	10
5.00 p.m.	29.60	77°	S.W. by W.	9

The most terrible disaster connected with the typhoon, so far as is yet known, occurred on shore in Kobe, and was caused by the downfall of a chimney. This deplorable accident occurred at Mr. Hitchcock's house on the hill, where the kitchen chimney, which was carried up about 9 feet above the roof, was brought down by the wind on to the servants' quarters, crashing through the roof and wrecking the building completely. The accident occurred shortly after 1 o'clock, when Mr. Hitchcock, who had just finishediffin, heard a tremendous crash, and rushing out of the house was told by the cook that the chimney had come down and that an amah and a man had been buried under the debris. He himself had saved his life by jumping out of the kitchen window as soon as he heard the noise of the chimney giving way. Mr. Hitchcock immediately investigated matters for himself, and as soon as the dust had cleared off found that a heavy mass of brick and mortar, weighing about two tons, had fallen through the second floor and into the kitchen, where it had pinned down a tin-smith named Hashimoto, who had come up to the house about some repairs to be done to the well. Mr. Hitchcock immediately got assistance from some workmen who were engaged outside, and by the aid of beams of timber the brickwork was lifted off the unfortunate man, who was of course quite dead, the body having been crushed almost out of resemblance to a human form. An amah who was in the upstairs room lying down saved her life by rushing on to the stairway when she first heard the noise, for the heaviest mass of brickwork penetrated the exact spot where she had been lying. An amah in an adjoining room was not so fortunate. Before she could get out a portion of the chimney came through the roof and carried away the floor on which she was standing, so that she fell with all the debris into the boy's room below. She marvellously escaped almost unhurt, however, only a few scratches remaining to show her terrible experience, and yesterday evening was performing her duties as usual. The damage which has been done by the chimney is most remarkable, the two-storied building used for servants' quarters being a complete wreck, beams having been broken like match-wood, almost every article in the rooms completely smashed, and practically only the four walls left standing. Great credit is due Mr. Hitchcock for the promptitude with which he acted, though this was unfortunately without avail in saving the life of the man upon whom the brickwork fell. We understand that the deceased who is well-known to foreigners, his works being situated near the Paper Mill, leaves a wife, but no children, to mourn his loss.

The *Nürnberg*, which arrived here at 8.20 p.m. on Monday, experienced somewhat rough weather, but did not get into the typhoon. She reports:—Left Yokohama at 4.30 p.m. on Sunday. Had to go slow on account of the torpedoes laid down, to avoid which each vessel leaving or entering port is piloted by a steam launch flying the signal "Follow me." There are three launches employed in this duty, so that no steamer suffers detention. Leaving Yokohama at 1.15 p.m. a light North-East wind and a

strong head sea down to Omaesaki. From Omaesaki to Suwo Point fresh and strong Easterly winds and high confused swell, and thence to port winds were fresh and variable, with a rough sea. Owing to the rough water in the harbour, the *Nurnberg* went alongside the Pier in the morning for the purpose of discharging cargo, but as the weather got threatening she left the Pier and steamed out to a safer position, where she still remains.

The *Empress of India*, from Shanghai via Nagasaki, which arrived this morning, reports heavy gales all the way across. On the 11th she picked up four Japanese fishermen from a water-logged boat while it was blowing a heavy gale. The men said that at the time the storm came on they were in company with another fishing boat, which they believed had perished. Fifty dollars was collected among the passengers and crew and handed to the shipwrecked men. The French mail steamer *Melbourne*, from Marseilles via ports, was passed about 6 p.m. yesterday, and did not seem to be moving against the sea and wind. She has not arrived in port at time of going to press, and the *Empress of Japan*, which was expected at 6 p.m. yesterday, is also overdue, having doubtless run in somewhere for shelter.

THE MURDER OF MR. WYLIE.

The following detailed accounts of this terrible crime have reached the *N.C. Daily News*, and they will be read with deep interest:—

On the evening of the 10th inst. the Rev. James A. Wylie, M.A., of the Scotch United Presbyterian Mission, Manchuria, was the victim of a dastardly outrage by Manchu soldiers on their way to the Korean frontier. The injuries were of such a nature that he only lingered on in an unconscious state for six days, expiring on the 16th. Manchuria has hitherto enjoyed comparative immunity from such outrages upon foreigners as have too often characterised the valley of the Yangtze. This good record, however, has been sadly broken by the events of the last week.

Liaoyang, where the attack took place, is a city of perhaps 80,000 inhabitants; 80 miles distant from Newchwang on the high road to Moukden. The Scotch Presbyterians have had a flourishing station established there for four or five years. Their main property in the city consists of a members' chapel and street chapel on the High Street East; and a large hospital and dispensary, women's hospital and training-home and another chapel, all a good mile away within the North gate. A compound adjoining the first named of these was where Mr. Wylie lived, while the other missionaries, a pastor and his wife, a doctor, and two missionary ladies live in compounds adjoining the hospital.

The attack originated in this way. As you are aware, large companies of soldiers have lately been passing through Liaoyang on their way to the front—the main road to the east branching here from the great high road through Manchuria, north and south. On the 10th instant a company of 250 Manchus from Kirin province under *I, lao yeh*, were quartered in inns on the East Street. Late in the afternoon of the same day a party of them sallied out bent on mischief. They entered the street chapel close at hand, where preaching was going on at the time, and very soon began a disturbance, which to make a long story short, ended in the complete wreck of the chapel and flight of the preachers minus all their property. The soldiers next proceeded to Mr. Wylie's compound and members' chapel, which are on the opposite side of the same street not many hundred yards away. By this time an enormous crowd had gathered and they began battering loudly at the one big entrance gate. The compounds are completely shut in by neighbouring shops, and there was little to fear if a message could be sent to the *yamen* for help at once. Mr. Wylie despatched a servant carrying his card over a side wall, but in some way not yet explained the message was bungled, and no help came. Seeing this, Mr. Wylie determined to set out for the *yamen* himself, fearing from the threats heard not only for his own safety, but also for that of his colleagues at the North gate. In a temporary lull caused, it is said, by the disappointed crowd drawing off to make for the hospitals, he started accompanied by his watchman and a deacon, Liu Yung-hai. They proceeded hurriedly along the main street and passed the wrecked chapel in safety, but immediately thereafter a shout arose that the foreigner had passed and at once a number of soldiers armed with the legs of the chapel forms and other instruments started in pursuit. There were not many of them, and it is said that had a party of a dozen members been close at

hand and willing to risk a little for their pastor, his life might yet have been saved. As it was Deacon Liu was the only one found willing to stand by; the watchman fled at the first blow. Whether the city crowd actually took part in the attack is not certain, they materially assisted by directing the soldiers and the impeding the missionary's movements. The attack was a particularly brutal one, almost all the blows falling on the head, and it was not long before Mr. Wylie was stunned. Yet Mr. Liu stuck bravely on all through, receiving blows dealt at his pastor on his own body and supporting him when he was ready to fall. I need not relate the harrowing details of the Chinese accounts, suffice it to say that the two were at last dragged apart, and while the deacon crept as well as he could to the *yamen* the soldiers concentrated and spent their fury on the foreigner, beating him savagely as he lay unconscious, and ultimately left him for dead.

While all this was going on in the main streets a menacing crowd assembled outside the compounds at the North gate. A rush was made and very soon the two hospitals were cleared of their patients. For a time great excitement prevailed, but the invaders seemed to lose courage at not being backed by soldiers and were comparatively easily cleared out by the dispensers and others, and the doors were shut. Mr. Douglas was there at the time with the three ladies and children. He at once went round to one of the hospitals and stepped out of the gate amongst the crowd. By some strange Providence this turned out to be enough, he was unarmed but the crowd fell back immediately about 100 paces on either side. He spoke a few words of remonstrance, and while they remained near at hand till darkness set in, they met no further threats. Fortunately there were no Manchu soldiers amongst them.

Meanwhile Dr. Gray, who had earlier in the afternoon gone to see a patient at the very *yamen* that Mr. Wylie was making for, hearing of some disturbance at the street chapel, rode round by Mr. Wylie's compound to satisfy himself that all was secure there. When he reached it, coming by the more usual route, and not the one that Mr. Wylie had taken, he found that Mr. Wylie had left not ten minutes before. He noticed a good deal of excitement in the streets and even heard some threats as he passed by, but judged that there was nothing to fear, and made for the hospital again, all unconscious of the terrible tragedy that was being enacted not half a *li* away.

He had scarcely reached the hospital when tidings were brought by members of Mr. Wylie's danger. Preparations were immediately set about for his relief. It was arranged that Dr. Gray should set out disguised to Mr. Wylie's while Mr. Douglas remained to look after the ladies and little ones. The former had not well started before a mounted company of soldiers from the *Chou yamen* dashed up. One half of them stayed to guard the compounds, while the other half proceeded at once to where Mr. Wylie lay, followed by members on foot carrying a stretcher. Very soon the other missionaries had the satisfaction of seeing him in their midst, but it was a pitiful, painful sight to behold. His face was battered beyond recognition; there was a fearful compound fracture of the jaw, a deep wound made by some sharp instrument in the left ear, besides other wounds and bruises too painful to detail. Dr. Gray and the others did all they could for him, and though there were hopeful signs of slow and gradual improvement up till the 13th, he never regained consciousness and gradually sank after that and died on the evening of the 16th. A more undeserving victim for such an outrage could not be imagined. All who were acquainted with Mr. Wylie were impressed most of all by his eminently gentle and peaceable disposition. An angry word he could not utter. Wherever he was known in China the greatest sympathy will be felt for his parents and the other members of his family in Scotland who are so soon to mourn his loss. His father is a well-known farmer in Lanarkshire and is this year Provost of Hamilton.

Liaoyang, 17th August.

On the 11th instant, the day after the terrible outrage on Mr. Wylie, *Hsu, ta lao yeh*, the chief magistrate of Liaoyang, came early to call upon the missionaries to investigate the case. After making full enquiries he at once proceeded to the inn, where *I, lao yeh*, the commander of the company, was staying, in demand the offenders. He had an interview, but not only did I refuse to part with them, he even let his hounds loose on the officers of the law. A scuffle ensued between *Hsu's* body-guard and the Manchus, in which the former who were greatly outnumbered were worsted. *Hsu* fled for his *yamen* by a back way, the chain-beaters, say the gossips,

going so fast that the horsemen had no chance with them. In the *mêlée* several of *Hsu's* men were injured, his *pa tsung* severely. It was a time of intense excitement, for the city was now practically in the Manchus' hands and the merchants, fearing a general looting, many of them put up their shutters. The local resources had been drained to the utmost in consequence of the war, and I believe that at the present moment there are only 50 soldiers left behind to guard the peace of the place. What could they do against 250 wild knaves from *Ki in*? It was a time of suspense for the missionaries, and excited members came running urging us to make our escape while we could. But a merciful God interposed. I evidently thought by this time that his men had gone far enough, and by noon the good news came that he had drawn off some 15 *li*.

By good chance, or rather good Providence, a telegraph clerk was that morning passing by on his way to the frontier with a 'tapping' instrument. He also had been roughly handled by the soldiers among their other madcap freaks. *Hsu*, hearing of it, at once availed himself of his service to tap the wire to Moukden, which passes just outside the city gates, and before the rowdy lot had well left the city the Governor-General there had word of his 'underlings' doings. Next afternoon, Sunday the 12th two mounted messengers dashed up the streets bearing a *wénshu* in reply.

I, the leader of the band, was to be promptly recalled, had lost his button and his rank; and his life, they said, depended on the injured missionary's; further the Liaoyang magistrate had instructions to repair forthwith all damage to property. Such was in substance the message sent from the *yamen* an hour later.

From the very beginning there has been no difficulty with the local officials. They have been to all human seeming most friendly throughout and most attentive in all enquiries; moreover it is no missionary's part to severely judge men's motives. The case was of course at once put into the capable hands of H.B.M. Consul in Newchwang, but he will have no trouble in forcing the Chinese, for they have done and are doing spontaneously almost all one could desire. The officials have issued proclamations; taken, so far as a foreigner can judge, genuine action towards the punishment of the offenders; they are repairing what can be repaired; and will apparently do everything they can to prevent the recurrence of similar trouble in future. Still in times such as these one is more driven back upon first principles and learns to lean hard on a stronger arm than man can lay bare.

On the Liao, 20th August.

THE FUNERAL.

On the 18th inst., the remains of the late Rev. T. A. Wylie were carried aboard a pea-boat at Liaoyang, in the presence of a band of soldiers belonging to the same regiment as those by whom he had been murdered. They were brought down the Liao River for interment at Newchwang by a little company consisting of Mr. Wylie's colleague in Liaoyang, two members, the preacher who was discoursing when the chapel was wrecked, Mr. Liu, the plucky deacon who so heroically stuck by Mr. Wylie to the death. They left not without some anxiety for the safety of Dr. Gray and the three ladies and children, who stayed behind to stand guard. On arrival at Newchwang on the 21st they were met by the Rev. John Macintyre of the same mission and other sorrowing friends. That same night at sunset all that was mortal of the first martyr in Manchuria was laid to rest not far from the grave of William C. Burns, his pioneer, in the little cemetery there. The foreign community turned out to a man and with them the native members from Liaoyang with some from Newchwang. Mr. Macintyre conducted the service first at the grave and then with the natives in their chapel close at hand.

It is a glorious honour so to live and die, but there is an awful price to pay. Our hearts well out in sympathy for his mother.

Newchwang, August 23rd.

THE CHINA-JAPAN WAR.

OPINIONS OF THE ENGLISH PRESS.

The Times (August 1st).

The interest and concern felt in this country in relation to the controversy between China and Japan do not depend, as Sir Edward Grey admitted in the debate on Monday, upon our commercial position alone. There are, as he said, large general interests at stake, and those interests may be jeopardized very seriously by an Asiatic war, which is, as Mr. Curzon in his very able and well-informed review of the chief problems now

pending in the East insisted, in many respects even more serious than a war amongst Western peoples. Asiatic struggles are often terribly prolonged, and they not infrequently lead to entanglements between third parties. For these reasons it is to be hoped very earnestly that the reassuring replies made by the Under-Secretary for Foreign Affairs in regard to the Pamirs, to Siam, and to Korea may all be borne out by events. Some ground exists for the complaint made by Mr. Curzon that hitherto the Asiatic policy of the Government has been overwhelmed by "a somewhat unusual obscurity." It is satisfactory to learn that, although no materials for the formation of an independent judgment as to the position in the Pamirs are to be afforded us for the present, papers are to be published immediately in relation to Siam. The course of events in regard to that country still remains anything but clear, and the promised papers will be of great interest and value—provided only that they are complete; a point on which Sir Edward Grey omitted to pledge himself. It will be noted with satisfaction that the Under-Secretary defined British interests in Siam as including the maintenance of the independence of that kingdom. As Sir Richard Temple subsequently bore witness, that is a matter which greatly concerns the welfare of India. The treaty to which Sir Edward Grey referred as having been quite recently signed between ourselves and Japan must be assumed to relate largely, at all events, to matters affecting the rights and privileges of British residents in that country. Japan, it is well known, has long been anxious to be permitted to exercise her municipal jurisdiction over the subjects of the great European States within her borders, and there will be no cause for surprise if it should turn out that concessions upon this and other important points have been made to her by Great Britain. Japan has earned the right to claim concessions of the kind, because she has known how to win the good opinion of the civilized world by the enlightened character of her laws and of her internal administration. Perhaps the fact that we are now yielding to her earnest desires on points of great concern to her and of great interest to many of our fellow-subjects may remind her before it is too late how high the value of the good opinion of other peoples is, and save her in time from the risk which she now runs of forfeiting the esteem she has earned at home by an unjust policy of aggression and adventure abroad.

The Times (August 3rd).

Nothing, however, can alter the fact that the sinking of the transport was a horrible business, though, according to Professor Westlake, who writes to us on the subject this morning, it may conceivably be defended on grounds of international law. And one thing comes out more clearly than ever from the officers' affidavits; namely that the excuse put forward by the Japanese Government—that the Japanese commander did not know that the *Kowshing* was a British ship—is absolutely unsupported. The officer had examined the ship's papers, and the position had been fully explained to him. He had the opportunity of reporting all the facts to his captain; and we must assume that he did so. The captain fired his torpedoes well knowing that the ship which was carrying the soldiers whom he regarded as enemies was a British ship.

It is at least satisfactory that the Japanese Government has promised such reparation as it can make, though nothing can restore the valuable lives which were lost in this unhappy affair. On every ground the Government of the Mikado is anxious to keep well with England, though at the same time it is not unwilling to hint that there is another friend to which it might turn if English resentment for this *Kowshing* matter were to prove too severe. That friend, we need hardly say, is Russia; and both Tokyo and Peking are quite clever enough to try what can be done by playing off Russia against England when troubles are in the air. At present, we are rejoiced to learn, there seems to be every intention on the part of the British and the Russian Governments to pursue a common policy with regard to the war. Russia, for the moment at all events, finds that she has no interests opposed to ours. We trust that this excellent frame of mind will long continue. But, at the same time, the "official" newspapers of St. Petersburg are declaring that, if the efforts of the two Powers to bring about a cessation of hostilities are without result, Russia will "not permit" any Power to occupy any portion of Korea. If that is a hint to England it is scarcely necessary, for not even the most sincere desire on our part to see Korea decently governed, and to witness the development of its natural resources, would lead us to interfere with that interesting but dangerous corner of the globe. On the contrary, the two great nations of the Far East have com-

to blows about it, our interest, and Russia's interest, and the interest of every European country that has intercourse with that part of the world, is to preserve the strictest neutrality, and by every means in our power to limit the sphere of the war.

PROFESSOR WESTLAKE'S LETTER.

Sir,—It is far from being as yet possible to form a definitive opinion on the conduct of the Japanese cruiser *Nanma* in sinking the Chinese transport *Kowshing* while under the British flag, but, since the flag is concerned, the occurrence is of a nature to produce an excited state of feeling in this country, and it may be useful to give some indication of what points are clear, and to what points the inquiries which it is necessary to make ought to be directed.

First, the *Kowshing* appears to have been British owned and to have been rightfully flying the British flag, but it is equally clear that she was acting as a transport in the Chinese service. If to this it shall be found possible to add that the service was a belligerent one, nothing is more certain than that she was not entitled to any protection from the British flag and ownership. Lord Stowell condemned the *Orosemba*, a neutral (American) vessel, carrying three belligerent (Dutch) military officers, on the ground that "a vessel hired by the enemy for the conveyance of military persons is to be considered as a transport subject to condemnation" (6, Ch. Rob. 433). If three officers were sufficient to let in this doctrine, much more are 1,700 men with their proportion of officers.

Secondly, I hold it as equally certain that the Japanese were not precluded from taking the service as a belligerent one by the mere fact that war had not been declared. To begin war without a declaration is a bad habit, which has nevertheless found its way for centuries past into the practice of nations, and which cannot be considered to be already excluded from that practice by the small number of better examples which have been set during the second half of the present century. It is true that the commencement of war *de facto* is only valid in international law as between the parties to the war so commenced, neutrals being entitled to notice before they can be made liable to the peculiar responsibilities which a state of war impose on them. But the *Kowshing* was not acting as a neutral breaking a blockade or carrying contraband of war. She was a transport in Chinese service, and, therefore, a belligerent, if China was belligerent, just as a similar employment identified the *Orosemba* with the belligerent Dutch.

But, thirdly, the Japanese could not make the *Kowshing* a belligerent by attacking her. In order to justify themselves against her neutral owners and the neutrals whom she carried, they must show either that war had already been commenced *de facto* between China and Japan by acts of hostility committed elsewhere, or that the Chinese fleet, of which the *Kowshing* formed a part, was engaged in a service the completion of which Japan could not be expected to permit. The former alternative might be satisfied either by acts of hostility committed between China and Japan in Korea or by acts of hostility committed between Korea and Japan in the course of a line of action in which Korea was receiving the support of China. The justification might probably be sustained on the ground of the latter alternative, by showing that the reinforcements on board the fleet in question were being poured into Korea for the purpose of dislodging the Japanese from a position which they claimed to be entitled to hold there.

Fourthly, however, the case as between England and Japan may not be decided by our admitting, if we should be bound to admit, that Japan had a right to treat the *Kowshing* as a belligerent. What if it should appear that she might have been captured instead of being sunk, or that she might have been pursued so as to prevent her landing in Korea the troops which she had on board, or that, if she had landed them in any part of the Korean peninsula which she could have reached, the military damage to be apprehended from her doing so would have been slight? Here are a series of suggestions as to matters of fact, on which we are as yet entirely without the information needed for giving answers. And it must be confessed that if the answers were unfavourable to Japan, we should be breaking rather new ground in holding that we had a right to complain. That war must be conducted, even as between the belligerents themselves, on the principle that suffering must not be inflicted which is out of all proportion to the military advantage to be gained by it, is what none would deny. A belligerent towards whom that principle was violated would have the right to use measures of retorsion or to exact an indemnity at the peace if he was able. But between states enjoying European civilization war is so seldom stained by a disregard of principle that precedents are wanting for a

neutral government's making a claim on behalf of its subjects who have suffered from a violation of it, when by their conduct they have identified themselves with one of the belligerent parties. On principle, however, it would seem that the claim might be made, and the recognition of the neutral's right might be a useful restraint on the excesses to which the terrible means of destruction now existing must operate as a temptation.

Fifthly, we are told that the Chinese troops on board the *Kowshing* would not allow her to be surrendered. It cannot be maintained that this at all affected the right of the Japanese to destroy her, if, in consequence of her not being surrendered, it really was a matter of military necessity to do so. The Europeans who undertake the duty of commanding or transporting Chinese must stand or fall with them.

Yours faithfully,

J. WESTLAKE.

Chelsea, August 2nd.

Daily Chronicle (August 4th).

War has raised its head once more in the world—deliberate, formal, bloody war. His Majesty the Emperor of Japan has declared war against his Majesty the Emperor of China. The old race-hatreds of the East, armed with all the destructive engines of the West, have burst into flame, and we are clearly about to witness the most dreadful and vindictive conflict that has raged in the East since the West first learned to know it. All the efforts of the Powers to stave off the horrors of war have proved useless. It is a lamentable spectacle for Europe, a deadly blow to the spread of civilisation among the semi-barbarous millions of China, and a step whose consequences in any event will weigh heavily upon the Japanese people for the next half-century.

After the events of the past week, however, it was evident that one issue or the other, either negotiation or formal war, was close at hand. The great nations of Europe would soon have been dragged in, one after the other, with consequences too dreadful to think of. Already the British flag has been fired upon and a British ship sunk. Japan has promptly apologised, and promised reparation for the sinking of the *Kowshing*, and her version of the affair places it in a rather different light from the narrative previously received. As yet, however, judgment must be suspended. We rejoice that Captain Galsworthy—that is the correct spelling of his name—has been saved, not only for his own sake, but because his testimony will place all the facts beyond question, and thus remove all doubt on the part of Great Britain as to the action she is called upon to take. And the declaration of war renders impossible any such occurrences in the future. Every British Consul has already received by cable stringent instructions, and it will be the duty of all to watch with lynxlike eyes that the British flag is used to cover no contraband, and that no British subject takes a part in the conflict without first resigning his nationality and all the protection it affords him.

The customs of nations with regard to the formal declaring of war have been subject to great variations. In ancient Greece and Rome a public declaration was made of injuries received, and a herald was often sent to the enemy's borders to demand satisfaction. In the punctilious Middle Ages it was held that honour, chivalry, and religion alike required a previous declaration. Among modern States the practice of notifying the enemy has been abandoned, and a formal announcement to the inhabitants of the challenging country itself has often been deemed sufficient. The great jurists, however, differ in opinion whether a previous declaration to the enemy is requisite of right, but are fairly unanimous that honour demands what may be called a statement of claim. Since the peace of Versailles, however, in 1763, the authorities state that formal declarations have, as a matter of fact, been discontinued, and that war has begun with a state of public hostility, announced by a domestic manifesto or State paper. In 1778 the act of England in recalling her Minister from France was regarded as a breach of the peace, and in 1756 active hostilities preceded a formal declaration by nearly a year. In the American Civil War the first shot was fired upon Fort Sumter on April 12, 1861, and was followed by a Federal proclamation on the 15th, and a Confederate declaration on May 6. In the Franco-German War a declaration in due form was handed in at Berlin on July 19, 1870, before any act of hostility had taken place. The Franco-Chinese War, on the other hand, was fought from beginning to end without a definite notification on either side. The case of China and Japan thus presents no new features.

The great majority of English readers will hardly realise how great are the interests of this country

in the present conflict. Our trade with the East is of enormous dimensions. Hongkong stands very near the top of the list of the chief ports of the world. An enormous preponderance of the shipping of the Far East sails under our flag, and the term "contraband of war," interpreted as it is with extreme elasticity, covering almost any article which may serve to enable the belligerents to prosecute their campaigns, places at least a partial embargo upon trade of every description. In some branches complete stagnation, and in all severe restriction, will therefore be felt at once, and the present depression will thus be intensified. War, nowadays, strikes not alone those who wage it, but all the world.

Is Japan justified in the step she has taken? It is very difficult to answer this question. Many wars have arisen on smaller grounds, but that reflection is not much to the point. The time has not yet come for a final verdict. We do not know definitely what are the demands she has made of China, or what conditions China has sought to impose upon her. Her interests in Korea are staked against Chinese suzerainty. Her trade is incomparably greater there, and her subjects vastly outnumber those of China. The condition of the people of Korea is so miserable, and the conduct of the King of Korea so unspeakably corrupt, that any change must be for the better, and it is absurd to overlook the fact that Japanese influence there, in comparison with Chinese rule, would be civilization instead of barbarism. And the further reflection that Japan feels so strongly the necessity for the settlement of the Korean question that she has been willing to throw down the gage of battle against the colossus of the East, the leviathan of all the nations of the globe so far as mere territory and numbers go—to pit herself as David against Goliath—should serve to convince us that she found the existing state of things intolerable indeed. A fearful ordeal awaits her, and she must know well that, even if she emerges from it victorious, she will not be permitted to reap all the fruits of her triumph, or to alter the map of the Far East to her liking. She must have felt the case to be as bad, therefore, as her confidence in her own arms was strong, before she determined to risk everything upon the uncertain outcome of an appeal to arms, and to take the irrevocable step of declaring war, from which she stands to lose so much, and—so far as the rest of the world can see—gain so little. We cannot find her justification, whereas her risk is obvious and unimaginably great.

Saturday Review (August 4th).

The story, as it is to be made out by comparing conflicting accounts, shows what some have known all along, that all their wonderful progress has not altered the essential character of the Japanese one jot. It is plain from their own account that they perpetrated what was neither more nor less than a cold-blooded massacre. Even in the improbable case that they are telling the truth when they say that they were unaware of the *Kowshing's* nationality when they fired on her, it does not improve their case. It was their duty to find out whether the English flag had been hoisted as a ruse by the Chinese captain or not. But since the deposition of the master was taken the Japanese have themselves given up that contention. Their officers, as it now appears, visited her and inspected her papers. They were also aware that, although the Chinese soldiers on board refused to be surrendered as prisoners of war, they were prepared to be carried back to China. War had not yet been declared, and the *Kowshing* was committing no breach of neutrality. To sink her in these circumstances was an outrage on the English flag, as well as an act of thoroughly Asiatic barbarity.

The Japanese may well have good cause to learn that it was also exceedingly unwise. It would be an act of the most contemptible weakness on the part of the English Government not to insist on a measure of satisfaction, going far beyond a mere apology. In their relations with China the Japanese will also probably learn that they have lost far more than they have gained by their ferocity. There is considerable plausibility in the contention that the Chinese were only postponing a declaration of war until they had accumulated an overpowering force in Korea. This might have justified the Japanese in turning the transport back. They might quote some European writers on war, who argue that all measures are justifiable which weaken the enemy, and even point to some incidents of the American civil contest, such as plundering of the Shenandoah Valley by General Sheridan, or the desolation of Georgia and Alabama by General Sherman, as proofs that despotic nations can conduct war on Asiatic principles. But the Japanese must remember that these theories are safe to an en-

and these examples good to follow, only when one side has such an overwhelming superiority of strength as to be quite safe against reprisals, and when the damage done is so great as to entirely cripple the enemy. In the present case the necessary conditions are wanting. Even if the Japanese can stop the transport of troops across the Yellow Sea, they cannot prevent the Chinese, who have lately extended their railways to the north, from pouring reinforcements into Korea. This being so, it may well prove that the slaughter of an insignificant detachment of 1,100 or 1,500 men, in a manner which is in the highest degree insulting to the Chinese, may prove a gross blunder, whether military casuists call it a crime or not.

GREAT FIRE AT CANTON.

ALL THE FLOWER BOATS DESTROYED.

One of the most disastrous fires of modern years broke out yesterday morning says the *Hongkong Daily Press* of the 1st inst., among the flower boats at Canton. About 4 o'clock the flames broke out and the highly inflammable nature of the material of which the boats are constructed lent every assistance to the conflagration, which, uncombed by the appliances of a Fire Brigade, soon enveloped the entire fleet. It is said that only one escaped, the remainder being entirely destroyed. As the boats are moored together with chains, it is not surprising that in the excitement of the moment and in the face of the devouring element advancing with such rapidity, it was found impossible to disconnect the vessels. A large number of sampans put off to as near to the burning boats as was possible and effected many rescues, but hundreds doubtless perished either in the flames or in the river. The flower boats were moored between the Canton Steamer Wharf and the Red Buoy. The glare from the flames was seen for many miles, and the heat in the proximity of the fire was intense.

At the fifth watch, or about 3.30 a.m., the alarm of fire was raised from a flower boat opposite Yuen, cheong street, near the river steamer wharves. The fire was caused, it is said by the careless burning of joss paper. In a few minutes the flames had got a firm hold and spread to the neighbouring boats, which were roped together very firmly. The fire engines reached the river bank promptly, but they could not render any assistance, the distance being beyond the power of their pressure. The fire was therefore left to spread its havoc and did not burn itself out until eight o'clock. Meanwhile, many people, both men and women, were seen jumping into the water and calling out "save life." The scene was indescribably awful. Although many life-boats arrived in the vicinity, the current was too strong for them to effect many rescues. It is reported that all the flower boats were destroyed except ten or eleven, which succeeded in making their escape.

THE KOREAN WAR.

In reply to questions put last evening in the House of Commons respecting events in Korea, says the *Daily Telegraph* of the 3rd ult., Sir Edward Grey answered with a just and becoming reserve that "the accounts of what had taken place were of the most conflicting nature, and until the facts were beyond dispute he could make no statement. Her Majesty's Government had received a spontaneous representation from the Japanese Government that they would readily make full reparation if it was found that their officers were in the wrong." Much injustice has indeed been done to Japan by the hasty condemnations which have been pronounced upon the opening incidents of her war with China. Those condemnations, no doubt, have been inspired not by bad, but by good motives—that is to say, by feelings of humanity, and by a just jealousy for the honour of the British flag. It is needless to say how heartily we accept the imperative mandates that attach to both. War at the best is very terrible, and when we hear of an incident so calamitous as the sinking of the *Kowshing*, before any declaration of war, with almost all her freight of human life, civilisation has the right sternly to inquire whether such a catastrophe was justified. When, moreover, we are told that the ill-starred vessel was steaming under the British flag and was commanded by a British-born captain, the sentiment of horror is enhanced by an impulse of indignant patriotism, and we do not therefore blame, but rather applaud, our contemporaries for their excitement upon the subject. Justice, nevertheless, is a virtue, as well as humanitarianism and patriotism, and it has not been worthily

done by certain journals, on the strength of imperfect and far from impartial telegrams, to jump to conclusions of a most unfriendly character against the smaller of the two Powers engaged in the present conflict. The manly instinct of Englishmen—apart from all political and diplomatic considerations—would naturally be led to admire the resolution of the Island Empire, which, believing itself in the right and holding its vital interests engaged, has not feared to challenge that vast and mighty China, which once waged war against England and France together, and recently drove Russia back from Kuldja. Now, brave men are not brutal, and courageous and civilising Governments are not generously barbarous; nor does there exist a single record against Japan, since the period of her renaissance, which should have caused reasonable and well-informed persons to believe that her Government would wantonly insult the flag of England, or approve, much less commend, acts of wilful inhumanity. Japan is no globe-trotter's playground of toys and trivialities. She is a country of more than forty millions of industrious and artistic people, united, serious, resourceful; the one civilised land of Asia; and this because she already possessed an ancient and lofty culture, intellectual, civil, and moral, upon which the new one, lately adopted, could be easily and swiftly grafted. Honour and humanity and the comity of nations are dear to her as to us; they are, indeed, the breath of her modern life, and it would have been more becoming, therefore, if the indecorous fury of some recent comments hazarded here had been suspended until public opinion had found time to study the true particulars of those serious incidents in the Korean Sea which we are enabled to furnish this morning.

The Japanese Government have received and now forward the signed affidavits of the captain and chief officer of the *Kowshing*, from which the following clear account may be derived. The *Kowshing*, a British vessel hired by the Chinese Government, left Taku on the 23rd of July, after notice had been given to the Peking authorities that the despatch of any more troops to Korea would be considered a "menace." Simultaneously the Chinese Government had for itself announced that its convoys had orders to resist any attempt to stop them. There was, therefore, constructive war already existing when, carrying eleven hundred troops, the *Kowshing*, escorted by Chinese war vessels, was intercepted by the *Naniwa*, a Japanese cruiser, and her consorts. The escorting Chinese warships were signalled to heave to, and seem to have sheered off, perhaps to protect the rest of their transports. They were flying the Japanese flag with a white flag above it, and they might have returned at any moment. The Japanese captain of the *Naniwa* sent a boat to board the transport, and requested her to follow him; which command the English captain was ready to obey. But after thus consenting, he signalled for a second boat to come, and then explained that the Chinese generals and soldiers on board, in their ignorance, forbade him to comply. The boat brought back this message. What could the *Naniwa's* captain do? At any moment the Chinese ships might be again down upon him; his orders were to stop all reinforcements; fighting had already occurred at Seoul, and torpedo boats had been launched; he accordingly signalled to the British captain and Europeans to come on deck, man a boat, and quit their steamer. Then, since they would not or did not accede, he opened fire, and the Europeans, jumping overboard, were actually fired upon by their own ship while in the water, being eventually rescued from death by the crew of the Japanese *Naniwa*. Every kindness was shown to our countryman and his companions on board that vessel, and the English captain bore witness that while on the *Kowshing* his life had been threatened by the Chinese generals when he attempted to follow his captor, or to leave the ship. The Japanese eagerly desired, on their second visit, to take the Europeans off, but were frustrated by the mad inexperience of the Chinese. Such is the substance of the narrative, which, so far from evidencing any disrespect for the English flag, shows an almost scrupulous care for the rights of neutrals and an especially eager desire not to involve the lives of foreigners—above all, of the English—in the desperate alternative which the Japanese captain believed to be forced upon him.

So much for the alleged disregard of the British flag, which Japan—in the absence of authentic particulars—has showed herself so anxious to disown or to atone for. With reference to the act of sinking the transport, and the sad consequent loss of life, Heaven forbid that we should speak carelessly about it! The transport was unarmed, helpless against the guns and torpedoes of the *Naniwa*, although the foolish Celestials did not

realise this. It is for high naval officers to say what a man-of-war's captain must do when, with hostile ships near him, the orders he has been instructed to enforce, accepted by the enemy's commander, have been scouted by a tumultuous crowd on board, and he must act or be stultified. The *Kowshing* was certainly not at the moment a British ship, for her captain was deposed, and Chinamen were in command. If she had run any merchantman down at that hour no damages could have been exacted from the flag she displayed. Suppose a French steamer had brought over Turkish soldiers towards Alexandria during the Arabi fighting, would a British cruiser have let her go on after the Turks had deposed her French master? Clearly here are questions of nice naval law, to solve which—without sufficient facts—too many have wildly plunged, justified only, as we have said before, by the natural and commendable horror of that subsequent catastrophe, a horror which we all must share. Many a time a subordinate has gone beyond the line prescribed for his action by superiors, who must be judged—as every civilised Power in its turn has had to be judged—by the manner in which they comport themselves when all the circumstances have become clear. There are thus, in this distressing and dreadful occurrence, two separate parties who must answer at the bar of civilised opinion—first, the commander of the *Naxos*, and next his Government. The calamities which attend belligerence are inevitable. War cannot—least of all to-day—be conducted without many an awful incident; but this must not blind us to the necessity of waiting for assured facts before we load a proud and courageous and sensitive people, at the outset of a heavy and doubtful war, with hasty obloquy and condemnation against which there has been no time to offer a defence.

THE DANGERS OF THE WAR.

The outbreak of war between China and Japan—even if the operations were confined to the Kingdom which is the cause of the contention—would be a disaster of more than Asiatic import. It is unnecessary to enlarge on the domestic risks which each of the two Empires would run by wasting blood and treasure in attempts to drive the rival Power from the Peninsula, and to vindicate its own exclusive pretensions to supreme influence at Seoul. The internal condition of China is a source of genuine concern to the more sagacious advisers of the Throne. The attacks on foreigners, mischievous as they have been in their effect on external relations, are, after all, only a symptom of the growing weakness of the Crown, and of the incompetence, corruption and fanaticism of the local officials. The evil is not one which can be cured by a dashing policy abroad. What the Central Administration needs is revenue, and the faculty of control over distant subordinates. The pursuit of *prestige* in foreign expeditions is, in European Statecraft, an old recipe for the dissipation of internal disaffection. But the sleepy East has rarely roused itself to imaginative delight in conquest, and it is pretty certain that, even at Peking and the great provincial capitals, the increased exactions of the tax collectors would be much more grievously felt than a blow to the more or less unsubstantial traditions of lordship over Korea. The rulers of Japan, if they are at all worthy of the reputation they enjoy, will appreciate even more distinctly the dangers which hostilities would bring upon their country. It has absorbed with extraordinary ease the notions of the West. It has sought—with considerable success—to assimilate Occidental usages and to recast its whole polity on the model of the most advanced European States. But the very haste with which the transaction has been effected has been a cause of peril. Constitutional government is still in the experimental stage, and the most patriotic and enlightened of Japanese politicians, whatever may be the side of the House on which he sits, will hardly deny that the method of rule by Parliamentary Parties has been productive as yet of vastly more friction than progress. Reform—if change is to be accounted Reform—has been effected at the cost of stability. It needs no great discernment to see that, while things are in so precarious a position at home, neither of the two claimants for supremacy in Korea can afford the exhausting strain which the prosecution of warlike operations, in however desultory a fashion, would involve.

But while the inducements to the competitors to keep the peace for their own sakes are of such self-evident force, it would be affectation to suggest that the strenuous advice pressed on them by the three Foreign Powers who have special interests in the region affected is wholly or mainly unselfish. One excellent reason why the Cabinets of Tokyo

and of Peking should hesitate about giving or accepting a challenge, is that, even in the event of superficially decisive success, the victor would hardly be likely to remain in possession of the spoils of war. Russia has long had wishes and hopes in relation to the coast line of Eastern Asia. It would be a needless complication of a sufficiently intricate matter to inquire what relation the dreams of the St. Petersburg strategists, regarding the sea-board of Eastern Siberia and its continuation southwards, have to the general policy of the Foreign Office. It must suffice to say that Siberia is in itself no unvalued possession of the Czar, and that to do justice to its capabilities it has been esteemed a matter of first-rate importance to obtain access to better harbours than those which at present are available. Vladivostok is a port and arsenal of considerable value; but it is not open all the year round. The valley of the River Amoor, according to the opinions of the well informed, may become a great commercial highway, and, as the world has good reason to know, the project of a railway connecting the capital on the Neva with the remotest Eastern ports and strongholds on the Pacific is being rapidly carried into effect. But it is no secret that extension southwards is ever present in the thoughts of Muscovite patriots. We do not presume to find fault with an ambition so closely akin to our own. But the plain truth is that the realisation of Russian wishes in this respect is absolutely inconsistent with the maintenance of what we regard as the safe balance of strength in the East. Russian diplomacy is ready to pay a loyal respect to the *status quo*. But it would be expecting too much to suppose that it could look on, indifferent and inactive, if a Power, so pushing, so vigorous, and so fully possessed with the passion for becoming great, as Japan, established itself in the long-coveted Kingdom of Korea, and, once for all, set a definite limit to the southward advance of the Imperial Eagle. The triumph of China—with which Empire its huge neighbour has so long been in touch, and on whose land frontier it is now pressing so hard in the Amoor region—would be no less unpalatable to statesmen on the Neva.

Thus it may be said, without exaggeration, that the outbreak of war between China and Japan would be the beginning, for the European system of politics, of a new Eastern Question. The United States would also be involved in the fresh development of international jealousies. In spite of the prejudices entertained by old-fashioned Republicans against the extension of American responsibilities beyond the American Continent, the representatives of the Washington Cabinet play a leading part in the politics of the Pacific, and both in China and Japan are strenuous in the assertion of the claims of American commerce and citizenship to respect. The future of Seoul is a matter about which almost as much concern is felt at the capital as on the Neva. For ourselves, we have given a very striking and substantial proof of the importance we attach to the maintenance of the present condition of things in East Asiatic waters. We withdrew from Port Hamilton, not because we under-estimated the advantage of the position, but because we were reluctant to persist in any step which appeared to give Russia even a colourable pretext for trespassing on the ancient and decaying kingdom on her southern border. One of the elementary axioms of present-day politics is that every Power desires peace, and has nothing to gain from war. It would, therefore, appear to be an universal interest to avert the danger which would be portended by any precipitated plunge into hostile action on the part either of Peking or of Tokyo. It is most fortunate that at such a crisis this country is about to have a representative at the Court of the Mikado of Japan so thoroughly fitted by long residence and experience as Mr. Le Poer Trench to deal with the temporary embarrassments of the situation. He will have unanswerable arguments of immediate expediency wherewith to back his appeal to the pacific sentiment of Japanese Statesmen. Korea as a Kingdom has possibly little claim beyond that of picturesque decrepitude to the protection of European diplomacy. But the people do not ask for very much from their rulers. The insurrection which has been the occasion of all the turmoil might be composed by some simple reforms. But whatever may be the intrinsic weakness of the Throne, the claims of Japan and of China to succeed to the inheritance are too shadowy to compel recognition, while the conditions under which the combat would have to be waged forbid the belief that, without sacrifices which would be fatal to either of these Powers, the counter pretensions of the other would be decisively crushed.—*Standard*.

BACK TO THE ARMY AGAIN.

I'm 'ere in a lousy ulster an' a broken billycock 'at,
A laying on to the sergeant I don't know a gun
from a bat;
My shirt's doin' duty for jacket, my sock's stickin'
out o' my boots,
An' I'm learning the damned old goose-step along
o' the new recruits!

Back to the army again, sergeant,
Back to the army again.
Don't look so 'ard, for I 'aven't no card,
I'm back to the army again.

I done my six year's service—'Er Majesly sez,
"Good-day,
You'll please to come when you're rung for, an'
'ere's your 'ole back-pay;
An' fourpence a day for baccy—an' bloomin'
gen'rous too;
An' now you can make your fortune—the same as
your officers do."

Back to the army again, sergeant,
Back to the army again;
'Ow did I learn to do right about turn?
I'm back to army again!

A man o' four an' twenty that 'asn't learned of a
trade—
Besides "Reserve" agin' him—'e'd better be
never made.
I tried my luck for a quarter, an' that was enough
for me,
An' I thought of 'Er Majesty's barracks, an' I
thought I'd go an' see.

Back to the army again, sergeant,
Back to the army again;
'Oo would ha' thought I could carry an' port?
I'm back to the army again!

The sergeant arst no questions, 'e winked the other
eye,
An' sez to me, "'Shun," an' I shunted, the same
as in days gone by;
For 'e saw the set o' my shoulders, an' I couldn't
'elp 'oldin' straight,
When me an' the other rookies comes under the
barrick gate.

Back to the army again, sergeant,
Back to the army again;
'Tisn't my fault if I dress when I 'alt—
I'm back to the army again!

I took my bath, an' I wallered—an' Gawd, I need-
ed it so!
I smelt the smell of the barracks, I 'eard the bugles
go,
I 'eard the feet on the gravel—the feet o' the men
what drill—
An' I sez to my flutterin' 'eart strings, I sez to
'em "Peace, be still!"

Back to the army again, sergeant,
Back to the army again;
'Oo said I knew when the *Fumner* was due?
I'm back to the army again.

I carried my slops to the tailor; I sez to 'im,
"None o' your lip.
You tight 'em over the shoulders an' loose 'em
over the 'ip,
For the set o' the tunic's 'orrid;" an' 'e sez to
me, "Strike me dead,
But I thought you was only a rookie!" an' so 'e
done what I said.

Back to the army again, sergeant,
Back to the army again;
Rather too free with my fancies? Wot? Me?
I'm back to the army again!

Next week I'll 'ave 'em fitted, I'll buy me a walk-
in-'cane;
They'll let me free o' the barracks to walk on the
Hoe again.
In the name o' William Parsons that used to be
Edward Clay,
An'—any pore beggar that wants it can draw my
fourpence a day!

Back to the army again, sergeant,
Back to the army again,
Out o' the cold an' the rain, sergeant,
Out o' the cold an' the rain.

'Oo's there?
A man that's too good to be lost you,
A man that is 'andled an' made—
A man that will pay what 'e cost you
In leasmin' the others their trade—parade!

You're dropping the pick o' the army,
Because you don't 'elp 'em remain,
But drives 'em to cheat to get out o' the street,
An' back to the army again!

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 137.

WHITE. BLACK.
1—B to Kt 8 1—Any
2—B, Kt, Q, or P, mates
accordingly.

Correct solutions received from Omega, Digamma, W.H.S., J.D., and E.D.

W.H.S. and J.D., both note that the defence P to K 4 is the only one that requires the Key-move; with all other defences a waiting move on the part of Q, R, or K.B., would suffice. This fine problem carried off first prize for two-movers in a late competition of the *St. James' Budget*.

PROBLEM No. 139.

By PH. KLETT.

White to play and mate in two moves.

We have received the following communication from a correspondent who is desirous of getting the views of local players and analysts upon the question set forth in his letter:—

TO THE CHESS DEPARTMENT OF THE "JAPAN MAIL."

SIR,—I have received and played over with much interest, the games recently contested by the great Masters Lasker and Steinitz. Although I had much pleasure in analyzing the strategy, I must confess that a duller, and more uninteresting set of games I never before had placed before me, and the disappointment has been great, because we had so much to expect!

These Masters I notice invariably adopted the Ruy Lopez opening, which is indeed strong, and always in right hands leads to beautiful combinations. I was led by curiosity to look back over the games of the old masters, and came across the third game which was a Ruy Lopez, in the great match between Anderssen and Morphy; on the sixth move by the former, the game was gone! and nothing could have saved it—it never went beyond the 21st move.

Other games of the same opening are to be found played by the great master, but in the opinion of Staunton the one referred to, is a masterpiece.

If Morphy were alive to-day he could undoubtedly give the present masters a pawn and move, and some, a pawn and two moves, and remain the Champion of Champions.

RUY LOPEZ.

With reference to the above, students of the game should be aware of the fact that the strategy and tactics of the Modern school are as different from those in vogue half a century ago as are those of modern warfare from the manoeuvres of Nelson, Buonaparte, and Wellington. Had "Ruy Lopez" gone thoroughly into the Steinitz-Lasker games with the commentaries thereupon of such men as Gunsberg, Tarrasch, Mason, Tinsley, Ranken, etc., he could not have failed to observe their many beauties and perfections. Admitted that he would not see therein the "brilliances" which he apparently expected; these are not to be found now-a-days in a contest of this importance. Has not Steinitz himself laid down the axiom that "brilliances are only possible against faulty play?" The modern German school which plods along upon absolutely safe lines leaving nothing to chance, was exemplified as never before in the play of Lasker. Careful, correct, precise, well-nigh mathematically perfect in his combinations, he held the fort in most of the games; until his great adversary's impatience led him to drop his guard. Then he sailed in and finished off his famous opponent *secundum artem*.

With regard to the giant Morphy—who has no more sincere admirer than the present writer—it is useless to argue: especially as to what he might or might not have done against the Modern school of play. Were he still alive he would, by this time, be well advanced in years, and Blackburne's dictum should be borne in mind:—"When we get beyond fifty we must be prepared to yield the sceptre to younger men." Much as we revere

and love the Knights of old, who have left us imperishable monuments of their genius, we must not forget that the coming men will build higher, and perhaps nobler, structures on the foundations which the pioneers laid. *Omnia mutantur; et nos mutamur in illis*. The statesmen and warriors of previous ages have left the stage clear for the Bismarcks and Moltkes of the nineteenth century; and in like manner we must be prepared to see the glories of Anderssen, Jaenisch, Morphy, and Steinitz, fade before the rising suns of the present generation.

MORPHY: AN EARLY REMINISCENCE.

The *New Orleans Times-Democrat* remarks that authentic unpublished games by Morphy have now become very rare. The following is one which was contested on October 12th, 1856, between him and Mr. C. A. Maurian, who, after playing with Morphy for a year at the odds of a Rook, had surmounted that advantage, and had begun to play at the smaller odds of Knight and move. At the date given above, Mr. Morphy was just over 19, and Mr. Maurian was a little younger.

And Morphy resigns.

NOTES.

(a) Best. If instead P takes P, after 7..... B takes P, Black menaces 8..... Q to R 4, or as a preliminary 8..... P to Q R 3, with a dangerous attack accruing speedily.
(b) If 14—Kt takes Q B P, then probably 14..... Q to K 5, when if 15—P to K B 3, 15..... Q to K R 3 ch. 16—P to Kt 3, Q to R 6, completely disorganising the adverse King's side.
(c) It is curious to note the effect of this move in holding the adverse Knight fixed at Q 3.
(d) With a view both to the text play and to the possibility of..... P to Q 4 whenever appropriate.
(e) A well-timed move, which speedily frees his game. Black wins a Pawn, but the resulting exchanges are fast.
(f) Of course he could not venture to win the Queen for his two Rooks.
(g) This reduces the ending to absolute simplicity, but 33—Kt to K 4 would also have been decisive.

When winning is possible (says Mason) it is best to win in the simplest possible way. The end should not be sacrificed to the means. First exhaust your adversary that he may not win the game. This is not "chivalry," it may be; but to lose where one should win is stupidity—or worse. Therefore when you have the superior force use it without scruple to destroy all resistance. If you cannot win, and know you cannot, then draw as soon as you can. Place no confidence in your adversary's blunders to come. Always make your moves deliberately, unhesitatingly, and with deci-

sion, without hurry, vacillation, or regret. Let the thought fully precede the act. Carry out your combination, bad though it be, unless a clearly better course presents itself. After all you are only playing a game of chess. There are many more to come. But without stability in thought and certainty in expression you can never do your best in any of them. The wavering player goes to the wall.

GAME No. 163.

Played recently at the Nuremberg Chess Club. Dr. Tarrasch giving the odds of a Rook to an amateur.

(REMOVE WHITE'S Q R.)

ALLGAIER GAMBIT.

WHITE. BLACK.
1—P to K 4 1—P to K 4
2—P to K B 4 2—P takes P
3—Kt to K B 3 3—P to K Kt 4
4—P to K R 4 4—P to Kt 5
5—Kt to Kt 5 5—P to K R 3
6—Kt takes P 6—K takes Kt
7—P to Q 4 7—P to Q 4
8—B takes P 8—P takes P
9—B to K 2 9—P to K R 4 (a)
10—Castles 10—K to Kt 3
11—Kt to B 3 11—B to K B 4
12—B to K 5 12—Kt to K B 3
13—Kt takes P 13—Kt takes Kt
14—R takes B (b) 14—K takes R
15—B to Q 3 15—Q to Q 4
16—Q to B sq. ch. 16—K to Kt 3 (c)

White announced mate in six moves.

NOTES.

(a) This and Black's two next moves render his position very insecure. Kt to K B 3 at each point is far better than the move in the text.
(b) A fine coup, and, of course, much stronger than 14—B takes R, which was doubtless what Black expected.
(c) He should play to K 3, in which case White continues 17—P to B 4 with good winning chances.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 10.
The Count de Paris is dead. He expired peacefully in the presence of his family, and will be buried at Weybridge.

It is rumoured that an armistice has been arranged between China and Japan.

Cholera is raging in Galicia.

The Omsk-Ural Railway has been opened for traffic, and the Russian Customs in Central Asia will be opened on Thursday.

London, September 11.

The Court has gone into mourning for ten days for the death of the Count de Paris.

There are several indications of a *rapprochement* of the Vatican and Quirinal.

London, September 12.

The following is the result of the St. Leger:—

Sir F. Johnstone's Throstle 1
Lord Roseberry's Ladas 2
Lord Alington's Matchbox 3

(FROM THE "N.-C. DAILY NEWS.")

London, September 7.

A captive balloon at Aldershot has been struck by lightning and three Engineers were injured.

(FROM THE "DAILY PRESS.")

London, August 30.

The massacre of Dutch troops has cast a gloom over Holland. A fresh expedition against the rebels is in course of preparation; in the meantime Dutch gunboats are bombarding Lombok.

The Russian fleet in the Caspian will shortly be replaced by larger and stronger vessels.

(FROM JAPANESE PAPERS.)

Hakodate, September 12.

The *Kaiyo Maru*, belonging to Mr. Shimizu Yoshizo, of Niigata, struck the rocks off Washi-wake during a violent gale, early this morning and has been much damaged.

Yamagata, September 12.

Violent gales swept over the district early this morning, and over one hundred fishermen, belonging to Kano and Hamanaka in Nishitagawa District, who were engaged in fish-

ing in twenty-four vessels at the time, were caught in the storm, and all are missing. The investigation of damages to buildings has not yet been concluded.

Shanghai, September 10.

The Peking Government has asked the Representatives of various Powers that, as there is a likelihood of Japanese war vessels entering China ports by hoisting the flag of a foreign country, every foreign man-of-war shall be instructed to stop when signalled by Chinese vessels and to wait until a thorough inspection of the vessel has been conducted by the Chinese authorities. None of the Powers have acceded to such a request.

Söul, September 12.

A trustworthy report is said to have reached Söul to the effect that a detachment of Japanese troops attacked a party of mounted Chinese soldiers on the 6th inst. in the neighbourhood of Hwang-ju. The Japanese army then carried the Hwang-ju Castle by assault, completely routing the Chinese garrison. Nothing is yet known of what subsequently occurred, but it is generally stated that a decisive battle will take place at Phöng-yang to-day.

Later.

Marquis Saionji is said to have left Söul (probably for home).

Hiroshima, September 12.

Owing to a recent severe storm, big floods occurred in various parts of the Prefecture. The damage in the town of Hiroshima was not serious, but the rural divisions are expected to have suffered severely.

Kochi, September 12.

The storm swept over here at 3 o'clock this morning. Twenty-five houses were devastated in the neighbourhood of the town of Kochi, and seven were partly crushed in, fifty others being slightly damaged. Three persons were injured.

Kobe, September 13.

The American gun-boat *Concord* left here for Korea last night.

Fusan, September 13.

The Japanese army have attacked the Chinese troops at Phöng-yang, advancing from Kiang-dong and Hwang-ju, and after a terrible fight lasting some hours the Chinese army retreated. Ten prisoners were captured; the loss is said to be very great.

[The above telegram was received by the Domestic and Foreign News Agency, but is received with doubt in Tokyo. It is surmised that the correspondent has jumbled together the battle of Hwang-ju and some skirmishes.]

Later.

Mr. Boku Ei-ko, formerly credited with the intention of returning to Japan, is now reported to have left Yöng-san, where he has been staying since his arrival in Korea, for Söul on the 11th, in answer to a demand from the King.

A Söul correspondent, writing under date the 10th inst., announces that Mr. Otori, Japanese Minister to Korea, arrived at Ninsen on the 9th to welcome General Count Yamagata. The King dispatched a Royal messenger to the same port to meet the General. A very warm reception was to be given by the Japanese residents. The letter adds that Marquis Saionji was to leave Ninsen for home on the 13th by the *Satsuma Maru*.

Later.

Count Yamagata, Lieutenant-General Katsura and others arrived at Ninsen on the 12th.

Muroran, September 13.

The *Kaijo Maru*, which struck a rock off this port is now a complete wreck owing to the high wind and waves which have prevailed here of late.

Fusan, September 13.

Several thousand Koreans have collected in a mob at Ei-chhong-do, and have begun to commit disorderly acts. The Peninsular Government has dispatched Li Ju-ka to inquire into the circumstances of the affair.

Fukuji, September 13.

According to investigations carried up till to-day, the number of houses which collapsed during the past storm was 510; five persons were killed, while three were seriously and 27 slightly injured.

Fusan, September 14.

Count Yamagata and party arrived in Söul to-day.

Later.

A detachment of Japanese troops, who proceeded towards Phöng-yang from Gensan, and another division who started from Söul, have commenced to attack the enemy, the former by way of Song-chong and the latter from Chung-hwa. The Chinese army has fled to Phöng-ju, while the Japanese soldiers have begun to cross the Tai-dong-gang.

Nagoya, September 14.

H.I.M. the Emperor left here at 9 a.m. An imperial salute was fired and many fireworks were displayed as the train moved out of the Station. A large number of persons gathered in the neighbourhood of the station to cheer his Majesty.

Kyoto, September 14.

The Imperial party passed through here at 2.07 p.m. H.I.H. Prince Yamashima, the leading local officials, the representatives of various public bodies, and others welcomed His Majesty at the station. The train waited here eight minutes.

Osaka, September 14.

H.I.M. the Emperor's arrived here at 3.30 p.m. A warm reception was given him by residents.

Kobe, September 14.

H.I.M. the Emperor arrived here at 4.30 p.m. All the streets were decorated with the national flag, and much enthusiasm prevailed.

Ehime, September 14.

A big junk belonging to a native of Okayama, which has been anchored off Asami, Kazahaya District, with a load of three hundred bags of herrings, was ran down by the M.M. steamer *Natal* on the 10th inst. at 7.30 p.m. Two seamen of the ill-fated vessel were slightly injured, but the rest are safe.

Tottori, September 14.

A report which came here from Sakai this afternoon was to the effect that 12 persons perished during the recent storm, and 4 others were wounded, while 117 houses were devastated, 395 others being submerged.

Kyoto, September 14.

Fifty-seven houses were overthrown in the neighbourhood of Mineyama, Naka District, thirty being damaged; four persons were more or less severely injured.

Yamagata, September 14.

Over one hundred fishermen of Nishi-tagawa District, who were reported missing after the recent gale, have been found.

Nagoya, September 14.

Count Ito, the Premier, was attacked by fever while travelling in the train yesterday. The fever increased as night drew on, his temperature rising to 39.9. Drs. Ikeda, a Court Physician, and Kumagai, President of the Nagoya Hospital, were duly called in. The principal cause of the Premier's illness is said to be catarrh of the bowels. His temperature fell under treatment to 38.9 this morning. The Premier was permitted by the Emperor to remain at Nagoya until he has recovered. He will stay here for a day or two, and then proceed to Hiroshima.

REPORTS.

The American steamer *City of Rio de Janeiro*, Captain J. T. Smith, reports:—Left Hongkong the 29th August at 5.42 a.m. via Amoy the 31st, Nagasaki the 5th September, and Kobe the 7th at 1.12 p.m. Arrived at Yokohama the 8th September at 5.40 p.m.; had strong N.E. wind and head sea from Oshima.

LATEST COMMERCIAL.

IMPORTS.

A trifling improvement only. Yarns—A few sales, holders accepting a reduction in price. Shirtings—Some little business in gills at quotations. T-Reds have sold steadily the last few days, and Black Velvets have had a small turn. Woollens appear clear as far as "spot" business goes. It is rumoured that some trade has been done on Indents, and that buyers are beginning to make enquiries about Blankets and Italian Cloth.

COTTON PICKER GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.40 to 2.90
Grey Shirtings—9 1/2 yds. 45 inches	2.60 to 3.25
F. Cloth—7 1/2 yds. 33 inches	1.60 to 1.90
Indigo Shirtings—12 yds. 44 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	1.75 to 3.75
Cotton—Italians and Sateens Black, 30 inches	0.16 to 0.21
Velvets—Black, 35 yards, 22 inches	6.85 to 9.95
Victoria Lawns, 12 yards, 42 1/2 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 yds. 24 1/2 yards, 30 inches	1.60 to 1.75
Turkey Reds—2.8 to 3 yds. 24 1/2 yards, 30 inches	1.80 to 2.10
Turkey Reds—3.8 to 4 yds. 24 1/2 yards, 32 inches	2.35 to 2.75
Turkey Reds—4.8 to 5 yds. 24 1/2 yards, 32 inches	2.95 to 3.15

WOOLLENS.

	PER YARD.
Flannel—Black, 30 yards, 32 inches	\$0.27 to 0.45
Italian Cloth, 30 yards, 32 inches	0.30 to 0.35
Medium	0.27 to 0.30
Italian Cloth, 30 yards, 32 inches	0.23 to 0.25
Mousseline de Laine—Capes, 24 yards, 31 inches	0.65 to 0.23
Cloths—Pilots, 54 to 56 inches	0.35 to 0.50
Cloths—Presidents, 54 to 56 inches	0.60 to 0.75
Cloths—Union, 54 to 56 inches	0.40 to 0.70
Blankets—Scarlet and Green, 4 to 14 yds. per lb.	0.45 to 0.53

COTTON YARNS.

	PER PIECE.
No. 16/24, Ordinary	\$34.00 to 34.50
No. 16/24, Good to Best	35.00 to 35.50
No. 16/24, Reverse	—

No. 42, Two-fold	44.00 to 48.00
No. 208, Bombay	—
No. 168, Bombay	—

METALS.

Tokyo still reports a dull market, and there is not much business passing here. Still everything moves to some extent, although as a rule at low prices, and there seems to be small chance of any rise just now.

	PER PIECE.
Flat Bars, 1 inch	\$3.30 to 3.35
Flat Bars, 1 inch	3.40 to 3.45
Round and square up to 1 inch	3.30 to 3.45
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.50 to 4.65
Galvanized Iron sheets	9.20 to 9.40
Wire Nails, assorted	5.71 to 6.00
Pin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

The situation is unchanged from last report. Holders remain firm but sales are few. The *Spondilus* arrived from Batoum with bulk oil (about 650,000 gallons), and the total stock is reckoned as equal to 670,000 cases or so.

Chester	\$1.75 to 1.77
Comet	1.74 to 1.75
Devoe	—
Russian Anchor	1.73 to 1.75
Russian Moon	1.70 to 1.72

SUGAR.

Browns—Formosa still neglected. Manila—Fair transactions with improved tone and rather better prices. White—Market quiet, but holders maintain their position.

	PER PIECE.
Brown Takao	\$4.50 to 4.60
Brown Manila	5.20 to 5.25
Brown Daitong	3.40 to 3.45
Brown Canton	3.70 to 4.40
White Java and Penang	7.10 to 7.20
White Java	7.60 to 9.90

**EXPORTS.
RAW SILK.**

Business has been resumed on a lower scale of prices, but there is still no general trade. Shippers require further reductions which at present holders will not grant. This is especially the case in Filatures, where buyers talk of \$700 for good Siwa stock against holders demand of \$725. Reels and Kakeda of medium to common grade meet with some enquiry, but all else is neglected, and the general stock is up to 17,000 piculs.

THE GREATEST WONDERS OF MODERN TIME.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BASSE, in his work entitled "The Nile Tribes in Abyssinia," says:- "I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:- "I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 24, 1894.

"MONEY,"**A JOURNAL OF BUSINESS AND FINANCE.**

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 22ND, 1894.

SUMMARY OF NEWS.

WATER-MAINS are being laid in Ushigome, Tokyo.

LORD and Lady Randolph Churchill are still staying at Miyanoshiba.

THE Kyoto Rice Exchange declares a dividend of $11\frac{1}{2}$ per cent. per annum.

MR. H. J. SNOW, of the *Retriever*, has been spoken in the Behring Sea.

THE Yokohama Dockyard scheme will, it is said, be begun early next month.

THE remains of Major-General Watanabe were interred in the capital on the 14th inst.

THE total amount of coals in stock at Moji, Kiushu, on the 14th inst. was 26,819 tons.

THE foreign trade of Japan for August shows an excess of yen 348,937.83 on the export side.

A SALT manufacturing company is to be started at Kawasaki with a capital of yen 60,000.

PRINCE SHIMADZU of Kagoshima has presented 10,000 yen to the Satsuma men engaged in the Korean War.

THE largest sum subscribed towards the War

Loan was 10,000,000 by the Bank of Japan. Subscriptions totalled yen 63,224,700 yen altogether.

MISS SONO TERU's school for the higher education of Japanese women, has been formally opened.

PASSPORTS running for twelve months are now obtainable by British residents through their Legation.

THE *Empress of India* rescued four water-logged fishermen near Shimonoseki during the storm of the 11th inst.

HANCOCK, a champion pedestrian, who has been touring in the East for some time, has arrived in Yokohama.

HARMSTON'S Circus concluded its season in Yokohama on Wednesday evening. It opens in Tokyo to-day.

IN the cricket match on Saturday last, the Committee's team beat the Captain's eleven by seventeen runs.

H.I.M. THE EMPEROR has sent a message of congratulation to the troops in Korea upon their behaviour in the field.

TWO gaolers who cut down a convict during a riot in a Tokyo penitentiary have been tried by a Local Court and found not guilty.

MR. NOSE, Japanese Consul at Ninsen, Korea, has been recalled, and Mr. Arakawa appointed to succeed him in that position.

THE Diet is expected to be convened for the 1st November, being opened on behalf of the Emperor by a Prince of the Blood.

A JAPANESE girl, about 17 or 18 years of age, was run over and killed at Kanagawa by the 8.20 p.m. train from Shimbashi on the 14th inst.

THE officers and seamen of the captured Chinese man-of-war, numbering in all over eighty, have been removed to Matsuyama from Hiroshima.

THE total number of Japanese emigrants in Hawaii at the end of last year was 20,125, of whom 15,328 were men, 3,936 women, and 861 children.

MR. TANAHASHI GUNJI, formerly Secretary of Legation at Berlin, the Hague, and Vienna, died from consumption at Oiso on the 17th inst. in the 43rd year of his age.

THE Chinese have been defeated by the Japanese forces with signal success at Pyong-yang, while on the sea a naval fight has resulted in the loss of four Chinese war-vessels.

A PROTEST has been raised in Saturday's sailing race, *Daisy*, the winner, having fouled *Vigen* just at the start. The ownership of the "Hokiboshi Cup" is not yet decided.

OWING to lack of transport facilities the godowns at Hiroshima rented by the Red Cross Society, are filled to overflowing with presents to the troops sent there by charitable persons.

IT is stated that the Japanese commissariat at Chongpho was destroyed by fire on the 5th inst. The loss is estimated at ten thousand yen. The fire is said to have been caused by Koreans.

KAWAKAMI OTOJIRO, the well-known *soshi* actor, has to be escorted by some of his former followers both at the theatre and in the streets, to ward off the too pressing attentions of other *soshi*.

THE ravages of epidemic diseases in Japan during the first half of this year, have been reported as follows:—Cholera, 103 cases and 56 deaths; typhoid fever, 9,238 and 2,167

dysentery, 7,730 and 1,174; diphtheria, 2,535 and 1,454; eruptive typhus, 67 and 12; small-pox, 11,782 and 3,166; total, 31,455 cases and 8,029 deaths.

THE construction of the Odawara-Atami *jinrickisha* roadway has been delayed in consequence of a scarcity of coolie labour, due to the war, and the promoters ask for a prolongation of three months.

DURING a violent gale on the 11th inst. a train from Kompira, in Sanuki Province, had three carriages blown off the track. Only three passengers were in the carriages, and they escaped unhurt; the conductor was wounded.

COUNT ITO, the Minister-President, who was suddenly taken ill while on the journey to Hiroshima, has so far recovered as to be able to leave Nagoya and join the Head-quarters established at the western garrison town.

THE *Kaifu Maru*, belonging to Mr. Yoshizo Shimidzu, of Niigata, which was wrecked off Muroan, was insured for yen 7,000 in the Tokyo Marine Assurance Co., for yen 3,500 in the Imperial Marine Insurance Co. and for yen 3,500 in the Japan Marine and Land Insurance Co.

THE damage done in Ehime Prefecture by a recent storm is summarized as follows:—2 persons struck by lightning, 2 persons crushed to death, 19 persons wounded, 65 houses ruined, 62 houses damaged, 21 boats carried out to sea, and 9 bridges washed away.

REUTER telegraphs that the Japanese Government have threatened to withdraw their promise not to molest Shanghai if work at the Kiangnan Arsenal is continued, possibly with a view to provoking British interference. Cholera is raging in forty districts in Galicia. The work on the central section of the Siberian Railway is progressing rapidly. Captain Noel Wilmot Houssemayne Du Boulay, Royal Artillery, proceeds to join the Japanese Head-quarters in Korea, and Captain Alfred Edward John Cavendish, Argyll and Sutherland Highlanders, proceeds to join the Head-quarters of the Chinese, as Attachés. Admiral Tyrtoff has been appointed to the command of H.I.R.M.'s Squadron in Korean waters. The English Press comment upon the great importance of the Japanese victory at Pyong-yang, which renders it apparent that Japan is a considerable power in the East.

A FURTHER improvement may be noted in the Import trade, and Yarns have been taken daily to a fair extent, fine counts and doubles being most in request. Shitings are not so brisk, but the country trade must shortly force buyers to operate to supply immediate wants, and Fancy Cottons continue in moderate demand. In the Woollen trade, Flannels have been taken up as fast as landed; most woollen goods, however, are somewhat dull, though there is apparently business pending. The Metal market is generally quiet, but Pig Lead has reached a very high price, and as foreign is getting scarce the out-turn of the mines in the north is being stimulated to supply the demand. A fair demand and good deliveries of Kerosene have had an appreciable effect on the large stock, and values are maintained. There have been small sales of Sugar, both Browns and Whites at previous rates. A fair daily business has been done in Raw Silk, and prices are generally well maintained, while there is also something doing in Waste. The Tea trade has not been brisk, but this is more due to the paucity of the stock than to lack of demand, as buyers pick up all the good parcels of leaf that come to hand at recent figures. Exchange closes firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The fall of Pyöng-yang and the naval victory off the Island of Hai-yang have caused universal rejoicing throughout the country. No doubt had been entertained by the Japanese as to the victory of their countrymen at Pyöng-yang, but the news of the latter's fall has been a great relief, for people had begun to grow a little impatient at the apparent delay in the prosecution of the war. The metropolitan papers are louder than ever in urging the Government to continue the fight until the enemy shall have been completely humbled, and in warning it against the acceptance of negotiations for peace before dealing a final blow to China. It has always been feared by the press that the fall of Pyöng-yang might be the signal for the opening of negotiations for peace. The papers tell the Cabinet that the people are willing to bear whatever burden may be necessary for the prosecution of the war, and that it ought to accept no offer of peace until the enemy has been brought completely under Japan's power. They also urge the authorities to make every haste to take possession of Peking. We reproduce a few of the principal articles on this subject.

The *Yüi Shimpö*, after congratulating the country upon the signal victory at Pyöng-yang, observes that this engagement is simply the opening scene in a drama to be enacted hereafter. The real work has still to be accomplished, namely the awakening of the Chinese from their torpor of centuries by carrying war to their capital. Our contemporary, however, fears that the news of the defeat of their arms at Pyöng-yang may induce the cowardly statesmen of Peking to invite the mediation of a third Power between their country and Japan. Whatever offers they may make, the Japanese Cabinet is told that they should be rejected without a moment's consideration. China's object in making offers would simply be to gain time and let the climate do work which her soldiers have signally proved incapable of accomplishing. That such has always been China's game is proved by her conduct at the time of her invasion by the allied English and French forces. If, indeed, China consents to make no more interference in Korean affairs, to place Port Arthur and Wei-hai-wei in Japan hands until Korea shall have completed the creation of a sufficient army to protect her own independence, to the stationing of a Japanese force at Wi-jü, to the payment of an indemnity sufficient to cover the expenses already incurred by Japan for war purposes, as well as those necessary for the stationing of troops in the peninsula for a number of years to come—if China accepts these conditions, the *Yüi* thinks that Japan may cease the war. But it will take time to bring China to such terms at the present stage of war, and in the meanwhile the advent of winter will prevent the prosecution of war for at least four months. Thus, all things considered, our contemporary thinks it absolutely necessary for Japan to employ every endeavour to reduce China to a state of complete helplessness, and, until such a result shall have been obtained, not to entertain any hope of compromise or of a temporising peace. As to the funds necessary for the vigorous prosecution of the war, the authorities are assured that they need not be in any anxiety on that score, for the nation is determined to contribute whatever money is needed for the purpose.

The *Nippon* laughs at the ignorance displayed by Western nations about the actual condition of Japan, when they express surprise at the victories that have thus far attended her arms—victories that ought to have been foreseen by every unbiassed observer in the least acquainted with the Japan of to-day. To the Japanese themselves—these successes are nothing. They expect before long to take Port Arthur and Wei-hai-wei, to dictate terms to China. Short of such achievements, Japan will never be contented

Our contemporary, however, fears that jealousy may prompt some Power to step in between Japan and her enemy with an offer of mediation. Should such a high-handed proceeding be resorted to, Japan would never forgive it, by whatever Power it might be attempted.

The *Hochi Shimbun* alludes to the terrible climate in the north of China, and insists that Peking must by all means be taken before the coming of the cold season. There is talk of going into winter quarters in Moukden, but the *Hochi* regards the project as a disastrous experiment. Japanese travellers have passed the winter in Manchuria without much inconvenience, but their experience cannot be trusted in the present instance, for, in the *Hochi's* opinion, the troops could never be provided with necessities that are within reach of ordinary travellers; and moreover they would be exposed to hardships from which travellers are free. But the rest of the papers in Tokyo seem to hold a different view on the subject. They appear to take it for granted that, with proper preparations, Japanese troops could withstand the cold of Manchuria without much inconvenience.

As to the terms on which peace should be concluded with China after reducing her to a state of complete helplessness, diverse programmes have been published in the columns of the vernacular press. The *Chu-o*, as we noticed at the time, was the first to discuss this question. Its plan was that China should cede the island of Formosa and pay an indemnity sufficient to cover the expenses incurred by this country in the war. The *Kokumin Shimbun* then followed with a suggestion that a war indemnity of 500 million *yen* in gold should be demanded, so that the gold thus obtained might be used for the adoption of a gold standard in this country. During the present week, the *Kokkai* and the *Yomiuri* have discussed the subject. The former agrees with its contemporaries in demanding that the price of peace should be such as to cripple China's resources for a long time to come. Such an object can not, it thinks, be attained by the cession of Formosa or the payment of a large indemnity. It is of opinion that the possession of Formosa would be of little value to Japan, and might even prove an encumbrance to her. As to an indemnity, our contemporary strongly doubts the Chinese Government's ability to pay any large sum. The nation as a whole is very rich, but any attempt on the part of the present dynasty to raise a large sum by additional taxation would lead to the breaking out of serious rebellions. The Chinese Government might consent to pay an indemnity in yearly installments extending over a long period of time, but such a method would hardly answer the purpose in view, which is to cripple the resources of China, so that she might not be able to fight with Japan for some time to come. The best plan in the *Kokkai's* opinion is to demand (1) the delivery to Japan of all the war vessels under the Chinese Government, and the steamships belonging to the China Merchants Steam Navigation Company, and (2) the cession of Shanghai, so that the revenue derived from the customs duties may be employed for the redemption of the debts incurred by Japan in the prosecution of the war.

The *Yomiuri Shimbun* writes in a similar strain. It suggests that China should be compelled to deliver to Japan not only all her war vessels, but all the arms and ammunition belonging to her army.

Indignation against China's systematic disregard of the neutrality of Shanghai is increasing in this country. Even the *Nichi Nichi* declares that Japan is no longer bound to observe the promise she made to England about the neutrality of Shanghai, since that promise was given on condition that a similar attitude be observed by China. What is China doing in Shanghai? Our contemporary cites instances of China's violation of her pledge, such, for example, as the enlistment of foreigners for mili-

ary service, the purchase or hire of foreign ships for warlike purposes, the floating of war debts, the removal of buoys and lights, the activity of the arsenal at Kiang-nan, and so forth. Under such circumstances, the conditions on which Japan gave her promise to regard the neutrality of Shanghai have already ceased to exist, and unwilling as she is to disturb neutral trade, Japan may at any moment be compelled by the necessity of self-defence, to bombard or blockade Shanghai. She will of course endeavour to give notice of such a movement to foreigners, but in case of urgency, it may very possibly happen that she will be absolutely precluded from taking any such precaution. The *Nichi Nichi*, therefore, hopes that the foreign residents of Shanghai will be prepared at any moment for the bombardment or blockade of the place by Japanese war-vessels. The responsibility for having brought this calamity upon Shanghai will rest with China, which has failed to fulfil her pledges. What steps England might take in that event, is a question for which Japan has no concern. Japan will simply enforce her rights as a belligerent.

The extremely encouraging results of the floating of the war loan attract considerable attention in the columns of the vernacular press. Thirty million *yen* was the amount asked for, but the sum subscribed has exceeded over sixty millions. Many of the subscribers offered 10 or even 20 per cent. above par. Such a result is especially satisfactory, when we consider the state of the money market at the present time. The metropolitan journals are united in ascribing the issue to the patriotism of the people.

The political situation in the coming session of the Diet is beginning to engage the attention of the vernacular press. The manner in which the subject is discussed by the papers is one of the many proofs of the capacity for union possessed by the Japanese nation. Men of all parties and factions are so entirely united about the war with China, that even the organs of the extreme section of the Opposition call upon the new House of Representatives to bury in oblivion all past wrongs and give hearty support to the Government in the prosecution of the war. In order that the nation may be united in its struggle with China, the mistakes of the Cabinet are to be overlooked. On the other hand, the party organs advise the Cabinet to meet the Opposition with an equal spirit of cordial friendship and indulgence. The *Chu-o* is of opinion that, since the Government and the people are united for the prosecution of the war, there is little necessity for the holding of a special session. The session at any rate may be closed in a week, and the members of the Diet are advised to repair in a body to Hiroshima to offer their congratulations to the Emperor on the anniversary of His Majesty's birthday. The regular session that will soon follow is also expected by our contemporary to be calm and orderly.

The arrival of Lord Randolph Churchill has attracted considerable journalistic attention. Portraits and biographical sketches of him have been published by several of the metropolitan papers. Among other journals, the *Mainichi Shimbun* devotes a leading article to him. Introducing the noble lord as one of the most distinguished statesmen in England, our contemporary expresses hearty satisfaction in welcoming such a valuable guest to Japan. It hopes that its countrymen will be willing to do every honour to so distinguished a visitor, and that the great English statesman will carry away with him a stock of unbiassed knowledge about this country. The present is perhaps the best time for him to observe the peculiar character of the Japanese nation, to note how they are patriotic, how they are fitted for constitutional Government, how they are in every respect different from their neighbours in the west. In short, he will find no difficulty in perceiving the injustice that has habitually been done to Japan by the misrepresentations of the

EDITORIAL NOTES.

THE MINISTER PRESIDENT INDISPOSED.

THE *Nichi Nichi Shimbun* says that, according to a telegram received from Nagoya, under date of the evening of the 14th instant, the illness of the Minister President, which prevented him from proceeding to Hiroshima in the suite of the Emperor, could not be clearly diagnosed at once. The patient's temperature rose as high as 39.6° C. in the morning of the 14th instant, but in the afternoon it fell to 38.9° C., and there was a marked general improvement. Drs. Kumagaya and Kawara, of the Nagoya Hospital, are in constant attendance, and two of the most experienced nurses in the Hospital are employed. Some say that a cold from which the Count had been suffering for several days, and of which he neglected to take proper care, probably developed a grave condition. Pending the patient's recovery, his Excellency's suite, with Mr. Ito Miyoji, Secretary-general of the Cabinet, are staying at the Shukin-ro, in Nagoya, a hotel in which the Count took up his quarters on arriving in that city. A telegram sent from Nagoya at 1 p.m. on the 15th instant says that the Count's fever had fallen considerably since the previous night and that under the circumstances no special anxiety need be entertained about him. Another telegram from Nagoya says that on learning of the Minister President's illness their Imperial Majesties the Emperor and Empress instructed Dr. Baelz to proceed at once to Nagoya and attend the patient, and that the Doctor was expected to arrive in that City on the evening of the 15th instant. Countess Ito, who stayed behind in the Premier's residence at Isarago, Shiba, attended at the Palace on the 15th instant to wait upon the Empress and thank her Majesty for the gracious consideration shown to the Count. Some papers say that the Countess then proceeded to Nagoya incognito.

THE HONGWAN TEMPLE AND THE WAR.

THIS Temple has frequently played a conspicuous part in the affairs of State, and notably in connexion with the Restoration. Following these precedents both the retired Chief Abbot and the reigning Abbot of the famous seat of Shin, are endeavouring to the utmost of their power to render assistance in the prosecution of the War. The two Abbots either separately or in combination visited the barracks of Nagoya, Osaka, Hiroshima, Kumamoto, etc., and there preached to the soldiers so as to inflame their military ardour, and to make their minds serene about their destiny in the life to come. The following letter, said to have been sent to the troops in Korea in the name of the Chief Abbot, may be of some interest. The letter is prefaced by a statement of the satisfaction which the Abbot feels on learning of the land and naval victories which the Japanese warriors have lately accomplished, and the regret he feels at being prevented on account of important business at home demanding his personal attention from going to Korea and from exhorting them by word of mouth. The present war with China, the document continues, is an affair unparalleled in the annals of the Empire, an affair on the issue of which the welfare of the State and of the Court depends. Such being the case, what subject of the Empire which for more than twenty centuries has enjoyed the supreme benevolence of the Court should fail to show his unfounded gratitude by a spirit of sincere patriotism. Especially is this relevant to soldiers and sailors who are bound to apply themselves to the grave responsibility of conducting either offensive or defensive operations and to prove themselves pillars of the State. And yet, unless they feel confident of their destiny in the life to come they may quail amidst smoke and flying bullets, and may thus fail to bring victory to the army of Japan. It is therefore of the utmost importance for the Japanese soldiers on active service to have no fear about their fate beyond the grave. Now for the inheritance of future glory there is no need for the followers of Buddha to attend personally to religious discipline, owing to the fact that Buddha himself

for the benefit of all believers, underwent a prolonged religious discipline and finally attained Nirvana. Consequently, all who place an implicit faith in the teachings of Buddha and pass out of this earthly existence without entertaining any sceptical doubts of the attainment of a glorious future life, will be rewarded at once with an unbounded felicity in another world. It is to be hoped that by always keeping in mind the spirit of the Rescript which the Emperor issued to the soldiers some years ago, and also by respecting the principles of loyalty, filial virtue, and faithfulness the soldiers will relieve the anxiety of the Emperor and will at the same time fulfil the trust reposed in them by the forty million brethren of the Japanese Empire.

THE WHITE HORSE OF ISE.

ONE of the sights of the great shrine at Ise is the large white Nambu pony kept on the premises, just as white horses either alive or carved in wood or stone are found in many other Shinto shrines throughout the Empire. Some years ago a writer proved, in the Transactions of the Asiatic Society of Japan, that these quadrupeds were relics of that equine cult which has always been connected with sun-worship and the solar myth; and it seems clearly established that albino stallions have always been venerated in the temperate and northern zones of Asia, whence undoubtedly the superstition came to Japan. The white horse of Ise, however, is the most celebrated of his kind in this country and is popularly supposed to be gifted with supernatural powers. He is, it is stated, allowed to roam about the temple grounds as the fancy takes him. Just after the outbreak of the South-western or Satsuma Rebellion the animal suddenly disappeared and for three days was not to be found in his usual haunts, though carefully sought for. His re-appearance on the third day was hailed as prophetic of the ultimate triumph of the Imperial arms. Now the Ise papers relate that since that date, thirteen years ago, the white horse has never strayed beyond the boundaries of the shrine. But on the 27th of last month he was missing, and it was not until ten days later that he came trotting back, looking fresh and well. It goes without saying this phenomenon has been given the natural explanation: Japan will be successful in the war with China and the Imperial arms will win fresh laurels; but hostilities will continue for a three-times greater length of time than in the case of the Satsuma rebellion.

WELCOME TO DRs. KITASATO AND AOYAMA.

A COMMITTEE to welcome on their return Drs. Kitasato and Aoyama has met and arrived at the resolution embodied in the following manifesto:—We regard with unbounded joy and satisfaction the fact that Drs. Kitasato and Aoyama, commissioned with the duty of investigating into the cause of the plague, surmounting great difficulties and exposing themselves to serious dangers, have attained a complete success and have returned home in safety. It is long since the plague raged fiercely in any civilized community. For many centuries it was the scourge of Asia and of Europe. When the epidemic was at its height the ordinary pursuits of the people were entirely suspended, cities were deserted and human life was, as it were, at a standstill. But in recent years, the disease having been in abeyance, no scientific investigation as to its cause was possible. Recently the disease broke out in Hongkong, and the two doctors were promptly despatched by the Japanese Government to carry out investigations into its nature. Their task was soon completed. In less than a week after they began their investigations, they succeeded in discovering the cause of the disease. Thus a mystery of many centuries has been solved, and a discovery made that may, without exaggeration, be regarded as introducing a new era in the annals of scientific investigation. This is a discovery the benefits of which are enjoyed by every human being, and is not only a glory to medicine but may justly be regarded as tending to shed the lustre of Japanese progress throughout the world. We, the originators of the under-

taking, therefore intend to welcome the two doctors, to congratulate them on returning in good health, and to thank them for their magnificent work, with a view to commemorate this great discovery in the scientific world, and to stimulate and encourage posterity. At the very time when the Japanese Empire is about to display its military glory throughout the East we have this peaceful distinction to show before all the world. This is indeed a satisfaction never known before. We expect that our fellow citizens of the Empire will give their hearty co-operation to this undertaking of ours." The manifesto then goes on to state that the ceremony will take place on the 14th October, in the Library of the Imperial University; that a bronze statue will be given to each of the two doctors, and to the others in the party a letter of congratulation; that any person desirous of taking part in the reception is required to pay a sum of money ranging from 5 yen to 50 sen, to be sent to the Welcome Reception Office at the Sanitary Society of Japan, No. 7, Sojyurocho, Kyobashi, Tokyo, up to the 30th of this month, and so forth. There are more than sixty projectors, the President being Prince Konoye.

It is no doubt an excellent project to give a public reception to Dr. Aoyama and Kitazato, and the other members of the expedition to Hongkong; but we have an uneasy feeling that the oriental hyperbole of the above manifesto is somewhat out of keeping with the commemoration of a discovery made by the severely simple methods of western science.

SNUG QUARTERS.

THE house of a tradesman in Koishikawa-mura, one of the outlying metropolitan suburbs, has recently had a strange visitant. Since the end of last month it was noticed that the daily stock of boiled rice, not to speak of vegetables and other minor eatables, used frequently to disappear, without warning and in a most unaccountable manner. This was first ascribed to rats, but the theory had to be abandoned on account of the large quantity taken and the fact that the food was skilfully abstracted in broad daylight. A watch was kept, yet without discovering who the hungry thief was. The mysterious disappearances were finally attributed to some malicious fox, and offerings were made at the nearest *Inari-sama* shrine to secure freedom from further molestation. But even this devout step proved without avail. At last the police were notified and two constables came, who proceeded to make a very thorough search of the premises. One of them crawled under the house to see if a fox had really made his den there; instead of this, however, he found a roll of matting neatly spread out in the driest spot, some teacups and a teapot, a pillow, and the remains of a number of *al fresco* meals. Late that night the real thief was caught in the person of a discharged employé of the tradesman. Having no money and nowhere else to go, he had taken up his lodgings beneath the flooring of his former master's house, and had been living in ease and comfort, the only drawback being, as he declared, the impossibility of smoking after a hearty meal, fearing that the smell of the tobacco might betray his retreat.

A FAREWELL ENTERTAINMENT AT THE TOKYO BARRACKS.

THE 3rd regiment of the Infantry Division of the Tokyo Garrison, which is burning with impatience to be despatched abroad, held a farewell entertainment on the 11th instant in the barracks. At the entrance of the parade ground a green arch was erected surmounted by a tablet on which three ideographs, meaning Triumphant Return Gate, were represented by strings of dried chestnut. A dried chestnut is called *kachikuri* in Japanese, and its sound is thus identical with those of the characters signifying triumphant return. On the tables bundles of a shrub called *akoku* were set in place of flower vases, and as edibles an abundance of dried cuttle-fish, boiled beans, and pears was piled up. All these were also symbolical since the words *ika-nimo mameda*

fusho nashi kikoku, signify to be in the haldest health and to return home without any wound. The preparation being completed, the regiment, from the commanding officer down to the privates, assembled at the table and enjoyed the feast, drinking at the same time from casks of *sake* that stood by. After a short while two pigs with Chinese caps and queues made of woollen yarn fastened on their heads, were brought in. The poor beasts no sooner made their appearance than they were compelled to undergo an ordeal of ill-treatment that ended in their death, after which they were cooked and eaten. Three cheers for the Emperor and Empress concluded this novel entertainment.

THE PEERS AND THE WAR LOAN.

THE *Yiyu* is indignant to learn that the peers have resolved not to subscribe to the War Loan. This resolution originated from some of the leading peers, who have communicated their views on the matter to others and have thus dissuaded them from subscribing to the Loan, the grounds for their abstention are said to be that as the peers are bulwarks of the Throne and should as such risk their properties and even their lives in case of emergency, they should not act indiscreetly in the present affair. The subscription to the Loan should, they think, be left to commoners for the present, while the peers should reserve their assistance for an emergency. It was on this ground that the peers of highest rank abstained from contributing to the loan, but the reason given by the others is different. They say that as the Peer's Bank, which is worked by capital furnished by the peers, has subscribed four million *yen* of the Loan, there is no need for individual peers to subscribe. As above stated, the *Yiyu* is highly incensed with the peers for their conduct. It asks the peers of higher rank whether they are so blind as not to be aware of the anxiety of the Sovereign, who has just started for Hiroshima to conduct the war in person; and asks them if they think that the peers alone are ready to sacrifice their property and even their lives for the sake of their country. The Radical paper charges the minor peers with evading the duty of subscription by a contemptible excuse. "We are more and more convinced," concludes the *Yiyu*, "of the meanness and uselessness of the peerage."

KEEP WATCH FOR SPIES!

A CORRESPONDENT of the *Kokkai* urges the people to keep a strict watch for spies. The writer proceeds as follows:—Some weeks prior to the breaking out of the war, I was travelling alone in the northern districts of China and, after having completed certain business, I returned home four or five days ago, that is on the 7th or 8th instant. After the news of the declaration of war reached me, I travelled along the river Lwan, in the north-east of Chihli, and thence passing through Peking, Tientsin, and Chefoo, I succeeded in reaching Shanghai in safety. I found everywhere the most vigilant search was being made for Japanese, not only by the authorities but also by the common people. Thus I found that whenever the common people met travellers whom they regarded more or less with suspicion, they questioned them as to their native places, businesses, and so forth, and even attempted to enter into conversation with a view to watching their behaviour in an unguarded moment. In short, their whole conduct was something very different from the indifference which my previous experience of the lower-class Chinese had led me to expect. Though they were my inveterate foes, I could not but admire their enthusiasm. The contrast between their conduct and that of the Japanese people is striking. Having arrived at Nagasaki, I at once started for Tokyo by way of Bakan, Kobe, and Osaka, a distance of some 800 miles. My hair, which was dressed in Chinese fashion, I concealed by putting a hunting cap on. But a careful scrutiny would have been sufficient to show that I was wearing a Chinaman's queue, and I was prepared to find myself somewhat roughly handled. I was entirely mistaken. The wearing of the cap was enough to hoodwink the

people, and I arrived in Tokyo without any molestation. I had an official certificate of identity with me, but I had no occasion to make use of it. Think of this and mark the difference. The Japanese are wont to despise the Chinese as destitute of patriotism, and as little more intelligent than pigs; and yet while the Chinese keep such a strict look out for Japanese spies, the Japanese who boast of their loyalty and patriotism appear negligent by comparison. There are several hundred Chinese who, having been educated in Japan, are undistinguishable in conversation, manners, and so forth from the natives; and I presume that at least two hundred of such Chinese subjects must be secretly dispersed among the people and must be carrying on espionage upon our military and political affairs in obedience to the secret orders of their home Government. And yet I hear that the Japanese Police have caught only two or them, while not an instance has come to my ears of the people having secretly informed against a Chinese spy. Such a state of affairs is not only derogatory to the dignity of the nation but also vitally affects the welfare of the country, and I cannot but enjoin the people to be on the alert in this matter.

THE CONTEMPLATED DOCK IN YOKOHAMA.

THE Yokohama Dock Company, started several years ago by leading capitalists of Tokyo and Yokohama, is required, according to the terms of its charter, to commence the work of construction from the 4th prox. The scheme was first drawn by the late Major-General Palmer, but owing to the necessity of introducing some amendment it was subsequently placed in the hands of a certain marine engineer. The altered plan having been completed, the leading officers of the Company held a meeting a few days ago and resolved to start the works on the basis of the new scheme from the 4th proximo. The original project of the Company, says the *Yiyu*, was to invest a sum of three million *yen*. This was, however, subsequently modified owing to the consideration that to raise such a large amount of capital, though it was not required at once, at a time when the money market was tight, would be unwise. Consequently it was decided that the capital should be temporarily fixed at half a million *yen*, with power to add to it as occasion arose, and that a dock 375 feet long, 65 feet wide, and 28 feet deep, capable of receiving a ship of about 3,000 tons capacity should be constructed at the outset. A smaller dock for ships of 1,500 tons capacity and a floating-dock for ships of about a third of these latter sizes are also contemplated. There is another opinion among the members of the Company: they maintain that as the steamers and war-ships of the world are becoming bigger and bigger in size, a dock capable of accommodating a ship of above 10,000 tons should be constructed. This latter opinion prevailed at one time, and a design for such a dock was actually prepared. Subsequently, however, objections were raised on the score of economy, and the question what kind of dock shall be constructed after the first is completed remains still obscure.

CONTRAST BETWEEN JAPAN AND CHINA IN CONNEXION WITH THE WAR.

MANY things, writes the *Mainichi*, may be cited as instances of the strong contrast between Japan's and China's methods of conducting the war. To give two or three examples, Japan, deeming it a national shame and also an inconvenience to depend to any extent on the help of foreigners, has pursued the policy of dispensing with their service altogether in posts directly connected with belligerent operations. Thus the Nippon Yusen Kaisha has substituted Japanese for foreigners in every ship chartered for Government service, and has sent the foreigners ashore, where they have nothing to do but to receive their salaries. Very different is the method pursued by China. Not only the command of her principal men-of-war, as the *Zing-yuen* and *Chen-yuen*, is entrusted to foreign employés, but even in the affairs of her military staff the aid of foreigners is enlisted. Again, in the battles at Söng-hwan and A-San, and the naval

engagement at Phung-do, the victory of the Japanese forces was conspicuous. Yet the Japanese Central Staff takes such precautions against the abuse of rewards that by no means unmixed applause was bestowed on the conquerors. China's action is precisely the opposite. Her Generals Yeh and Seh sustained an ignominious defeat at A-San and fled for their lives, leaving behind them their standards. Yet they have been rewarded by their Government for distinguished merit! In Japan a reward does not always follow even a victory; in China defeat and flight are often recompensed. Again, the Japanese troops are very prompt in attack but slow to retreat, whereas the Chinese are shy as maidens on the eve of a charge but bold and resourceful in running away.

The *Mainichi Shimbun* is, we think, mistaken in saying that the services of foreigners have been dispensed with in steamers engaged for the transport service by the Japanese Government. We know that several foreigners are still employed in those steamers, and that some were quite recently appointed.

INDIAN MAGIC.

A CORRESPONDENT of the *Province* (Toronto) communicates the following story:—The curious interest, notwithstanding the excusable incredulity of some readers, occasioned by your account of well authenticated tricks to be witnessed in parts of India prompts me to relate the substance of a scene witnessed by a party of British officers and their guests at their private camp while enjoying a brief season of outing in the mountain regions of India. The few friends, of whom I had the honour of being one, were entertained in a most royal manner. Each day during our stay in camp had witnessed some enjoyable surprise. We had been treated to polo, cricket, tennis, horse racing, etc., and we had begun to wonder each night what would be the surprise on the morrow, when one morning there came to our camp, as if by mere chance, a venerable fakir bestride his donkey and accompanied by a youth of perhaps twelve years of age. The manner in which Captain Dickinson, who, by the way, was a brother-in-law of the late Charles Stewart Parnell, approached the fakir, and the confidential manner apparent in their brief colloquy, plainly indicated that the visit of the fakir to the camp had been pre-arranged. After a little parleying, there appeared to be a unanimous wish among the officers and their guests to witness the rope trick. We had gathered about the fakir, boy, and donkey, forming an irregular circle; and were kept for fully a quarter of an hour waiting while the fakir passed several times around the inner circle, with his keen eyes taking in every face with an intentness which we felt almost inclined to resent. Apparently satisfied with his scrutiny, he opened a pocket or pouch attached to his girdle; and taking from it a cord, looked intently into the sky for full half a minute and, drawing back his arm, threw the cord immediately toward the zenith. We saw the cord uncoil as it left the fakir's hand, and go up, up out of sight. At this moment our surprise was heightened by seeing the fakir's boy seize the cord and climb hand over hand, as a sailor climbs, only faster, and pass into the cloud mist which hung above us in an otherwise clear sky. Not a word up to this time had been spoken. The fakir stood holding firm the cord for a full minute. He then shook it, and called the boy to come down. After waiting another half minute, he, with seeming impatience, grasped the cord with the other hand, followed the boy, and passed out of sight. I cannot say how it was with the others, but I had scarcely breathed since the boy had disappeared, and when the old fakir passed from sight I am sure I could hear my heart beat. A shout now broke from the assembled officers, which was replied to by a bray from the donkey. The little beast looked, as if for the first time missing his master's presence, and, seizing the cord between his teeth, he followed him into the sky. I was under too great a stress of excitement to measure time definitely; but it

Original from

could not have been exceeding another minute until we saw the donkey returning with the boy's head in place of his own, and ridden by the solemn-visaged old fakir. The boy brought up the rear, as we had witnessed him do as the three came into camp, the only difference being that he had exchanged heads with the ass, whose long ears he now flapped in accompaniment to the cudgel with which he belaboured the poor beast; and reaching *terra firma*, the trio took the trail by which they had come to camp, and in a few minutes had disappeared from view. Was it mesmerism? Was it hypnotism, or psychic influence? We all knew, after collecting our senses, that what we had seen did not in fact occur. It was well that this entertainment had been planned to take place on the last day of our stay. We, the novices at least, were in no condition for levity on the morrow.

LE DÉPUTÉ MALGRÉ LUI.

In the recent election, many of the defeated candidates spent large sums of money in canvassing and worked hard for success, but one of the successful candidates, Mr. Yasuda Senjiro, elected by the citizens of Honjyo and Fukagawa, did not spend a *sen*, nor trouble himself in the least about his election, for he spent the period of the contest at Nikko, entirely unconcerned about the result. He was elected by an enormous majority, and those who had worked in his behalf expected that he would be much gratified by the news. They were entirely mistaken, for Mr. Yasuda, it appears, was elected contrary to his own wishes. There appear to be not a few such instances, in which the whole matter is arranged by a few influential electors of the district, the person chiefly concerned being indifferent or even unwilling. The electors of the Fukagawa and Honjyo district were at first divided into two parties, one party intending to support Mr. Ota Minoru, an ex-member of Parliament, while the other had at that time no chosen candidate. A meeting of the influential electors was held at the Nakamura-ro on the 15th ult., to confer together on the choice of a candidate. There was a conflict of opinion, with the result that the proposal to support Mr. Ota was rejected, and in place of him it was decided to recommend Mr. Yasuda. Mr. Yasuda was in Nikko at that time, and in order to secure his consent to stand for parliament, Mr. Amano, an elector of the district, was sent up to see him. When Mr. Amano met Mr. Yasuda and told him of the business on which he had come, Mr. Yasuda seemed rather undecided, and said he had several objections to taking the proposed course. A friend of Mr. Yasuda, who happened to be by and was listening to the conversation of the two gentlemen, tried to argue him out of his objections, and earnestly advised him to consent to stand. Mr. Yasuda replied that he would consider the matter and would give a definite answer next morning. Somehow, Mr. Amano was under the impression Mr. Yasuda had consented, and being in a hurry to get back to his district and to make preparation for the election, he started for Tokyo that very evening. He told his brother electors that Mr. Yasuda had agreed to their proposal, and, as already explained, their candidate was elected without difficulty. Their labours were, however, in vain. Mr. Yasuda declares that he did not give his consent at all. He says that he woke up next morning with the determination not to stand, and sent a messenger to the hotel at which Mr. Amano had been staying to ask him to come over to his house. Finding Mr. Amano already gone, he instantly posted a letter to him declining to accept the proposal. Now, whether Mr. Amano thought that Mr. Yasuda would give his consent when he had been successfully elected, and therefore said nothing to the other electors about the letter, or whether the letter miscarried, is not clear, but anyhow there has been a misunderstanding, and an awkward situation is its result. The majority of the influential personages of Honjyo and Fukagawa had visited the voters of the district and asked them to give their vote to Mr. Yasuda. They thought therefore that their honour would

be compromised should Mr. Yasuda persist in his intention of resigning his seat. Messrs. Shibuzawa, Okura, and others have earnestly advised Mr. Yasuda to consent to take his seat even if for one or two days. When he was thus urged, Mr. Yasuda replied that he would consult with his relatives and asked for time to give answer. In a few days he wrote to the effect that in the opinion of his relatives to sit only one or two days in the Diet with the intention of giving up his seat after that would be a shallow pretence, and that he could not consent to do it. Several of the canvassers are members of the District Council, and they are deliberating whether it is not proper for them to resign their seats. The account is taken from the *Yiji*. The district is unfortunate. In the previous general election one of the two candidates was Mr. Oku Saburo-bei, who was at the time of the election on his way home from Europe, and got the news of his election when he reached Colombo, if we remember rightly. It was fortunate that he did not decline the proffered seat as Mr. Yasuda has done, but he evidently soon had enough of Parliamentary experience, for he represented Honjyo and Fukagawa only for week a two,—without opening his mouth even once, and he declined to be a candidate for réélection.

VIRTUE IS ITS OWN REWARD.

The following note appears in a recent number of *Nature*:—

We have often in these columns had to complain of the backwardness of the Government of this country to recognise the value of men of science and the work in which they are engaged, and a fresh instance of this slowness of vision is furnished in a recent number of the *Electrical Review*. It seems that of the deputations present at the Congress at Chicago, the delegates who represented France and Germany had the whole of their expenses paid, and were rewarded according to their several merits with decorations, honours, and with courteous thanks. The representatives of Great Britain alone have been ignored entirely; and, so far from their services receiving remuneration or thanks, it is doubtful whether her Majesty's Government even know the names of those who looked after British interests and maintained the credit of Britain on this most important occasion. Yet they were all men of the highest eminence, who sacrificed much time and trouble to this thankless business. According to a contemporary, among them was one whose labours have been rewarded abroad with every kind of honour and acclaim, whose work has wrought incalculable benefit, whose inventions are in constant universal use, who gave his greatest discovery freely to the world—and who has never in his own country received the smallest official recognition or distinction. Truly, a prophet is not without honour save in his own country and among his own people.

We have been sufficiently curious to examine the list of British Judges at the Chicago Exhibition. It contains more than forty names, but among these four only are the names of distinguished inventors. They are Prof. George Forbes and Prof. W. E. Ayrton (Judges of Electrical Appliances), Prof. Sylvanus Thomson (Judge of Scientific Apparatus), and Prof. John Milne (Judge of Instruments of Precision).

HOW LI HUNG CHANG GOT BURNT.

PLAYING at soldiers is a fascinating pastime for boys the world over, and as heartily enjoyed in Japan as in any European land. Every toy-shop displays miniature swords, spears, halberds, bows and arrows, paper helmet, and card-board armour, all of the olden type; for the heroes about which Young Japan reads are one and all men of the pre-*Meiji* days: Hachiman-taro, Yoshitsune, Kato Kiyomasa, Yoritomo, and the rest. Since the outbreak of the war with China, the game of soldiers has assumed a new form. Every one wants to play the part of the Japanese soldiers, and no one is found willing to impersonate the Chinese. Yet there must be an enemy, or the game is flat and uninteresting. In Mita District, the other day, a number of boys ranging from twelve to fifteen years of age got up a mimic street representation of the Sōng-hwan battle. The Chinese troops were, for obvious reasons, not impersonated, but their absence was more than made up for by the tallest lad who volunteered to take the trying rôle of Li Hung-Chang. With a queue made of shavings he charged alone and in person

upon the mob of Japanese irregulars, only to be met with a storm of *nankin-hanabi*, a certain kind of firework that explodes on striking any object. Just at the moment of Li's fiercest rush, one of these unpleasant missiles struck him in the nape of the neck, inflicting a painful burn. This broke the Viceroy's doughty heart: he sat him down and wept; while cheer upon cheer rose from among his adversaries and the crowd which had been attracted by the boys' noisy play. Angered at their want of sympathy, Li hereupon said that he "wouldn't play any more" and marched off homewards, amid the derisive laughter of his opponents.

MOROCCO.

OUR readers will have noticed the telegram published in our issue of Saturday, taken from the Manila papers, and dated August 5th, stating that Abdul Aziz, the new Sultan of Morocco, was dead, and that it was believed that he had been poisoned. The news has not yet been confirmed, but it is likely enough to be true, for Morocco is a land where no man's life is safe from hour to hour. Under the title of "A Land of Incredible Barbarity," the Earl of Meath publishes an article in the July number of the *Nineteenth Century* describing the impressions produced by a recent visit to this unhappy country. Morocco, he says, is the most barbarous land he has ever seen. "It is a country where injustice reigns in the place of law, where might is right, where, at this day and hour, in this nineteenth century, treacheries are perpetrated and cruelties committed which could only find their equal in the most horrible stories history has handed down to us of the brutalities of the middle ages."

The Earl of Meath thus describes the way in which the ruler is chosen:—"The Emperors of Morocco do not succeed to the Crown by right of inheritance. Theoretically they are chosen by the people from amongst the descendants of the Mahomedan Prophet; practically they are placed upon the throne by some Palace intrigue, or by the influence of some man, or body of men, powerful and energetic enough on the death of a Sultan to seize the reins of power, to bribe the soldiery in the vicinity of the Palace, to destroy, banish, or outwit the other claimants to power, and to effect the proclamation in form of the Sultan of his or their choice. The late Emperor became Sovereign in no different manner from that of his predecessors. It need hardly be said that the man who interferes in the election of the Monarch of Morocco risks all upon the cast of the die. If he fails, and the rival claimant be successful, the would-be king-maker, and all his kith and kin, may consider themselves fortunate if, by a precipitate flight, leaving all their worldly goods behind, they are able to escape from death and possibly from torture. The man, therefore, who succeeds in placing a sovereign on the throne of Morocco has the strongest possible claim on the gratitude of the autocrat whom he has successfully installed in power. How did the late Sultan reward the subject who risked for him his life and possessions? Some time after his accession, when he began to feel himself upon the throne, and without even the pretence of a quarrel or of an accusation, the late Emperor cast this man into one of his dungeons, and there he remained until a few months ago, when he was at length released after an imprisonment of fourteen years. The motive for this crime was probably fear lest the chief who had been powerful enough to raise him to the throne might some day use his influence in favour of another."

After giving numerous instances of the acts of cruelty and oppression that are incidents of every-day life in Morocco, atrocities compared with which those of a Verres seem acts of kindness, the writer goes on to point out what, in his opinion, ought to be done: "At the commencement of this paper I stated that it is international jealousy, suspicion, and fear, which prevent the Powers of Europe and

Original from

America from taking united action to sweep from the face of the earth this unspeakably barbarous tyranny, a government only in name, which crushes to the ground the miserable population of Morocco, render unproductive vast lands which formerly were the granary of the world, hinders the development of Africa, and by its close proximity to Europe is a standing reproach to the civilising influences of Christianity. Let two or three of the leading countries of the world come to an understanding in regard to the future of Morocco, and there can be little doubt that the others would either rejoice over or acquiesce in any settlement which would replace the iniquitous tyranny at present in force by a stable and righteous administration. Any Government which would open up the country to commerce and civilisation by encouraging enterprise and thrift, and which would enable that portion of the north of Africa to regain the prosperity which at one period of the world's history it is known to have possessed, would be worthy of universal gratitude. The united influence of Europe and America could hardly be employed in a better cause than in compassing the delivery of the six million inhabitants of Morocco from the intellectual darkness, physical torture, and cruel robbery and oppression which for centuries they and their ancestors have suffered at the hands of their barbarous rulers. The Moorish people have some right to look to Christian nations for relief, as the continuance of their sufferings to the end of the nineteenth century is partly due to the criminal apathy and jealousy of the leading Christian nations."

DUKE'S JAPAN.

It is not that any one of the name of Duke has written a work on Japan. "W. Duke, Sons & Co." is the style of one of the many branches of the American Tobacco Company; the inventors of the "Cameo," "Pin-head," "Duke of Durham," and other well-known brands of cigarettes, all of which have sold literally by millions in this country. Probably in grateful recognition of this popularity the firm have added to the list of photographs accompanying each box of their various brands a number of suppositiously Japanese scenes. "Flower Day in Japan," is not at all badly done, although there is no recognized festival of the kind, at least no one day annually set apart to Flora. "Parliament Day" is unsatisfactory. In the foreground, and evidently in a gallery, stands a Japanese female figure, incorrect in every detail from her hairpins to the very pattern of her robe. She is gazing at an immense parterre wherein, dimly outlined, one catches a glimpse of long rows of shaven heads and *chon-magé*. It may surprise "W. Duke, Sons & Co." to hear that the old-fashioned way of dressing the head is obsolete. The only member of the Imperial Diet, in either House, who still clings fondly to the old queue, is Prince Shimazu of Satsuma. Still more wonderful is the "seimseim," one of the strange musical instruments "packed in Duke's cigarettes," of course as a chromolithograph. This is evidently intended for the *samisen*, although the fair player has her robe fastened to the left instead of the right, holds the instrument in the wrong hand, has five instead of three strings to play on, has stuck a number of pins at random in her skull, and finally has curly hair and a gold bracelet with massive bosses on her upper right arm. The Japan of Messrs. Duke & Co. must be a novel country.

QUIET BUT HAPPY.

THE news of the great victory was received in Tokyo with no particular demonstrations of joy beyond a pretty general display of the national flag. Beaming faces were seen everywhere, and the streets were unusually crowded, but there was no shouting or cheering. In most of the larger Buddhist temples special thanksgiving services were held on Monday afternoon and evening, while the Yasukuni Shrine had a constant stream of worshippers, praying for the souls of those who had fallen and for those still in the field. Ginza was thronged, particu-

larly in the neighbourhood of the newspaper offices, where telegrams were placarded every now and then and read by the hundreds who kept moving up and down in quest of the latest and most authentic news. As the evening wore on the *Nichi Nichi Shim-bun* lighted the great gas-jets in front of its building, a thing which is done only on very great occasions. Certain foreigners expressed their surprise at the quiet manner in which so great an announcement was taken. The reply was eminently characteristic of the Japanese. "But this is only what we knew would happen; it was a matter of course; why should there be any unusual display or demonstration if the victory of our arms was positively assured from the outset?"

MAX O'RELL AND SUNDAY OBSERVANCE FANATICS.

THE case of the Sunday Observance Society against the Leeds Sunday Lecture Society has been concluded, judgment having been given for the defendants, and Max O'Rell, the lecturer, takes the Secretary of the Observance Society, to task as follows in a letter to the *Chronicle*:-

I feel sure that you will believe me when I tell you that it would be purest affectation on my part to say that I am in the least concerned about the criticisms the secretary of the Lord's Day Observance Society may wish to pass on this or any other of my lectures. A lecture which for years has been acknowledged to be a lesson, conveyed in a humorous form, in international courtesy and good feelings, this "Christian" secretary has never heard. Yet he writes to the papers and declares it to be made up of "vulgar jesting." Nothing in it to forgive, nothing in it to admire. Christ was crucified by the Sabbatarians and the Pharisees who 2,000 years ago aired their self-righteousness in Palestine. If He should return to the earth He would be again crucified by the Sabbatarians and the Pharisees of the present day. When I think that our Lord is reported in the Gospel to have taken a walk on the Sabbath in the cornfield and plucked the ears of corn, I am afraid He would not be safe in the sacrilegious hands of the Lord's Day Observance Society.

BURNING OF THE YUTEN-JI.

ONE of the most remarkable and certainly the wealthiest Buddhist temple in the vicinity of Tokyo, is the Yuten-ji at Meguro-mura, some nine miles away from the city proper. The erection of this temple is surrounded with fanciful legends, one of which has been successfully dramatized. Yuten was the name of an acolyte of a certain shrine some centuries ago, who was noted for his stupidity and forgetfulness. No matter how he applied himself to the study of the Buddhist litanies, he invariably forgot each morning what he had laboriously committed to memory on the foregoing day. Believing himself disgraced by all this, he began to beseech the good Fudo night and day, praying that he might become at least as clever as ordinary mortals. He fasted; he spent whole nights in impassioned prayer before the shrine of Fudo; he exposed his body to fire in summer and the snow in winter. One day, being well-nigh exhausted by his ascetic practices, he was lying down and fingering his rosary, when suddenly Fudo himself appeared, in a blaze of roseate light. In thunderous tones the god declared that he, Yuten, had bad blood in his veins. This blood must be extracted, or his worshipper would ever remain stupid and a fool. With these words Fudo showed the awe-struck young priest two swords, a long and a short one, and then asked which he was prepared to "swallow"? Deeming death to be inevitable in either case, Yuten replied that he chose the longer, which was immediately plunged down his throat. A gush of black blood followed and the god disappeared. Yuten arose; he was seemingly uninjured and had never felt so well. New and intelligent ideas seemed to swarm in his brain. From that time forth he became noted for his learning and eloquence, and the result of his life-work was the building of the Yuten-ji, dedicated to his patron Fudo. The story of the miracle found ready credence, and the Yu-ten-ji gradually became one of the richest of Buddhist temples and was patronised by all classes of society. The braziers and other temple-furniture were made of solid silver; priceless screens stood here and there; scrolls

written by famous calligraphers were preserved in the treasury; the carvings were in the highest style of art and done in the costliest woods. A rough estimate of the value of the temple-possessions was made last year, and they were found to total not less than half a million yen. It was in this famous place that, in some unexplained manner, fire broke out shortly before midnight of the 12th instant. The temple was completely destroyed, and though a large portion of its treasures was rescued, still many priceless relics perished in the flames. The loss is said to be not less than fifty thousand yen, while most of the property burned is irreplaceable.

TO ENSURE SUCCESS.

THE manner in which various classes and communities of the people have set to work to render what assistance they can to the army in the field, is very noteworthy. Not to speak of ready-money subscriptions, donations of food and all sorts of little luxuries—never so highly appreciated as when far from home and fighting in a strange land—those whose means have not permitted their doing this much have thought out other plans by which they may share in the honours falling to their country. We read that the inhabitants of one small town in Ehime Prefecture have unanimously and voluntarily bound themselves to do with less food and without tea—and what that means only one who has lived among the Japanese can appreciate—in order to raise funds sufficient to send certain of their number to Korea with a long line of gifts for the troops. The people of another place, a village in Shizuoka, have gone *en masse* to the summit of Fuji, where they still are, there to offer up unceasing prayer for the success of the arms of Japan. All the villagers of one well-known place in Fukushima have taken the pledge, or rather, mutually promised not to touch *sake* until the war is over and the final triumph of Japan unquestioned. The money thus saved is to be forwarded to the military authorities as a free will-offering. The Yasukuni Shrine, Tokyo, is a sight worth seeing, for here one meets with crowds of the poorest, all of whom offer up fervent and oft-repeated prayers for the safety and victory of their countrymen in the field. The Hachiman Temple in Fukagawa is holding three great services daily, the whole court-yard and surrounding park being filled with worshippers on these occasions; for Hachiman is the god of war, the *Kwan-ti* of the Chinese. Indeed nothing can be more touching and praiseworthy than the unbounded zeal and fervency shown by all classes. And this in the land where the *Spectator* denies all national sentiment!

CHINA TRADERS' INSURANCE COMPANY, LIMITED.

THE following is the Report for presentation to the shareholders at the twenty-eighth ordinary meeting, to be held on Saturday, the 22nd inst.:—The Directors have the pleasure to lay before the shareholders a statement of the Company's accounts for the year ended April 30th, last. The net premium earned amount to \$757,077.24 as against \$703,363.06 collected during the previous twelve months. The working account shows a balance at credit of \$559,147.20, which sum the Directors recommend be appropriated in the following manner:—A dividend of 20 per cent. to shareholders, \$120,000.00; a dividend of 15 per cent. on contributions, payable to all contributors of business whether shareholders or not, \$100,000.00; to reserve fund, \$50,000.00; to be carried to new account, \$289,147.20—\$559,147.20. The reserve fund, with the above addition, will amount to \$800,000.00.

DRASTIC MEASURES.

ON the day of the announcement of the victory at Pyongyang," writes a correspondent, "there was a general feeling of triumph in the metropolis, and nowhere more apparent than in the schools. Young Japan being patriotic before all else just at present. It was probably in consequence of this excitement that a certain Japanese teacher of English gave his class the following subject for a composition, to be writ-

Original from

ten without dictionary on the spot and in half an hour's time:—"What shall we do with China?" A number of most interesting if slightly incoherent essays was the immediate result, one of the best reading thus: "After this overwhelming victory our army will entrance upon still larger battles and shed a very greatest quantity of Chinese blood. Being also victorious in those battles, we shall advance to Peking and compelled them to sue for peace. When they do so then we will torment them, telling them all the faults they have done. This management being done, we will conclude a new treaty while in possession of the capital, just as the French did with China; and finally we will take a large ransom from them." This is given word for word as it was written. The other compositions were all couched in similar forcible language and advocated no less drastic measures.

HANCOCK, THE WALKER.

ARTHUR HANCOCK, once the fifty mile walking champion of the world, has arrived in Yokohama after a lengthy tour through the East. In Hongkong recently he did four miles in 35 minutes 25 seconds, outwalking six men who took him up at intervals along the track. He is a Jersey man, and was born on the 14th Aug., 1856. His first public performance was at the Lillie Bridge ground, on October 16th, 1878, when he received £20 for walking 50 miles in 10 hours. From that time on he was continually winning walking contests, and in 1880 won the fifty mile championship in 7h. 58m. 3s. He afterwards went abroad, first to America, then to Australia and New Zealand. After returning to the old country for a while, Hancock went to South Africa, giving several exhibitions in Johannesburg. From the Cape he journeyed to Calcutta, and since then has come by way of Allahabad, Lucknow, Meerut, Bombay, Poona, Bangalore, Madras, Colombo, Rangoon, Penang, Singapore, Hongkong, and Shanghai to Japan. He is anxious to give exhibitions here, and will meet eight men at a given distance, each man to do only one-eighth of the match. It is hoped that arrangements will be made here to give Hancock a show, as he is undoubtedly a very fine pedestrian, and if the committee of the Y.C. and A.C. will interest themselves by allowing the use of their cinder path, the public will have the opportunity of witnessing a performance that has not previously been seen in Yokohama.

THE CHRYSANTHEMUM EXHIBIT.

PARTICULARS concerning the unusual fine display to be expected this year at Dango-zaka, Tokyo—to which reference has already been made in these columns—are now published by the metropolitan journals. The four largest exhibitors are the well-known florists Ueso, Ueju, Ue-ume, and Tane-han. The principal scenes that they will florally depict are as follows:—

URSO:—(1) Lieutenant Gouji's party in their first exploring tour after landing on the Kuriles. (2) The death of Captain Matsuzaki in the battle of A-san. (3) An episode from one of the old *monogatari*.

UEJU:—(1) Minister Otori at the gate of the palace of the Korean King, threatened by the native troops. (2) The battle at A-san. (3) A skirmish in the streets of Seoul.

UE-UME:—(1) Minister Otori holding his final meeting with the Chinese Resident Yüan. (2) Battle of A-san and the flight of the Chinese troops.

TANE-HAN:—(1) The Naval Engagement of Phung-lo. (2) The sinking of the *Kowshing*. (3) A scene from Kawakami's melodrama at the Asakusa theatre. (4) Battle of A-san and spoliation of the Chinese encampment.

Judging from the above the show ought to be superior to anything that has yet been done, and the vernacular press assures us that this will actually be the case.

FALSE WEIGHTS AND MEASURES.

FOR having in his possession and using false measures, a well-to-do Yokohama rice-merchant was recently arrested and is now awaiting trial. The case is fortunately an unusual one, and it is expected that the full penalty of the law will

be dealt out to be fraudulent seller. He had for some time been suspected of malpractice, and official examination of the measuring-boxes used by him showed that they were, one and all, supplied with false bottoms, so that each customer was cheated at the rate of about 5 per cent. It is stated that the man's employes were compelled under various threats to connive at the imposture; but willing or unwilling victims, they have been arrested and stand in imminent danger of a long term of imprisonment.

DEATH OF REAR-ADMIRAL HIPPLESLEY.

THE following notice will be read with regret by many friends in China and Japan:—

The death is announced of Rear-Admiral Henry Nelson Hippisley, who served with distinction in the China war. He was midshipman of the commodore's galley at the destruction of the flotilla of war junks in Fatsan Creek when Commodore Keppel so distinguished himself in June, 1857, and was slightly wounded by a spear at the taking of the Fatsan fort. He was present at the action with the Mandarin fleet at Escape Creek and at the siege and capture of Canton (for which he received the China medal, with the Faishan and Canton clasps), and as flag lieutenant to Admiral the Hon. C. G. J. B. Elliot in the *Bombay* when she was burned at sea in December, 1864. Admiral Hippisley commanded the *Hornet* and the *Cleopatra* on the China Station. He received the thanks of the Foreign Office for services rendered in connection with Sir Henry Parkes' mission to the King of Korea, and was also thanked by the Italian Admiralty for co-operation with Captain Acciomi, senior naval officer at Shanghai, during the French operations in North China.

PROFESSIONAL JEALOUSY.

WHEN Ichikawa Danjuro was still a young man and had not yet attained the height of popularity he now enjoys, it is said that he experienced much ill-treatment at the hands of his brother professionals, who were jealous of his ability and rapidly increasing fame. Threatening letters were frequently received and things went so far that he was forced to have private detectives guarding him. Precisely the same jealousy is now being experienced by the well-known *soshi* actor Kawakami Otojuro, to which is added, in this instance, persecution by members of his own former *clientelle*. The elections being over, a good many *soshi* are at their wits' end to make a living, and it appears a fixed idea with them that Kawakami's troupe should always be ready to receive impecunious brethren, be they endowed with histrionic talent or not. Kawakami's rejoinder that the Asakusa-za is not an asylum for out-at-elbows hoodlums has aroused fierce indignation. His life being in positive danger, he now goes abroad under *soshi* guard, and even the doors of his dressing-room at the theatre have to be tiled. A well-to-do *soshi* in any other than a blustering career being phenomenal, Kawakami has now to pay the penalty of his success.

MIMIC WARRIORS.

WE noticed the other day the report of a hard contested battle between swallows and dragonflies in Fukushima Prefecture, the latter being triumphant. Now comes a story from Miye Prefecture of a suspiciously similar nature. On the 10th inst., at a place called Kanda-mura, a great fight occurred between two enormous clouds of wasps: one party representing the native horn contingent, the other an invading host. Great numbers were slain, eye-witnesses reporting that the dead and wounded covered the ground in heaps. The conflict raged from nine in the morning till four in the afternoon, when the invaders proved successful at every point and settled quietly down to take possession of their hard-won homes. The moral is too obvious to need elucidation. Our informant, the *Miya-ko Shinbun*, neglects to add with what fate the bystanders, or those who would have interrupted the war, met. The probability is, however, that they got badly stung.

ONE KIND OF PATRIOTISM.

KOBE is an undoubtedly pleasant place, in which Chinese merchants have hitherto rarely failed to make themselves very much at home. There are

still, according to the *Kobe Nippo*, a number of well-to-do Chinamen in the port, and these are as fond of *geisha*-suppers as of yore, as though there were no little misunderstanding between their own country and the land of their adoption. But the local *geisha*, in an access of stern patriotism, have publicly announced their intention not to come at a Chinaman's call in future, be he never so wealthy. "We are mere worms (*mushi*)," runs the statement, "yet even as such we refuse to degrade ourselves any longer by ministering to the pleasure-parties of the enemies of our country." This determination the *Nippo* considers highly laudable, for the local Chinese have always been greatly given to the cult of *chirimen vestis*, and the pretty songsters thus voluntarily deprive themselves of a profitable source of income.

"THE WAR OF FREIGHTS."

UNDER the title of "The War of Freights," a pamphlet has been issued by Messrs. Tata & Sons, of Bombay, embodying a petition to the Secretary of State for India and other official documents and correspondence relating to the competition between the P. & O. Company and the Tata Line of steamers in the trade between India and Japan. Messrs. Tata and Sons object to the measures taken by the P. & O. to run them off, and in their petition to the Secretary of State, while admitting that legal pressure could hardly be brought to bear, they express the belief that moral force might be used.

THE BIRTHDAY BALL.

WE learn that the Ball usually given on the Emperor's birthday—November 3rd—by the Minister of State for Foreign Affairs, will not take place this year. The proximate cause of this temporary departure from a pleasant custom is said to be the difficulty of putting any of the ordinarily available buildings into such a complete state of repair after the earthquake. But, indeed, we should not have imagined that the idea of an official ball would find much favour until peace is restored.

THE OLD ORDER CHANGETH.

As the Emperor was driving to the station on Thursday morning, he turned from side to side to acknowledge the cheers with which he was greeted. This is quite a new thing in Japan, and therefore noteworthy.

It is also worthy of remembrance that it is many centuries since the Emperors of Japan have taken any such active part in warlike operations as that now taken by his Majesty.

THE VICEROY LI ON A JAPANESE STAGE.

IT would tickle the Viceroy Li did he see the personification of himself put upon the Japanese stage by the now celebrated *soshi* actor Kawakami, in the Asakusa Theatre. The Chinese statesman is made to appear in a very prudent rôle, for whenever news is brought to him of the advent of Japanese soldiers, he incontinently issues orders to his own braves to run away.

THE DEATH OF BULLINGTON.

THE following is taken from *The Sportsman* of August 6:—Mr. Charnock, the veterinary surgeon, having made a post-mortem examination of the remains of Bullington last week, certified that the immediate cause of death was acute inflammation of the lungs set up by the severe injury to the hock, which was fractured.

THE TWO JAPANESE ARRESTED IN SHANGHAI.

IT happily turns out that the two Japanese arrested in Shanghai and said to have been put to death by the Chinese, have not met with any such fate. They are prisoners, indeed, but are well treated and apparently in no danger.

THE UNITED STATES LEGATION.

WE learn that the staff of the United States Legation is to be increased by a Military Attaché, and that the post has been conferred on Captain O'Brien, whose speedy arrival in Japan may be expected.

URBANA-CHAMPAIGN

THE NAVAL FIGHT ON THE 17TH.

Further telegrams remove all doubt as to the fact that the first naval engagement of magnitude during the present war took place on the 17th instant. Full particulars are still wanting, but it seems that 12 Chinese men-of-war and six torpedo-boats had visited the mouth of the Yalu River conveying a flotilla of transports, and were on their way back to Port Arthur, when they were sighted by a Japanese squadron of 11 ships. This occurred at 11.45 a.m. on the 17th instant. The Japanese Navy had apparently been working in two squadrons, one of which was engaged in assisting the Phŏng-yang expedition, while the other cruised at the mouth of the Petchili Gulf. It has been already related in this journal that the column to which the chief part in the assault on Phŏng-yang was entrusted, had to be carried over the Ta-dong river with all possible expedition, and that the Navy assisted in the operation both by furnishing boats and by guarding the mouth of the river. It was while the squadrons were thus separated that the Chinese fleet was sighted in the neighbourhood of Hai-yun and Blonde Islands, which lie about mid-way between the mouth of the Yalu River and Port Arthur. The names of the ships composing the Japanese Squadron are not given in full, but among them were included the *Akagi Kan*, the *Hiyei Kan*, and the *Saikyo Maru*. The *Akagi* is a steel gun-boat of 622 tons; the *Hiyei* is a composite armour-belted corvette of 2,284 tons, and the *Saikyo* is one of the steamers of the Nippon Yusen Kaisha converted into a cruiser. The Chinese Squadron consisted of the *Ting-yuen* (iron-clad), the *Chen-yuen* (iron-clad), the *Chih-yuen* (steel cruiser), the *Lai-yuen* (belted cruiser), the *King-yuen* (belted cruiser), the *Wai-yuen* (training ship), the *Yang-wei* (Armstrong cruiser), the *Chao-yung* (Armstrong cruiser), the *Ping-yuen* (belted cruiser), the *Kwang-chia*, the *Kwang-hing*, and another, together with six torpedo boats. It was, in fact, the most powerful fleet that China could put together. The engagement commenced at 12.45 p.m. and seems to have continued until dark. The *Hiyei Kan* took fire and had to draw out of the fight, nor could she again take part in the operations that day. She seems to have steamed for the Ta-dong River, and her casualties were 20 killed and 34 wounded. The *Saikyo Maru* also was severely handled. Her rudder was shot away, and while she was substituting other gear the enemy tried to torpedo her, but failed. She finally extricated herself, and steamed away, reaching port (?) at 1.45 a.m. on the 19th instant. Her casualties appear to have been only 12 wounded, but she was struck by four shot of 33.5 centimetres and by several others of smaller calibre. As she steamed away from the scene of the engagement, she observed that two of the Chinese ships had been disabled. On the morning of the 18th instant, at daybreak, the second Japanese squadron, accompanied by the *Yayeyama Kan* (steel despatch vessel), which had probably been sent to give intelligence of the fight, started at full speed for the scene of the battle, which, it is said, was resumed that day. By sunset, on the 17th, the Japanese are said to have gained a marked advantage, having sunk three and burned one of the enemy's ships without losing any of their own. News of the fight was signalled by the *Matsushima Kan* on the morning of the 19th instant, to the transport *Mogami Maru*, then lying off the mouth of the Ta-dong River, but this intelligence was limited to a bare statement that the Japanese had gained a complete victory. Later news is published by the *Asahi Shimbun*. It comes from that journal's Fusan correspondent, and is dated 8.40 a.m. on the 20th instant:—

In the naval engagement on the 16th instant four Chinese vessels were sunk and seven burned to the water's edge. Two of the Japanese ships received more or less injury.

It is difficult to credit this telegram in its integrity. Further details must be waited. But we may accept it as a fact that the whole of the Peiyang Squadron, including

the two iron-clads and all the Armstrong cruisers, was engaged by a portion of the Japanese fleet, consisting for the most part of greatly inferior ships, and that victory rested with the Japanese. It is a very remarkable feat, worthy to rank with the taking of Phŏng-yang. On the other hand, the Chinese evidently stood to their guns. Had they utilized their superior strength with any reasonable degree of skill, they ought to have annihilated the Japanese squadron. But at all events they fought, and their defeat was not bought gratis. His Majesty the Emperor has issued the following Rescript to Vice-Admiral Ito, commander of the combined squadrons:—

We are sincerely gratified to learn that Our fleet has gained a signal victory in the Yellow Sea, and to be thus assured that our ships have the command of the enemy's home waters. We fully appreciate the vigilance and zeal of our officers and sailors, and applaud their meritorious services.

KOREAN AFFAIRS.

On Saturday last, the *Nichi Nichi* received the following telegrams from its correspondent at Fusan, under date of September 14th, 7 a.m.:—"The van of the column advancing from Wŏn-san has come into collision with the Chinese in the vicinity of Song-chhŏn; while the division marching from Sŏul by way of Chung-hwa has come within sight of the enemy at the latter place. At both points, the Chinese have been put to flight, and have all fallen back upon Phŏng-yang. The Japanese army has already commenced to cross the Tai-dong-gang. General Count Yamagata and suite arrived in Sŏul to-day."

The following telegram, received by the Government on the same day, is more accurate:—"On the 14th instant, the right wing of the Japanese army that marched from Wŏn-san came into action with the enemy's outposts at Song-chhŏn and Sam-dŏung. The main body that advanced from Sŏul was then driving the enemy from Chung-hwa, and the left wing had commenced to cross the Tai-dong-gang a little above Chhŏl-do."

On Saturday night, the *Nichi Nichi* received the following message from Fusan:—"On the 8th instant, 2,000 Chinese infantry and 200 cavalry attacked the Japanese troops at Chung-hwa, but were soon repulsed. No subsequent news has been received, but the belief prevails that a signal victory has been gained by the Japanese."

The following telegrams were received by the same paper on the same day:—"Since the arrival of the Japanese troops at Yang-dok, not a single Chinese soldier is to be seen south of Song-chhŏn. Yang-dok has been evacuated by all its inhabitants, including the mayor. A military hospital has been established at this place. According to the reports of Koreans who have returned to Wŏn-san from Chyŏng-yang, the Chinese army stationed at the latter place, having exhausted all the available provisions in the country round, was engaged in harvesting millet at a distance of several miles from head-quarters."

"On the 13th instant, after the vanguard of the Japanese right wing had reached the neighbourhood of Phŏng-yang, a party of Chinese troops, more than 1,500 strong, suddenly attacked the Japanese commissariat force at Song-chhŏn. A body of thirty Japanese foot-soldiers successfully arrested the enemy's advance by firing from a strong place on the side of a hill. The contest lasted several hours, but the Chinese had finally to retreat before the little band of Japanese."

The *Kokkai* states that the following telegram, dated Fusan September 15, 5 a.m., has been received by the Government in Tokyo:—"A party of Chinese troops appeared in the vicinity of Song-chhŏn, and an engagement has commenced between the two armies. Phŏng-yang is being attacked on two sides."

The *Kokumin Shimbun* is more circumstantial than other papers in reporting the march of the Japanese army upon Phŏng-yang. But we are strongly inclined to believe that its items

are in many cases more fanciful than real. We, therefore, refrain from reproducing them.

According to recent correspondence from Sŏul, Mr. Boku Eiko, who had been on the point of re-embarking for Japan, was recently recalled to Sŏul by the special order of the King. The rupture that occurred between the King and Mr. Boku shortly after the latter's return from Japan has been discovered to have been the work of a calumniator. The culprit, Li Shun-hitsu, a Court officer, has been sentenced to death. It is not known to what post Mr. Boku will be appointed.

The *Kokkai's* Sŏul correspondent mentions that, in compliance with the request of the Korean Government, a party of about 200 Korean soldiers are being drilled by a few Japanese officers. They are said to be very quick in learning military evolutions. They are to form the nucleus of the Korean army now about to be organized.

Concerning the reported landing of Japanese troops on an island in Society Bay, no information has been received by the Japanese Government.

On Sunday evening the *Asahi Shimbun* published an extra saying that the combined attack on Phŏng-yang by all the columns converging on it, was planned to take place on the 15th instant, and that provisions for the use of the Japanese were conveyed by a river which, though its name is not published, is evidently the Tai-dong. Supplies were thus furnished regularly for the Japanese, but the Chinese, who had depended on the Tai-dong for a similar purpose, were reduced to considerable straits. Their foraging parties had created such a panic that the whole district about Phŏng-yang was deserted.

The Hiroshima correspondent of the same journal telegraphs that, from the 15th instant, information by wire from the northern regions beyond Phŏng-yang was interrupted. He adds an obviously wild story, that the Viceroy Li had caused Mr. Yuan, formerly Minister Resident in Sŏul, to be poisoned, being unwilling to run the risk of that official's knowledge becoming public property.

As for the Chinese loss, some interpreters of the telegrams infer that almost the entire force has been either killed or captured. But there is an evident ambiguity in the message. Necessarily it was telegraphed phonetically without the use of ideographs, and the result is that one of the words employed (*shisho*) being capable of interpretation either as "four generals" or "killed and wounded," the import of the telegram becomes partially uncertain. The middle portion may read:—"The enemy's General, Tso Pao-kwei, and four Generals under him have been captured, and great quantities of arms and rice have fallen into our hands;" or:—"From the General Tso Pao-kwei downwards the enemy have all been killed, wounded, or taken prisoners," &c. We ourselves are inclined to accept the former rendering as more reasonable and consistent with the context. On that hypothesis the intelligence conveyed is that General Tso and four other Generals have been taken prisoners; that great quantities of military weapons and stores have come into the possession of the victors; that the Chinese force numbered about 20,000 men; that one or two bodies managed to break through the Japanese lines, but that the rest were all killed, wounded, or taken prisoners. Elaborating this information, some Japanese journalists arrive at the conclusions that the number of killed and wounded on the Chinese side was about six thousand; that some two thousand effected their escape, and that twelve thousand were taken prisoners. It is difficult to accept such a sanguine estimate, but under any circumstances the victory was most signal. Yesterday the inhabitants of Tokyo showed their appreciation of the news by decorating the city profusely with the *Hi-no-maru* flag. In Yokohama a similar demonstration was made, while the streets, both in the native and foreign portion of the town, resounded with the incessant jingle of the newspaper "express" runners.

URBANA-CHAMPAIGN

THE EMPEROR AND THE WAR.

Many Japanese will doubtless be disposed to regard it as something more than a mere happy coincidence that the Emperor's arrival at Hiroshima should have been followed almost immediately by intelligence of the victory at Phŭng-yang. If there was any management about the business, it was certainly very skilful management. On the 17th instant his Majesty issued the following Rescript to the troops:—

We are rejoiced to receive intelligence, immediately after Our arrival at Head-quarters, that Our army has gained a great victory at Phŭng-yang. We appreciate the ability shown by Our officers and soldiers, and applaud the signal success they have achieved.

This Rescript, together with a congratulatory message from the Empress, was at once telegraphed to Korea by H.I.H. Prince Arisugawa, Chief of the Staff.

THE SONG-CHHŌN AFFAIR.

The story of the Song-chhŏn affair is naturally received with much incredulity. According to news sent a few days ago, an advanced guard of the Gensan column encountered at Song-chhŏn a greatly superior force of Chinese, and, after a fight of some duration, succeeded in repulsing the enemy. The number of Japanese engaged was put at 30 and that of the Chinese at 1,500. Naturally in publishing the story, we used all reservation, giving it merely as a rumour, and pointing out that, even supposing it to be true, an affair of outposts is never to be regarded in the same light as a regular fight. An outpost is invariably instructed to fall back if it finds itself engaged with a superior force, and it is very possible that since the Japanese are said to have occupied a position that concealed their strength, the Chinese may have retired though greatly outnumbering them. It is amusing to find such an incident, when published by us with such reservations, quoted by another journal as an example of "fabrication and falsehood" on our part. Since, however, the story is so rudely challenged, we have no hesitation in saying that we do not find it at all impossible. The explanation given is that the Japanese occupied a commanding position which not only masked and protected them, but also enabled them to use their repeating rifles with signal effect. From such a position they may have beaten off even as many as 1,500 Chinese, fighting as Chinese fight, ignorant of the force opposed to them, and, above all, not instructed to invite any needless risks. Whether the thing happened or not, exactly as described, is another question, concerning which we do not venture to give any definite opinion.

THE STRONG FOREIGN POLICY PARTY.

The representatives of the *Taigai Koha*, or Strong Foreign Policy Party, now in Tokyo, held a meeting on the 16th instant at the offices of the Party, and discussed the policy to be pursued in the approaching session of the Diet. They arrived, according to the *Jiji Shimpō*, at a resolution that peace must not be made with China until an agreement can be come to with her securing the permanent peace of the Orient. They further determined that no expense must be spared to achieve the above result, and that ample supplies must be voted; and further, that since national unanimity is essential in a crisis like the present, all petty subjects of dispute with the Government should be laid aside, and no voice of censure should be raised so long as the country's honour and interests are fully guarded. The spirit displayed by these politicians is deserving of all applause, but in truth the heart of the Japanese nation is so thoroughly enlisted in this struggle with China that we may look for displays of loyalty on all sides.

THE NEW PASSPORTS FOR BRITISH SUBJECTS.

The new passport system contemplated by Art. II. of the Anglo-Japanese Treaty, has been drawn up by the Foreign Office, says the *Shōgyō Shimpō*, and will be put into operation from the 20th instant. In comparing the new with the old system we find, continues that paper, that whereas, according to the latter, the holder of a passport was required to start for his destination within thirty days counted from the day on which the passport was issued, and to forward a note stating reasons to the Foreign Office through his Legation whenever he was prevented from arriving at his destination within the prescribed time, and was further required to observe several other provisions of similar nature, to his great inconvenience and annoyance, all such points have been greatly simplified in the new system. For instance, rules relating to treaty limits, periods, and so forth have been altered in a liberal sense, so that a British subject who has secured a passport will be entitled, during the time of its validity, that is, for the period of one year, to travel in any part of the Empire, and will also be entitled to undertake repeated journeys from the original place of departure without going to the trouble of applying for a new passport each time. The old passports will lose their efficacy it is believed from the 20th instant when the new passports are issued. But since there may be many British subjects who, even after that date, continue travelling with the old passports, the Metropolitan Police are said to have issued instructions to local Police Offices with the view of avoiding complications. The Foreign Office is said to have sent a copy of the new passport regulations to the Local Offices a few days ago.

THE BATTLE OF PHŬNG-YANG.

Details of the battle of Phŭng-yang are reaching Tokyo. They modify in some degree the estimates previously formed as to the results of the fight. We learn, in the first place, that the Japanese loss was not so small as Lieut.-General Nozu's original telegram reported. His figures were 30 killed (including 2 who died in hospital) and 269 wounded. A message sent to Head-quarters by Major-General Kodama, however, under date 11.50 a.m. on the 19th instant, gives the following totals:

Officers killed	8
Non-commissioned officers and men killed ...	154
Total killed	162
Officers wounded	26
Non-commissioned officers and men wounded	381
Total wounded	407
Missing	40
Total casualties	609

The brunt of the fighting seems to have fallen upon Major-General Oshima's brigade. It had six officers killed, namely, 3 captains of Infantry and 1 of Artillery, and 15 wounded, namely, a Major of Artillery, and 4 captains, 5 lieutenants and 5 ensigns of Infantry; and its total of rank and file killed and wounded was over 300.

With regard to the Chinese losses, Major-General Kodama, on the strength of information furnished by Lieut.-General Nozu, telegraphs that over 2,000 were killed, and that although the number of wounded is not accurately known, it is at least twice that of the killed. Concerning the prisoners, however, there is much uncertainty. The intelligence received in Tokyo on the 18th gave 14,500 as the assured total, but neither Major-General Kodama nor General Yamagata speak of more than 600. The general opinion appears to point to about 7,000, but as that is obviously a compromise between the large total originally named and General Yamagata's comparatively small body, we hesitate to credit it. Further information must be awaited.

The Chinese seem to have been largely supplied with cavalry, for Major-General Kodama

telegram speaks of a great number of horses killed. But Chinese cavalry has always proved an almost useless appendage. Evidently it did not serve even for *vidette* duty at Phŭng-yang, since the enemy remained in ignorance of the real movements of the Japanese up to the last moment.

The plan of attack was simple. The true assault was to be delivered from the enemy's rear by a column marched round to the west of the city. The Commander-in-Chief, Lieut.-General Nozu, and Major-General Oshima were in command of the troops forming this westerly column. It was conveyed across the Tai-dong River, above Chhol-do, by a large flotilla of steamers and junks, convoyed by three men-of-war, and from thence it accomplished a remarkable forced march that carried it to Suk-chian, a town due north of Phŭng-yang and fully 33 miles distant from it. Of this column's whereabouts the Chinese seem to have remained ignorant until a late period. Their attention was entirely occupied by feigned attacks delivered from the south and east, the former by Major-General Tachimi's brigade, the latter by that under Major-General Oseki. This programme was in part dictated by topographical considerations, Phŭng-yang being very difficult of approach from the east and south, but comparatively accessible from the rear. Whether the Chinese were wholly taken by surprise when they found themselves assailed from the rear, is not stated in the accounts thus far received, but probably their feeble resistance is to be attributed to that cause.

THE PHŬNG-YANG PRISONERS.

There is still much uncertainty as to the number of prisoners taken by the Japanese at Phŭng-yang. According to the earliest telegrams received the number was very great. In the first place came the message of the officer commanding the Division, whose temporary headquarters were at Chung-hwa. It ran thus:—

Our Division, despite some confusion in the commissariat arrangements, advanced upon Phŭng-yang from various directions and made a combined attack upon the place yesterday (15th instant). After a fierce combat we gained a complete victory and at daybreak this morning the place fell into our possession. The enemy's general, Tso Pan-ki, and four other generals were taken prisoners, and a great quantity of arms and rice came into our possession. The enemy are said to have numbered 20,000. Since yesterday, one or two bodies have broken through our lines, but the rest have all been killed, wounded, or taken prisoners. Our loss is 300 killed and wounded.

This telegram was despatched from Chung-hwa at 8 a.m. on the 16th instant. The fight could scarcely be said to have come to an end by that time, and the figures given in the message were obviously approximations only.

Another official telegram came from Lieut.-General Nozu. It bore the same date as the preceding, namely, 8 a.m. on the 16th instant, and it ran as follows:—

Since yesterday the Division has surrounded Phŭng-yang and after a severe fight we have gained a great victory. The place came into our possession at dawn this morning. The enemy's loss in killed and wounded is very great. Our loss is 300 of all ranks, killed and wounded.

These telegrams reached Tokyo on the 17th instant. They did not enable us to do more than conjecture the actual Chinese loss, but they were supplemented by telegrams from newspaper agents putting the enemy's killed and wounded at various figures from six to ten thousand, and the prisoners at from ten to fifteen thousand. Writing on the 18th, we said that we "found it difficult to accept such sanguine estimates."

Then followed a telegram from General Yamagata, transmitting intelligence received from Major-General Oshima. It was dated 1.50 p.m. on the 18th, and it said:—

The officer commanding the Fifth Division sent yesterday a flying column in pursuit of the retreating Chinese troops. They have captured 600 Chinese (including 100 *roppaku-nin*).

The telegram reached Tokyo on the morning

of the 19th inst. It has been freely quoted by foreign local newspapers as contradicting the previous estimates in the matter of prisoners, and we have been roundly accused of deliberate falsehood because, with such a telegram lying before us, we accepted the generally believed statement that 14,500 men had been taken prisoners. But General Yamagata's telegram does not necessarily bear such a construction. His words apparently refer to a fresh capture made by the pursuing column. In that sense they were read by the Japanese and by ourselves also.

The next official telegram of importance was from Major-General Kodama, under date 11.45 a.m. on the 19th instant:—

The enemy's killed aggregate over 2,000. The number of wounded is not clear, but must be at least twice that of the killed. The prisoners are 513 Chinese and 14 Koreans.

This telegram reached Tokyo on the evening of the 19th instant, and was referred to in our issue of the following day, as showing that all previous estimates must be accepted as doubtful. It is not believed in Tokyo that only 600 prisoners were taken, though some suppose that the Japanese have refrained as far as possible from retaining captives. At all events we must await further intelligence before arriving at any conclusion. From the above quotations, however, our readers will perceive that no official attempt has been made to exaggerate the facts. It is natural that there should be some disposition on the part of newspaper reporters to magnify the successes of their country's arms. Experience proves that such a tendency exists and is indulged in everywhere. But nothing of importance is here concealed nor is the significance of any intelligence perverted. The public is frankly placed in possession of all accessible facts.

CHINESE VICTORIES AND FOREIGN APOLOGISTS.

Poor Chinese! So low have they fallen in the estimate of the public that their foreign apologists become even jubilant when they can claim for them the honour of having effected a "masterly retreat." That was the complexion put upon their defeat at A-San and that is now the complexion put upon their disaster at Pyŏng-yang. By degrees certain foreign journalists persuaded themselves actually to eulogize General Yeh because he succeeded in escaping from A-San with less than half of the troops under his command. The garrison at A-San might have retreated at any moment between the 15th and the 20th of July, had retreat been its object. There was nobody then to molest it, and General Yeh might have saved his whole force alive instead of flying with a fragment of it. But he chose to wait until a Japanese column, not much stronger than his own, came within striking distance, whereupon, according to his foreign pæan-singers, he ran away incontinently, leaving more than a moiety of his force dead, wounded, or dispersed. That was a magnificent triumph; and now the defenders of Pyŏng-yang are having a similar apology prepared for them. China threw a very large force into that city. We cannot estimate its numbers at less than from 30 to 40 thousand. Her troops made all apparent preparations to hold the place, and they did hold it until 2,000 of their number were killed and 4,000 wounded. Then they ran away. Common or garden historians would call this a sound drubbing, but China's apologists—shall we not rather call them Japan's detractors?—are already beginning to circulate a tale that the flight from Pyŏng-yang was in reality a masterly retreat, and that by some occult process three-fourths of the Chinese army were spirited away through the envolving lines of the Japanese. What kind of warfare it is that consists in perpetually scuttling in the face of a foe from strong positions deliberately chosen and carefully entrenched, strategists have yet to define. These apologists or detractors, whichever they please to call themselves, had better write a new manual of military methods before they expect to be

uninstructed public to sympathize with their quaint ecstasies.

That is precisely what we have ventured to censure more than once. Any journal may be mistaken in its original intelligence, but when it adheres obstinately to intelligence contradicted over and over again, it must consent to be called prejudiced, not merely ignorant. We have had examples all through the war. It was maintained and is maintained that the *Naniwa-kan* trained her Gatling guns upon Chinese soldiers struggling in the water. It was maintained and is maintained that the Chinese troops never attempted to defend A-San, but retreated quietly leaving the Japanese to overcome imaginary resistance. It was maintained and is maintained that these same Chinese troops, while in the act of evacuating A-San, fought the Japanese at a place 15 miles distant and repulsed them with a loss of 500 killed. It was maintained and is maintained that in taking A-San two Japanese columns fired upon each other by mistake, by which blunder several hundreds were slaughtered, whereas the Japanese official reports give the total casualties in the A-San campaign as 75. It was maintained and is maintained that the Fifth Division of the Japanese army, on the occasion of its first advance from Sŏul against Pyŏng-yang, met with several reverses, had its out-posts driven back from place to place with a total loss of over 5,000 killed, and was finally obliged to suspend its operations, whereas the truth long ago officially published is that a change of strategical programme involved the halt of this Division until its advance could be synchronized with that of another Division from Gensan. It was maintained and is maintained that the Chinese force at Pyŏng-yang did not exceed 15,000 men, although no basis for an estimate exists except the statements of Chinese newspapers, which put the number at 45,000, and the accounts of Koreans in Pyŏng-yang who put it at 40,000. Finally, it is now maintained that the Japanese, though they fought a hard fight, killing, wounding and capturing some 7,000 of their foes, in reality had a walk over, the Chinese having performed another masterly retreat from their stronghold. To credit these singular assertions, it becomes necessary to distort facts and totally disbelieve Japanese official reports, which in no one instance have proved false where military operations are concerned.

THE NAVAL ENGAGEMENT.

Fuller particulars received yesterday of the naval engagement on the 17th instant necessitate some modification of the details already published. In the first place, the Chinese force was under-stated. It appears that there were fourteen vessels-of-war and six torpedo-boats, making twenty in all, not eighteen, as hitherto believed. It must therefore be concluded that the whole of the celebrated Peiyang Squadron took part in the fight. On the Japanese side there were only eleven ships without any torpedo-boats, and most of them were inferior in armour and armament to the Chinese ships. The engagement lasted four hours, ending at about 5 p.m., when the remnant of the Chinese squadron fled. Four Chinese ships were sunk, namely the *Yang-wei* and *Chan-yung*, Armstrong cruisers of 1,350 tons each, the *Lai-yuen*, a cruiser of 2,900 tons, and the *Ching-yuen*, a cruiser of 2,300 tons. One of the ironclads, the *Ting-yuen* (7,335 tons), Admiral Ting's flag-ship, the *King-yuen*, a belted cruiser of 2,900 tons, and the *Ping-yuen*, a belted cruiser of 2,800 tons caught fire, but whether they were actually destroyed the telegram does not say. The remaining seven ships, badly damaged, fled westward. They were pursued by the Japanese as far as Hope Sound, which was reached at daylight, but the Chinese vessels had by that time managed to get clear. The Japanese squadron accordingly returned to Hai-yang. On the Japanese side the *Akagi Kan* (622 tons), the *Matsushima Kan* (4,278 tons), and the *Hiyei Kan* (2,284 tons) were more or less damaged, but all safely reached the temporary station of the Japanese Squadron, presumably in the neighbourhood

of Chemulpo. The loss of personnel was nine officers and thirty men killed, and a hundred and sixty wounded. The *Saikyo Maru* also, as described in a previous article, suffered severely, her conspicuous bulk having probably induced the enemy to single her out for special attention. It is stated that Admiral Kabayama was on board the *Saikyo* throughout the fight, doubtless having chosen her on account of the facilities she afforded for supervising the operations of the squadron, though he incurred considerable personal risk by choosing such frail quarters. The *Yiji Shimo* publishes a telegram from the Japanese Consul at Chemulpo saying that the *Yoshino Kan*'s barrette was injured in the action, but that the ship sustained no further damage.

These details add to the importance of what must be considered the greatest naval engagement that has taken place in Oriental waters for 300 years, and one of the greatest that has ever occurred between ships of modern constitution. The Japanese force was undoubtedly far inferior to the Chinese. We are compelled in this matter to rely to some extent upon conjecture and inference. Why the Japanese authorities do not publish the names of all the ships engaged, we are at a loss to understand. The result of such reticence is that everybody magnifies the force under Admiral Kabayama's command, and the brilliancy of the Japanese feat is thus impaired. But we know two things: first, that the *Akagi Kan* and the *Saikyo Maru* were among the Japanese ships, the former a gun-boat, the latter a mail-steamer; and secondly, that only one squadron of the Japanese fleet was present. It would be impossible to select from the Japanese Navy nine ships that could fairly be pitted against the Chinese Peiyang Squadron, including as it does two ironclads of over 7,000 tons each and a number of powerful heavily-armed cruisers. Taking these things into consideration it must be admitted that the success achieved by the Japanese was very marked. They have greatly crippled the Chinese Navy. One more victory of similar dimensions would eliminate the celebrated Peiyang Squadron from the fighting arena. Englishmen above all will appreciate and sympathize with this display of prowess on an element where they have themselves won so many signal triumphs.

The injury done to the *Matsushima Kan* was the disabling of one of her guns. It being impossible to effect the necessary repairs outside, she returned to Sasebo for the purpose, and a telegram received yesterday said that she had again put to sea in fighting trim. The official reports say nothing about the injury reported to have been done to the barrette of the *Yoshino Kan*, and we may consequently conclude that it was very trifling. As for the *Hiyei Kan*, it is alleged that she will soon be repaired.

The *Matsushima Kan*, the *Hiyei Kan*, and the *Akagi Kan* are said to have been most hotly engaged. The *Matsushima* especially received the brunt of the enemy's fire, and it is stated that the *Yayeyama Kan* at one time went to her assistance.

From the above details we learn incidentally the names of 6 of the Japanese Squadron of 11. They are:—

- The *Matsushima Kan* (flagship); Steel Coast Defence Ship; 4,278 tons; 28 guns.
- The *Yoshino Kan*; Steel Cruiser; 4,216 tons; 34 guns.
- The *Yayeyama Kan*; Steel Despatch Vessel; 1,609 tons; 11 guns.
- The *Hiyei Kan*; Composite Armour Belted Corvette; 2,284 tons; 10 guns.
- The *Saikyo Maru*; Armed Mail Steamer.

The casualties on board the *Matsushima* were very heavy, but the ship herself suffered comparatively little. After leaving Sasebo repaired, she put into Kure, where her captain landed to make a personal report to the Emperor.

The Chinese have not failed to publish reports favourable to themselves. They allege that four Japanese vessels—names not given—were sunk and that the Japanese fleet retreated. But they admit that Admiral Ting and several other officers were severely wounded, and that the Chinese fleet was much disabled, returned to

THE PRESS CENSORSHIP AND ITS DIFFERENT METHODS.

There appears to be considerable diversity of treatment even in such matters as press censorship, where different offices are concerned. On the very day of the abolition of the censorship and the issue of new inspection regulations by the War and Naval Departments, the War Department summoned the representatives of the Metropolitan press, and the Vice-Minister told them that, as the Department was of opinion that they were sufficiently experienced to judge properly what news might be published without detriment to the interests of the Empire and what should be repressed, the Department had resolved to dispense with the trouble of inspection and to leave the whole matter to the patriotic judgment of the respective papers. The Vice-Minister then conjured them to exercise due care in the publication of war intelligence, otherwise the Department would take proper steps against them in virtue of the powers invested in it by law.

The Metropolitan Police Office also summoned representatives of the Tokyo newspapers and news agencies and enjoined them not to publish, on pain of penalties, matters of the following description:—

- 1.—Any matter relating to the revised Treaty, calculated to agitate the public mind and likely to prove obnoxious to the maintenance of public peace, or any matter injuriously reflecting upon the proceedings of a Treaty Power and calculated to injure its good feeling.
- 2.—No intelligence, whether conjectural or rumoured, relating to a military project, or to the movements and stations of troops, men-of-war, ships in Government service, and officers.

For the benefit of newspaper offices and news agencies, the Police also issued the following prohibitive schedule, which should be observed in giving war intelligence:—

- 1.—Matters relating to the number of ships on war service and their movements, with the exception of intelligence concerning one or two ships whose movements are not sufficient to afford any inference as to the whole number and tonnage of the ships on war service, their destination, and object.
 - 2.—Matters relating to the requisitions for men, horses, and provisions.
 - 3.—Matters relating to the alteration in the service of railways for warlike purposes, the points of departure or destination of trains, and the dates, except in cases where an inference can be drawn as to the number of men, horses, and provisions carried on such railways.
 - 4.—Matters relating to dates and localities of official announcements bearing on the recruiting of men, and so forth.
 - 5.—Matters relating to the amount and disposition of military provisions purchased, except when the purchase is local and cannot afford any idea as to the number of combatants on whose account it is made.
 - 6.—Matters relating to the conditions and localities of the manufacture and purpose of ammunition.
 - 7.—Matters relating to the assembling of soldiers.
 - 8.—Matters relating to the places of shipping and landing soldiers.
 - 9.—Matters relating to the number of troops despatched to the war, their nature, the names of their regiments, and of the officers in command.
 - 10.—Matters relating to the movement and mobilization of troops.
 - 11.—Matters relating to the localities of coast defences, the number of troops stationed for purposes of coast defence, their nature and the number of their corps.
 - 12.—Matters relating to Government offices directly connected with the conduct of the war, and the movement of officers.
 - 13.—Matters relating to posts, telegraph, and other communication connected with the war.
- In addition to the above items, the publication of any military intelligence considered liable to produce bad feeling among the people is also interdicted.

If the views attributed above to the Vice-Minister of State for War be correctly reported, their liberal confidence offers a striking contrast to the rigid exclusiveness of the police's ideas.

Whatever may be the shortcomings of the House of Lords as a political institution, it pays its way. In the last financial year it earned over £25,000 in fees on private Bills, and judiciously

THE WAR LOAN.

The subscriptions to the War Loan received at the Nippon Ginko up to the 14th instant are said to have aggregated 63,224,700 yen, of which 8,335,700 yen were above the face value of 100 yen, and the remaining 54,889,000 yen were at par. The districts that subscribed for sums above 1,000,000 yen were Tokyo, 26,973,750 yen; Osaka, 8,130,400 yen; Yokohama, 6,610,000 yen; Kyoto, 2,118,500 yen; Mayebashii 1,486,700 yen; Nagoya, 1,251,800 yen; and Kobe, 1,151,600 yen. Among the principal subscribers were the Nippon Ginko, 10,000,000 yen; the Nobles (15th) Bank 7,000,000 yen; the 119th Bank 3,500,000 yen; and the Mitsui Bank 3,500,000 yen. The highest price offered was 120 yen, but for the rest the figures above par were chiefly 107 to 105 yen. There are many places from which no intelligence has yet been received, owing to their distance from the capital, and it is therefore expected that when the day on which the subscription is to be closed arrives the total will amount to a still larger figure than the above.

Since the subscriptions thus far known already aggregate more than twice the prescribed sum of 30 millions, and even exceed the total War Loan of 50 millions by more than 13 million yen, opinions prevail, says the *Yiji Shimpō*, that the Government had better issue another Notification and raise the whole amount of 50 million yen at once. It would of course be illegal to increase the first issue to 50 millions without preliminary notice. But if subscribers are offered the choice of reducing their tenders or adhering to them, and if the total loan be raised after the intentions of the subscribers have been thus ascertained, there could be no objection to increasing the issue without inviting fresh tenders. It is believed that as the people have subscribed from patriotic motives there would be no likelihood of their wishing to have the amount of their subscriptions reduced, and that if the period of payment be a little postponed no embarrassment would result from raising the total amount of the loan at once.

Writing in another column on the same subject, the *Yiji* says that, contrary to common expectation, the floating of the War Loan has not affected the money market to any sensible degree. The banks in Tokyo anticipated that the deposits held by them would be drawn out for the sake of subscribing to the Loan, but this has not happened. On the contrary, the circulation of money is said to have been rather facilitated than checked by the operation, since the loan has had the effect of drawing from provincial strong-boxes sums hitherto lying idle, but now destined to swell the general stock of floating capital. Moreover, since the War Loan Bonds may be quoted on the stock exchanges from the time of paying the first installment of 10 yen, they become, in effect, an addition to the currency, consequently no inconvenience has been felt in the money market.

THE NEWTON OF JAPAN.

With all that has been written about Japan—and no eastern country, except perhaps India, can at present boast a better literature—there are still many departments of antiquarian research left untouched. This is particularly the case with regard to Japanese history. We are acquainted with its broad lines, its rulers and wars, its epochs and their subdivisions; but for all that, of the life and doings of those outside the immediate pale of history we know little or nothing. Nor are the Japanese themselves much better off in this respect. The grave of Nanko, or Kusnoki Masashige, was ignored and forgotten for scores upon scores of years; what actually became of Yoshitsune has never yet been convincingly proved; and how few know that a plain granite slab in the graveyard attached to the Jorinji, a venerable temple in Bentencho, Ushigome, Tokyo, marks the last resting-place of a contemporary of the world's greatest mathematician and physicist, and who is said to have been in no wise his inferior!

Mathematical calculations of an abstruse nature have always been to the liking of both Japanese and Chinese philosophers. Working on wholly different lines and without the light of successive discoveries, the great thinkers of the two Empires were no mean rivals of their Western colleagues, of whose very existence they were unaware. Since the introduction of European science into Chinese thought, it must be confessed that they have outstripped their masters. Having more time or perhaps a greater liking for patient and painstaking calculations, they have, in certain branches of the higher mathematics, gone further than European men of science, particularly in the theory of curves. In an excellent treatise on the calculus, published a good many years ago in Peking, the author says that, after all, wisdom first travelled from east to west and then came back again; that soon Western peoples would once again have to learn from the Orient. Nor was this merely a vain boast.

In Japan, on the other hand, geometry and stereometry have developed without any knowledge of the trigonometrical functions, which have only quite recently, comparatively speaking, been taught in her schools. Yet problems of the most abstruse nature, that would take days of unremitting labour even in Europe and under the most favourable circumstances to solve, have been successfully elucidated by the masters of mathematical thought in Japan. Sir Isaac Newton was born on Christmas Day, 1642, and his discoveries produced a new era in science. In the same year, on April 4th (old style), was born the greatest mathematician the Orient has ever known, Seki Shinsuke Fujiwara no Takakazu. Of gentle blood, he led a quiet and scholarly life in his native town, Fujioka in Joshiu, and it was not until after his death at the age of seventy-five (*i.e.* just five years prior to Newton's decease) that he became famous for his discoveries and works. Seki's treatises, like those of his great contemporary, were entirely novel, voluminous, and epoch-making. Without the aid of trigonometry, and having a very scanty library of Chinese works at his hand, he thought out and systematized the Binomial Theorem, which he called *Tetsu-jutsu*. Certain parts of the Calculus were beyond the grasp even of such a man, yet he published for the first time, in a word invented, the Differentiation of Algebraic Functions (*Daisu-kansu Bibun-ho*); the Maxima and Minima of Differential Calculus (*Tekijin-ho Kyu-ho*); and the Integration of Algebraic Functions (*Daisu-kansu Sekibun-ho*). Besides these, Seki compiled several other great works on the Length of Curves (*Eurijutsu*), and Quadrature and Cubature (*Kyu Seki-fuku*). With all this, he does not seem to have applied his marvellous discoveries to practical natural research; the laws of nature were not so interesting to him as three cones which passed directly through each other at a stated point, and the calculation of the volume of that portion when the three met: a calculation dealing with infinite series and taking up fifty closely printed pages. Some of the problems he loved to put himself and his enthusiastic pupils were of so abstruse a description that only the best Western adepts could solve them at the present day. And when one remembers that all the work was done without the facilities to be found in trigonometry, without a knowledge of logarithms and all the other prompt aids of the modern mathematician, one cannot fail to marvel at the miraculous powers of thought displayed by this Newton of Japan. Seki lived to a ripe old age and was honoured by all, though the Jorinji is at best but a poor substitute for Westminster Abbey. The name of Sir Isaac Newton is deathless—

Nature and all her works lay hid in night;
God said, 'Let Newton be!'—and all was light.

But while we say this, and cordially assent to the language of his epitaph, *Quem immortalis calti, natura, tempus ostendunt*, we must not overlook the not less extraordinary claims of that extraordinary scholar, Seki Shinsuke.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

SHANGHAI NEWS.

The publication in Shanghai of the new Anglo-Japanese Treaty elicits the following comment from the *North China Daily News*:—"The British residents in Japan must live in the hope that China will be ultimately successful in the present war; in which case China will not agree to giving up extraterritoriality, and the British communities will thus be rescued from the danger to which their own government has cheerfully consigned them." We must congratulate our contemporary on the perspicacity as well as the morality of this idea. In the first place, China's consent or refusal to submit to Japanese jurisdiction could not affect the operation of the Anglo-Japanese Treaty any more than the direction of the wind that may happen to be blowing at the date fixed for its enforcement can affect it. In the second place, the notion that British residents in Japan should desire China to be victorious merely to save them from submitting to Japanese jurisdiction is one of the most exquisitely selfish propositions ever enunciated—China, that holds foreigners at arm's length, that abhors Western civilization, that shrinks from every step of progress, that murders and mutilates the stranger within her gates, and that has lived isolated from the world for 3,000 years; for this Power's triumph we are to pray in order that we may preserve for ourselves Consular jurisdiction.

The ridiculous story that a body of 800 Japanese were defeated by a handful of Korean tiger-hunters is not only believed by the leading Shanghai newspaper, but reasons are given for such credulity. The tiger-hunters are extolled as magnificent men, who, if properly armed, could account for twice their number of Japanese, or more. Evidently all Japanese are men in buckram according to the estimate of the *North-China Daily News*.

We read in the Shanghai press, on the authority of Chinese journals, that three foreigners belonging to the Canton Customs and six from the Kowloon Customs have gone north to join the Peiyang Squadron. These men are said to have had considerable experience in naval matters and torpedo practice. They are to receive 150 T's a month, and should they be killed in battle a bonus of 3 years' pay is to be given to their families. It is added that Sir Robert Hart had guaranteed the good faith of the Chinese Government in this matter and has promised that the men shall be taken back into the Customs' service at the expiration of the war. We do not believe this. There may be plenty of British subjects quite willing to violate the vetoes contained in their Government's proclamation of neutrality, but that Sir Robert Hart should publicly abet such open defiance of the law of the land overtaxes our credulity.

Rumours prevail in China that the Viceroy Li is in imminent danger of losing his power in consequence of his unsuccessful conduct of the war. If there was any truth in this rumour a week ago, there must be much more now that the Chinese troops have suffered such a signal defeat.

The *N.-C. Daily News* in its issue of the 11th instant publishes a Korean confirmation of the rumour that the Japanese had been defeated at the Tai-dong river with heavy loss. Our contemporary will be a little embarrassed on receipt of the news of the fall of Pyongyang, for it will then learn that all the stories hitherto ventilated by it with reference to Japanese defeats and disasters were pure fictions.

The steamship *Chean* has been wrecked on the western island in the Shetung Pass. She was sighted by the steamship *Woorung* from Amoy, and was seen to be surrounded by Chinese boats engaged in wrecking operations. The *Chean* was a wooden vessel of 401 tons register. She had been called by various names during the course of a somewhat long career, being known at different times as the *Feiyuen*, the *Kiuling*, the *Whaon*, and the *Chean*. At the time of her loss she had several hundred soldiers on board.

The report that the *Empress* was wrecked with the 60th anniversary of the Empress

Dowager's birthday would be abandoned and the funds devoted to the prosecution of the war with Japan, seems to have no foundation. The preparations are going on uninterruptedly.

From the *Peking Gazette* we obtain incidentally some information as to the law of naturalization in China. It appears that agricultural settlers in the provinces of Kansu and Chinese Turkestan must have resided there and paid land and poll taxes for fully ten years before they can be regarded as qualified citizens.

The extraordinary falsehoods wired to London by Reuter's agent and other purveyors of news about the war, furnish the text of an interesting article in the *China Gazette*. In truth, when we observe the baseless canards cabled for the benefit of the British public on the present occasion, we begin to wonder whether the news sent here from time to time by Reuter about European affairs is not equally untrustworthy.

The *China Gazette* reports that Admiral Ting has suffered degradation at the hands of the Emperor for cowardice and incapacity, and that he will be replaced in his command of the Peiyang Squadron by Wu Ta-cheng, Governor of Hunan. We doubt this rumour. It seems to us that if Ting was degraded for keeping his ships hidden away, his successor would have avoided that error and the Chinese fleet would have ceased ere now to be an invisible factor in the war.

The *Shen-pao* reports that negotiations are on foot for transferring the ships of the China Merchants' fleet to Messrs. Jardine, Matheson, & Co., and that the English flag will be hoisted on the ships to save them from Japanese cruisers.

The district about Tientsin is inundated and the calamity is said to be hailed in Peking as a blessing, since it offers an effectual impediment to a Japanese invasion. Rumour says that orders have been issued forbidding any attempt to lower the waters, despite the ruin and famine thus entailed upon the unfortunate peasantry.

The attempts made by the Chinese authorities to prohibit the import of Japanese merchandise in China have led to an inquiry by the Foreign Consuls, with the result that the Chinese have disclaimed any intention of interfering with the business of foreign merchants. That they could not do of course. Their uncivilized and short-sighted endeavour to intensify the sufferings of war by needlessly crippling commerce must be limited to their own countrymen. It is worthy of remark that the Japanese have not attempted anything so benighted.

There has been a large exodus of Japanese from Shanghai. Nearly two hundred left by the *Angers* on the 7th instant, and as many more by the French Mail on the following day.

HONGKONG NEWS.

The *Daily Press* of September 6th waxes facetious over the doings of some local sportsmen in the following fashion:—"There went forth five 'gunners' with guns to bag the wily untamed snipe on Tuesday. Bag—three Chinamen, one tame duck (carried by a coolie), and a few couples of snipe. Birds are reported to be strong and healthy—no report to hand as to Chinamen aforesaid."

A most distressing incident in connection with the guerilla warfare waged by the pirates against the authorities in Tonkin is reported by the Hongkong papers. On the night of the 26th August M. Chaillet, the Commissioner of Customs at Moncay, was murdered and his wife and daughter kidnapped. Moncay is a frontier town separated by a small stream from Chinese territory. There is a garrison of three hundred men there, of whom a hundred and sixty are Europeans, but they supply no guard to the town, the two gates being kept by a dozen native militiamen. It appears that a party of pirates who had crossed the frontier from China to steal women and children had their plans frustrated by M. Chaillet. They determined to have their revenge, and during the night succeeded in effecting an entrance into the town and attack-

ed M. Chaillet's house. This gentleman being aroused by the sentinel crying, "The Pirates," rushed out by a door at the back of the house to call the Customs' boatmen. While he was absent the pirates broke open the bedroom door and carried off Madame Chaillet and her daughter, a little girl. M. Chaillet, on discovering this, went in pursuit, armed with a revolver, but had not gone far before he was shot down, fatally wounded. By the time the garrison came on the scene the pirates had disappeared, and it was found impossible to obtain any clues as to the direction they had taken, all the natives professing the most complete ignorance. The *Courrier d'Haiphong* severely blames the carelessness on the part of the military authorities that rendered such an outrage possible, but maintains that this does not diminish the responsibility of the Chinese Authorities for allowing piratical bands to use Chinese territory as a basis for their operations. Mme. Chaillet and her child are reported to be meeting with kind treatment at the hands of the Tonkin brigands, who demand \$20,000 ransom. She is allowed to send letters to her friends, and to receive supplies.

An old China hand writes in a private letter:—"When I first knew Hongkong, people got their water from wells and mountain streams, but water was beginning to be scarce for the increasing population and the Pokfulam reservoir was made. Everybody was jubilant. A constant supply of water would be afforded and a water famine rendered impossible! Within your time the Pokfulam reservoir proved insufficient, but the gigantic works at Tytam were going to do as much as, or more than, was expected of the Pokfulam scheme. The Tytam scheme has scarcely got into working order before the colony is again short of water. Something must be wrong with our grand and very expensive scientific schemes! Then you get the plague is the colony and notwithstanding all Chadwick's drainage fads you have it much worse than in Canton, where there is no drainage at all."

At a meeting of the "Odd Volumes" Society of Hongkong, held recently, H.E. Sir William Robinson in the chair, the subject of discussion was the China-Japan War, and among the speakers were Col. Mulloy, Messrs. E. Robinson, Jas. Cantlie, S. Jeffrey, H. L. Dennis, R. Fraser Smith, S. B. J. Skerichly, J. J. Francis, Q.C., J. W. Jones, and others. After an animated debate a vote was taken resulting in the meeting expressing its sympathy with China in the present struggle. Sir William Robinson at the close of the meeting said that he hoped one of the results of the war would be the speedy opening of the West River, and other advantages to British trade. He was quite sure that the home government would see that Russia did not establish any sort of protectorate over Korea. His Excellency presented the Society with a large and admirably executed map of Korea, the work, he said, of the much abused Public Works Department.

A queer-looking sailing boat is being built at Kowloon for a member of the Royal Hongkong Yacht Club. A local journal describes the curious craft as follows:—"She looks somewhat like an Arab dhow, with an immense amount of overhang, being only about twenty feet on the water line and about twenty-seven feet over all, with a beam something like eight feet. She is to have a centre-board and very little ballast, and a deck-house instead of a spinnaker, to help her to leeward. When on a wind the deck-house automatically collapses, and, folding up in the weather bilge, becomes useful ballast. The same motion drops the centre-board and hoists the working jib. She is to be rigged as a sloop, and can be sailed single-handed. A boat of this advanced type has not yet been seen out here, and it will be interesting to see how she will compare with the existing boats as regards speed. The centreboard is to be capable of being twisted slightly in its socket when beating; this, it is expected, will screw the boat to windward of where she looks, a great point in sailing to windward. The boat will be ready by the middle of October when some other boats will be launched."

THE WAR.

IT has seemed scarcely worth while to traverse the extraordinary statements circulated by English local newspapers in China and Japan during the past fortnight with regard to the war in Korea. There is a plain desire on the part of several journals to create the impression that defeat and disaster attend Japan's operations in Korea, and in the absence of any striking engagement to contradict their hopes, they have found an opportunity to put their own construction on the course of events. Now, however, the general outlines of the campaign have become so apparent that no ground exists for further misconstruction, and we may reasonably look forward to at least a brief interval of comparative freedom from falsehood and fabrication.

Our readers may remember that on the 12th and 13th of August public expectation in Japan pointed to the immediate receipt of news that the stronghold of the Chinese army had been attacked by the Japanese troops advancing northward from Sōul. Writing at that time, we showed that the expectation was premature, and that, assuming most favourable conditions, the Japanese forces could not come within striking distance of the Chinese before the 29th of August, unless, indeed, the Chinese advanced resolutely toward Sōul, a proceeding which they did not appear to contemplate for a moment. Had events moved along the lines then indicated, that forecast would probably have been fulfilled. But they did not so move. There occurred a variation that considerably postponed the crisis.

Looking at the map of Korea, it will be seen that the neck of the peninsula is a little north of the 39th degree of latitude, and that the Japanese settlement of Gensan is situated on the east coast of the neck, while near the west coast is the town of Phyōng-yang. Two trunk roads lead from the north to the south, one a few miles inland of Gensan, the other passing through Phyōng-yang. This latter town offers special facilities as a military post, for across its front runs the river Tai-dong, an excellent water-way for preserving communication with the coast, and a strong obstacle against the advance of a hostile army from the south. The original Chinese plan of campaign—so far as we can judge—was to concentrate a powerful force at Phyōng-yang and to preserve communication with China by the Tai-dong river, which, trending southward after flowing past Phyōng-yang, debouches at a point nearly opposite the entrance to Pechili Gulf. Assuming that to be the programme, the Japanese troops set out from Sōul and advanced northward to the attack of Phyōng-yang. Their van left Sōul on the 7th of August, and their rear—which consisted of the troops that had just returned from the capture of A-San

—on the 14th. At that time Japan had one Division in the peninsula. A Division, on a war footing, consists of twenty thousand men in round numbers; that is to say, from sixteen to seventeen thousand available combatants. The country through which the troops had to march was exceedingly difficult, and it was found that, to advance in conformity with military exigencies, an average speed of about 6 miles daily was the utmost attainable. Six miles daily seems a slow rate, but it is not slow when due allowance is made for the transport of stores and artillery through districts virtually without roads. Phyōng-yang is about 135 miles from Sōul. Hence, supposing the progress of the troops to be uniform and uninterrupted, the advanced guard ought to have reached the banks of the Tai-dong in the closing days of August. But in the meanwhile it appears to have been found that the Chinese were not only concentrating at Phyōng-yang, but also menacing Gensan. The motive of this latter manœuvre is not quite plain. Possibly the Chinese Generals extended their plan so as to embrace the defence not merely of the Western routes but also of the eastern routes. In other words, they perhaps conceived themselves strong enough to hold the whole neck of the peninsula. But they may also have contemplated a flanking movement. For supposing that the Japanese forces moved from Sōul along the western route—i.e. the route leading to Phyōng-yang—and left the eastern—i.e. the Gensan route—open, it would have been possible for the Chinese to march by the latter round the Japanese right flank, and thus not only to place themselves in the rear of the Japanese army, but also, perhaps, to seize and occupy Sōul. That would have been a very clever and bold stroke of strategy. We can scarcely believe that it entered the field of practical conception at Chinese military councils. But of course the Japanese could not postulate any lack of ability or energy on the part of the enemy, and moreover, indications were not wanting that the Chinese had made Gensan an objective point. Indeed, their demonstrations against it were sufficiently imposing to cause a hasty exodus of its Japanese settlers. Under these circumstances strong reinforcements were despatched from Japan at the close of August, and being carried direct to Gensan by sea, were there disembarked, with orders to push westward against Phyōng-yang. There were thus two Japanese columns moving towards Phyōng-yang, one having its base of operations at Sōul, the other at Gensan. The Gensan force comprised one-half of the Nagoya Division; the Sōul force, the whole of the Hiroshima Division, so that their united combatant effectives aggregated about 25,000. The Sōul column having commenced its advance between the 7th and the 14th of

August, with a distance of 135 miles to travel, and the Gensan column having begun its westward progress at the opening of September, with 120 miles separating it from Phyōng-yang, it became necessary to check the former's advance in order to secure simultaneous convergence on the point of attack. Accordingly, the advanced guards of the Sōul column were called in, and the rate of progress was retarded. This apparently retrogressive movement at once inspired unfavourable comment. The Chinese seem to have circulated all kinds of rumours, attributing to themselves the honour of having driven the Japanese back, and perverting the latter's strategic delay into a disastrous check. Certain Japanese journalists assisted the circulation of these falsehoods by ignorantly assigning the most ludicrous reasons for the arrest of the Sōul column's advance. One writer carried silliness to the length of asserting that the outpost had been recalled for the purpose of supplying the men with winter clothing! As for the Chiemulpho correspondent of the leading Shanghai English journal, he outdid himself by inventing a crop of contests, in all of which the Japanese had been worsted with an aggregate loss of 5,000 men. Considering that at the date of this correspondent's estimate the total number of killed on the Japanese side had been only 47, including two non-combatants—interpreters—and 17 men drowned in the passage of a river, the *North-China Daily News'* 5,000 killed was a tolerably expensive statement.

Examining in fuller detail the movements of the Japanese troops, we find that the Gensan column's march was directed toward Song-chhōn, a town some 32 miles distant from Phyōng-yang as the crow flies. This place lies considerably to the north of Phyōng-yang. It may, therefore, be a part of the programme to throw a Japanese force across the main route of retreat northward from the Chinese position. From Gensan to Song-chhōn is 53 miles in a direct line, but as the country is mountainous and the roads circuitous, the distance to be marched must be fully 70 or 75 miles. On the 13th instant the advanced guard of the Gensan column entered Song-chhōn, and occupied the place, after a somewhat obstinate encounter with a greatly superior Chinese force. It is alleged that the Japanese mustered 30 only, whereas the Chinese numbered 1,500, but the advantage of the ground being greatly with the former, they beat off their opponents. Such an encounter, however, is not significant, since, except under rare circumstances, advanced guards are not instructed to risk an obstinate engagement. The Gensan column probably set out on the 1st instant. It must therefore have advanced about 6 miles per day in order to reach Song-chhōn on the 15th. A distance of 120 miles then separated

it from the main position of the Chinese at Phyöng-yang.

As for the Söul force, it marched direct to Ka-shou, a town 35 miles from Söul, and there divided into three columns, of which the right directed its advance upon Sam-deung, a town 16 miles south east from Phyöng-yang; the centre marched towards Chung-hwa, a town 23 miles due south of Phyöng-yang, and the left was instructed to cross the Tai-dong westward of Chung-hwa, taking Hwan-ju *en route*. Chung-hwa was occupied on the 8th instant, after a skirmish resulting in the defeat of a Chinese force numbering 2,000 infantry and 200 cavalry; the left column crossed the Tai-dong on the 11th, and the right column entered Sam-deung on the same day. It is evident, therefore, that the four columns converging upon Phyöng-yang have hitherto moved with remarkable unanimity. But it is also evident that the final attack upon that place must be still somewhat retarded so as to synchronize with the advance of the Gensan force.

The above *resumé* will convey to our readers a general idea of what has been going on, and will show how completely untrustworthy are the stories hitherto circulated about Japanese reverses and Chinese successes. The Chinese have gained one solitary victory—on the occasion when they surprised five Japanese troopers. For the rest, they have nothing to show except their own vaunting, the unwisdom of which will be proved by the issue now impending. As for English local journalists who endeavour to convict the Japanese of failure and incompetence because six weeks have not sufficed them to transport forty or fifty thousand men to a foreign country, and to complete an expedition involving the march of an army of 25,000 through a distance of 150 miles and over a difficult country, badly provided with roads, and offering no commissariat resources or transport facilities, we recommend them to examine the historical records of their own country's foreign undertakings, even those on a much smaller scale than the Japanese march against the capital of Manchuria.

Since the above was put in type information has been received that on the 16th the Japanese army, numbering 20,000, attacked the Chinese at Phyöng-yang, the latter being strongly entrenched there with 30,000 men. The Japanese were completely victorious. The Chinese loss is very heavy, and the Japanese had about 700 killed and wounded.

By a majority of 381 in a poll of 1,108, the members of the Surrey Club, to whom the question was submitted, decided on 3rd inst. that football should be played at the Oval during the season of 1894-5. The news will be welcome to the vast body of London footballers, there being no enclosure in the vicinity of the metropolis so admirably adapted for affording a crowd the requisite facilities for watching the winter game in comfort.

THE JAPANESE MARCH.

WITHOUT further particulars it is impossible to pronounce an opinion on the military consequences of the defeat suffered by the Chinese at Phyöng-yang, but we can at any rate conclude that the result of the fight is a miserable commentary on the capacity of the Chinese troops. Everything was in their favour. They had chosen at their leisure a position strong by nature, and they had devoted some forty days to the task of entrenching themselves there. During that time, with the most ordinary exercise of industry and military knowledge, it ought to have been easy to throw up works such as, if they did not necessitate a regular investment, would at least have compelled great sacrifices on the part of an attacking army. The Chinese are credited with ability to fight behind parapets. They ought to have had excellent parapets at Phyöng-yang, and they certainly had a force which, if not numerically superior to that of the Japanese, must have been at least equal to it. Moreover, not merely at Phyöng-yang itself, but also in its immediate vicinity, nature has furnished facilities for defence. The Ta-dong river, which flows in the vicinity of the town on the east and south, is a large stream without bridges fitted for the crossing of troops, and navigable for vessels of some size from the sea. The passage of such a river in the face of a foe commonly resolute and competent, would have been an operation involving heavy loss. But the Chinese do not appear to have made any attempt to oppose the Japanese passage of the Ta-dong. They limited themselves to a few abortive skirmishes on the southern and eastern sides of the river, and being defeated in these, fell back incontinently on Phyöng-yang, leaving the Ta-dong wholly unutilized. At Phyöng-yang itself their defence must have been of the weakest and most perfunctory kind. Strongly entrenched and with a force of over twenty thousand men, the total loss that they succeeded in inflicting upon the assaulting army was only 300 in killed and wounded. A more contemptible record could scarcely be compiled. Of course it is possible that the Japanese dispositions for the attack were of an exceptionally skilful character. But even after every assumption of that nature has been made, the Chinese troops must be held to have acquitted themselves disgracefully. One feature of the affair can not fail to strike a foreign observer, it is the total incapacity of the Chinese Government to assist and support its army. The Ta-dong river was, in effect, the only route by which supplies could be conveyed to Phyöng-yang. For that purpose it was an excellent route, since its mouth lies opposite the entrance to the Pechili Gulf, and is within a day's steaming of Wei-hai-wei and Port Arthur. If the Chinese fleet were ever to figure as an

active factor in the war, it ought surely to have been employed for the purpose of preserving marine communication with the army in Korea, and conveying ships with supplies to Phyöng-yang. But the Chinese fleet allowed itself to be imprisoned in the Gulf of Pechili; the Ta-dong river was seized by the Japanese and used for the purpose of provisioning their own army; and the Chinese troops, campaigning in an open country and with an open seaboard, found themselves in danger of starvation before the enemy came in sight. It has been proudly asserted of China that she possesses an immense reserve of stern staying power; that the loss of half-a-dozen armies is nothing to her, and that she can wear out any foe by the mere illimitability of the material she offers to be slaughtered. It is a wretched reputation, but looking at the course of recent events, we are forced to conclude that if any inference is deducible from the apathy and perfunctoriness of the Chinese Government, the Phyöng-yang army was regarded in the light of a mere military obstacle, the destruction of which deserved no more consideration than would be accorded to the levelling of a parapet or the breaching of a bastion. If China has really adopted this policy of pitiless sacrifice, she may secure temporary safety at the cost of permanent disgrace. Forty days have been required by the Japanese to reach Phyöng-yang, and exterminate the first Chinese army. Forty days more will bring the close of October, after which there will be little time for campaigning in Manchuria above the fortieth parallel of latitude. Presumably China can mass another army between Moukden and Phyöng-yang. It will be wiped out as was the Phyöng-yang army, but still the process demands time, and frosts and snows of winter are at hand. We fear that this war may prove a tedious affair, unless Japan contents herself with the now practically accomplished operation of expelling all Chinese troops from the peninsula. The Koreans must now have discovered how utterly incompetent China is to maintain the suzerainty she so haughtily asserts.

THE JAPANESE FORCE AT PHYÖNG-YANG.

VERY wild statements are published by the English local press with reference to the Japanese forces engaged in the Korean campaign. One journal says that "for weeks past the Japanese have been pouring into Korea some 100,000 troops and coolies." The extravagance of such an assertion is evident on the face of it. To include "coolies" in the strength of an army in order to create an exaggerated idea of its size is a device too disingenuous to be excusable under any circumstances. Another journal writes:—"The total number of Japanese troops at Phyöng-yang

could not have been less than 50,000 and probably nearer (*sic*) 75,000." Surely it is strange that whereas 48 days have elapsed since war was declared and since the Korean campaign virtually commenced, English journals published in Japan should not yet have acquired the most rudimentary idea of the forces actually sent from this country to the peninsula. It is true that the Government does not permit the vernacular press to publish details as to the strength or movements of the troops despatched to Korea. Very wise reticence that is, too, for journalists having already shown that their first aim is to procure and publish news, and that considerations of public interest weigh little with them as against the achievement of that object, it would be plainly unsafe to leave their hands free in such matters. Independence of speech and pen is a very fine thing in the abstract, but when its exercise imperils national independence, there cannot be much doubt about the wisdom of restraining it. But although the vernacular press has been prevented from inserting numerical details, it has not been prevented from stating the broad facts of the case, and even if local English journals had no source of information other than the columns of the Japanese papers, they ought to know by this time that the forces hitherto sent to Korea for the northern campaign are represented by the Hiroshima Division and one-half of the Nagoya Division. The strength of the Hiroshima Division on a peace footing is 8,882 of all ranks, and the strength of the Nagoya Division is 9,011. To what number these corps have been raised on a war footing, there is no precise information published. But we shall certainly not be minimizing the facts if we assume that their strength has been doubled. On that hypothesis the total force engaged in the campaign against Phŭng-yang was 26,874 men, and with an army of that strength no General could hope to put more than 20,000 men into the field. If the Japanese troops actually engaged in the assault upon Phŭng-yang exceeded twenty thousand the excess must have been insignificant. In all probability they fell short of that total, since when from an army of 27,000 we deduct the numbers required to escort provisions and preserve communications with a base more than a hundred miles distant, the remainder will be found considerably below the original aggregate. Some misapprehension appears to have been caused by the fact that the reserves have been called out. But the calling out of the reserves does not necessarily mean that they have been sent abroad. On the contrary, they would not go abroad until after all the troops with the colours had been despatched. Knowing what Divisions have been sent to Korea, there can be little doubt as to the force under the command of the Japanese Generals there. The second half of the

Nagoya Division was sent a few days ago, at the time of General YAMAGATA'S departure, but of course it could not have taken any part whatever in the Phŭng-yang campaign. All this information is just as accessible to our local contemporaries as to ourselves. When, therefore, they speak of an army of 100,000 men, or 75,000 men, attacking Phŭng-yang, they display singular indifference about facts, and curious carelessness about supplying true information for their readers.

THE CHINESE LOSS AT PHŬNG-YANG.

WE explained in our last issue that much ambiguity existed with respect to the Chinese loss at Phŭng-yang. The telegrams at first received were bewildering. They said that "one or two bodies" of the enemy had broken through the Japanese lines and effected their escape, but that all the rest had been either killed, wounded, or captured. How was the expression "one or two bodies" to be interpreted? A "body" of men may mean fifty and it may mean four or five thousand. On the other hand, the language in which the telegrams were couched indicated a studious desire to avoid exaggeration. When men seek to exaggerate the nature of a victory, they invariably give a numerical estimate of the enemy's casualties—so many thousands killed and wounded. Here was nothing of that kind. We were simply told that one or two bodies (*mure*) had escaped, and that all the rest were *hors de combat*. Still people felt much hesitation in translating this account into an arithmetical equivalent, and further intelligence was awaited. On the 18th instant two telegrams reached Tokyo, each obviously intended to remove the ambiguity purposely left in previous messages. The first was to the *Yiji Shimpō*. It had been despatched from Hiroshima at 10.50 a.m. on the 17th instant, and it read thus:—

The killed and wounded on the Chinese side at the battle of Phŭng-yang are said to have been over ten thousand.

The second telegram came to the Tokyo News Agency. It was dated at Hiroshima, 11.45 p.m. on the 17th instant:—

In the great battle yesterday at Phŭng-yang, the enemy's loss in killed, wounded, and prisoners was about fifteen thousand.

The first of these messages is obviously incredible. The killing and wounding of ten thousand men can not be reconciled with any resistance other than one of a most vigorous character, and a vigorous resistance on the part of the Chinese can not be reconciled with a loss of only 300 on that of the Japanese. The second telegram leaves us in doubt as to the separate figures of killed, wounded, and captured. Later messages, however, have furnished fuller information. It is now believed that the number of killed on the Chinese side was about 2,000, and that the number

of prisoners was 7,000. The Chinese army was practically wiped out. These facts elevate the affair to the rank of a most remarkable feat of arms. The Japanese loss was about 700 killed and wounded. It seems almost incredible that such results should have been achieved at such a paltry sacrifice, and however low an estimate we may form of the military capacity of the Chinese, very great credit is undoubtedly due to the Japanese generals. The Chinese are hopelessly disgraced. Their fighting throughout the war has been contemptible. Prior to the final advance upon Phŭng-yang, they had managed to kill only 30 Japanese. It is of no avail for the enemies of Japan to be sceptical about this figure. The names of all the killed have been duly reported to the War Office in Tokyo, and the total is 47, in which are included 17 drowned in the passage of a river and 2 non-combatants. At the action of Sōng-lwan, on the 29th of July, and in the defence of A-San, captured the following day, the Chinese had a force of between two and three thousand engaged. Yet, with a loss of over 500 and the complete rout of their army, the total casualties inflicted by them on their assailants were only 75 killed and wounded. That is a record sufficiently feeble to justify belief in any degree of subsequent weakness. Still the Phŭng-yang figures are surprising: 2,000 killed and 7,000 taken prisoners on one side; 700 killed and wounded on the other! The Chinese were beaten at every point; in generalship not less than in fighting ability.

The path to the frontier now lies open to the Japanese. It appears that the roads to the north of Phŭng-yang are much better than those to the south, and that the rivers are spanned by good bridges. Moreover, the Japanese have not failed to despatch a flying column in pursuit of the Chinese who escaped, so that the latter will not have time to break up the roads or destroy the bridges. Neither will they have time to rally. We may conclude therefore, that no further engagement will take place on this side of the frontier, and that the next stand made by the Chinese will be at Wiju, which lies on the Yalu river about 100 miles from Phŭng-yang. If the Japanese advance be expeditious—and expedition is now of the utmost importance—they may reach Wiju by the end of the present month, though, for our own part, we scarcely anticipate such rapidity. At present it is said that the army's progress is delayed by the difficulty of dealing with the crowd of prisoners taken at Phŭng-yang. But that will not prove more than a temporary embarrassment. The Japanese must be heartily congratulated. They have covered themselves with *éclat*.

During the first three months of 1894, the average of the temperature was ten days, an increase of 20 per cent. over the same period of last year.

PALMAM QUI MERUIT.

IT has become a habit with the local English journals of this Settlement to class the Chinese and Japanese in the same category of falsehood so far as concerns war news. Both sides, we are told, have proved such adepts in lying that no confidence whatever can be reposed in either. SATAN, the proverb says, has a conservative tendency to reprove Sin, and we presume that the spectacle of these gentlemen criticising Japanese and Chinese mendacity belongs to the Satanic genus of moral phenomena. For certainly if it were necessary to make a candid comparison, there could be no manner of hesitation in assigning the palm of falsehood to these foreign journalists themselves and to foreign reporters generally. From the commencement of the war until the present moment several of the English local journalists in the far East have distinguished themselves by circulating lie after lie and canard after canard, and if any one wants a veritable assemblage of falsehoods as extravagant as they are baseless, he has only to collect the telegrams sent from the East to the London journals. It is impossible to peruse any issue of the local newspapers in question without encountering an illustration of their indifference to truth. Take, for example, the *Japan Gazette* of the 17th instant. We there find this statement:—"After the Japanese outposts had been driven back with very heavy loss, the second reserve was called out." Now on what authority does this assertion rest that "the Japanese outposts were driven back with very heavy loss?" Purely on Chinese authority. From China came stories of repeated repulses suffered by the Japanese army advancing from Sôul. These stories were emphatically contradicted in Japan. Why, then, are they still accepted as true by the *Japan Gazette*?—the *Japan Gazette* which, twelve days previously, had written thus:—

When some time since we ventured to anticipate stupendous mendacity as a feature of the Korean war, the most experienced in Oriental lying would scarcely have predicted the magnificent crop of falsehoods which six weeks have produced. For lies that looked like truth most of us were prepared, but for colossal fabrications which subsequent events were bound to expose, few were prepared. China has apparently been the most unblushing sinner, but Japan runs her close.

Thus it appears that the *Japan Gazette*, regarding China as "unblushingly and stupendously mendacious," yet accepts and adheres to Chinese fictions of victories "which subsequent events were bound" to prove fallacious. For, observe what this allegation of "outposts driven back with heavy loss" means, when judged by the light of recent events. It means that whereas the Japanese, on their first advance against Phÿông-yang, were defeated by the Chinese at every point with heavy loss, they met with no resistance whatever on their second advance a few days later,

and it also means that the same Chinese who managed to drive the Japanese back with heavy loss fighting in the open, were unable, when fighting behind entrenchments, either to hold them in check or to inflict upon them any save the most trifling loss. When the *Japan Gazette*, in its issue of the 17th instant, republished the falsehood about the driving back of the Japanese outposts, it knew that these nominally defeated and decimated outposts had marched over the same ground a short time subsequently without encountering any resistance; and it also knew, or ought to have known, that the total number of Japanese killed in the peninsula prior to the final struggle at Phÿông-yang had been 47. But this is only a solitary example. Fifty others could easily be cited. Against them, what is to be set on the Japanese side? Is it really the case that the Japanese have been fabricating tales of victory and prowess? We have not heard such tales. It is true that rumours of minor successes have reached the vernacular press and made their appearance in print, but they have almost invariably been given as rumours and with suitable reservations. No impartial observer can hesitate to award to the Japanese considerable credit for the common sense and moral balance they have shown throughout this war. So far from indulging in wild exaggerations and suffering themselves to be carried away by flattering rumours, they have preserved a quiet and sober mien, showing no flurry or excitement when the die of contest was cast, nor any undue elation when news of their army's successes reached them. We do not perceive that there have been any of those attempts, so familiar in Europe, to influence the stock market by stories of fictitious victories or defeats, nor have we observed a single leading journal lend its columns to the ventilation of canards about the triumphs of Japanese arms. In short, so far from there being any reason to accuse the Japanese of "stupendous mendacity" or "adept lying," they are to be applauded for a display of precisely the opposite tendency. The palm for circulating false rumours rests emphatically with the foreign local press, and when its editors rail at the Japanese for lying, they afford a quaint spectacle of SATAN reproving Sin.

Surrey and Yorkshire still keep neck-and-neck for the championship, the former having lowered the colours of Notts, and the latter, after an interesting game, securing a decisive victory over Lancashire.

The North v. South match at the Oval ended on 4th inst. in a draw in favour of the Southern team, who, with seven wickets to fall in their second innings, only wanted 56 runs to win. At Taunton, Somerset gained a brilliant victory over Sussex by 110 runs. The matches between Lancashire and Leicestershire at Manchester, and Gloucestershire at Birmingham were left drawn. At Leyton there was a very exciting finish in the match between Essex and Hampshire, which eventually resulted in a victory for the latter by nine runs.

THE JAPANESE AND CHINESE FORCES AT PHÿÔNG-YANG.

IT is not surprising that the general public, since it does not pay detailed attention to the movements of the Japanese forces, should be uncertain as to the number of troops now in Korea. Moreover, great reticence has been observed by the Japanese Authorities on this subject, and there is consequently some difficulty in getting at the truth even for careful observers of events. We believe, however, that the facts are pretty plain. The first troops despatched by Japan were the Hiroshima Division. Our readers are probably aware that apart from the Imperial Guard (6,530 men), the Japanese standing army consists of six Divisions, having their head-quarters in Tokyo, Sendai, Nagoya, Osaka, Hiroshima, and Kumamoto. The smallest of these Divisions is that of Hiroshima, numbering 8,882 of all ranks, on a peace footing; the largest is that of Tokyo numbering 10,066. Roughly speaking, the Divisions may be said to average 10,000 men. The exact total of the six is 55,913 of all ranks on a peace footing. In time of war these numbers are swelled by drafts from the Reserves. There are two Reserves, the First and the Second. The former totals 89,097 men; the latter, 104,480. It is from the First Reserve that drafts are first taken to augment the strength of the Divisions, because the men comprising that Reserve, having served most recently with the Colours, are fittest to take their place immediately in the ranks. In order to render the matter clear, we set down here the establishments of the Imperial Guard and the Six Divisions, distinguishing between the Troops with the Colours and the First and Second Reserves:—

	With the Colours.	First Reserve.	Second Reserve.
Imperial Guard.....	6,530	8,610	5,507
First Division (Tokyo) ...	10,066	15,549	19,870
Second Division (Sendai) ..	8,892	16,428	20,002
Third Division (Nagoya) ..	9,011	13,912	15,897
Fourth Division (Osaka) ...	9,157	14,876	15,595
Fifth Division (Hiroshima) ..	8,882	13,462	17,077
Sixth Division (Kumamoto) ..	9,885	14,870	16,039

Now, since we know which of these Divisions have been sent to Korea, we are in a position to form a pretty clear idea as to the number of troops in the peninsula. At the outset, the Hiroshima Division was despatched. The First Reserves had not then been called out. Hence it was the peace establishment that went. Of course the whole force, as shown upon paper, did not embark. A certain number of men must have remained at the dépôt and some were doubtless on the sick list. If we assume that out of the 8,882 appearing on the returns, 7,500 took ship for Korea, we shall be tolerably near the mark. Subsequently the First Reserve, consisting nominally of 13,462 men, was despatched. Assuming that as many as 13,000 embarked, it appears that the total force in Korea at the time of the first advance from Sôul against Phÿông-yang

was 20,500 of all ranks. With an army of that size, a General would count himself fortunate if he could put 17,000 actually in the field on any given day. When it was decided that an advance against Phyōng-yang must be made from Gensan as well as from Sōul, one half of the Nagoya Division was despatched by sea to Gensan. This happened in the closing days of August, and the First Reserve having then been called out, the troops with the colours were doubtless sent *en masse* from Nagoya. Nominally 9,011 strong, the Division was probably able to muster 8,000 for foreign service. On that hypothesis, the total forces engaged in the campaign against Phyōng-yang numbered 28,500. Japanese estimates have hitherto placed them at 24,000, but the figures followed by us are those given in the annually published official statistics. Recently the remaining half of the Nagoya Division was sent to Gensan. It did not arrive in time to take any part in the campaign against Phyōng-yang, but it has doubtless advanced ere this. Its addition brings the total of the Japanese troops in the peninsula to about 40,000.

Such is the estimate on which we have hitherto relied. But it is to be noted that the Japanese journals, writing now with a degree of candour and precision not hitherto permitted, put the strength of the troops engaged in the attack at from 15,000 to 20,000. The most minute and carefully considered calculation is that of the *Hochi Shimbun*. It says that Lieut.-General NOZU, who commanded the column on which the brunt of the attack fell, had 5,500 men; Major-General OSHIMA, who worked in combination with Lieut.-General NOZU, 3,700; Major-General TATSUMI, 2,500, and Colonel SATO, 4,700; or 16,400 in all. On the whole, therefore, we may assume that not more than 20,000 men were actually engaged in the attack.

With regard to the Chinese engaged in the defence of Phyōng-yang, they consisted of the Kirin army and troops from Pechili. The former, nominally 30,000 strong, moved across the frontier from Manchuria; the latter were carried from Taku over-sea. We can not arrive at an accurate estimate of either contingent. It is known that between July 20th and 27th twelve steamers left Taku laden with troops for Korea, and according to journalistic statements made at the time, each vessel carried a thousand men. Reinforcements were subsequently sent from the same place, so that we shall probably be well within the mark if we assess the Taku contingent at 15,000: it has generally been reckoned as 18,000 strong by Chinese authorities. Supposing, then, that the Manchurian Army numbered only 20,000 instead of 30,000, we have a total of 35,000. General Count YAMAGATA'S telegram says that, according to statements made by the Koreans, there were 40,000 Chinese troops in Phyōng-yang. Hence, all things considered, thirty thousand is a very moderate estimate.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MISSION TO THE BLIND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A Miss Thornton in her letter made reference to the school for the Blind under the C.M.S. here in Gifu. I send an account for the benefit of "Englishmen," not so much of what we have done as of what we hope to be able to do.

Up to the present, for the want of a qualified teacher, we have only been able to teach massage, acupuncture, and to give verbal Christian instruction.

At present, however, a catechist of ours who lost his sight last year, and who was previous to his becoming a catechist a teacher in the Gifu Chu Gakko, is studying at the Blind School in Tokyo in order to qualify himself for the principalship of the school, and for work amongst the blind.

On his return from Tokyo we are hoping to start a school for blind children. In which, besides Christian instructions, the ordinary course will be reading, writing, arithmetic, geography, and history. The technical course, massage, acupuncture, and music. The course will cover five years.

Mr. Muri, the catechist, first began to learn the raised type *Kana* Bible, which was obtained from the Bible Society in Yokohama, but has since dropped it, and is now learning M. Louis Braille's system, which is considered superior to other systems and is now adopted in most schools.

There is a Christian Blind School in Yokohama started by Mrs. Draper which, I believe, is doing an excellent work.

Yours, etc.,

A. F. CHAPPELL.
Church Missionary Society.

Gifu.

BRITISHER OR ENGLISHMAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I was sorry to see "Student's" letter in yesterday's *Japan Mail*, for writing to one newspaper to call attention to minor defects in the language used in another newspaper is a piece of silliness which must be most distasteful to you.

The matter, however, which "Student" calls attention to, but without clearing it up, is one of some interest. Both in ancient and modern usage there is good authority for adding *er* to the name of a place (a noun). Londoner, Hollander, New Yorker, are unquestionable. The second has unfortunately been displaced by the inappropriate Dutchman. But in *Britisher*, *er* is added to an adjective, for which I think there is no precedent. The word is objectionable etymologically. Has it been sanctioned by usage? Is it a necessary word? Writers of good literary reputation, with the exception of Thackeray, do not use it—so I believe, but I may be mistaken. There is no short term for a native of the United Kingdom of Great Britain and Ireland, nor for the kingdom itself. Briton is obsolete. Moreover it and British are properly distinguished from Irish, except in the phrase, the British Islands. The most convenient words for ordinary usage are England and Englishman. A Scotchman or an Irishman, while loving his own particular country best, in no way sacrifices its dignity if he consents for convenience sake to be designated by the term which is strictly applicable only to the larger, wealthier, and more populous country with which his own is united.

The United States of America likewise lack for themselves and for their citizens' names which are at once brief and quite correct; but there seems to be a general acquiescence in the convenient restriction to the great republic of the terms America and Americans, to the exclusion of Canada, Mexico, &c. United-statesman would be worse than British Islander.

I am, Sir, yours very truly,

ISLANDER.

September 16th, 1894.

MODERN JAPANESE PHYSIQUE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There can be no question that tobacco in any form is a bad thing for growing boys, and that men, generally speaking, who smoke, and snuff, and chew, receive no benefit from these habits but the sensual pleasure afforded by them. The figures, however, produced by Mr. Chappell in a recent issue of the *Mail* to support his case are not convincing. In the first place, the number of men—smokers and non-smokers

—tested at Yale for results, is altogether too small to make an average worth recording, and there may have been a dozen other causes operating even in so small a number of subjects. The growth of the men of Yale is given thus:—Chest girth (non-users) 1.740 in.; ditto (habitual users) 1.276 in.—a very slight difference when compared with lung capacity (non-users) 21.06 cub. in.; ditto (habitual users) 12.17 cub. in. Considering how largely lung capacity depends upon chest girth these figures are too small in the "girth" column and too large in the "capacity" column to be correct. Most athletes and men who have been trained know that, though they may take off weight, when they increase lung capacity they increase chest girth with some regard to ratio. "Scientific demonstrations" are worse than useless if not correct, because they then become misleading and put people on the wrong scent when attempting to remedy an evil.

The reference to the armour of the knights of old being far too big "for the men of the present generation to wear" in connection with the use of tobacco is disproved. In no country of the world has the consumption of tobacco increased to such an extent as in England, and yet not one man in twenty of the present generation can get into ordinary suits of armour now preserved in the Tower of London and in private collections.

Mr. Chappell is not happy in concluding his letter. He says, referring to smoking:—"Such violation of physical law is a striking commentary on the words of scripture:—"Visiting the iniquity of the fathers upon the children unto the third and fourth generation." This is decidedly a slap in the face for many of his brother missionaries, who will not care to be told that they are guilty of an "iniquity" which will injuriously effect their descendants. Mr. Chappell has certainly not thrown any light upon the subject referred to in the first paragraph of his letter.

Yours, &c.,

September 16th, 1894.

VIRGINIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If I were a crank on the tobacco question, I would be glad that "Virginia" had given me opportunity to air again my little fad. Concerning his letter, I have only to say that the contention is between him and Jas. W. Seaver, M.D., College Physician of Yale University, and Prof. Edw. Hitchcock, M.D., of Amherst College. "Virginia" asserts that "the number of men is too small to make an average worth recording." Prof. Seaver states that "the data relate to one hundred and eighty-seven men composing the present senior class," and that "the group is large enough to eliminate the elements of mechanical error and chance growth." "Virginia" further asserts that the figures cannot be correct. I believe that the gentlemen who have charge of the department of physical culture in the institutions named are men who would not give to the world other than correct figures. The statement concerning the use of tobacco by Englishmen would only prove that during recent centuries the influences at work to increase physique among them have been greater than those at work to diminish it. In Japan, it is evident that the influences at work to diminish physique have been greater than those at work to increase it; and I believed that I had put my finger upon one of these influences. Allow me in closing to quote these further words from Dr. Seaver: "Here, then, is scientific demonstration that the use of tobacco checks growth in weight, height, chest girth, and most of all, and most damaging of all, in lung capacity." If any one has any evidence to the contrary, the writer would be glad to have it produced.

Yours, &c.,

B. CHAPPELL.

Aoyama, Tokyo, September 19th, 1894.

AUSTRALIAN FERNS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Not the least beautiful or characteristic of the many picturesque features of the Australian landscape, especially in the vicinity of the eastern coastal districts, is the enormous wealth of fern-life, from the delicate maiden-hair timidly peeping, like the modest violet, from among tufts of jealous grass, to the stately tree fern, rising to a height of fifty or sixty feet, and even more. Well might sober-minded botanists enthusiastically describe Australia as the fern-hunter's paradise, for nearly every known kind of fern is to be found, especially in New South Wales, in wonderful profusion, being as plentiful in some localities as are buttercups and daisies in an English meadow. There are places in the vicinity of Sydney Harbour possessing ferns in sufficient abundance to awaken the envy of a Covent Garden florist. A mass of maiden-hair ferns, as large as a good-

sized cabbage, can be purchased for sixpence from any of the fern and flower-sellers in the Sydney streets; and school children from the shores of the Lane Cove River often carry large bouquets of fern and blossoms with them to town, imparting a somewhat festive appearance to the decks of the river steamers by which they travel. Immense quantities of ferns are also sold periodically by auction in Sydney, a large tree fern, which would form a noble acquisition to Kew or Chatsworth, being procurable for three or four shillings, and even less. How many thousands have thus found their way into the market during the last few years it is impossible to say, but there appears no sensible diminution in the mass of fern-life in the country around Sydney. Considerable numbers of ferns are obtained from the neighbourhood of the Hawkesbury, the Manning, and other northern rivers; and occasionally from the Illawarra and other southern districts. Among the favourite kinds of fern are the elk-horn and the stag-horn, both of which are found growing, sometimes in large clusters, on the trunks of forest trees or the surface of moist rocks. They are easily detached, and will grow readily when affixed to a brick wall, a door-post, or almost anything which affords them a means of suction. The bird-nest fern is another favourite. It is found growing from a few inches to several feet in height, and forms both an attractive addition to the garden and an ornament to the verandah. The English maiden-hair is the most in request, not only for the garden or the bush house, but also for bouquets. It is generally sold in pots or wire hanging-baskets, the price not exceeding a few pence. Indeed, among the Sydney labouring classes, ferns largely take the place of the geraniums and other pot plants which find a place on the window-sills of Whitechapel and similar metropolitan working-class districts. Among other well known ferns are the common adders-tongue, climbing snake fern, parasol fern, hare-foot fern, mountain bracken, catwing fern, fan-shaped spleenwort, caraway fern, bladder fern, lady fern, blanket fern, golden swamp fern, and others; while of those known only by their botanical names the number is legion; but to see the Australian ferns in their fullest beauty, they should be sought in the mountain gullies into which the sunlight scarcely penetrates, and where they form exquisite pictures far more enchanting than any that the most fertile imagination is capable of creating.

Yours, etc.,
JOHN PLUMMER.
Sydney, July 2.

MIXED FARMING IN AUSTRALIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR.—Mixed farming, both on a large and small scale, is extensively practised in Australia, especially in New South Wales, where, for many reasons, the smaller class of landholders are found preferring a combination of the pastoral and agricultural industries, as enabling them to secure the largest amount of profit with the least amount of labour. This partly explains the reason why, notwithstanding the fact that a considerable portion of the colony is admirably adapted by soil and climate for agricultural purposes, the total area under cultivation in 1893 was only a little over a million acres. Possibly, if communication with Sydney were less difficult and costly, there would be a rapid increase of cultivation in many of the outlying districts. How mixed farming on a small scale, in a suitable locality, can be made to pay, is shown by a description of one of the farms which obtained a government prize in 1892. It is situated at Teutei field, on the high table-land in the northern part of the colony, 471 miles from Sydney, and consisted of 175 acres, of which about 110 acres were cleared. Of this latter portion, 22 acres were under wheat, 22 acres under wheat and oats mixed, being intended for hay, and 21 acres under lucerne. Thirty acres had been planted as an orchard, but the trees were still young, and, of course, only partially productive. The live stock consisted of 6 draught and 13 light horses, 23 head of dairy cattle, 37 pigs, and a number of poultry. There was an excellent residence, gardens, wooden barn, machine shed, granary, labourers' huts, cow sheds, and piggeries. The machinery, etc., comprised a reaper and binder, two mowing machines, hay rake, hay press, two drays, two-furrow plough, single-furrow plough, potato digger, harrows, and roller. Although the system of farm management was capable of considerable improvement, the books showed that the receipts for the year, principally for wheat, hay, chaff, and milk, amounted to £395 1s. 6d.; and the expenditure, chiefly in the shape of wages, to £168 12s.; leaving a profit of £226 9s. 6d. When the uncleared portion of the farm had become properly utilised and the orchard got into full bearing con-

dition, the yearly profit would be found considerably increased. Of the larger mixed farms, one near Wellington, in the western district, 248 miles from Sydney, may be taken as an illustration. It consisted of about 5,000 acres, of which 1,500 acres had been cleared, and, with the exception of 200 acres, placed under wheat. Of the 1,300 acres, under wheat, 900 acres were left for grain, the other 400 acres being cut for hay. Over 100 acres were under lucerne, and 20 acres under maize and pumpkin. The live stock included 8,000 cross-bred sheep, 70 horses, 50 dairy and other cattle, 30 pigs, and a number of poultry. The mechanical appliances comprised 5 reapers and binders, steam threshing plant, steam chaff-cutting plant, steam hay and straw press, steam wool press, 5 Horsby three-furrow ploughs, 3 single furrow ploughs, 2 strippers, 4 sets of harrows, 2 disc harrows, etc. The farmhouse and out-buildings were in good condition, as were also the cottages provided for the married labourers. The receipts for the year, principally from wheat, sheep, and wool, were £4,912 0s. 7d.; and the expenditure, chiefly for wages, store sheep, and implements, £3,353 18s. 7d.; leaving a profit of £1,558 2s. 0d. on the year. As from 200 to 300 acres of the uncleared land were being cleared annually, the profits would show an increase each year, except during unfavourable seasons. The soil, for the most part, was a rich grey loam, with clay subsoil. The two farms above mentioned were typical of their class, and show the possibilities of mixed farming in New South Wales.

I am, Sir, &c.,

JOHN PLUMMER.

Sydney, July 23rd, 1894.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, August 23rd.

It is probably better known in Japan than on this side whether or not the following clipping states a truth:—

New York, August 18th.—Among the passengers on board the French liner *Le Yauraine*, which arrived here to-day were two Japanese, one of them a cousin of the Mikado. The Mikado's cousin is travelling incognito as Count Mishima. With him are his secretary, Mr. Nagasaki, and two servants. The Count will sail from San Francisco for Yokohama on September 6th.

With an apology for using again "scissors and paste," I submit another clipping which is worth giving entire:—

Articles of incorporation were filed yesterday at Springfield for the International Takamine company with a capital stock of \$1,000,000. This company proposes to sell the patent rights of Takamine distaste in all foreign countries. It is less than three years ago when Jokichi Takamine discovered that koji, a fungus found on the wheat stalk, could be used instead of malt to set up alcoholic fermentation. He reduced the koji extract to a solid form, and the new process of fermentation was tried for thirty days at the Manhattan distillery in Poughkeepsie. It proved entirely satisfactory. The saving was about 15 cents a bushel, or 5 cents a gallon on the alcohol. The saving on the output of the Distilling and Cattle Feeding Company in alcohol alone will be \$1,000,000. In the brewing of beer the estimated saving will be \$10,000,000 a year. The process entirely displaces the use of malt.

The Distilling and Cattle Feeding Company has now signed a contract with the new company by which it agrees to equip all its distilleries with the Takamine process as soon as it can be conveniently done and to pay as per cent. royalty on the material saving.

Ye Sung Son, Korean Minister to the United States, is on his way home for a vacation, which may extend over the full allowance of six months.

In view of the serious nature and probable long continuance of the war between Japan and China, the U.S. naval force in Asiatic waters is to be reinforced by "the crack cruiser" *Charleston*. All news from the scene of war is read with great interest, and almost unanimous sympathy with Japan is freely expressed in conversation and in print. A number of Chinese have started home to take part in the war.

Moy Ah Kee, who says that he has lived in the United States for 35 years, and who "speaks, reads and writes English," is trying to become a citizen of this country. He took out his first papers in 1880 before Judge Dugro in New York City; but was recently refused his final papers by Judge Dunne of this city. His attorneys will carry the case to a higher court.

On the 14th inst., the Senate, by a vote of 47 to 20, confirmed the new Chinese treaty. The Pacific Coast Senators generally favoured it; but Senator Perkins, of California, opposed it on the ground that it is not "as stringent as the old treaty, and would open the gates for an influx of Chinese" through fraud. The new treaty prohibits the coming of Chinese labourer to the United States for ten years, except upon specified conditions, which refer to the return of labourers now or formerly in this country. A departing Chinaman must secure a certificate, good only for one year, but extendable longer in exceptional cases. These restrictions, however, do not apply to officials, teachers, students, mer-

chants, or travellers who are provided with the proper certificate. Chinese residents of the United States are guaranteed all the rights and protection given the citizens of the most-favoured nation; except the right to become naturalized. The necessity for registration is also laid upon our nationals residing in China. This treaty is expected by Senator Davis (Minn.), of the Committee on Foreign Relations, to "prove most beneficial to our commercial interests."

Col. Denby, U.S. Minister to China, has not yet left this country, but is spending his vacation in Indiana. It is, however, quite probable that he will return to his post either by this mail or the next.

The Countess Wachtmeister, a prominent Swedish theosophist and an intimate friend of Mme. Blavatsky is lecturing in this city.

The latest news from Samoa is that, as the planting of crops has been neglected on account of the warlike condition of affairs, "a serious famine is impending."

From Hawaii comes a sensational item, that Japan wanted to get Pearl Harbour. A resolution of congratulation to the new Republic of Hawaii has been introduced into the U.S. House of Representatives, but has not yet passed.

It is reported from Nicaragua, that Guatemala, San Salvador, Honduras, and Nicaragua have signed a protocol uniting those States into one Central American Republic, and that Costa Rica has not yet accepted the protocol.

The Navy Department has issued the following amended regulations:—

The right of asylum for political or other refugees has no foundation in international law. In countries, however, where frequent insurrections occur, the constant instability of government exists, local usage sanctions the granting of asylum, but even in the waters of such countries, officers should refuse all applications for asylum, except when required by those interests of humanity in extreme or exceptional cases, such as the pursuit of the refugee by a mob. Officers must not directly or indirectly invite refugees to accept asylum.

The new regulations have an important bearing on the case of Ezeta, ex-President of Salvador, and friends, who are on board the *Bennington* off San Francisco. Warrants for the arrest of the refugees have reached San Francisco, and will be served, perhaps to-day.

The State Department has addressed a note to all maritime powers asking them to co-operate with the United States and Great Britain in the protection of the Seal fisheries.

The *Chicago Herald* Arctic Expedition, with Walter Wellman as leader, has returned to Norway with "every member in good health and spirits." The loss of their steamer compelled an earlier return than had been planned. Cape Gresham and four islands, named Whitney, Armour, Scott, and Walsh, are among the points added to the map by virtue of discovery. A full account of the trip will be published in due time. Wellman says that he is determined to try that route again in 1895.

Gen. Black of Illinois has introduced into the U.S. House of Representatives a resolution looking towards a bill for the coinage of the Seigniorage.

The river and harbour bill, passed by both Houses, became law without the President's signature.

A tariff reform measure has at last been put through Congress! And, though it has seemed to be taking an unnecessarily long time to get it through, the period consumed is actually six weeks less than that occupied in passing the McKinley Bill. It was on Aug. 13 that the grand finale came. A caucus of the Democratic members of the House of Representatives was held in the morning, and, by a vote of 112 to 21, decided to recede and agree to the Senate amendments. When the House met, the Wilson Bill as amended by the Senate, was passed by 182 to 12. The Republicans did not vote; the Populists voted with the Democratic majority; and the dozen who voted against the surrender are ultra free-trade Democrats. Immediately following this vote, the Democratic majority put through bills for free coal, iron-ore, sugar and hatched wire. These have been favourably reported to the Senate by the Finance Committee, but will probably fail to pass, as the Senate has voted by 27 to 16, that it is impracticable to attempt any more tariff legislation this Session. Public opinion also pretty generally condemns any further prolongation of the uncertainty. These measures have been dubbed the "pop-gun bills" of the House of Representatives.

The bill thus passed will probably not receive either signature or veto from the President, but will become law, at the end of the ten days' limit, on next Monday, August 27th. (It did not reach the White House till August 17th.) On the articles which have been the items of dispute between the two Houses, it fixes the following rates of duty:—

All raw sugars, 40 per cent. ad valorem; sugars above No. 36 (refined), one-eighth per cent. additional; sugars produced in

U.S. Marshal Arnold's special deputies sworn

The Captain's team went in on a damp wicket but their task did not seem very formidable.

"We cleared the Bashee Channel on the 31st August, and from thence to the Kii Channel had a steady N.E. wind, having to beat up the whole of the way. Arrived off Cape Murato on the 18th September after a passage of 147 days."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 15.

Chinese agents have been endeavouring to incite British soldiers in Hongkong to join the Chinese Service. General Barker has issued a warning order to the garrison.

London, September 17.

Captain Noel Wilmot Houssemayne Du Boulay, Royal Artillery, proceeds to join the Japanese Head-quarters in Korea, and Captain Alfred Edward John Cavendish, Argyll and Sutherland Highlanders, proceeds to join the Head-quarters of the Chinese, as Attachés.

Admiral Tiroff has been appointed to the command of H.I.R.M.'s Squadron in Korean waters.

London, September 19.

The English Press comment upon the great importance of the Japanese victory at Pyŏng-yang, which renders it apparent that Japan is a considerable power in the East.

London, September 21.

In the Russian Press it is urged that the Japanese victories have become a matter for Russia's resolve not to sanction the annexation by Japan of Korea, but to suggest that the time has arrived for European intervention.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, Sept. 19, 6.50 p.m.

A report has reached this place that further engagements have occurred in Korea, both ashore and afloat, and victories are assigned to the Japanese arms. No definite particulars are obtainable in regard to the military affair, but it is stated that a naval battle has been fought in which three ships have been sunk on each side, and that the killed on the Chinese side includes von Hanneken and seven other foreigners.

Kobe, September 20.

James McCann, charged with discharging a pistol in Nankin-machi, to the public danger, was tried for the offence at the United States Consulate to-day [the result of the firing being the wounding of a Chinese child in the foot] and sentenced to be imprisoned for the term of one year.

(FROM "N.C. DAILY NEWS.")

London, September 8.

The Japanese Government have threatened to withdraw their promise not to molest Shanghai if work at the Kiangnan Arsenal is continued, possibly with a view of provoking British interference.

Cholera is raging in forty districts in Galicia.

The work on the central section of the Siberian Railway is progressing rapidly.

(FROM TONKIN PAPERS.)

Paris, August 24.

The Russian Press advocates a concert of the European Powers to assure the safety of trade in Chinese and Japanese waters.

Paris, August 30.

Monsieur L'Abbe Bruneau, has been executed at Laval. An immense crowd surrounded the guillotine and applauded most heartily.

The Chinese Government has promised his Holiness the Pope to guarantee the security of all Christians in China.

September 2.

The entire press of France demands reparation for the assassination of M. Chailet.

(FROM THE "HONGKONG DAILY PRESS.")

London, September 12.

M. Le Myre de Vilers, supported by four warships, is proceeding to Madagascar to ascertain whether the Hovas will submit to France. Should they not do so an expedition will be necessary to force their submission. A pacific issue of the mission is not expected, and the French Press hail with enthusiasm the prospect of Madagascar becoming a French Australia.

H.R.H. the Duke of York attended the

funeral of the Comte de Paris at Weybridge. A thousand French loyalists were present who afterwards, assembled in London, were addressed by the Duc D'Orleans, who declared that he would fulfil the mission inherited from his father.

(FROM JAPANESE PAPERS.)

[The following telegram dispatched by Lieutenant-General Noku on the 16th inst. at 8 a.m. has reached the War Department from the Head-Quarters at Hiroshima.]

A fight took place on the 16th inst. at daylight at Pyŏng-yang. Three hundred Japanese have been killed or wounded. The Chinese loss has not yet been ascertained, but it is said to be considerable. The Japanese are now in possession of the castle at Pyŏng-yang.

Nagasaki, September 15.

The French despatch vessel *Inconstant* has arrived here from Chefoo *via* Korea.

Miyazaki, September 15.

Lord and Lady Randolph Churchill, the Hon. P. le Poer Trench, Dr. Lowson, and over fifty other foreign guests are staying at the Fujiya Hotel.

Hiroshima, September 16.

H.I.H. Prince Komatsu Yorihito, who is expected to leave San Francisco for home on the 20th inst., has telegraphed to Count Saigo, Minister of the Navy, intimating his intention of joining the Japanese fleet engaged in the China-Japan war.

Hiroshima, September 16.

On learning of the victory of the Japanese army at Pyŏng-yang the Emperor expressed great satisfaction at the behaviour of his officers and soldiers engaged in the field. His Majesty has evinced his earnest desire for the continual success of his troops when engaging the enemy. H.I.H. Prince Arisugawa at once telegraphed the Imperial message to the Commander-in-Chief of the Japanese forces in the Korean peninsula.

Later.

H.I.M. the Emperor attended a military conference held at Head-quarters this afternoon. Immediately upon the close of the sitting His Majesty announced his intention of visiting the military hospital in person, in order to inspect the disabled soldiers sent back from Korea. Surgeon-General Ishiguro, in answer to the Minister of the Imperial Household, urged that the Imperial visit be postponed for a while as the hospital is not yet completed, while the business of the establishment has not yet got into smooth working order. Moreover, the Surgeon-General stated, some cases of dysentery had occurred among the patients and the risk was great. The Emperor finally abandoned the idea of visiting the Hospital, but sent a Chamberlain with presents to the disabled soldiers instead.

Fusan, September 16.

General Count Yamagata, H.I.H. Prince Kanin, and party left Sŏul on the 15th inst. for Pyŏng-yang.

[The following telegram, dispatched by General Yamagata at Pyŏng-yang on the 16th inst. at 1.30 a.m., was received in the capital *via* Fusan and Hiroshima.]

The Commanding Officer of the Fifth Army Division sent yesterday a flying column in pursuit of the retreating Chinese troops. They have already captured six hundred Chinese refugees. Three officers under Sato, a divisional commander, were killed, four being wounded. One hundred and forty privates of the same division were either killed or wounded. No detailed reports have yet been received from the other wings. Among the things captured by the Japanese army were forty cases of gold dust and silver specie, each containing an amount of thirty-five *kwamme* (one *kwamme* = 8½ lbs. Av.); 67,000 *kwamme* of Korean money was also captured.

Hiroshima, September 18.

Count Ito, the Premier, reached here at 6 p.m. A large number of officials welcomed him at the station. He at once dispatched a message to report his arrival to H.I.M. the Emperor.

Later.

A telegraphic message under date the 17th inst., which was dispatched by Surgeon Kiuchi at Pyŏng-yang, and which arrived here this morning, states that the Japanese surgeons

have been giving medical assistance to seventy-seven disabled Chinese soldiers.

Cabinet business will, it is arranged, be transacted here from to-day; whatever portion is done in Tokyo will have to receive the Emperor's sanction here.

Sapporo, September 18.

Loud rumbling sounds were heard in the neighbourhood of the Rausu Spring in Menashi District, Nemuro Province, on the 12th inst. at 6 p.m., and a large landslip followed. Nobody was injured.

Fusan, September 19.

An official report received here to-day says that the Japanese fleet met eleven Chinese war-vessels on the 16th in the neighbourhood of a certain island (Hai-yang?), and at once sank three of the Chinese ships, while another took fire and was totally destroyed.

A report which reached here at 3.30 p.m. states that all the Japanese war-vessels engaged in the recent fight are safe.

Later.

According to news brought by the *Mogami-gawa Maru*, the Japanese fleet encountered twelve Chinese men-of-war and six torpedo boats in the open sea about thirty-five miles north-east of an unnamed island on the 16th inst. at 7 p.m. The Chinese fleet first opened fire, and the Japanese ships quickly replied. After a short engagement three Chinese vessels were sunk, another being burnt to the waters' edge. All the Japanese ships are safe.

(An official telegram from Head-quarters at Hiroshima, it is said, confirms this news.)

Shimonoseki, September 19.

A Ninsen correspondent, under date the 15th inst., states that the French Squadron will assemble at Chefoo in two or three days. The flag-ship left there on the 15th for Chefoo.

Hiroshima, September 18.

Forty boxes of silver coin, containing *yen* 2,000 each, were sent to Korea to-day by the *Yokohama Maru*. A number of transports have been arriving here since yesterday.

Hiroshima, September 19.

Count Ito, the Premier, had audience with the Emperor to-day. He has almost completely recovered from his illness.

Later.

Mr. Chisaka, Governor of Okayama, was nominated to-day a member of the House of Peers, his previous position being given to Mr. Kono Chuzo, Secretary of Aichi Prefecture.

Osaka, September 20.

The Chinese soldiers captured at Pyŏng-yang, are to be brought to Masukame and Matsuyama. One division of captives will be sent to the Fourth Army Division if their numbers are too great for the accommodation provided at other places. Three buildings have been prepared in Osaka and Himeji wherein the captives will be housed, and another has been arranged at Otsu. Each house is capable of accommodating one hundred persons.

Shanghai, September 20.

A report has reached here to the effect that a steamer of the China Steam Navigation Co., named the *Toonan*, was captured by the Japanese fleet during the recent naval engagement in the Yellow Sea.

Fusan, September 21.

The Fusan-Pyŏng-yang Military telegraph line was interrupted to the north of Kai-song yesterday.

Shimonoseki, September 21.

Mr. Otori, Japanese Minister, arrived in Sŏul from Ninsen to-day. The route between Ninsen and Ta-dong is now controlled by the Japanese navy, and steamship communication between the two places is open without fear of interruption. The *Mikawa Maru* and *Echigo Maru* have conveyed provisions to the Japanese troops at Pyŏng-yang by way of Ta-dong. The Japanese commissariat in the Pyŏng-an and the Hwang-hai Provinces are established at Pyŏng-san, So heung, Hai-ju, Kiang-ju, Chu-hwa, Su-an, and Sam-hwa. The work of leading a telegraph wire between Pyŏng-yang and Fusan (130 *ri*) was completed yesterday.

White mates in two moves.

(a) P to Q 3 is better.
(b) A beautiful final stroke to a splendidly conducted game on the part of White.

The player (says Mason) should always have a plan—almost any plan will be better than none. He should endeavour to have a chief design in his play at every stage of the game, to which design his particular moves at the time should contribute or be subordinate. A plan may be one of attack, or one of defence, or to substantially preserve the position for future contingencies; but it should be thorough, controlling, and persistent until its

object is attained—unless clearly overruled by emergency. In chess many things fall out unforeseen—favouring design, or the reverse. The player should be incessantly awake to these, or he will be unable to make the most of them. Presence of mind often discovers the first appearance of surprise to be neither its best nor worst. Concentration and coolness go far. Preconception should be tested from move to move—should be, as it were, constantly under revision; for with every move the position changes, and what was true may presently be false.

GAME No. 165.

SCOTCH GAMBIT.

- WHITE. BLACK.
- Mr. Crane. Mr.

(a) This mate is one of the tricks of the trade, by which the unwary are frequently trapped.

AUDI ALTERAM PARTEM.

In a recently-published souvenir of the chess department of the Brooklyn Standard Union, Dr. Broughton remarks that—"Problems are in chess what sonatas are in music—the combining of the most pure harmonies, the building of ideas in the framework of imagination. They are the clever conceptions of genius whose creations often show the possession of powers equal to the educated architect. The chess pieces and board are to the problemist what the canvas and pencils are to the artist, and, though the composer may not have so large an audience, his work is appreciated in proportion to its merits in its own field as any work of art would be." In his *Principles of Chess*, however, Mr. Mason expresses opinions of the very opposite character. He says that problems have their uses "as pretty and ingenious compositions; but they are no more chess than chess itself is war. In all of them the great point is assumed. There is no real contest proposed. The ardour which fills the human breast in presence of personal antagonism, an opposing intelligence, cannot be known. The enemy is already vanquished. The only question is how best to slay the slain. To talk of these things as the 'poetry of chess'—as some do—is to abuse language and poetry and chess together. They are perversions of the alphabet, and nothing more; 'poetry' of the 'A was an Archer, &c.' style, and nothing else. The soul and the spirit of the game is wanting in the mass of these simple intellectual puzzles; and who mistakes them for chess or its poetry is scarcely wise."

GAME No. 166.

Played recently in a handicap tournament at the Nuremberg Chess Club, Dr. Tarrasch giving the odds of a Kt.

(REMOVE WHITE'S Q Kt.)

CENTRE-COUNTER GAMBIT.

- WHITE. BLACK.
- Dr. Tarrasch. Amateur.
- 1—P to K 4 1—P to Q 4 (a)
- 2—P to K 5 2—P to Q B 4
- 3—P to K B 4 3—P to R 3
- 4—Kt to B 3 4—Kt to Q B 3
- 5—P to B 3 5—Q to Kt 3
- 6—B to Q 3 6—B to Q 2
- 7—B to B 2 7—P to B 5
- 8—P to Q Kt 3 8—P takes P
- 9—P takes P 9—P to Q 5
- 10—Q to K 2 10—P takes P (b)
- 11—P takes P 11—Kt to R 3 (c)
- 12—Kt to Q 2 12—B to K 2
- 13—Kt to K 4 13—Castles K R (d)
- 14—Q to Q 3 14—P to Kt 3
- 15—Q to R 3 15—P to Q B 4 (e)
- 16—P to Kt 4 16—Kt to Kt 2 (f)
- 17—Kt to B 6 ch. 17—B takes Kt
- 18—P takes B 18—Kt to K sq.
- 19—P to Kt 5 19—K to R sq. (g)
- 20—Q to R 6 20—R to K Kt sq.
- 21—P to R 4 21—Kt to Q 3
- 22—P to R 5 22—Kt to B 4
- 23—Q takes P ch. (h) 23—K takes Q
- 24—P takes P dis. ch. 24—K takes P
- 25—R to R 6 mate.

NOTES.

- (a) This is perhaps the best way of defending when the first player gives the odds of Q Kt.
(b) He need be in no hurry to exchange the pawn, as White dare not castle in any event. 10..... Kt to R 3, threatening Kt to Q 4 was to be preferred.
(c) K a is still the better square for the Kt.
(d) A grave error of judgment of which Dr. Tarrasch takes advantage in a very masterly manner.

- (e) If 15..... K x Kt 2, 16—Kt to B 6 comes in with fatal effect.
(f) Either 16..... B to R 5 ch., or 16..... Kt to R 5, seems to result in the loss of a piece.
(g) After this he appears to have no resource. 19..... Kt to Q 5, would have given Black a strong counter attack which might have proved a full return for the sacrifice of the Kt.
(h) A beautiful finish. He could win, however, by simply taking the Kt.

Mount Washington, American bark, 1,217, Rose, 23rd May.—Kuchinotsu, Coal.—Mitsu Bishi Shm.

Senator, British ship, 1,695, Smith, 22nd August.—Cardiff, Coal.—Langfeldt & Co.

Worlock, British steam-schooner, 31, A. Riedrich, 17th November.—Petropaulovsky, Sealing Gear.—Captain.

LATEST COMMERCIAL.

IMPORTS.

A better feeling in some departments. Yarn—Fair daily sales have been made, especially in the fine counts and in doubles. Shirtings—These still "hang fire," although the country trade is reported better. Fancies in moderate demand only. Woollens—Flannel is taken up as it arrives. Worsteds and Pilots dull; but there are signs of business in the air.

COTTON PIECE GOODS.

January 13th, 1894. 1y.

MILKMAID BRAND CONDENSED MILK
The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.
Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.
Original from
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN
September 8th, 1894.

AWARDED GOLD MEDAL L'POOL INTERN'L EXHIBITION, 1889.

ENGLISH MANUFACTURED TOBACCOS
